It is an understandable position, the political struggle being what it is, but it does not satisfy even the President's own closest scientific advisers. For they see the defense, atomic energy and space programs taking most of the creative scientific brains of the country; they do not believe the space experiments will help the civilian economy as much as the space addicts believe; and, like FULBRIGHT, they are not convinced that the cost of space propaganda will bring as much prestige as a booming economy.

"The differences today," said the President at Yale, "are usually matters of degree." This is the real issue about the space budget: not whether it should explore space, but whether the degree of exploration should be so great as to spend tens of billions on propaganda as well.

SALEM (W. VA.) COLLEGE PARTICIPATES IN NEW LEASING PLAN FOR THE CONSTRUCTION OF DORMITORIES—CIT ANNOUNCES PROGRAM

Mr. RANDOLPH. Mr. President, we are all painfully aware of the challenge which faces the field of education as a result of rapid and widespread increases in population. Without imaginative and far-reaching action by the Congress and segments of the private economy the situation in 10 years will be grave—in 20 years it could be disastrous.

We must, therefore, be governed in our actions of today by the needs of tomorrow, and must address ourselves steadfastly to the task of producing meaningful legislation which will add impetus to the progress and expansion of education facilities in the United States.

Mr. President, in light of the current needs for expanded educational capability it is heartening to note that certain elements of the business community are making significant contributions toward acceptable solutions. The CIT Financial Corp. is one such firm, having recently announced the establishment of a pay-as-you-go plan for the construction, rental, and future ownership of units, which is being offered to colleges and preparatory schools. It is designated "the CIT campus homes program."

I am gratified to report that Salem College, a small and progressive institution of higher learning in Salem, W. Va., is among the first to take advantage of this remarkable opportunity. Dr. K. Duane Hurley, its vigorous and devoted president, has said:

> The plan will be a tremendous help in moving forward toward our goal of doubling our facilities to meet the expansion of our enrollment expected in the years ahead.

He further pointed out that the student enrollment of 850 is expected to rise to approximately 1,200 in the next 5 years, and to double within the next decade.

I ask unanimous consent that explanatory fact sheets of April 3, 1963, released by CIT Financial Corp., and explaining the new leasing plan for dormitories, be printed in the RECORD.

There being no objection, the fact sheets were ordered to be printed in the RECORD, as follows:

CIT ANNOUNCES NEW LEASING PLAN FOR DORMITORIES

A pay-as-you-go program under which colleges and preparatory schools can acquire the early use and eventual ownership of additional student dormitory facilities without capital investment was announced in New York today by L. Walter Lundell, president of CIT Financial Corp.

The program, as outlined by Mr. Lundell at a press conference attended by college officials and other educational leaders, will make it possible for these institutions to meet their increasingly pressing needs for additional housing solely from normal room rental fees paid by the students who will occupy the buildings.

A newly formed company subsidiary, CIT Educational Buildings, Inc., will arrange for construction of CIT-owned dormitories, lease them to the colleges for a specified number of years, up to a maximum of 12, and then give title to the buildings to the colleges without further cost or charges, Mr. Lundell said. The overall project has been named "The CIT Campus Homes Program."

"This unique, self-liquidating plan, we believe, will make a significant contribution to solving the serious and growing student residence problems facing many colleges and schools," he said. "It is the essence of the plan that standard room rentals approximating those charged students occupying other rooms on the same campus should be sufficient to cover all rental payments under the lease, as well as provide income to the college for building service and maintenance costs."

TWO PROJECTS LAUNCHED

While negotiations currently are underway with a number of colleges, Mr. Lundell announced that contracts and leases have been signed for two substantial building projects that will get underway at once for completion by the opening of the college year next fall. The two projects will be built for Ricker College, located at Houlton, Maine, and Salem College at Salem, W. Va.

Construction of both dormitory complexes will be handled by Southern Mill & Manufacturing Co., of Tulsa, Okla., leading industrial and home construction firm, of which A. R. Tandy is chairman and president.

The buildings on the Ricker campus, to be erected as an open quadrangle, will house a minimum of 120 students in double rooms. Proctor's rooms also will be provided. Construction will feature an exterior of brick and cedar shingles to blend with existing campus buildings.

OUTSIDE BALCONIES

The three Salem dormitories, also to be erected in a U-shaped plan, will have exteriors of brick and rustic wood. They will house a total of 140 students. The architectural plan for these buildings will feature outside balconies for access to all interior rooms and the students will live in four-room, eight-occupant suites, built around a common lounge and separate bathroom facilities for each living unit.

CIT officials pointed out that variations in building costs, college requirements and other factors will necessarily result in varying per-student room charges from one project to another. However, it was said that all investigation to date suggested that most buildings could be leased for annual per-student charges in the $225-$250 range with payments on the Ricker and Salem projects falling within these limits. This range will fix the total per-student, or per-bed cost to a college somewhere between $2,500 and $3,000 over the 12-year period of the lease. At the end of this period, it was noted, the title to the building will be turned over to the college without further payments, so that all the income in future years will accrue to the college itself.

EXPERIENCED BUILDERS

Southern Mill, prime contractor in the educational building program has had extensive experience in mass production of homes, schoolroom facilities, and municipal, industrial and military housing, Mr. Tandy said. He pointed out that the company was a pioneer in the pre-engineered construction industry.

As one of the country's leading constructor-contractor-builders, Mr. Tandy said, Southern Mill, among other major projects, completed a $12 million mobilization housing project, comprising 3,862 family units in Kansas; built an entire community of 66 homes and 4 service buildings at Mexican Hat, Utah, and has constructed more than 400 school classrooms in Tulsa. More recently, he said, the company has expanded its activities to construction of college housing, including 20 dormitories at Denton, Tex., apartments, motels and other major units. Its buildings now serve more than 1,000 communities in 37 States, he added.

"The broad experience of the Southern Mill Co., the skilled organization it represents and their imaginative approach to architectural and construction considerations have made an important contribution to the development of CIT's campus housing program," Mr. Lundell said. He added that CIT representatives and Mr. Tandy and his associates had visited scores of colleges across the country to study campus housing problems, building designs and other dormitory requirements, and had consulted with many college building authorities in the course of the development of the program.

Mr. Tandy noted that while flexibility in dormitory design is essential to provide buildings compatible with each college's overall architectural atmosphere, standardization of the basic structures will result in substantial savings and is contemplated for most projects, in the interests of savings for the colleges and students.

COLLEGE DESCRIPTIONS

Ricker, founded in 1848, is a 4-year, liberal arts college with an enrollment of 380 students but expects to increase that total to 500 by 1967. Dr. C. Worth Howard, former president of American College, Cairo, Egypt, is president. Business manager is Charles W. Heath, who handled negotiations with the builder.

"After having tried unsuccessfully to adapt large homes within the town to our student housing needs, we welcome CIT's campus homes program as a providential answer to our problem," Dr. Howard said. "At last we are able to build student housing facilities to fit our specific needs and ultimately to own our own dormitories. This is obviously the solution to our housing requirements and undoubtedly to those of other small colleges in the Nation."

Dr. K. Duane Hurley, president of the 75-year-old Salem College, said that student housing is "one of our most pressing problems." He added:

"We at Salem College are extremely enthusiastic about this 'pay-as-you-go' plan to help us provide badly needed additional dormitory space. It will be a tremendous help in moving forward toward our goal of doubling our facilities to meet the expansion of our enrollment expected in the years ahead." He said the present student enrollment of 850 is expected to rise to approximately 1,200 in the next 5 years and to double within the next decade.

CIT officials pointed out that other builders also are expected to participate in the program as it develops. One of those interested, the company said, is National Homes Corp. of Lafayette, Ind., a leading organization in the manufactured homes industry, operating nationally.

CIT has long had a close corporate relationship with the educational world. Through two other subsidiaries, Tuition Plan Inc. and the recently formed Tuition Plan of New Hampshire, Inc., CIT makes installment financing of college educations available to all families with college-age children. The CIT Foundation, the company's philanthropic affiliate, participates in the national merit scholarship program and, in addition, makes challenge grants of $5,000 each to all newly accredited, 4-year, liberal-arts colleges. Under the latter plan, the school is asked to raise at least an equal amount from local business sources in order to receive the CIT award.

Salem College, Salem, W. Va.

Salem College was founded in 1888 and this year is celebrating its 75th anniversary.

It is a 4-year liberal arts college that was founded by the Seventh Day Baptists. It is coeducational.

Its present enrollment is approximately 850 students. The college is in a period of considerable growth and it is expected that its enrollment will reach approximately 1,200 students in the next 5 years and will at least double in the next decade.

President of Salem is Dr. K. Duane Hurley, who has been active in the founding and growth of the Council for the Advancement of Small Colleges.

In December of 1962 Salem was selected by the Association of American Colleges to receive the seventh annual quality improvement award amounting to $25,000 in unrestricted funds. The award, made possible by a grant by the U.S. Steel Foundation, "is designed to encourage and reward a college striving for excellence and to help it obtain full recognition from its regional accrediting association." Salem College was fully accredited in March of this year by the North Central Association of Colleges and Secondary Schools.

Salem College joins Ricker College of Houlton, Maine, as the first schools to participate in the new CIT Educational Buildings, Inc., program of providing "pay as you go" campus housing to colleges and schools.

The CIT Financial Corp. subsidiary will arrange construction of three dormitories for Salem, lease them to the college for up to a maximum of 12 years and then give title to them to the college.

The buildings will consist of a center structure in brick colonial style, with two other separate dorms angling out from either side. The 3 will house 140 students.

Contractor is Southern Mill & Manufacturing Co., Tulsa, Okla., a leading industrial and home builder. Architect for the college is W. H. Grant, Jr., Clarksburg, W. Va.

Construction is to start this spring with completion scheduled for September 1963.

The new dormitories will be constructed on the 100-acre Salem campus, located in the Salem and Clarksburg, W. Va. area.

CIT Educational Buildings, Inc.

Newly formed subsidiary of CIT Financial Corp., the Nation's largest industrial and commercial financing firm.

Officers of Educational Buildings: L. Walter Lundell, president. Mr. Lundell also is president of CIT Financial Corp.

Offers unique plan to U.S. colleges and schools to provide the use and eventual ownership of dormitories and other campus housing facilities.

Educational Buildings will construct campus housing, lease to the college for a stated number of years—to a maximum of 12—and then give title to the building(s) to the college.

Buildings will be constructed on college property, built to specifications worked out between college and construction company.

Rental payments will be made to educational buildings on a semiannual or quarterly basis. The payments will be made from funds derived from normal student room rent charges, expected to range from $225 to $250 a year. Thus the buildings can be self-liquidating for the colleges.

Under the plan, colleges eliminate any outlay of their own funds and their general credit is not committed or impaired in any way.

Initial projects are construction of three-unit dormitory buildings for Ricker College, Houlton, Maine, and Salem College, Salem, W. Va. Completion is scheduled for September, 1963. Contractor for both projects: Southern Mill & Manufacturing Co., Tulsa, Okla.

The campus housing program was developed by CIT after 2 years of study in cooperation with college and other educational officials, builders and architects.

A number of colleges and schools already have expressed interest in the plan, and it is expected other construction projects will be undertaken during the year. It is also expected that other builders will participate with CIT in the program as it progresses.

FIFTIETH ANNIVERSARY OF ROCKEFELLER FOUNDATION

Mr. SALTONSTALL. Mr. President, this year the Rockefeller Foundation is celebrating its 50th anniversary. The work of this foundation is a striking example of the type of service that American foundations can perform for the advantage of all mankind. As a former overseer of Harvard University, I have some small idea of what contribution the Rockefeller Foundation has made to education.

The Rockefeller Foundation was founded in 1913 by John D. Rockefeller, with an initial endowment of $35 million. Its various funds have spent more than $763 million to date. The money has been used to advance the cause of public health and hygiene, medical research to stimulate advanced scientific studies through fellowships and scholarships, and to support science in general. Twenty-eight recipients of the Rockefeller-financed fellowships and scholarships have received a Nobel prize. The foundation has also lent assistance in the fields of the arts and to programs in humanities and social sciences. Their funds have helped make possible our Arena Stage here in Washington, D.C., and the Lincoln Center for the Performing Arts in New York City, to name but a few. It has also been extremely active in the international field and much progress which we see in certain of the newly developing nations can be credited to the Rockefeller Foundation support.

We hear today about certain abuses of privileges granted nonprofit organizations. We can be certain that the Rockefeller Foundation does not fall in any such category. We turn with pride and confidence to this foundation as one which is working in the best interest of all of our citizens here in this country and throughout the world.

I commend the Rockefeller Foundation for its extremely fine work in the past and wish them another 50 years of equal progress.

VERY DISTINGUISHED COLUMNIST POINTS UP SENATOR HUMPHREY'S SIGNIFICANT DISARMAMENT ROLE

Mr. McGOVERN. Mr. President, today's Washington Post carries an article by the noted columnist, Mr. Max Freedman, entitled "Humphrey and Disarmament."

Mr. Freedman very properly gives the senior Senator from Minnesota, who also serves as chairman of the Senate Disarmament Subcommittee, major credit for keeping the current disarmament discussions in perspective. As Mr. Freedman points out, Senator Humphrey has been "carrying the lonely burden of protecting the public interest in a safeguarded disarmament treaty."

Many informed observers believe that the Senate speech delivered by the Minnesota Senator on March 7 is the most important statement made on the Senate floor in this session of the Congress. Certainly, it is a speech that fully documents the position taken by our administration in the Geneva negotiations. It is a statement that ought to be studied carefully by all those who believe in a realistic and safeguarded disarmament agreement.

I ask unanimous consent that Mr. Freedman's column be printed at this point in the Record.

There being no objection, the column was ordered to be printed in the Record, as follows:

[From the Washington Post, Apr. 8, 1963]

Humphrey and Disarmament

(By Max Freedman)

Without Senator Humphrey the debate on disarmament would proceed against hopeless odds. He has been President Kennedy's chief supporter in Congress for a prudent and responsible treaty. When Mr. Eisenhower was President he gave the same kind of courageous support to a Republican administration. It is not the least of his merits that he believes that disarmament, like defense policy, should be above mere partisan skirmishing. In view of this record he is entitled to a thoughtful hearing when he makes a major statement on the disarmament negotiations at Geneva.

Yet this careful examination of his proposals is precisely what has been lacking. It almost seems as if the cynical principle is being followed of ignoring Senator Humphrey's points because one cannot answer them. Some time ago he delivered an elaborately documented analysis of the disarmament deadlock but his address met with little response in the Senate and with only scattered attention in the country. This surely is shabby treatment for a Senator who is carrying the lonely burden of protecting the public interest in a safeguarded disarmament treaty.

It may therefore be some contribution to the public debate if one summarizes the main points which Senator Humphrey is now making.

He points out that in 1958 it was the belief of both Russian and American scientists that there would have to be an international inspection system with about 180 control posts, of which 19 would be in the Soviet Union. It would have taken between 4 to 6 years to install this system; scores of international technicians would have been included in the project; the system would have cost $2 billion to build and several hundred million dollars a year to maintain. Today no such system needs to be established at all.

The United States, like Russia, can now identify nuclear tests in the atmosphere, under water, and in outer space. If Russia would agree to a treaty outlawing such tests, the risks of successful evasion or cheating would form no problem. The real concern is with tests conducted underground where they may be harder to detect or may be confused with earthquakes.

Senator Humphrey reports that in the past 5 years the United States has greatly improved its ability to identify earthquakes in Russia. It is a generous figure to suggest that these unidentified occurrences in any 1 year will be "only a few dozen at most." Under the British-American treaty each of these mysterious events would be subject to inspection. From a scientific or technical standpoint, the problem of security is wholly manageable. Russia would soon learn this fact if it were willing to give the proposed treaty a fair trial.

Senator Humphrey asked the Kennedy administration to make available the results of studies of underground events in Russia from 1958 through 1962. He has quoted "a competent administration official in whom I repose the highest confidence" as saying that the United States has the present ability to monitor a test ban agreement with full safeguards for American security.

Under these new arrangements it would be necessary to supplement these monitoring devices by inspections inside Russia carried out by inspectors who could be accompanied by Soviet observers. The inspected area would be small and would be located by using the records of at least four detection stations. There would be no more than seven inspections each year. The treaty would lapse and the United States would be free to resume its tests if Russia refused to agree to any suggested inspection or was caught in a secret test.

Since the 1960 campaign, Mr. Kennedy has shown much more eagerness than the general public to reach a disarmament agreement with Russia, above all on a test ban treaty. The public has tended to view the Geneva talks with resigned apathy as a meaningless charade. Yet all the time hardworking and often misunderstood officials have been closing the gap between the Russian and American positions, while always striving for a treaty that would be endorsed by two-thirds of the Senate. It is high time that we realize that American public indifference is very helpful to Russia in resisting a treaty. For Russia can twist and equivocate at Geneva without being called to account by a bored American press.

FOREIGN AID

Mr. FONG. Mr. President, a thorough overhaul is overdue in America's foreign aid program. This is my conclusion after I carefully studied the Clay report—a report of the Committee appointed by the President to look into our foreign assistance programs.

I am convinced that the money Congress has been appropriating for foreign aid is not being as effectively used as it should or could be used.

While I have served in the U.S. Senate, I have consistently supported our foreign aid program. I believe in it.

In a world where relentless Communist imperialism manipulates the poverty and instability of nations to subvert their freedom, I see foreign aid as an important arm of American foreign policy.

It should keep open avenues of trade to market our products and reliable sources of raw materials needed for our industry. It should assure America of free, independent, and strong allies, and thus strengthen our defense posture around the globe.

In a world in which poverty, sickness, and turmoil are rife, I see foreign aid as the spiritual and humanitarian thing for America to do. As the Clay report pointed out, it is an "American tradition to be concerned with the plight of those less fortunate than ourselves."

Our extensive foreign aid programs, lasting for well over a decade, may be accredited with impressive accomplishments—the Marshal plan, the point 4 technical assistance plan, the capital loan assistance plan, to name a few.

Yet, even with these and other successes, "much remains to be accomplished." We do not really know how effectively much of our funds are being used; we know that some recipient nations have not adopted the necessary fiscal, administrative, political, and social reforms for a successful program.

Nor have they planned well in some cases, or planned sensibly—so that some nations are not using their own resources to help themselves, while other countries have programs ill suited to their needs and conditions.

To meet these inadequacies and problems, I am cosponsoring a bipartisan resolution, Senate Concurrent Resolution 34, with a group of other Senators to appoint a series of small committees, one for each country receiving American foreign aid. Each of these committees would take a long, close look at the receiving country, reviewing and evaluating the development program in that country.

The committees would study three questions:

First. Does the country receiving U.S. aid have a practical and sensible development program that will help raise the country's living standards?

Second. Is the recipient country doing all it can to help itself?

Third. Has it adopted all the reforms needed for the program to succeed?

If we are to get as much mileage out of our foreign aid dollar as we can, I believe it is imperative that we stop and take a good, hard look at the effectiveness of our foreign assistance program in each country.

THE YOUTH CONSERVATION CORPS BILL NEEDED NOW: THIS BILL IS ALL GOOD

Mr. YARBOROUGH. Mr. President, the Senate is fortunate to be able to take up this week, among the first major bills before it, S. 1, the Youth Employment Act. The Senate will be able to show its wisdom and concern for the country by the speedy passage of this bill. By thus acting, we can take another step toward improving the economy of our country.

For too many years, this Nation's economy has been in a stagnant condition. We have been faced with an unemployment rate that seems to creep upward regardless of the general business conditions. Of course, this Democratic administration and Congress have viewed this situation as intolerable, and have commenced in the last 2 years a series of specific programs carefully tailored to have a lasting impact on the unemployment problem. The Area Redevelopment Act, the Accelerated Public Works Act, the Housing Act, the Manpower Training and Development Act, these and other intelligent steps have been taken to lay the groundwork for full employment. In this Congress, we have the opportunity to act in the area of greatest need for stimulation in employment; our youth.

The young people of this country compose the most serious unemployment problem we face in the immediate future. Their rate of unemployment is twice the national average; more than 13 percent of the 16-to-21-year-olds in the labor market are without jobs. There are 700,000 unemployed youths between 16 and 21 years of age. And this year 3,800,000 young people come of age, 1 million more than last year.

So we are proposing to take a modest number of these youths and put them at jobs that beneficially serve the public interest. In the Youth Conservation Corps, we shall put some 15,000 to work outdoors improving our resources for conservation and recreation, but the second year, this number would rise to 50,000. Initially, in addition, we shall help 45,000 young people do community service near their own homes, in the Home Town Service Corps. Of course, we hope that this will have some small effect on the unemployment rate, but even more worth while are the public benefits to accrue both to the young people joining these programs, and to the localities where their service is performed.

What more useful calling could be devised for a young man than to be employed in healthy outdoor conservation work? And what better contribution can be made to our national investment in conservation and recreation facilities than the products of these youths' labor? One can look about in the National and State parks of my State and see that a very large proportion of the permanent facilities there are legacies of the work of the CCC more than 20 years ago. I dare say the situation is the same in many other States.

We knew the CCC well in Texas, where 156,000 young people worked in the camps between 1933 and 1942. They built over 6,000 miles of Texas roads and track trails. Texans knew their work and appreciated it—perhaps it should never have been stopped, putting us to the effort of starting it again.

The other title of this bill would institute a new and worthwhile program, the home town service corps. State and local public agencies would be provided funds on a 50–50 matching basis to provide worthwhile job opportunities and training for youths between 16 and 21. These 45,000 young people would be employed in their own communities in needed capacities at hospitals, libraries, children's homes and other community service institutions, public and private. Community service institutions are usually pressed for funds and personnel; local programs of this design have proved to be quite successful. They channel youth into beneficial public work, while improving the employability of the young person. Regular workers will not be displaced, and pay and working conditions are to be reasonably comparable with the community standard.

There have been needless fears expressed that this program will provide a haven for juvenile delinquents. Perhaps that has arisen because the proponents of this bill have expressed their hope that it will provide a constructive outlet for the energies of school dropouts. In spite of the bad social conditions created thereby, I do not equate school dropouts with any predisposition to juvenile delinquency. If one looks at our educational statistics he can see that this country has been built mostly by the labor of so-called school dropouts. They have performed useful services for America in the past; they shall do so in the future under the terms of this bill. I sincerely hope that we shall avoid the sort of social stigma on these youths that some have already started to hint. The provisions of the bill are sufficient safeguard against undesirables; those serving in the two phases of the program will be performing very desirable services for this country.

As an example, I am pleased to note that Secretary of the Interior Udall, in his testimony for the bill, suggested that the Youth Conservation Corps might well be employed in establishing recreation facilities in the newly created national seashores at Cape Cod, Point Reyes, and Padre Island, Tex. Texas this week completed the necessary legislative action by it to establish the Padre Island National Seashore, an event which pleased me very much as the original sponsor of that legislation. Texas would be benefited indeed if the recreation facilities needed to implement fully the National Park Service plans for Padre Island were to be built by the Youth Conservation Corps volunteers as contemplated by this bill.

The Youth Conservation Corps created by the Youth Employment Act will build conservation facilities in the great national parks, dams and bridges, roads and trails, and even cabins and other recreational facilities. But more than that, it will build in the boys and young men who live close to nature in the camps, a love for the outdoors, and appreciation of nature, a will to work, a drive for higher ideals in life. The Corps will build character along with muscle; it will build into its graduates employability in our society, and good citizenship for our Nation.

S. 1 is a proposal that will truly offer to young people the means for attaining human dignity, individual self-reliance, and citizenship training. It is a necessary step toward beginning to solve some of the problems our urban industrialized economy has created for today's youth. This bill is all good. I urge its adoption.

PASSOVER

Mr. KEATING. Mr. President, sundown today marks the start of the Festival of Passover to commemorate the liberation of the ancient Israelites from slavery in Egypt. In this traditional ceremony of the Jewish religion, families will observe rites that have been upheld for centuries and passed on in days of slavery and persecution as well as in freedom.

Even as these high holy days are observed with the age-old scriptural responses and the traditional foods, we are all reminded that elsewhere in the world this freedom does not exist. For the second year in a row the Soviet State bakeries in Moscow have prohibited the baking of matzohs, the unleavened bread that is eaten in remembrance of the haste with which the people of Israel fled from Egypt.

Passover, perhaps, more than any other religious holiday, symbolizes liberation, the redemption of a people from alien oppression and slavery. Yet freedom poses its responsibilities—responsibilities for self-restraint, tolerance, community service, and integrity. It is most fitting that on this start of the Passover season, we all, regardless of religion, assess again our continuing obligations as individuals and as citizens of a free nation to the ideals of religious and political freedom which are such a deep and meaningful part of the historic celebration of Passover.

TO BE OR NOT TO BE: THE INDIANA DUNES

Mr. DOUGLAS. Mr. President, a deeper understanding of the issues concerning the effort to preserve the Indiana dunes from the destruction spearheaded by the economically unjustified Burns Ditch Harbor is taking shape throughout Indiana. This increased understanding is in large part the result of the dedicated and skilled efforts of Mr. Thomas E. Dustin, of Fort Wayne, Ind., who is the voluntary public relations director of the Save the Dunes Council.

The fight to save the dunes was started by Indiana citizens and has largely been carried forward by Indiana citizens, although strong nationwide interest and active support has developed. The Save the Dunes Council and others working to rescue the dunes, including myself, do not oppose a new harbor for Indiana. We do oppose the unnecessary and economically unjustified construction of a harbor in the heart of the irreplaceable and beautiful dunes. As has been pointed out many times, there are several alternate locations for a harbor which will preserve the dunes and give Indiana a large new harbor and industrial site.

In its current issue, Fort Wayne, a magazine devoted to the good life in northeastern Indiana, carries an excellent article by Mr. Dustin which discusses the issues in relation to recent proposals made by Governor Welsh, of Indiana. I ask unanimous consent that this article from the April issue of Fort Wayne be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TO BE OR NOT TO BE—THE INDIANA DUNES

In mid-February, the Governor of Indiana addressed the people of the State in support of what was termed an economic development fund.

The basic purpose of this program was to obtain tax support from the citizens and the business of Indiana, to finance construction of a port project, east of Burns Ditch, in the Indiana Dunes adjacent to Lake Michigan.

This program was rejected in the regular 1963 session of the Indiana General Assembly, but taxpayers may well expect new State administration angles to finance the same project, in the special session of the legislature, called by the Governor, partly for this very purpose.

A port in Indiana at the particular location proposed has met opposition from conservationist groups, because construction at that chosen place would destroy much of the irreplaceable Indiana dunelands, as well as skiing, boating opportunities and other water recreation activities on our Indiana Lake Michigan shores. This view has been expressed by the Izaak Walton League, by the American Camping Association, the Save the Dunes Council, and by almost every other similar group in this State and throughout the Nation, as well as by more than 70,000 Indiana citizens.

But if the port was first opposed by those who only wanted to save our dunes, it is now opposed by uncounted thousands who want to save our money.

It is now well understood that there are already four harbors on our Indiana Lake Michigan shoreline, two of which have been fully public for many years, and both of which are federally funded, not State tax subsidized, for deepening to ocean vessel depth, or for studies of other improvements.

It is also well known that the Tri-City area of Lake County is now under intensive study by the Army Corps of Engineers, who are determining the feasibility of a deep water port at that site. That port project would have an initial size 10 times the greatest size which could be attained at Burns Ditch.

But the tempo to get millions of dollars of State tax money for construction of yet another port continues at fantastic levels.

In light of the fact that our State already has two public harbors now, both of which are federally funded for improvement, Indiana taxpayers ask why the State should spend $25,500,000 to finance a Federal project.

This project—which was the fundamental purpose of such proposals as the Economic Development Fund, has not even been given an unqualified approval by the Army Engineers. There are many conditions which have not been met—only one of which is an integrated steel mill.

We are having chaotic troubles in Indiana, raising $1,400 million for absolutely essential uses. Why should we be expected to pay for a two-company port which remains unapproved by the Federal Government, now considering budgets approaching half a trillion dollars?

Are we to spend this money just so we can enjoy the dubious privilege of thumbing our noses at imagined "out of State" enemies? * * * and at a time when millions are being slashed from university appropriations.

Several specific phases of the Burns Port program are worth discussing, both on its own merits, and on the effects it would have on a great natural resource. As citizens of a proud State, we have a right and a duty to show concern, not only for the size and quantity of our growth, but also for the shape and quality of that growth.

The Burns Port is feasible only under a very strict set of conditions. One of these many conditions is an integrated steel mill.

What are the prospects for meeting that requirement before today's 10-year-olds have graduated from our universities?

According to State house estimates, which predicted the Economic Development Fund, a port would not be in operation for a dozen years or more, under the very best conditions.

An authoritative trade journal said less than a year ago, that Midwest Steel Corp. integrated mill plan is a "way out" expansion, and added the company would use the port if it built a basic steelmaking facility—an integrated mill.

On January 10, little more than 2 months ago, the chairman of the board of Bethlehem was quoted in the Wall Street Journal, as saying that their integrated mill was only a dream well off in the future.

And this was confirmed in a letter of February 18, to the Governor from Bethlehem Steel, which we obtained, and which said this: "It is obvious that we cannot now predict, with any degree of accuracy when we will reach step 6, which will be the fully integrated steel mill."

This same letter also indicated that production worker employment for the committed mills might be on the order of 2,100 to 2,300, but that possible labor agreements "will have a bearing on whether the local labor supply, where qualified, will be given preference for these jobs."

There are simply no guarantees either as to when or if any integrated mills will be built.

But even if the firms did make hard commitments to build integrated mills, it would be adverse to our interests to use State funds for building their harbor, whether through an Economic Development Fund, or through some other grand-sounding legislation.

No one has made a target of either of these two great firms. Conservationists as well as all other citizens wish both a long and prosperous history in our State. But establishing a spirit of good will and a favorable economic climate are far different than providing a vast subsidy, which a Burns Port represents.

We don't think our administration should ask us to pay a 3-cent cigarette toll—or a special corporate tax to finance such a doubtful objective. Conservationists have in mind a new fighting slogan, paraphrasing a famed historical exclamation: "Millions for education—but not 3 cents for tribute."

Let's turn now to the Army Engineers reports and the figures attributed to the Burns Ditch port project.

In both its 1960 and its 1962 reports, the corps set an integrated steel mill as a basic requirement for port feasibility. There was nothing strange in this. Fully 94 percent of all the proven tonnage for the port is set forth for limestone, ore and coal, required only for an integrated mill. Yet, the administration expressed shock when the engineers called this detail to their attention a couple of months ago.

This was quite an oversight at best.

An agreement between the State and Midwest, lying in the files of the Indiana Port Commission, even mentions the possibility of nice, clean, open hearth blast furnaces if an integrated mill is built. These are the only devices which would consume ore, limestone and fuel at the site.

The Army Engineers state the project would save Midwest Steel $6,700,000 a year if they used the port. And they say the project would save all other shippers just $610,000 a year, less than one-tenth of the total.

But even of this small nonsteel benefit, two-thirds is listed for transshipped coal alone. This leaves about 2 or 3 percent of the benefits for all the rest of the agriculture and manufacturing industry of the entire State of Indiana.

If the mills do not integrate, and if the coal shippers used more of the capacity of the present Michigan City harbor, we'd have little more than a ghost harbor up there. But even with complete fulfillment of every qualification, we lose money if we build the port with State funds.

Here is why this is so:

The Army Engineers computed the benefit-to-cost ratio at 1.5:1; that is, the port would save $1.50 to shippers for every dollar of cost. But while this computation is based on the Federal portion of the cost only, it includes all the benefits. The Federal part is $25,500,000; but the rest of the cost is conservatively estimated at $38 million. The total cost of the project then, is at least $63 million.

Weighing all the costs as well as all the benefits, the benefit-to-cost ratio falls below 1 to 1. That is, in complete terms, the port will cost far more than it will return.

Let's review this again. The total annual income from the port is estimated at $1,500,000, while cost against only the Federal portion of the investment is $1 million a year. But what about the rest of the costs, $38 million in revenue bonds and what about maintenance costs? The annual interest costs, principal costs, and maintenance costs come to $3,700,000; but we are still working with only a total income of $1,500,000.

Now, if we approve State taxing for the Federal portion of the project, total costs of operation for which we are responsible—in one way or another—amount to $4,700,000, the sum of the Federal and the bonding charges—a net overall loss in excess of $3 million a year.

This reality becomes quite clear when you think of the State (Indiana taxpayers) going it alone.

Neither of the steel companies will pay any terminal fees. This is established, and it means that only terminal fees from the small fraction of nonsteel users would be available for bond retirement, channel maintenance and other costs.

Now, here is the $63 million question: Who has first claim on the scanty $1,500,000 income which is supposed to cover $4,700,000 in annual costs, we the taxpayers—or they, the bondholders?

Let's return to Uncle Sam. If he builds the breakwaters, nobody pays anything to enter the port area; this is established by both statute and custom. If the State builds the breakwaters, and attempts to levy fees for entry, we have a whole new problem to contend with.

Even the small group of nonsteel alleged users, base their interest on a federally financed outer breakwater program, which would require no entry fee. What will they say if they now find they would have to pay a terminal fee and an entry fee? The margin of alleged advantage at Burns Ditch is so small to begin with, any such additional charges will clearly make the port uneconomical for any but the two steel firms.

With a $3,200,000 spread in the red, where do we make up the losses? From more corporate taxes? From university appropriations? More tribute from smokers? Or do we just issue more bonds in a never-ending series?

But there's more on the costs. Much more. In its 1960 report, the Army Engineers estimated that it would cost at least $6,400,000 for the first dredging costs of the port. This figure remains unchanged by the 1962 report; but the engineers commit the Federal Government to only $3,700,000 of these costs, and they say that if the job can't be done by hydraulic pumping means, the cost could double, to $12,800,000. Even with Federal financing, we have to pay at least $2,700,000 for first dredging, and we could be hit with up to $9,400,000 for this; without Federal financing, we get the bill for the whole thing, no matter what it is.

They don't talk much about this in the State capitol.

Besides first dredging costs, the Army Engineers said 27,000 cubic yards of shoreline erosion would be caused by the riparian filling and construction; and they exclude the Federal Government from any responsibility for this. Who is going to pay to correct the erosion?

Then, of course, there's the question of continued harbor dredging. No one has figured what this amounts to; but it is a fact that every other port in the lower Lake Michigan area requires extensive and continued dredging to maintain suitable depths. How much is that going to cost the taxpayers?

After all, the State house emotionalism and diversionary charges of "outside pressure" are set in perspective, here is the basic sediment of the Burns Ditch port:

(1) The annual revenues predicted for the port are less than one-third the known annual costs;

(2) There is no solid commitment, with dates, for construction of an integrated steel mill; but even if there were, this would not increase revenue because neither steel company would pay terminal fees.

(3) Neither the costs of first dredging, nor of continued dredging, nor of erosion control and corrections are known or even guess-estimated.

(4) The nonsteel users are unproved, particularly for coal, and especially if the State builds the port—with our money—and tries to collect entry fees.

Any one of these uncertainties is more than reason to wait before we lay out at least $25,500,000 of our State tax money for the project.

Let's go into this alleged coal tonnage for Burns Ditch in a little more detail.

We have obtained a copy of the 1961 annual report of the Monon Railroad. The Monon is called The Hoosier Line, because it serves Indiana, almost exclusively, with 90 percent of all its tracks in Indiana.

The Monon is the only railroad with existing direct rails between our southern Indiana coal areas and a public harbor on our shore of Lake Michigan—the harbor at Michigan City, which has been serving the Indiana coal industry for years.

The Monon's annual report says, under a paragraph entitled "Michigan City":

"The general plans and specifications for a deep water dock facility at Michigan City have been prepared. This facility, as designed, would initially handle the transfer of coal from railroad cars onto lake steamers."

Elsewhere in the report, the company explains that its expansion, accomplished with its own investment—not State subsidized—would enable it to transfer 2 million tons of coal a year at Michigan City.

The Monon is an Indiana company, willing to invest millions of its own money in terminal and other facilities so that it can expand its existing coal carrying operations.

Furthermore, this public harbor is now federally funded for improvements. Neither of these operations are being paid for out of Indiana State taxes; and new jobs will result from the program, at no drain on us.

What's significant about the Monon's plan at Michigan City? Only this: Ditch port backers allege that Burns Ditch is the only port project capable of coal transshipment; and coal is the only major nonsteel commodity listed for shipment from the Burns project.

But, there is the Michigan City harbor program. Why should we put up State funds for a carbon copy coal handling capability, thus discouraging private enterprise from solving the problem in the tried and true way?

Here's one more shocker: A full year ago, the president of the only real shipper who had expressed intent in the part, Rail to Water, Inc., of Chicago, wrote Clinton Green, of the Indiana Port Commission, that port feasibility from their point of view relied upon Federal participation. The firm also said our commission would have to buy out Rail to Water's Calumet facilities first, and morever that it did not consider itself a "public utility" bound to handle just anybody's coal. Just where does all that leave Indiana and our sick coal industry?

It would be interesting, now, to turn back to the 1957 Indiana General Assembly, which appropriated $2 million for the purchase of Burns Ditch port lands.

"This appropriation," the legislation reads, "shall not be expended or available for expenditure by the Board (now the Indiana Port Commission), in whole or in part, unless and until the Corps of Army Engineers has approved the economic feasibility and justification for a public harbor or terminal on said real estate."

The requirements for feasibility, as set forth by the Army Engineers have not been met, and they have not requested construction funds for the project.

Yet, the port commission has spent hundreds of thousands of dollars for the purchase of these lands. They have jumped the gun, and now we are asked to produce an additional $25,500,000 for a project that has not even fulfilled the requirements of the first $2 million.

It has been 6 years and four legislatures ago since that $2 million was appropriated, we still don't have assurances that the Army Engineers requirements will be met.

No amount of scapegoating and charges of "outside interference" can cover these hard, cold facts.

It would be hard to see how Indiana needs another port under the best of conditions. In combinations, both our public ports and the two private ports now handle millions of tons a year, of coal, gypsum, limestone, iron ore, general cargo, petroleum products, steel, gravel, and other materials.

If we do need yet another port, we can have it in the East Chicago-Whiting-Hammond area of our State. This project is now under study.

How many gateways to world trade do we need?

Won't the State House be satisfied until we have nothing but one long string of ports from one end to the other on our 42-mile Lake Michigan shoreline?

What are the prospects for employment by the known industry for the port? We can only go to the record for this. The 1962 employment at Midwest Steel, the only plant now operating there, was listed authoritatively at less than 500, and many of these folks are known to be from out of State.

In combination with the unbuilt, but committed plants of the other firm, this indicates a total of about 3,500 production workers. But that's only one-tenth of the employment forecast by the administration, and just 3 percent of the prediction by the Lieutenant Governor.

C. W. Efroymson, an economist at Butler University, offers a professional opinion on employment from the proposed development in the dunes. He says:

"In view of the probable advance in automation, particularly in steel, and the probable future of the steel industry as a whole, it seems likely that the number of jobs available in that industry will gradually decline."

"While it is probable that steel employment will decline over the years," he comments, "the opposite applies to employment in recreational facilities such as the dunes are fitted to offer."

Mr. Efroymson asks: "Shall we destroy a continuing certain source of jobs and income for employment in an industry which can be closed down when some executive committee in Pittsburgh or New York decides it would be cheaper to build a new mill in Utah or Texas?"

Let's turn from the opinion of this professional economist, and examine what other trained experts say about our Indiana dunes and shoreline, and what the Burns Ditch port would mean.

Commenting on the effects of the proposed port, an associate director of the National Park Service said this:

"Development of a public harbor in the location proposed by the Governor of Indiana would level several hundred acres of the remaining tree-covered dunes, and would destroy nearly a mile of the finest sand beach on the Great Lakes."

He also said, and this is especially important, "There is a grave probability that the water and air pollution created by harbor activities and adjacent factories will make the Indiana Dunes State Park less desirable, and might well make beach activity unsafe."

In his official, written statement to Lt. Gen. W. K. Wilson, Chief of Engineers, Interior Secretary Stewart L. Udall said this on July 20, 1962:

"The inevitable pollution which would necesarily follow the construction of the harbor at this location would have a detrimental effect on the public recreation potential in this area."

The Secretary said, "There are alternate sites within the same general area for artificial harbors which have not been studied in detail; there is no substitute for the scenic and recreational opportunities which the Indiana dunes can be made to provide."

"It is our recommendation," the Secretary continued, "that approval of the proposed reports be withheld until thorough study can be given by the Corps of Engineers to alternative sites for the harbor, and until the impact of the Burns Waterway project on the proposed lakeshore is fully evaluated."

The Bureau of the Census now forecasts that within a very few years, there will be virtually a continuous strip of cities from Milwaukee, Wis., to Buffalo, N.Y. On our own Lake Michigan shore, Gary on the west and Michigan City on the east, will form links of this urban system.

With most of our existing shoreline already given over to ports, cities, and industry now, it is easy to see that the rarest and most priceless asset in a few years is not going to be one more port or one more factory.

The unusual, and therefore the most valuable tract will be the last green legacy we can provide for our people and the people of the country.

Make no mistake about the dunes as an economic asset. This place is right now in the main flow of transcontinental traffic, and this is going to increase. Even now, highway expansion feeding the dunes area is being considered, though the Governor vetoed certain highway improvement in that area.

It is the simplest of logic which indicates we should acquire those lands which are known to be in demand now, and which can be proved of demand in the future.

For instance, if we give credibility to statements made by the Handley administration only 3 years ago, and the Welsh administration today, the Indiana Dunes State Park increased in development and use from 10 to 33 percent in that short period of time.

The Dunes State Park was acquired in the mid-1920's, and has not been added to since that time. It contains about 3 percent of the total park area in our State, but it gets 25 percent of the human traffic. This means that the average acre of the Dunes State Park gets 10 times more human traffic than the average of all our other State parks.

This means money to us—lots of it—incoming money, from other States to our own State.

The average tourist spends $12 a day when he visits, and on this basis our duneland attraction should now result in about $62,500,000 of business for our State each year * * * one-fourth of all the skimpy tourist business we get in Indiana.

What are we to do? * * * seal this off little at a time, or capitalize on it while there is still time? Should we write off our whole shoreline for industry and more ports as the position of Congressman HALLECK seems to suggest?

Beyond the money, we have an obligation on our shoreline. Indiana is not an isolated republic. It is a member of the community of States. We have an asset in the dunelands of which all America is proud, and which we should want to use and share.

Thousands of Indiana educators, scientists, conservationists and other citizens have publicly expressed their hope that this asset be protected for our enjoyment and for the use of future generations.

Not a month ago, 13 biologists from the University of Notre Dame, which represents virtually the entire biology staff at the university, went on record favoring shifting of the port to another site because of its effects on the dunes and lakeshore.

A month or two ago, almost 200 educators and scientists from more than a dozen other major public and private universities echoed this wish in a joint letter to President Kennedy.

Dr. James Dewey Watson, one of Indiana's few Nobel Prize winners, who earned his doctorate at Indiana University, sent the following message in November. He said:

"I would view the loss of the Indiana dune region to industrial exploitation as both a personal and a national tragedy." Dr. Watson said the natural variety of the area stimulated him to become a scientist, and he added that "There is no honest reason why subsequent generations should forever lose this same opportunity."

What have other areas of the United States done about similar problems?

New York, under Mr. Rockefeller's leadership, has established a multimillion-dollar fund for acquiring much of the Adirondack Mountain region as a vast State park system for the benefit of all.

The State of Oregon has set aside 162 State parks, almost 10 times our meager effort, and many Federal areas as well.

California has saved many of the redwoods for our enjoyment.

The people of Wyoming have set aside the incomparable Tetons for us, and Yellowstone; Massachusetts has preserved our Cape Cod heritage; Florida, our Everglades; Minnesota, our Quatico Superior National Forest; North Carolina, our Great Smokies and Cape Hatteras * * * all against many of the same kinds of self-interested influences and real estate wheelers now faced by the people of Indiana.

Who are we, and what manner of people are we, to turn backs on our special share of this great national responsibility—the Indiana Dunes National Lakeshore?

> Can we afford the continued destruction of this priceless natural resource? Or are we to act at last with Hoosier conscience, and say "No" to further ruin of this place * * * financed by the very taxes we pay?

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, is morning business concluded?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

THE WILDERNESS ACT

Mr. MANSFIELD. Mr. President, I ask that the unfinished business, Senate bill 4, Calendar No. 88, be laid down and be made the pending business.

There being no objection, the Senate resumed the consideration of the bill (S. 4) to establish a national wilderness preservation system for the permanent good of the whole people, and for other purposes.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum; and I would advise the attachés on both sides to have Senators come to the Chamber, because this may well be a live quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the role.

Mr. ALLOTT. Mr. President, I ask unanimous consent that further proceedings under the quorum call may be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ANDERSON. Mr. President, when hearings were set on S. 4, the wilderness bill, request was made to witnesses to confine themselves to new material. The hearings, accordingly, do not involve as much material as heretofore.

The measure has been before the Senate 6 years. We have held 10 hearings on it and accumulated 2,825 pages of printed record. It passed the Senate by a 78 to 8 vote on September 6, 1961. Nearly everything which can be said about the measure has been said several times in the Interior and Insular Affairs Committee and repeated a time or two here on the floor. The report on the bill makes available to the Senators a section-by-section analysis and explanation.

In presenting the bill today I am seeking to impose on myself the same rule we proposed to witnesses at the hearings, and will try to confine myself largely to a statement on what is new.

The effect of the bill is to provide for setting aside, for preservation in their primitive condition, areas in the national forests, national parks and monuments, wildlife refuges and game ranges which are already being administered to preserve their wilderness character, as a national wilderness preservation system.

The bill sets criteria for their management to preserve their natural character and has two practical effects: It provides that areas finally and fully accredited for wilderness preservation shall have been reviewed both by the executive agencies in charge, and by Congress. It provides that once designated, the areas shall be protected against disturbance or exploitation except when one of the two highest authorities in the land, the President or the Congress, determines that other use is in the greater public good.

Because these areas are public lands already restricted as to commercial exploitation, the bill will cost nothing and cause no economic disturbance to communities, counties, States or private enterprises. Private rights, a half dozen mines, some grazing and a few inholdings, are not disturbed.

The net effect is essentially increasing the degree of protection given to existing wilderness. It becomes a statutory requirement with congressional approval, not just a bureau policy that can be set aside with a stroke of someone's pen.

Two years ago one of the principal points of attack made on this bill was that it was hasty—that the Outdoor Recreation Resources Review Commission was making a $2.5 million study of recreation facilities, including wilderness needs, and that we ought to delay action on a wilderness preservation bill until that report was filed.

But the minority report on the bill—then S. 174—said:

> We feel that the "sense of urgency" that lies behind the drive for enactment of this legislation is artificial and fictitious.

The minority continued:

> We do not attempt to challenge the motives of our colleagues who sincerely support this legislation, but we firmly believe that the "problems which will make the enactment of (such) legislation even more difficult" in the event of further delays are among the following:

The minority, speaking in 1961 before the ORRRC report was issued, then listed as the No. 1 problem which would make enactment of this bill more difficult this year as:

> 1. An analysis of the 1962 report of the ORRRC may well disclose that the 7 million acres presently classified as wild, wilderness, or canoe will be more than adequate to meet the recreation needs of those rugged few who seek the solitude of these areas.

The report of the Commission created under a bill which I introduced and on which I had the honor to serve with many fine Members of the Senate, is now available. It was filed in January 1962. The minority's question is answered, and one of the bits of new material which I can submit on this subject today is just what the Commission said in regard to wilderness.

On page 131 of the Outdoor Recreation Resources Review Commission's report is the Commission's recommendation 8 to 6, which reads:

> Congress should enact legislation providing for the establishment and management of certain wilderness areas as primitive areas.
>
> Primitive areas satisfy a deep-seated human need occasionally to get far away from the works of man.
>
> Prompt and effective action to preserve their unique inspirational, scientific, and cultural values on an adequate scale is essential, since once destroyed they can never never be restored.
>
> Portions of national forests, parks, monuments, wildlife refuges, game ranges, and the unreserved public domain meet the basic criteria of primitive areas. The natural environment has been undisturbed by commercial utilization, and they are without roads. Some of these areas are managed for the purpose of wilderness preservation under broad statutory authority. Certain areas of more than 100,000 acres in the national forest have already been set aside by the Secretary of Agriculture as "wilderness areas." Others between 5,000 and 10,000 acres have been set aside by the Chief of the Forest Service as "wild areas."

And now, Mr. President, comes the answer to the minority speculation about the Commission finding 7 million acres of wild and wilderness area to be more than adequate.

The Commission reported:

> There is a widespread feeling, which the Commission shares, that the Congress should take action to assure the permanent reservation of these and similar suitable areas in national forests, national parks, wildlife refuges, and other lands in Federal ownership.

Mr. President, the ORRRC went beyond S. 4, the wilderness bill which is now the pending business of the Senate. Ater enumerating the types of lands covered by this bill, it reported that:

> Congress should take action to assure the permanent reservation of these and similar suitable areas.

It also went beyond S. 4 by suggesting that, in addition to the forest, park, wildlife and game lands covered by S. 4, there should be some areas of the unreserved public domain set aside.

There are no unreserved public domain lands put into the wilderness system by S. 4 for a very good reason.

The lands which are designated as wilderness in the pending bill are all areas already reserved, already restricted, as to commercial exploitation.

There are no such reserved areas in the unreserved public domain.

We cannot be certain, as we are about areas actually covered by S. 4, that if a wilderness area is designated in the unreserved public domain it will not disturb some economic activity or arrangement.

Where designation of unreserved, unrestricted areas are involved, the sponsors of this bill have felt that the same procedure as is followed in establishing a national park—an act of Congress—is the proper procedure. This bill so provides. No unreserved lands, no areas not already restricted as to economic activity, are involved in S. 4. If there is effort to add the additional lands to our wilderness holdings as recommended by the Outdoor Recreation Commission, it will hereafter have to be by an act of this Congress apart from S. 4.

The point of these remarks is that the speculation of the minority in 1961, and I imply no criticism of my colleagues for being careful in their approach—has not only not been sustained by the ORRRC report, it has proved to be rather wide of the mark.

ORRRC found that the wild, wilderness, primitive, canoe, park, and wildlife areas covered in this bill should be reserved and protected as wilderness through prompt and effective action.

Since the findings of the Commission have been released, we have had witnesses before the Interior and Insular Affairs Committee who have contended that ORRRC found that "we do not need wilderness very much." The argument goes that the Commission found that the major part of our recreation problem is within 50 miles of our great urban centers.

The Commission did find that the largest number of recreational activity occasions will be an afternoon or evening walk, a drive, tennis, golf, a swim, or some simple pleasure close to home.

But besides these 1-day activity occasions, there are weekends, and there are vacations of 1, 2, 3, and 4 weeks and even longer on which only 9 percent of the participants stay within that 50-mile radius. Two-thirds travel more than 250 miles. One-third travel more than 750 miles; 27 percent travel more than 1,000 miles, and 10 percent make a trip of 2,000 miles or more.

The erroneous argument that we do not need recreation facilities except close to big cities was used against the Sleeping Bear Dunes proposal, by the Senator from Michigan [Mr. HART], at hearings a week ago. The Public Lands Subcommittee was told that a lakeshore recreation area was not needed in northern Michigan because it was more than 50 miles—240 miles, in fact—from Detroit. The implication was that no one would go there.

I hope that no one in the Senate will make such an argument. We need city playgrounds inside city limits. We need golf links, tennis courts, pools, and general outdoor recreation areas in or close to the suburbs. We need reasonable accessible vacation areas a day or two away from population centers, and we need far away places like our great national parks and wilderness for vacations.

The Outdoor Recreation Resources Review Commission proposed a system of classification of recreational areas illustrating the variety of our needs. I ask unanimous consent, Mr. President, to have printed in the RECORD at this point the Commission's recommendation of a system of classifying recreation lands in six categories to facilitate planning, administration, and understanding in the recreation field. It will clearly indicate the Commission's finding of the range of our needs.

There being no objection, the recommendation was ordered to be printed in the RECORD, as follows:

> The following system of classifying outdoor recreation resources is proposed:
>
> Class I—High-density recreation areas: Areas intensively developed and managed for mass use.
>
> Class II—General outdoor recreation areas: Areas subject to substantial development for a wide variety of specific recreation uses.
>
> Class III—Natural environment areas: Various types of areas that are suitable for recreation in a natural environment and usually in combination with other uses.
>
> Class IV—Unique natural areas: Areas of outstanding scenic splendor, natural wonder, or scientific importance.
>
> Class V—Primitive areas: Undisturbed roadless areas characterized by natural, wild conditions, including "wilderness areas."
>
> Class VI—Historic and cultural sites: Sites of major historic or cultural significance, either local, regional, or national.

Mr. ANDERSON. Mr. President, I served on the Outdoor Recreation Resources Review Commission and it was a real privilege, for which I am grateful to the Senate, for it was a truly outstanding Commission which did a very wonderful job.

The Commission was composed of four Members of the Senate and four Members of the House, equally divided between political parties, and seven members appointed by President Dwight D. Eisenhower. Mr. Laurance Rockefeller served as Chairman, and he rendered the Nation a great service in that capacity, as he is continuing to do as Chairman of a citizens' group which is pressing for implementation of the ORRRC report.

The members of the Commission, and also of a larger advisory council which assisted the Commission, included conservationists, public officials, and businessmen interested in the use and utilization of the natural resources of our forests and mineral lands.

The report itself says:

> After 3 years of research and an aggregate of 50 days of discussion among the Commissioners, the Commission has developed specific recommendations for a recreation program. The 15 members brought different political, social, and resource-use opinions to the meeting table, and proposed recommendations were put through the test of this range of opinions. During the course of the study and discussion, views of individual members developed and the collective opinion crystallized. The final recommendations are a consensus of the Commission.

That consensus, Mr. President, agreed with the policies and programs which would be established by S. 4 in detail.

The Commission recommended, as S. 4 provides, that wilderness areas remain under the administration of the agencies which now administer them. It commented immediately following the recommendation that "this concept is incorporated in pending legislation which provides that wilderness areas shall be administered by different Federal bureaus."

The Commission declared that wilderness areas should "be managed for the sole and unequivocal purpose of maintaining their primitive attributes. There should be no development of public roads, permanent habitations or recreation facilities. Mechanized equipment of any kind should be allowed in the area only as needed to assure protection from fire, insects, and disease."

All of these statements support features of S. 4.

The Commission had an independent study made of the wilderness problem. It discussed that report and the many subordinate problems involved in preserving an adequate area of untouched, natural lands. This discussion covered competing uses and needs for the lands. Those competing uses and needs are not entirely commercial, exploitive users like mining, timbering, and grazing. One of the greatest pressures on the wilderness areas in the national parks, and on the backlands in the wildlife ranges and refuges, is from the burgeoning number of recreationists themselves, and the pressure for mass recreation facilities.

It was because of this pressure, as well as other use pressures, that ORRRC found that the type of protection given the wild and wilderness areas in the national parks and wildlife lands by S. 4 to be highly desirable.

Mr. President, deep down inside of most Americans is a love of the out-of-doors.

This is the really essential fact one needs to know to pass judgment on this bill, and give it his support.

It is an effort to protect and preserve, unspoiled, just a little bit of the vast wilderness which stretched from ocean to ocean on this continent less than 300 years ago, so that this love of the great, unspoiled, out-of-doors which is a part of us can be gratified.

In September 1961, when this measure first passed the Senate, I was forced to be away and the senior Senator from Idaho [Mr. CHURCH] handled the measure on the floor.

I have a great obligation to him for the splendid presentation of the measure which he made, and the skillful manner in which the bill was handled. He had able assistance from the junior Senator from Montana [Mr. METCALF]; from the Senator from Utah [Mr. MOSS]; the present chairman of the Interior Committee [Mr. JACKSON]; and others.

As I read the RECORD, I felt, as I still feel, a deep sense of appreciation to all of them.

One passage in the debate impressed itself in my mind. That was a passage during which the Senator from Idaho [Mr. CHURCH] very fervently and very eloquently stated the fundamental case for the preservation of wilderness.

It is the one bid of old, not new, material which I shall use in these remarks for it is well worth repeating; it was one of those relatively infrequent but memorable passages in our usually workaday record. It was devoid of statistics, and devoid of legalistic arguments but it got down to fundamentals. The Senator said, and I read from the RECORD:

> Have those who seek the sanctuary of the wilderness no right in a country as vast and rich as the United States?
>
> We will deny those people their right if we fail to act in a timely fashion upon a wilderness bill.
>
> Most of the people in the Eastern United States are denied the right now because the wilderness has largely disappeared. It is vanishing in the West. Unless we take some action to establish legislative safeguards around it, within a few years it will disappear entirely. Once it has been dissipated, once roads have been built, once organized life starts, it is gone forever. It is not a renewable resource.
>
> So, if we are to preserve for future generations the uplifting experience which has come to those of us who have known the wild lands, we must act now, else our children and grandchildren will be forever deprived.
>
> So I say that, in a country which has come to be characterized by the congested life of cityism by the domesticated life of nicely clipped countrysides, let us reserve some places here and there and elsewhere around the country where the land remains as God

gave it to us, and make sure that it stays that way; so that those who want to escape from the banality of beer cans and cigarette commercials will have a chance to do so.

Mr. President, without wilderness this country will become a cage.

This passage from the distinguished Senator's remarks has been reprinted and quoted many times for the reason that it stated what a great many Americans feel and believe but cannot state so forcefully.

Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc, and that the bill as thus amended be considered as original text for the purpose of further consideration.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The amendments agreed to en bloc are as follows:

On page 11, after line 18, strike out:

"(i) (1) The Secretary of Agriculture and the Secretary of the Interior shall each, in submitting any recommendations to the President with respect to any area's retention in or incorporation into the wilderness system include with such recommendations the independent views of the Governor of the State in which such area is located with respect to the Secretary's recommendations generally, unless no reply is received from such Governor within ninety days after such recommendations are submitted to him and his views thereon requested."

And, in lieu thereof, to insert:

"(i) (1) The Secretary of Agriculture and the Secretary of the Interior shall, prior to submitting any recommendations to the President with respect to any area's retention in or incorporation into the wilderness system—

"(A) give such public notice of the proposed action as they deem appropriate, including publication in the Federal Register and in a newspaper having general circulation in the area or areas in the vicinity of the affected land;

"(B) hold a public hearing or hearings at a location or locations convenient to the area affected. The hearings shall be announced through such means as the respective Secretaries involved deem appropriate, including notices in the Federal Register and in newspapers of general circulation in the area: *Provided,* That if the lands involved are located in more than one State, at least one hearing shall be held in each State in which a portion of the land lies;

"(C) at least thirty days before the date of a hearing advise the Governor of each State and the county, or in Alaska the borough, governing board of each county, or in Alaska the borough, in which the lands are located, the United States Forest Service, the United States Soil Conservation Service, the Corps of Engineers of the United States Army, the Bureau of Reclamation, the Bureau of Mines, the United States Geological Survey, the Bureau of Sport Fisheries and Wildlife, the Federal Power Commission, the Rural Electrification Administration and the Federal Communications Commission, inviting each to set forth its views at the hearing. It shall be the responsibility of each named Federal agency to submit its independent views concerning the designation of an area as 'wilderness', giving an analysis of the comparative values that may be involved as between wilderness and that type of development or uses for which the Federal agency has administrative responsibility."

On page 13, line 21, after "(j)" strike out:

"In any case where State owned land is completely surrounded by lands incorporated into the wilderness system such State shall be given either (1) such rights as may be necessary to assure adequate access to such State-owned land by such State and its successors in interest, or (2) vacant, unappropriated and unreserved land in the same State, not exceeding the value of the surrounded land, in exchange for the surrounded land."

And insert:

"In any case where State-owned land is completely surrounded by land incorporated into the wilderness system, such State shall be given either (1) such rights as may be necessary to assure adequate access to such State-owned land by such State and its successors in interest, or (2) vacant, unappropriated, and unoccupied Federal land in the same State, equal in value of the surrounded land: *Provided,* That if the State does not reserve mineral rights in the surrounded land conveyed to the United States, the United States need not reserve mineral rights in the land conveyed to the State in exchange."

On page 14, line 21, after the word "the", strike out "Congress." and insert "Congress: *Provided, however,* That nothing in this Act shall be construed to confer a right of condemnation with respect to privately owned land within the boundaries of a wilderness area, or to impair any customary right or privilege heretofore enjoyed by the owners of such land, respecting access to it or to its ordinary use and maintenance."; and on page 17, line 14, after the word "where", strike out "well"; so as to make the bill read:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

"SHORT TITLE

"SECTION 1. This Act may be cited as the 'Wilderness Act'.

"WILDERNESS SYSTEM ESTABLISHED

"STATEMENT OF POLICY

"SEC. 2. (a) The Congress recognizes that an increasing population, accompanied by expanding settlement and growing mechanization, is destined to occupy and modify all areas within the United States and its possessions except those that are designated for preservation and protection in their natural condition. It is accordingly declared to be the policy of the Congress of the United States to secure for the American people of present and future generations the benefits of an enduring resource of wilderness. For this purpose there is hereby established a National Wilderness Preservation System to be composed of federally owned areas in the United States and its possessions to be administered for the use and enjoyment of the American people in such manner as will leave them unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of these areas, the preservation of their wilderness character, and for the gathering and dissemination of information regarding their use and enjoyment as wilderness.

"DEFINITION OF WILDERNESS

"(b) A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and its community of life are untrammeled by man, where man himself is a visitor who does not remain. An area of wilderness is further defined to mean in this Act an area of undeveloped Federal land retaining its primeval character and influence, without permanent improvements or human habitation, which is protected and managed so as to preserve its natural conditions and which (1) generally appears to have been affected primarily by the forces of nature, with the imprint of man's works substantially unnoticeable; (2) has outstanding opportunities for solitude or a primitive and unconfined type of recreation; (3) is of sufficient size as to make practicable its preservation and use in an unimpaired condition; and (4) may also contain ecological, geological, or other features of scientific, educational, scenic, or historical value.

"NATIONAL WILDERNESS PRESERVATION SYSTEM

"EXTENT OF SYSTEM

SEC. 3. (a) The National Wilderness Preservation System (hereafter referred to in this Act as the wilderness system) shall comprise (subject to existing private rights) such federally owned areas as are established as part of such system under the provisions of this Act.

"NATIONAL FOREST AREAS

"(b) (1) The wilderness system shall include all areas within the national forests classified on the effective date of this Act by the Secretary of Agriculture or the Chief of the Forest Service as wilderness, wild, primitive, or canoe: *Provided,* That the areas classified as primitive shall be subject to review as hereinafter provided. Following enactment of this Act, the Secretary of Agriculture shall, within ten years, review, in accordance with paragraph C, section 251.20, of the Code of Federal Regulations, title 36, effective January 1, 1959, the suitability of each primitive area in the national forests for preservation as wilderness and shall report his findings to the President. Before the convening of Congress each year, the President shall advise the United States Senate and House of Representatives of his recommendations with respect to the continued inclusion within the wilderness system, or exclusion therefrom, of each area on which review has been completed in the preceding year, together with maps and definition of boundaries: *Provided,* That the President may, as a part of his recommendations, alter the boundaries existing on the date of this Act for any primitive area to be continued in the wilderness system, recommending the exclusion and return to national forest land status of any portions not predominantly of wilderness value, or recommending the addition of any contiguous area of national forest lands predominantly of wilderness value: *Provided further,* That following such exclusions and additions any primitive area recommended to be continued in the wilderness system shall not exceed the area classified as primitive on the date of this Act. The recommendation of the President with respect to the continued inclusion in the wilderness system, or the exclusion therefrom of a primitive area, or portions thereof, shall become effective subject to the provisions of subsection (f) of this section: *Provided,* That if Congress rejects a recommendation of the President and no revised recommendation is made to Congress with respect to that primitive area within two years, the land shall cease to be a part of the wilderness system and shall be administered as other national forest lands: *And provided further,* That, primitive areas with respect to which recommendations are submitted to Congress on the eighth, ninth, and tenth years of the review period herein provided shall retain their status as a part of the wilderness system until the expiration, in respect to each area, of a full session of Congress, two years for resubmission of revised recommendations to Congress by the President, and, if so resubmitted, until the expiration of a full session of Congress thereafter. Recommendations on all primitive areas not previously submitted to the Congress shall be made during the tenth year of the review period. Any primitive area, or portion thereof, on which a recommendation for continued inclusion in the wilderness system has not become effective within fourteen years following the enactment of this Act shall cease to be a part of the wilderness system and shall be administered as other national forest land.

"(2) The purposes of this Act are hereby declared to be within and supplemental to but not in interference with the purposes for which national forests are established as set forth in the Act of June 4, 1897 (30 Stat. 11), and the Multiple Use-Sustained Yield Act of June 12, 1960, Public Law 86-517 (74 Stat. 215).

"NATIONAL PARK SYSTEM AREAS

"(c) (1) There shall be incorporated into the wilderness system, subject to the provisions of and at the time provided in this section, each portion of each park, monument, or other unit in the national park system which on the effective date of this Act embraces a continuous area of five thousand acres or more without roads. Within ten years after the effective date of this Act the Secretary of the Interior shall review the units of the national park system and shall report his recommendations for the incorporation of each such portion into the wilderness system to the President. Before the convening of Congress each year, the President shall advise the United States Senate and the House of Representatives of his recommendations with respect to the incorporation into the wilderness system of each such portion for which review has been completed in the preceding year, together with maps and definitions of boundaries. The recommendation of the President with respect to each such portion shall become effective subject to the provisions of subsection (f) of this section.

"(2) The Secretary of the Interior shall include, as part of his recommendations to the President under the provisions of this subsection, a description of the parts of each park, monument, or other unit submitted which should be reserved for roads, motor trails, buildings, accommodations for visitors, and administrative installations. Such parts shall be determined in accordance with the procedures for rulemaking under section 4 of the Administrative Procedure Act (5 U.S.C. 1003), except that the public notice required under such section shall be at least ninety days prior to the determination proceedings. No designation of an area for roads, motor trails, buildings, accommodations for visitors, or administrative installations shall modify or affect the application to that area of the provisions of the Act approved August 25, 1916, entitled 'An Act to establish a National Park Service, and for other purposes' (39 Stat. 535; 16 U.S.C. 1 and following). The accommodations and installations in such designated areas shall be incident to the conservation and use and enjoyment of the scenery and the natural and historical objects and flora and fauna of the park or monument in its natural condition. Further, the inclusion of any area of any park, monument, or other unit of the national park system within the wilderness system pursuant to this Act shall in no manner lower the standards evolved for the use and preservation of such area in accordance with such Act of August 25, 1916, the statutory authority under which the area was created, or any other Act of Congress which might pertain to or affect such area, including, but not limited to, the Act of June 8, 1906 (34 Stat. 225; 16 U.S.C. 432 and following); section 3(2) of the Federal Power Act (16 U.S.C., sec. 796(2)); and the Act of August 21, 1935 (49 Stat. 666; 16 U.S.C., sec. 461 and following).

"NATIONAL WILDLIFE REFUGES AND GAME RANGES

"(d) There shall be incorporated into the wilderness system, subject to the provisions of and at the time provided in this section, such portions of the wildlife refuges and game ranges established prior to the effective date of this Act under the jurisdiction of the Secretary of the Interior as he may recommend for such incorporation to the President within ten years following the effective date of this Act. Before the convening of Congress each year the President shall advise the United States Senate and the House of Representatives of his recommendations with respect to the incorporation into the wilderness system of each area recommended for such incorporation by the Secretary of the Interior during the preceding year, together with maps and definitions of boundaries. The recommendation of the President with respect to each area shall become effective subject to the provisions of subsection (f) of this section.

"MODIFICATION OF BOUNDARIES

"(e) Any proposed minor modification or adjustment of boundaries of any portion of the wilderness system established in accordance with this Act shall be made by the appropriate Secretary after public notice of such proposal by publication in a newspaper having general circulation in the vicinity of such boundaries and public hearing to be held in such vicinity not less than ninety days after such notice if there is sufficient demand during such ninety days for such hearing. The proposed modification or adjustment shall then be recommended with map and description thereof to the President. The President shall advise the United States Senate and the House of Representatives of his recommendations with respect to such modification or adjustment and such recommendations shall become effective subject to the provisions of subsection (f) of this section.

"EFFECTIVE DATE OF PRESIDENT'S RECOMMENDATIONS

"(f) Any recommendation of the President made in accordance with the provisions of this section shall take effect upon the day following the adjournment sine die of the first complete session of the Congress following the date or dates on which such recommendation was received by the United States Senate and the House of Representatives; but only if prior to such adjournment neither the Senate nor the House of Representatives shall have approved a resolution declaring itself opposed to such recommendation: *Provided,* That in the case of a recommendation covering two or more separate areas, such resolution of opposition may be limited to one or more of the areas covered, in which event the balance of the recommendation shall take effect as before provided: *Provided further,* That where a resolution of opposition to any such recommendation has been introduced, a hearing thereon shall be held within thirty days by the committee to which such resolution has been referred. Any such resolution shall be subject to the procedures provided under the provisions of sections 203 through 206 of the Reorganization Act of 1949 (5 U.S.C., secs. 133z-12—133z-15) for a resolution of either House of Congress.

"EFFECT OF PUBLIC NOTICE OF PROPOSED ADDITION TO WILDERNESS SYSTEM

"(g) Public notice when given by either the Secretary of the Interior or the Secretary of Agriculture that any area is to be proposed under the provisions of this Act for incorporation as part of the wilderness system shall segregate such area from any or all appropriation under the public land laws to the extent deemed necessary by such Secretary. Such segregation shall terminate (1) upon rejection of such proposal by the President, (2) upon approval by the Senate or the House of Representatives of a resolution opposing the incorporation of such area in the wilderness system, or (3) five years after the date of such notice if the proposal to incorporate such area as part of the wilderness system has not been submitted to both Houses of Congress prior to the expiration of such five years.

"ADDITION OR ELIMINATION NOT PROVIDED FOR IN THIS ACT

"(h) The addition of any area to, or the elimination of any area from, the wilderness system which is not specifically provided for under the provisions of this Act shall be made only after specific affirmative authorization by law for such addition or elimination.

"ADDITIONAL REQUIREMENTS WITH RESPECT TO RECOMMENDATIONS

"(i) (1) The Secretary of Agriculture and the Secretary of the Interior shall, prior to submitting any recommendations to the President with respect to any area's retention in or incorporation into the wilderness system—

"(A) give such public notice of the proposed action as they deem appropriate, including publication in the Federal Register and in a newspaper having general circulation in the area or areas in the vicinity of the affected land;

"(B) hold a public hearing or hearings at a location or locations convenient to the area affected. The hearings shall be announced through such means as the respective Secretaries involved deem appropriate, including notices in the Federal Register and in newspapers of general circulation in the area: *Provided,* That if the lands involved are located in more than one State, at least one hearing shall be held in each State in which a portion of the land lies;

"(C) at least thirty days before the date of a hearing advise the Governor of each State and the county, or in Alaska the borough, governing board of each county, or in Alaska the borough, in which the lands are located, the United States Forest Service, the United States Soil Conservation Service, the Corps of Engineers of the United States Army, the Bureau of Reclamation, the Bureau of Mines, the United States Geological Survey, the Bureau of Sport Fisheries and Wildlife, the Federal Power Commission, the Rural Electrification Administration, and the Federal Communications Commission, inviting each to set forth its views at the hearing. It shall be the responsibility of each named Federal agency to submit its independent views concerning the designation of an area as 'wilderness', giving an analysis of the comparative values that may be involved as between wilderness and that type of development or uses for which the Federal agency has administrative responsibility.

"(2) Views submitted to the President under the provisions of (1) of this subsection with respect to any area shall be included with any recommendations to Congress with respect to such area.

"STATE LANDS SURROUNDED BY WILDERNESS SYSTEM

"(j) In any case where State-owned land is completely surrounded by land incorporated into the wilderness system, such State shall be given either (1) such rights as may be necessary to assure adequate access to such State-owned land by such State and its successors in interest, or (2) vacant, unappropriated, and unoccupied Federal land in the same State, equal in value to the surrounded land: *Provided,* That if the State does not reserve mineral rights in the surrounded land conveyed to the United States, the United States need not reserve mineral rights in the land conveyed to the State in exchange.

"ACQUISITION OF CERTAIN PRIVATELY OWNED LANDS WITHIN THE WILDERNESS SYSTEM

"SEC. 4. The Secretary of the Interior and the Secretary of Agriculture are each authorized to acquire as part of the wilderness system any privately owned land within any portion of such system under his jurisdiction, subject to the approval of any necessary appropriations by the Congress: *Provided, however,* That nothing in this Act shall be construed to confer a right of condemnation with respect to privately owned land within the boundaries of a wilderness area, or to impair any customary right or privilege heretofore enjoyed by the owners of such land, respecting access to it or to its ordinary use and maintenance.

"GIFTS OR BEQUESTS OF LAND

"SEC. 5. The Secretary of Agriculture and the Secretary of the Interior may each accept gifts or bequests of land for preservation as wilderness, and such land shall on acceptance become part of the wilderness system. Regulations with regard to any such land may be in accordance with such agreements, consistent with the policy of this Act, as are made at the time of such gift, or such conditions, consistent with such policy, as may be included in, and accepted with, such bequest.

"USE OF THE WILDERNESS

"OTHER PROVISIONS OF LAW

"SEC. 6. (a) Nothing in this Act shall be interpreted as interfering with the purposes stated in the establishment of, or pertaining to, any park, monument, or other unit of the national park system, or any national forest, wildlife refuge, game range, or other area involved, except that any agency administering any area within the wilderness system shall be responsible for preserving the wilderness character of the area and shall so administer such area for such other purposes as also to preserve its wilderness character. Except as otherwise provided in this Act, the wilderness system shall be devoted to the public purposes of recreational, scenic, scientific, educational, conservation, and historical use. Subject to the provisions of this Act, all such use shall be in harmony, both in kind and degree, with the wilderness environment and with its preservation.

"PROHIBITION OF CERTAIN USES

"(b) Except as specifically provided for in this Act and subject to any existing private rights, there shall be no commercial enterprise within the wilderness system, no permanent road, nor shall there be any use of motor vehicles, motorized equipment, or motorboats, or landing of aircraft nor any other mechanical transport or delivery of persons or supplies, nor any temporary road, nor any structure or installation, in excess of the minimum required for the administration of the area for the purposes of this Act, including such measures as may be required in emergencies involving the health and safety of persons within such areas.

"SPECIAL PROVISIONS

"(c) The following special provisions are hereby made:

"(1) Within the wilderness system the use of aircraft or motorboats where these practices have already become established may be permitted to continue subject to such restrictions as the appropriate Secretary deems desirable. In addition, such measures may be taken as may be necessary in the control of fire, insects, and diseases, subject to such conditions as the appropriate Secretary deems desirable.

"(2) Within national forest and public domain areas included in the wilderness system, (A) the President may, within a specific area and in accordance with such regulations as he may deem desirable, authorize prospecting (including but not limited to exploration for oil and gas), mining (including but not limited to the production of oil and gas), and the establishment and maintenance of reservoirs, water-conservation works, transmission lines, and other facilities needed in the public interest, including the road construction and maintenance essential to development and use thereof, upon his determination that such use or uses in the specific area will better serve the interests of the United States and the people thereof than will its denial; and (B) the grazing of livestock, where established prior to the effective date of this Act with respect to areas established as part of the wilderness system by this Act, or prior to the date of public notice thereof with respect to any area to be recommended for incorporation in the wilderness system, shall be permitted to continue subject to such restrictions and regulations as are deemed necessary by the Secretary having jurisdiction over such area.

"(3) Other provisions of this Act to the contrary notwithstanding, the management of the Boundary Waters Canoe Area, formerly designated as the Superior, Little Indian Sioux, and Caribou roadless areas in the Superior National Forest, Minnesota, shall be in accordance with regulations established by the Secretary of Agriculture in accordance with the general purpose of maintaining, without unnecessary restrictions on other uses, including that of timber, the primitive character of the area, particularly in the vicinity of lakes, streams, and portages: *Provided*, That nothing in this Act shall preclude the continuance within the area of any already established use of motorboats. Nothing in this Act shall modify the restrictions and provisions of the Shipstead-Nolan Act, Public Law 539, Seventy-first Congress, July 10, 1930 (46 Stat. 1020), the Thye-Blatnik Act, Public Law 733, Eightieth Congress, June 22, 1948 (62 Stat. 568), and the Humphrey-Thye-Blatnik-Andresen Act, Public Law 607, Eighty-fourth Congress, June 22, 1956 (70 Stat. 326), as applying to the Superior National Forest or the regulations of the Secretary of Agriculture. Modifications of the Boundary Waters Canoe Area within the Superior National Forest shall be accomplished in the manner provided in section 3(e).

"(4) Commercial services may be performed within the wilderness system to the extent necessary for activities which are proper for realizing the recreational or other purposes of the system as established in this Act.

"(5) Any existing use or form of appropriation authorized or provided for in the Executive order or legislation establishing any national wildlife refuge or game range existing on the effective date of this Act may be continued under such authorization or provision.

"(6) Nothing in this Act shall constitute an express or implied claim or denial on the part of the Federal Government as to exemption from State water laws.

"(7) Nothing in this Act shall be construed as affecting the jurisdiction or responsibilities of the several States with respect to wildlife and fish in the national forests.

"(8) Nothing in this Act shall be construed to prevent, within national forest and public domain areas included in the wilderness system, any activity, including prospecting, for the purpose of gathering information about mineral or water resources or to prevent the completely subsurface use of such areas, if such activity or subsurface use is carried on, in a manner which is not incompatible with the preservation of the wilderness environment.

"RECORDS AND REPORTS

"SEC. 7. The Secretary of the Interior and the Secretary of Agriculture shall each maintain available to the public, records of portions of the wilderness system under his jurisdiction, including maps and legal descriptions, copies of regulations governing them, copies of public notices of, and reports submitted to Congress regarding, pending additions, eliminations, or modifications. Within a year following the establishment of any area within the national forests as a part of the wilderness system, the Secretary of Agriculture shall file a map and legal description of such area with the Interior and Insular Affairs Committees of the United States Senate and the House of Representatives, and such descriptions shall have the same force and effect as if included in this Act: *Provided, however*, That correction of clerical and typographical errors in such legal descriptions and maps may be made with the approval of such committees. Within a year following the establishment of any area in the national park system or in a wildlife refuge or range as a part of the wilderness system, the Secretary of the Interior shall file a map and legal description of such area with the Interior and Insular Affairs Committees of the United States Senate and the House of Representatives. Clerical and typographical errors in such legal descriptions and maps may be corrected with the approval of such committees. Copies of maps and legal descriptions of all areas of the wilderness system within their respective jurisdictions shall be kept available for public inspection in the offices of regional foresters, national forest supervisors, forest rangers, offices of the units of the national park system, wildlife refuge, or range.

"CONTRIBUTIONS AND GIFTS

"SEC. 8. The Secretary of the Interior and the Secretary of Agriculture are each authorized to accept private contributions and gifts to be used to further the purposes of this Act. Any such contributions or gifts shall, for purposes of Federal income, estate, and gift taxes, be considered a contribution or gift to or for the use of the United States for an exclusively public purpose, and may be deducted as such under the provisions of the Internal Revenue Code of 1954, subject to all applicable limitations and restrictions contained therein.

"LAND USE COMMISSIONS

"SEC. 9. With respect to any State having more than 90 per centum of its total land area owned by the Federal Government on January 1, 1961, there shall be established for each such State a Presidential Land Use Commission (hereinafter called the Commission). The Commission shall be composed of five persons appointed by the President, not more than three of whom shall be members of the same political party, and at least three of whom shall be residents of the State concerned. The Commission shall advise and consult with the Secretary of the Interior and the Secretary of Agriculture on the current utilization of federally owned land in such State and shall make recommendations to the appropriate Secretary as to how the federally owned land can best be utilized, developed, protected and preserved. Any recommendations made to the President by the Secretary of Interior or the Secretary of Agriculture and any recommendations made to the Congress by the President pursuant to the provisions of this Act shall be accompanied by the recommendations and reports made with respect thereto by the Commission.

"SEC. 10. At the opening of each session of Congress, the Secretaries of Agriculture and Interior shall jointly report to the President for transmission to Congress on the status of the wilderness system, including a list and descriptions of the areas in the system, regulations in effect, and other pertinent information, together with any recommendations they may care to make.

"SEC. 11. Nothing in this Act shall be construed as superseding, modifying, repealing, or otherwise affecting the provisions of the Federal Power Act (16 U.S.C. 792–825r)."

Mr. AIKEN and Mr. CHURCH addressed the Chair.

Mr. ANDERSON. Will the Senator from Vermont permit me to yield to the Senator from Idaho first?

Mr. AIKEN. Certainly.

Mr. CHURCH. I merely wish to say to the distinguished Senator from New Mexico that I appreciate his opening remarks. All of us on the Interior and Insular Affairs Committee know of the fine leadership we have had in him that has resulted in bringing this bill to the floor today. The Senator from New Mexico is one of the most distinguished conservationists in the Senate today, and no chapter he has written over the course of a long and brilliant career will win for him greater esteem in the hearts of the people, than the leadership he has given to this measure. I just wanted to express my feeling, which I know is shared by many other Members of the Senate.

Mr. ANDERSON. I thank the Senator from Idaho. I yield now to the Senator from Vermont.

Mr. AIKEN. Mr. President, I wish to commend the Senator from New Mexico for his ability and persistence in this effort. This bill, if enacted into law, will enable future generations of Americans to see at least a few wilderness spots in America.

As I understand, very little area east of the Mississippi and north of Kentucky would be eligible for inclusion in wilderness areas. Am I correct in my understanding that the Mount Desert Island area in Maine and the White Mountain area in New Hampshire will be eligible for such inclusion?

Mr. ANDERSON. I think that is correct. A few States have some space that is wilderness area, like New York State, for example, which will be eligible for preservation under their own State system, but not under the national system.

Mr. AIKEN. But it would require additional legislation to put in the wilderness area any tracts which are not now included?

Mr. ANDERSON. Yes, it would. One of the things we made sure of is that it requires positive legislation to add new areas.

Again I thank the Senator from Vermont for his fine leadership. I have been associated with him many times in agricultural legislation, and it has been a great pleasure to be associated with him in conservation legislation. I pay tribute to him.

Mr. AIKEN. I shall support the legislation even though no area of my State would be eligible to be included in the wilderness area. We have other ways, however, of preserving forest reserves and wild areas in Vermont.

Mr. JOHNSTON. Mr. President, I commend the Senator from New Mexico for the diligent work he has given to the bill pending before the Senate. In the Southeast, and especially in South Carolina, we would be benefited very little, if at all, by the bill; but I am mindful of the fact that if something had been done years ago in this particular field, it would have brought much benefit to South Carolina and the Southeastern States. We let it slip through our fingers, so to speak. Today we can do very little about it, but, at the same time, the West is at the present time trying to preserve forests. I am glad to see them do it. I commend especially the senior Senator from New Mexico for his diligent efforts in this field.

Mr. ANDERSON. I thank the Senator from South Carolina for his kind remarks, which are typical of him.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. ALLOTT. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. ALLOTT. Have the committee amendments been adopted en bloc?

The PRESIDING OFFICER. The committee amendments were agreed to en bloc. The bill, as amended, is considered as original text for the purpose of amendment. The bill is now open to further amendment.

Mr. DOMINICK. Mr. President, if I may, at this time, I should like to make some statements about the pending bill and my own position on it, and also with respect to possible amendment which might be added to it.

First of all, I wish to say that I had the privilege of serving in the House of Representatives in the last 2 years on both the Public Lands Subcommittee and the Interior Committee, which considered the bill when it came to the House from the Senate last year.

There is little or no doubt in my mind that although I personally would like to see a wilderness system set up under legislative authority, the pending bill, as it is now written, would, if passed by the Senate, encounter considerable difficulty in being approved by the appropriate committee in the other body.

I say that for a variety of what I consider to be very good reasons. First, I served with a great many of the Members in the House; secondly, there is basic disagreement on the question of which branch of Government should have primary authority in creating a legislative system under law.

We have at the moment in the pending bill a proposal which I believe it would be wise to modify in at least one important respect, and which could have vast significance in insuring for future generations a wilderness system in which people could enjoy the forests and mountains and lakes as a part of our Nation's heritage.

However, the difficulty is that we are grouping together and putting into one system, without any particular legislative scrutiny, a vast area of land known as the primitive lands, which have not been classified by the executive department or reviewed by Congress, to see whether this is the most useful purpose for that particular group of public lands.

What we have proposed in committee, and what the other body was doing its best to try to put into effect in previous hearings and previous discussion of the bill, is the proposal that the legislative body, Congress, should have the right to determine, after recommendation by the executive department, which of these primitive lands or which group of these primitive lands should be brought into the wilderness system, and that they should not all be blanketed in at the same time.

As an example of that, I would like to point to—and I believe the Senator from New Mexico [Mr. ANDERSON] would agree—what I consider to be a good system, namely, the method by which we decide on the establishment of reclamation projects. There is a possibility, I suppose, that under reclamation law the Executive could simply decide what is to be done by way of reclamation projects and then send the proposal to Congress, and, unless Congress vetoed it, the projects would go through. However, as a matter of fact, that is not the way we have established the reclamation system. What we have done is to say that the Executive shall determine whether a particular project is feasible. At the end of that study it sends the project to Congress. Then Congress both authorizes the project involved and appropriates the money for it. During the course of that time, however, Congress very carefully inspects and studies the details of each project that is presented to it.

It is my feeling, and I believe the feeling of a great number of us in Congress, whether it be in the Senate or in the House, that that is the same type of system that we ought to use in connection with the wilderness system. However, it is not. What we are being asked to do here is to say that we will blanket everything in, and then the Executive will review it and say either that additional public lands will be brought in or that some of them should be taken out; and that the only way Congress will have the right to act in a negative way on the matter will be by way of a veto.

I believe that a comparison of such a proposal with the Reorganization Act shows it to be basically wrong. The reason it is basically wrong is that under the Reorganization Act the executive department is, in fact, dealing with the executive departments of Government. In that kind of situation perhaps the Reorganization Act, which gives Congress only the right to veto, has some possibility of being fruitful and the expedient way of handling executive departments.

However, in this particular situation what we are dealing with is wholly different. We are saying that we will take a vast amount of public land, belonging to the people of the United States all over the country, and blanket it into a system, as the result of which the majority of the people can no longer use those lands for any purpose whatsoever.

The evidence has shown, in the House and in the Senate, if I may use a colloquial term, that only about 2 percent of the visitors to public lands never go into the wilderness lands at all.

This taking of action by Executive decree is beyond the principle and scope of the effort which we in this great body should undertake. We should determine whether particular lands are to be isolated and carried out of use by people of the United States, and isolated into a situation where only 2 percent of the people can have any benefit out of them.

There are other problems involved in connection with this situation. I was able, during the course of the hearings, to ask the distinguished head of the Forest Service as to whether passage of the bill would later prevent the construction of electric transmission lines across wilderness systems which might be incorporated in the pending bill. I asked whether we would be able to continue the necessary water development of the West if we passed the bill. I asked that particularly because of the need that we have for water development in the western area of the United States, in particular.

The answer that I received was that the bill, if passed, would supersede other laws now on the books, and that this would mean that no construction could go on in these wilderness areas, of any kind, unless the President of the United States himself determines that this construction of transmission lines or water development facilities, or whatever it might be, was in the public interest to the extent that there should be permitted an invasion of the wilderness concept of any particular land. This could easily in the State of Colorado, and in any other Western State, seriously hamper the necessary construction of facilities for the accumulation of water for the benefit of the entire economy of the Western area of the United States.

It is a really serious question as to whether it will be possible to continue water development if any of the wilderness systems which are contemplated under the terms of the bill will in fact hamper the construction of transmission lines or the development of water facilities. We already know that within some of the wilderness systems which would be brought within the terms of the bill as it is now presented to the Senate, there are in existence water development projects which it will be necessary, in some manner, to maintain so as to insure their continuance. There is no such guarantee in the bill at the present time. Therefore, it would be necessary to promulgate special regulations or to get special exceptions in order to be able to take care of existing water developments in certain portions of wilderness areas at the present moment. This is one reason why I have serious doubt whether the bill, if it remains in its present form, even with the amendments adopted by the committee, will be able to pass the other body of Congress.

I say again, publicly, that I favor a legislative system to preserve wilderness areas; but I have strong doubts as to whether the pending bill will accomplish that result. I say that because I have strong doubt as to whether the bill in its present form will ever pass the other body of Congress.

We have a very simple amendment, which was offered in committee by my colleague, the distinguished senior Senator from Colorado [Mr. ALLOTT], which would reserve the process which is proposed in the bill. It would bring into the wilderness system all lands which are now classified as wilderness or canoe, but would leave out all lands now classified as primitive. It includes specific instructions that primitive lands shall remain primitive under their present usage, but that they would be reviewed by the executive department, and that each year, as Congress meets, Congress would be presented with recommendations as to those lands, not only by the executive department but also by the Governors of the States and by representatives of the local areas which are involved, after hearings. The recommendations would be presented to Congress for authorization to be included within the wilderness system.

If this type of amendment were adopted by the Senate, it seems to me that without any doubt not only would there be almost unanimous approval for the passage of the bill in this body, but that the chances of the passage of the bill in final form through the other body would be greatly enhanced. At the moment, I do not conceive of any particular difficulty in getting a bill of that type through the other body. However, I anticipate substantial difficulty in having a bill of the present nature, even with the committee amendments which have been adopted, passed by the other body.

Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Colorado will state it.

Mr. DOMINICK. Do I correctly understand that the committee amendments as shown in the committee report—Report No. 109—have already been adopted by voice vote?

The PRESIDING OFFICER. They have been adopted. The bill as amended is considered as original text for the purpose of amendment.

Mr. ANDERSON. Mr. President, will the Senator from Colorado yield?

Mr. DOMINICK. I yield.

Mr. ANDERSON. The plan was to have the committee amendments adopted en bloc. The bill then would be regarded as a new bill, to which amendments to any section thereof would be in order. Amendments which were then offered would not be barred as third degree amendments, or anything of that nature.

Mr. DOMINICK. Have the amendments which were included in Report No. 109 been explained to the Senate?

Mr. ANDERSON. They have not been explained. A motion was made that they be adopted. The explanation should properly take place during the discussion of the bill.

Mr. DOMINICK. Has that motion yet been voted upon?

Mr. ANDERSON. Yes, it has. The committee amendments have been adopted en bloc, and the bill is all new text, as carried in the report, for the purpose of amendment.

Mr. DOMINICK. I thank the Senator from New Mexico. That relieves my mind.

Mr. President, most of us, particularly those of us who represent the Western States, are probably more conscious of the beauty and magnificence of the proposed wilderness areas than perhaps any other group in the United States. Most of us from that area use the public lands for hunting, fishing, and exploring. Some of the public lands are used for grazing purposes. Those who conduct grazing operations on the lands have participated in the process of soil conservation within those areas and have performed a very fine service in many cases. Therefore, I believe that the general attitude which has been created by some conservationists, namely, that those who are opposed to this type of bill are a group of Neanderthals, and who do not have any idea of what the greatest heritage of our country is, are simply wholly wrong in their approach to the problem. They do not understand what we are trying, basically, to do.

I do not suppose there is any group of people who are more conscious of the need of preserving the public lands and of the need for having as a national heritage public lands, public parks, and systems of this kind, which can be preserved and used for their beauty and for the solitude that is contemplated in the bill, for hunting, for fishing, and all the other desirable uses that these lands would make possible. But this does not derogate from the conflict with the basic principle, namely, whether Congress will retain affirmative control over the public lands, or whether Congress proposes simply to delegate the whole operation to the executive department, and retain nothing except the right of veto. It seems to me that that is the basic principle with which we in this body are concerned, and which will be of great concern in the other body.

I add one more observation. I have explored, I have fished, I have hunted, I have hiked, I have camped all through these systems. I have been doing it for most of my life. I think most of us in the Senate have done so, in one form or another. We who feel that the bill should be amended are not trying to prevent its passage. We are simply trying to insure the adoption of a system which will not prevent the great majority of the people of the country from enjoying these areas, from enjoying the lands which will actually be included in the system, and insure that the lands will be those which should more properly be within that system.

We are also very carefully trying to outline for the Members of this body the basic conflict in the matter of principle. Will Congress retain control and authority over the public lands in an affirmative sense, or will we turn control over to the executive department, as is now proposed in S. 4, even as amended?

Mr. MANSFIELD. Mr. President, will the Senator from Colorado yield?

Mr. DOMINICK. I yield.

UNANIMOUS-CONSENT AGREEMENT AND ORDER FOR ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. MANSFIELD. I have asked the Senator to yield for the purpose of propounding a unanimous-consent request. The proposal has been cleared with the two Senators from Colorado, with the minority leader, and the acting minority leader; with the majority leader; with the senior Senator from New Mexico [Mr. ANDERSON], who has done so much in behalf of the bill; and with the senior Senator from Idaho [Mr. CHURCH], who is in charge of the bill.

Mr. President, I ask unanimous consent that when the business of the Senate has been completed today, the Senate adjourn until 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that beginning at 10 o'clock tomorrow morning, 1 hour be allocated to each amendment, 30 minutes to a side, the time to be controlled by the Senator from Colorado [Mr. ALLOTT], and the Senator from Idaho [Mr. CHURCH]; and that there also be 1 hour on the bill.

Mr. KUCHEL. Mr. President, reserving the right to object, and I shall not object, does the majority leader contemplate any morning hour tomorrow at 10 o'clock?

Mr. MANSFIELD. No.

Mr. KUCHEL. It is proposed that the Senate adjourn today?

Mr. MANSFIELD. Yes; and the time for debate will begin at 10 o'clock tomorrow.

Mr. KUCHEL. So, Mr. President, assuming that yea-and-nay votes are ordered, the Senate should be on notice, as I understand, that on or about 11 a.m. the Senate will begin to vote on the proposed amendments.

Mr. MANSFIELD. The acting minority leader is correct in his assumption.

Mr. KUCHEL. Very well.

I have no objection.

The **PRESIDING OFFICER.** Is there objection to the unanimous-consent request? The chair hears none, and without objection, it is so ordered.

Mr. MANSFIELD. I thank the Senator from Colorado.

The unanimous-consent agreement, reduced to writing, is as follows:

Unanimous-Consent Agreement

Ordered, That, on Tuesday, April 9, 1963, at the hour of 10 a.m., the Senate resume the consideration of the bill S. 4, the so-called Wilderness Act, and that thereafter debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to 1 hour, to be equally divided and controlled by the mover of any such amendment or motion and Mr. Church: *Provided,* That in the event Mr. Church is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further,* That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to 1 hour, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided,* That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

Mr. CHURCH. Mr. President, the junior Senator from Colorado has made three arguments which I think require some comments for purposes of clarification, if for no other purpose.

First of all, he has called for amendments to the bill, on the ground that unless we amend the bill in certain important respects, it will not be acceptable to the other body.

Mr. President, it is always open to the other body to modify in anyway it may see fit measures passed by the Senate; and if we in the Senate are to do our constitutional job, it certainly is not incumbent upon us to pass measures in such form as we think might be acceptable to the other body. Instead, we should pass measures which in our judgment will constitute the best and most desirable legislation for the country. In doing so, we do not impinge upon the prerogatives of the other body; instead, we discharge our own responsibilities in the best and highest sense of that term.

Second, the junior Senator from Colorado has argued that we should handle primitive areas in the way we handle reclamation projects; namely, by having special authorization by Congress prior to the time any given project is constructed.

I would agree if we were considering the establishment, for the first time, of primitive areas; if we were faced with a situation in which there were no primitive areas; and if Congress were being asked now to establish them. If this were the situation, it might be entirely appropriate to take the position that these areas should be established only upon the affirmative act of Congress.

But today we have in our national forests over 6 million acres which have been designated by the executive agencies of the Government as primitive areas. These areas have been established for periods of between 20 and 30 years. In my State alone, Mr. President, there are in excess of 3 million acres in primitive areas. The authority to establish these areas, to enlarge them, to create new ones, and to modify their boundaries was delegated years and years ago to the executive branch by the Congress.

What we are attempting to achieve by this bill is a measure of congressional control which does not now exist. In Idaho, we have waited for nearly 30 years to have these primitive areas reviewed by the Forest Service. Only this year has the Forest Service managed to complete its review of one of them, namely, the Selway-Bitterroot Area, involving portions of Idaho and Montana—an area which originally comprised 1,875,000 acres. The Forest Service has for the past 2 years studied the area, held special hearings in Montana and Idaho, and finally made recommendations—which were approved only 2 months ago by the Secretary of Agriculture—committing 1,240,000 acres of the area to wilderness, excluding and restoring to ordinary forest lands 447,000 acres which were found to be more suitable for multipurpose use, and leaving 190,000 acres in primitive area status.

Mr. President, this example should suffice to demonstrate that the executive agencies not only have the power to establish primitive areas, but also can redesignate the primitive areas as wilderness areas, without having the matter even come to Congress for any sort of consent, surveillance, or review.

The Secretary of Agriculture has announced his intention to convert another primitive area in Idaho—the Sawtooth Primitive Area, comprising 200,942 acres of land—into a wilderness area. Again he proposes to do so—using authority he now has under existing law—by the stroke of his pen; and the matter will never come to Congress for any vote or any review.

So I suggest that it is totally unrealistic to argue that this bill somehow diminishes congressional power over the public lands. The very contrary is the case. The bill seeks to restore to Congress surveillance over the portions of the primitive areas which are to be permanently included in the wilderness system; and the bill does so by providing that before the President, acting through the Secretary of Agriculture, may convert a primitive area into a wilderness area and may make it permanently part of the wilderness system, he must submit his recommendation to Congress, where it will be subject to review by both Houses, and where either House can, by majority vote, veto the proposal.

So, Mr. President, by means of this bill we are attempting to accomplish a restoration of authority to Congress, thus reclaiming to Congress a power which heretofore has been delegated to the executive branch.

Finally, Mr. President, the junior Senator from Colorado has argued that the bill constitutes some sort of impairment with respect to the development of water resources within the areas affected by the bill. He has pointed out, quite correctly, the importance of water impoundments—dams, power generators, and reclamation projects—to the West. But, Mr. President, I suggest that there are two portions of the bill which adequately assure the West continued water development, and I submit that even within the wilderness system the bill does not constitute any impediment whatever.

First of all is the provision which preserves intact the authority of the Federal Power Commission to license water projects.

In the course of the hearings it was made clear that the Federal Power Commission, which Congress has charged with the authority to license water development projects on the rivers of the West, would retain its full jurisdiction. There is no provision in the bill to the contrary which would affect that jurisdiction. So with respect to the major water developments that must be licensed by the Federal Power Commission, the bill would in no way interfere.

Second, there is provision that the President of the United States may open a wilderness area to minor water resource conservation measures, small watershed developments, so that once we would place areas into wilderness, they would not forever be removed from such activity.

Finally, need it be said that with respect to major public water projects, the Congress always retains authority—and, indeed, it is the practice of the Congress—to authorize such projects by legislation. Nothing in the bill could affect the power of Congress to authorize public water projects in wilderness areas by specific enactment. That is our practice anyway. So I suggest there is no basis for the arguments that the Senator has advanced. I hope that the Senate will not amend the bill in the ways that he has suggested.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. CHURCH. I yield.

Mr. DOMINICK. I was particularly interested in two phases of the very interesting discussion of the Senator. First was the question of fact as to whether we would regain authority under the bill from the executive department or whether we would not. I would say that

I think we probably would. I think that is probably a correct analysis of it.

But the point I am making is that we would not regain the type of authority that we should take. With respect to the analysis of the Senator from Idaho as to what the executive department can do now and what the Congress would be permitted to do under the bill as it stands in its present form, I ask the following question: Is it not true that at the present moment there must be positive action by the Congress of the United States in order to create a national park, even though it may be out of lands classified as public lands in one form or another?

Mr. CHURCH. The Senator is correct. There must be an affirmative enactment on the part of Congress to establish a new national park. But there need be no action at all on the part of Congress, in fact, no congressional action is now taken when areas within the national forest are placed in wilderness status. That authority has long since been delegated away to the Secretary of Agriculture, and this bill would restore the prerogative of Congress.

Mr. DOMINICK. But my question really is as follows: If we must take positive action to create a national park, why should we not also take positive action in order to create a wilderness area?

Mr. CHURCH. The answer to that question is that the primitive areas are already there. In this bill we are attempting to have them reviewed within a 10-year period, and a determination made by those reviews as to what portions of the areas shall be permanently included in the wilderness system. Given those facts, if we were to require affirmative action on the part of Congress before primitive areas that are already there may be included within the wilderness system, we could not assure ourselves that each of the recommendations would ever come to the floor of either House for action.

The Senator from Colorado, having been a Member of the other body, is fully aware that many legislative proposals and many executive recommendations never get to the floors of Congress for a vote. If we were to require positive action, which would call for an affirmative vote in both the Senate and the House of Representatives before a recommendation could take effect, there would be no way by which we could assure ourselves that those recommendations would ever be acted upon in the Congress. After the 10-year review period has expired, without some action by the Congress, the bill provides that primitive area lands not acted upon would automatically be returned to regular National forest status. So the only way that we could guarantee that primitive areas would be reviewed and the Congress would act upon them is by the device that is provided in the bill giving a veto to either House, but not requiring affirmative action on the part of both Houses.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. CHURCH. I yield.

Mr. DOMINICK. I would merely say in passing that if we should determine that that was the necessary procedure to get something before Congress in this case, it seems to me that perhaps any measure which the Senator from Idaho favored ought to be treated legislatively along those lines. Such action would seriously reduce the power of Congress.

But the other point that I wished to make was with reference to the question of whether or not the proposal might inhibit water development, reclamation projects, and the construction of transmission lines on projects that have already been authorized and constructed.

I call to the attention of the Senator from Idaho the questions that were asked of the Secretary of the Interior as they appear on page 29 of the hearings. I pointed out that water development includes more than merely plain damsites. It includes the construction of conduits—transmission lines—a great number of pieces of which must go across lands which would be included within the wilderness system under the bill as it is now written. I asked him whether the provision would not give a right of veto to the President of any particular reclamation project that might be passed by Congress. The President could say, "All right. We do not mind the reclamation project, but we are not going to permit you to build facilities for the reclamation project across the wilderness system." The answer was that obviously that could be true.

Mr. CHURCH. Mr. President, I respectfully disagree with the Secretary of the Interior in that regard. Had he had an opportunity better to consider the question and his answer, I believe he would have concluded otherwise.

First, if we are to have any new public water project in a wilderness area, it would require positive action of the Congress, and that requires Presidential consent; he must sign the bill. It is hard for me to feature why a President would sign a bill authorizing a public project and then turn around and refuse to permit the building of the project by virtue of the fact that it is located in a wilderness area. That would be an act of complete contradiction.

Second, if the project is a private project, it must be licensed by the public power commission. The bill preserves the full prerogative of the Federal Power Commission without any inhibition or limitation whatsoever.

I suggest to the Senator that his fears are not well grounded with respect to this proposed legislation.

Mr. DOMINICK. I sincerely trust that the Senator is correct.

Mr. ALLOTT. Mr. President, I intend to speak at some length on this subject. I wish to begin by remarking that no bill that has been before the Congress in the past 2 years has had as many words said about it which shed as little light or little understanding of what the bill is about as the particular measure before us.

I first encountered this matter in the spring of 1957. Since then various groups in support of a wilderness system have grown up, like mushrooms, all over the country.

What is a wilderness system? The bill describes it in some of the most wonderfully idealistic language anyone ever could conjure up:

> A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and its community of life are untrammeled by man.

There are those of us who have opposed this concept of a wilderness system for years. I shall always oppose it, because I think it is wrong. It is wrong because it is a travesty upon the great majority of the American people. I shall go into this later.

Secondly, it is wrong because the bill, as now drawn, violates the fundamental precepts of our American constitutional system.

It is also wrong because it would give to a very few people in the United States the unbridled use of land to the detriment of every other public use, whether it be mining, grazing, forestry, or plain recreation.

All those factors add up to sufficient reason, in my mind, for opposing the bill in its present form.

I say again—because it seems necessary to say it at least a hundred times to get it through the minds of some people who will not and do not wish to purvey and repurvey the truth—I am in support of a limited wilderness system. I have always been in support of a wilderness system. I am in support of a wilderness system of from 7 to 8 million acres. There is one now existing of 8 million acres.

I think we should set aside forever for the people of this country an area which will be essentially untouched by man and unbothered by man, which will be used solely for a measure of enjoyment by man of nature in its primitive state.

The facts are that there are some 65 million acres, using round figures, in primitive areas, wild areas, canoe areas, wilderness areas, wildlife refuges and game areas, and national parks which are susceptible of inclusion in the wilderness system.

The pending bill seeks to include and would include immediately in the wilderness system all of the primitive areas, all of the wilderness areas, all of the wild areas, and all of the canoe areas.

The question is, What should we do? There is one big question, aside from the problem of improving the language of the bill and making it more workable. The big question is, How should we include these areas within the wilderness system? How should we add to the 8 million acres?

I wish to point out a few things about the 8 million acres which are now in the wilderness system. Some 1¼ million acres were added in the past year by administrative action taken in the Department. This is one reason why I want a bill passed. I say to those who are sponsors of the bill, they are no more anxious to have a wilderness bill passed than I am, except that I should like for Congress to take a hard, affirmative look at every acre of land which is to come under the system afterwards.

The testimony has been undisputed before the committee for several years that not more than 1 percent of all the people who use the Federal public land areas—the forests, the parks and everything else—use the wilderness system.

Before the administrative action was taken last year, those people already had available for their use 8 percent of all of the land of the public domain, set aside in wilderness areas. So the 1 percent of the people who use our public lands, before the administrative action was taken last year, had the use of 8 percent of the land. They had 8 times as much of the use of the land, in proportion, as did the people who used the national parks, the national monuments, and things such as that, in the ordinary sense in which we use them.

What happened last year was that there were approximately 1¼ million acres added—whatever the figure was; at least a million acres—in the Selway-Bitterroot Area of Idaho. That raised the proportion. Now the 1 percent of the people who use our public lands have 12 percent of the public lands set aside for their use—12 percent is set aside for their exclusive use.

I am somewhat of a realist. I can appreciate the great cultural values some of these people feel these lands might have. When they have 12 times as much land set aside for their use as the ordinary individual does, I think they are getting somewhere near their equal share of the public land use.

There is a more impelling reason why we should not go beyond this at the present time. If Senators will read the bill, they will find that no one could go into these areas except man on his two legs or on horses. There are to be no roads. No motorboats will be allowed, except where they have been customarily used, and they will be regulated out as fast as they can be. There will be no machinery of any kind in these areas. There will be nothing allowed in the areas except man on his two legs and on horses.

What will this mean in practical terms and effects? I do not care what the supporters of the bill have said to the contrary, the facts are it is not within the financial realm of the average man who takes his family on a vacation to rent an outfit with a guide and horses, as well as pack horses and the necessary equipment, to go into a wilderness area. I do not care what anybody says to the contrary, we shall be establishing here, mainly, a wilderness system for people of more affluent means, denying the area and its enjoyment for the most part to people of ordinary means.

But there is another reason for opposition. No roads are to be provided. I do not have the figures with me, but we all know that there is a growing number of people who are retired, who have reached the ages of 60 and 65. They have retired, and now, perhaps for the first time in their lives, they have sufficient time to utilize these facilities, to have some of the pleasures of life, after having worked for so long.

There is not one person in a thousand of that age who has the physical stamina to put a pack on his back or to ride a horse into a wilderness area 25 miles in order to enjoy the use of that area, even if he had the money to hire a horse and guides. Frankly, most of them have no business in those areas without guides, having lived a more sedentary existence all their lives. They have no justification physically for walking or riding into those areas.

So what have we done here? We have already locked up 12 percent of our public lands, and the most beautiful areas in the United States. They are not locking up any old swamp or merely mediocre views, or anything like that, for the 1 percent of the population; they are locking up 12 percent of the most beautiful, wild, primitive country we have between the Atlantic and the Pacific.

Now, I think there is a case to be made for pure justice and pure equity. Consider that our people from 60 to 65 years of age cannot have access to a road where they can view those parts of the country, because no roads are permitted in them. On the other hand, how well are we going to treat the 1 percent of our population, this handful of people who are reaching out for more and more of this land? They are not satisfied with the 8 million acres that they have now. Under this bill 65 million acres of land are subject to reclassification as wilderness area, and this is what they are reaching out to grab.

As a matter of compromise, I am perfectly willing, personally, to go along with the 8.2 million acres they now have. But it seems to me we are going as far as we should go.

This brings me to the amendment which I have offered, and which I intend to offer again tomorrow morning, to provide that, just like the park system, no more lands shall be included in the wilderness system unless Congress has acted affirmatively.

I think my colleague from Colorado [Mr. DOMINICK] very beautifully and brilliantly illustrated this point just a few minutes ago. Fortunately, we have not given authority to the Secretary of the Interior to throw any lands he wants to into this system. Congress has retained jurisdiction for that purpose.

On February 20 of this year, the following Senators all joined me in offering an amendment to Senate bill 4: Messrs. BARTLETT, BENNETT, CANNON, DOMINICK, FONG, GOLDWATER, HAYDEN, JORDAN of Idaho, LAUSCHE, MECHEM, MUNDT, RANDOLPH, SIMPSON, and THURMOND.

This amendment is not now in print, having been submitted to the Committee on Interior and Insular Affairs.

I ask unanimous consent that it may be printed in the RECORD at this point in my remarks, and that it may also be printed for the use of the Senate.

The PRESIDING OFFICER. The amendment will be received, printed, and will lie on the table; and, without objection, will be printed in the RECORD.

The amendment is as follows:

(f) Any recommendation of the President made in accordance with the provisions of this section shall take effect upon the day following the adjournment sine die of the first complete session of the Congress following the date or dates on which such recommendation was received by the United States Senate and the House of Representatives; but only if prior to such adjournment Congress approves a concurrent resolution declaring itself in favor of such recommendation: *Provided*, That, in the case of a recommendation covering two or more separate areas, such resolution may be limited to one or more of the areas covered or parts thereof.

Mr. ALLOTT. Mr. President, I shall discuss this amendment more fully tomorrow.

In order to understand this problem and all its ramifications, there are certain things that need to be known. First of all, let us face it squarely—this is not a conservation bill. I repeat, this is not a conservation bill. The word "conservation" is mentioned in the bill only once.

As a man who has lived all his life in the West, I think I understand conservation about as well as anyone. I have been a fan of conservation measures, and I may say even a rabid supporter.

In my opinion, the bill as it is now constituted is not going to conserve anything. It is going to lock up areas for the use of a few. But the conservation aspects of the bill are completely lacking.

I should like to underscore again the fact that this is not a conservation measure. If a bill locking up areas which may not receive the benefits of conservation is called a conservation measure, then we have reversed the meaning of conservation in this country. The word "conservation" is mentioned in the bill only once. I do not see mentioned anywhere in the bill the fact that conservation is one of the purposes hoped to be accomplished.

In order that the record may be completely clear, there are in the national forest, wild, wilderness, and canoe areas, 8,220,403 acres.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. GOLDWATER. Can the Senator tell me how many acres there are in my State of Arizona?

Mr. ALLOTT. The figures I have before me show 422,990.

Mr. GOLDWATER. I thank the Senator.

Mr. ALLOTT. In the National Park System there are 22,560,000 acres.

In the lands not now permanently withdrawn from resource use, there are in the national forest primitive areas 6,098,532 acres.

There are 28,554,014 acres in the National Wildlife Refuges and game areas.

That makes a total of 65,432,949 acres that are susceptible of inclusion within the wilderness areas.

I ask unanimous consent that I may include in the RECORD at this point a table showing Federal ownership or management of land in 11 Western States. The table shows, I may say for the benefit of the distinguished Senator from Arizona [Mr. GOLDWATER], who is on the floor, that 71.3 percent of the State of Arizona is owned by the Federal Government.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 1.—*Federal ownership or management of land in 11 Western States*

	Total land area (thousand acres)	Federally owned land [1] (thousand acres)	Percent of total land area	Managed by Federal Government Indian tribal lands (thousand acres)	Percent of total land area	Federally owned or managed lands (thousand acres)	Percent of total land area
Arizona	72, 688	32, 396	44. 6	19, 383	26. 7	51, 779	71. 3
California	100, 314	45, 071	44. 9	496	. 5	45, 567	45. 4
Colorado	66, 510	24, 156	36. 3	746	1. 1	24, 902	37. 4
Idaho	52, 972	34, 050	64. 3	409	. 8	34, 459	65. 1
Montana	93, 362	27, 815	29. 8	1, 557	1. 7	29, 372	31. 5
Nevada	70, 265	60, 726	86. 4	1, 062	1. 5	61, 788	87. 9
New Mexico	77, 767	27, 300	35. 1	5, 815	7. 5	33, 115	42. 6
Oregon	61, 642	31, 580	51. 2	1, 208	2. 0	32, 788	53. 2
Utah	52, 701	36, 466	69. 2	2, 253	4. 3	38, 719	73. 5

Wyoming	62, 404	30, 219	48. 4	1, 753	2. 8	31, 972	51. 2
Total	753, 368	362, 445	48. 1	36, 495	4. 8	398, 940	52. 9

[1] Excludes trust properties, Indian tribal lands.

Source: Statistical Abstract of the United States, 1960.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. ALLOTT. I am happy to yield.

Mr. GOLDWATER. I might point out that in my State of Arizona, when we add the State-owned land to the Federal-owned land, the total is 88 percent. In other words, the fastest growing State in the Nation must get along, taxwise, by taxing 12 percent of the available land.

I suggest that in the days when my State had fewer than a million people, and the density was two or three persons to the square mile, we could live under those conditions. However, what the Federal Government is doing by forcing more and more land in the West under Federal control is to hasten the day when the Western States will not be able to tax themselves adequately to run their own governments. Of course, when this happens, the only place that we will be able to turn to will be the Federal Government. That is something that we westerners do not like to do.

It is unfortunate that when the Original Thirteen States formed our Union they, too, were not subjected to some kind of giving away of their land in order to become members of the Union.

Frankly, I believe that if we westerners had known before what we know now, many of our communities would not be States of the Union, but would still be territories. I say that because, frankly, we were better off as far as the ability to live our own lives was concerned.

In my State we have 16 national monuments, 2 national parks, and 2 national recreation areas. I forget how many wildlife areas we have. Still the effort is to put more and more land under the control of the Federal Government, instead of continuing with the rather time-honored and time-proven concept of multiple use of the lands in the West.

I suggest that our eastern friends, who are so eager to have the West become a giant national park, might try to imagine their own State problems if they were to have in their own States their own lands subjected to ownership by the Federal Government.

I might say, in passing, because I see on the floor my good friend from Idaho, sitting in the majority leader's chair, that, as he well knows, one of my favorite fishing spots in the whole Nation is in the Middle Fork of the Salmon River in Idaho. I remember when that was truly a wilderness area, when it was hard to get in, and when it meant perhaps a 2½-day pack trip to get to the Middle Fork of the Salmon River. It was opened up. I do not know if it is a wilderness area, as such. However, it is some kind of wildlife area.

To me that was one of the most beautiful streams in the world. Although it has retained its beauty, the area has been opened up to people who have no appreciation for this kind of scenery. The last time I was there I saw empty beer cans and empty whisky bottles, and fish still lying around the campsites, and the campsites uncleaned. Instead of preserving these areas as wilderness areas, the tendency is to have them more and more opened up. The public will demand that they be opened up. As a result they will lose their scenic value. I am in hearty accord with the preservation of areas for people who really like to get into the wilderness, or get out into the open, as we say, and use it. However, I am not in favor of opening it up to the abuse of people who want to say they have been there and in the process leave their trade mark.

Mr. CHURCH. Mr. President, will the Senator from Colorado yield, so that I may respond to the Senator from Arizona?

Mr. ALLOTT. I yield for that purpose.

Mr. CHURCH. The area to which the Senator from Arizona refers is, of course, an Idaho primitive area. I know the Senator loves the area very much. He has taken some wonderful photographs of the area on the occasion of his trips into it in the past. I say to him that one of the purposes of the proposed legislation is to prevent a further opening up of the area, which is what has occurred in past years, so that the scenic and wilderness values, which are the predominant values, can be preserved, and so that the wildlife and the watershed can be preserved as well. In this sense, the bill is not only a wise conservation measure, but also a measure to prevent the continuation of the very process the Senator has lamented.

I might just say in passing, in all good humor, that I have listened with interest to the remarks of the Senator with respect to the burdens of statehood. I would say that it is open to him to sponsor legislation to restore Arizona to territorial status. If a persuasive case can be made, I believe Congress would listen with fascination to the advocacy of such a proposal by the Senator from Arizona.

Mr. GOLDWATER. I might say that I doubt Congress would seriously consider, or that even the New Frontier would seriously consider, such a proposal, because we pay about $300 million a year into the National Treasury. I do not believe they are about to let go of a fat plum like that.

My reference was to the days when we became territories and then later States, when we did not have big populations, and when Federal ownership of lands, even in Idaho and in Montana, was of no great consequence. We never gave it any thought at all. Today, in a State like my own, which is the sixth largest State from a geographical standpoint in the United States, we find ourselves with these national parks and national monuments and national recreation areas located in our State, and approximately 19 Indian reservations, taking up about 88 percent of the State. We do not like to lose any more of the 12 percent of the land, because we are up against the wall now.

There is another point that I should like to raise and with respect to it ask a question of my good friend from Idaho, if the Senator from Colorado will yield for that purpose.

Mr. ALLOTT. I yield.

Mr. CHURCH. First I should like to respond to the Senator from Arizona by saying that the pending bill does not involve the acquisition of so much as a single acre of additional Federal land; all of the land involved is already owned by the Federal Government; so it will not impose any heavier burden upon the Western States, where, I agree, Federal ownership is very large. The bill does not enlarge that holding whatever.

Mr. GOLDWATER. I am happy to be reassured on that point by the Senator. This is the point that bothers me. I know what the intention of the writers of the bill is. I can say that I am in accord with it, but I am troubled by this point. The Senator says that the Idaho Wilderness Area, if it becomes a part of the public land, will be preserved in its present form and condition.

I have asked this question of the Secretary of the Interior, Mr. Udall, with respect to a large section of land near Henry Mountain, in southern Utah, in the Wild Horse Area, about which Zane Grey wrote, and with respect to Navaho Mountain, where I run a trading post, an area consisting of about 15 million acres, which he wants to make into a so-called wilderness area. What is going to happen when the eastern tourist or the western tourist cannot get in there? What if he cannot get in there because he does not like to ride a horse and he does not like to walk, perhaps because he has not heard of the 50-mile program, but, instead, likes to drive his car on a paved road and find good accommodations when he gets there? My question is, Can the Interior Department and can the organization set up to administer the bill and can Congress withstand pressures to provide the funds to open these places? That is what bothers me.

Mr. CHURCH. Mr. President, I should like to respond to the question of the Senator from Arizona [Mr. GOLDWATER].

Mr. ALLOTT. Mr. President, I yield to the Senator from Idaho to permit him to respond; then I should like to resume my discourse.

Mr. CHURCH. The very pressures which the Senator from Arizona fears are pressures which are genuinely feared by the supporters of the proposed legislation. We feel that an enactment of this kind will provide better guarantees that wilderness areas can be preserved in their primitive state than will the absence of such legislation. Without such legislation, it is much more likely that the pressures will not be withstood and that the small portions of the wilderness which still remain to us will vanish. This is one of the chief reasons why I support the bill.

Mr. ALLOTT. Mr. President, I should like to respond, since the Senator from Arizona has raised this question. I am looking at a map which is included in the hearings on S. 174, the wilderness bill, held in 1961. I am looking at page 284, which has facing it a map of Colorado and a map of Arizona, showing areas which are susceptible of inclusion in the wilderness system.

Everyone who desires to have some kind of beauty retained in our mountains must ask himself a question. For example, if one looks at the wilderness areas in Colorado, he observes that it is very hard to establish a camp on the side of one of our mountains which rise to 14,000 feet. Ultimately, in the wilderness areas of the West, one is reduced to a relatively few locations where camps can be established.

The next question one must ask himself is this: After 30, 40, or 50 parties have camped in those few areas which are suitable for camping, and considering the tin cans and other refuse, including the residue left by horses, how much suitable area will be left untrammeled by man and his four-footed friends? The answer is: Not too much So the proposal to include more and more land in the bill is unrealistic.

The Senator from Arizona mentioned the multiple-use concept of land. I wish to discuss that point. Since the passage by Congress of the multiple-use law, this would be really the first time that that law would be completely abrogated. Congress included in the multiple-use law the use of areas for a wilderness system. I think this is one of the proper uses. But we simply cannot afford, as I pointed out to the Senate 2 years ago, to put all our land—some of it our best land—into wilderness and lock it up so that it can never be touched again.

Mr. John Wolfe, a prominent Colorado geologist, made an impressive statement before the Committee on Interior and Insular Affairs this year. He pointed out that the great portion of the mineral wealth of Colorado lies beneath the wilderness areas which would be set aside by the bill. The same is true of other States. When we begin to talk about conservation and the use of land, I think we are entitled to talk about multiple use. When 12 percent of all the public lands of this country are already locked up for a single use—as wilderness areas—merely to enable people to breathe fresh air, I think we have reached a place beyond which we should not go until Congress has had an opportunity to consider the proposal and gage it affirmatively. The multiple-use theory with respect to land has been accepted by Congress and has been adopted by Congress. I think it should be retained by Congress.

When we hear what is proposed to be done with the land, I think it should be pointed out that in the 11 States of the West—Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming—the value of the farm, mine, and forest products is $6,369 million. The value of the mineral production is $3.8 billion; the value of forest products is $3.3 billion.

As in the State of the distinguished Senator from Arizona [Mr. GOLDWATER], Federal land ownership is substantial in Colorado, roughly, 35 percent. That means that we who live there must bear a greater proportion of the expense of our State than we would if we had the opportunity to convert Federal lands to private ownership; but we do not have that opportunity.

At the time a similar bill was considered by the Senate 2 years ago, the proponents did not pay any attention whatever to impending report of the Outdoor Recreation Resources Review Commission. The reason was that the report had not been completed at that time. But the proponents were perfectly willing, anyway, to establish wilderness areas, even though some $2 million had been spent on the Outdoor Recreation Resources Review Commission and the study which it had made. Congress nevertheless proceeded to consider wilderness legislation.

Now the report of that Commission is before us. What did that "blue chip" Commission, of which the distinguished Senator from New Mexico [Mr. ANDERSON] was a member, say about wilderness areas. Speaking of primitive areas, the report said:

> Areas in this class are inspirational, esthetic, scientific, and cultural assets of the highest value. They, and they alone, satisfy the longing to leave behind for a time all contact with civilization. Fortunately, they are a resource of which the country still has an abundant supply and which it can afford to preserve from other uses for the benefit of future generations. At the same time, it must be recognized that there are some areas which meet the physical requirements of this class but which for economic and social reasons are more valuable for other purposes.
>
> The recommendation is that primitive areas should be carefully selected and should be managed for the sole and unequivocal purpose of maintaining their primitive characteristics.

What the Commission said was that some of the lands may be valuable for other purposes than as wilderness areas. With that statement I agree.

Mr. President, turning now to the bill, it contains several items which I think should be considered very carefully.

On page 17 we find the following provision in regard to grazing:

> The grazing of livestock * * * shall be permitted to continue subject to such restrictions and regulations as are deemed necessary by the Secretary having jurisdiction over such area.

Mr. President, in the committee I tried unsuccessfully to have the word "restrictions" stricken, because I believe that word has a connotation in the bill which is not justified. So, Mr. President, tomorrow I shall try again to have that word stricken.

The word "restrictions" is also used in connection with motorboats, on page 16. I think there is no question that it is the intention of both the Secretary of Agriculture and the Secretary of the Interior to restrict the use of motorboats. However, with respect to this matter I notice the provision that—

> The President may * * * authorize prospecting (including but not limited to exploration for oil and gas), mining (including but not limited to the production of oil and gas)—

And so forth, and so on.

The point is that "restrictions" and "regulations" either mean the same thing or else "restrictions" further qualifies "regulations." I believe it rather significant that the portion which refers to the President's action provides for "regulations," but the bill provides that there will be "restrictions" in regard to the use of motorboats. If anything is to be done with respect to grazing in the wilderness system, I believe such a provision should be included under "regulations," not "restrictions." In my opinion and, I believe, in the opinion of most persons, the word "restrictions" carries with it the right arbitrarily to establish a guideline which must be followed, whereas the word "regulations" implies a limitation under a definite set of guidelines which will remain constant and will not be subject to the whim or fancy of the Secretary of Agriculture or the Secretary of the Interior.

Therefore, Mr. President, I send to the desk an amendment relating to these words. I ask that the amendment be printed.

The PRESIDING OFFICER (Mr. RIBICOFF in the chair). The amendment will be received and printed, and will lie on the table.

Mr. ALLOTT. Mr. President, in the next few minutes I propose to discuss briefly several amendments which I shall send to the desk and ask to have printed.

I turn now to another amendment relating to page 17 of the bill. This part of the bill has caused us a great deal of concern and trouble. I refer to the provision of the bill that:

> (2) Within national forest and public domain areas included in the wilderness system, (A) the President may, within a specific area and in accordance with such regulations as he may deem desirable,—

And so forth.

My amendment would substitute the words "appropriate Secretary" for "the President." I believe it perfectly obvious to anyone—and tomorrow I shall discuss this matter at greater length—that no one would have access to the President, for the purpose of securing authority to explore for minerals or "the establishment and maintenance of reservoirs, water conservation works, transmission lines, and other facilities needed in the public interest, including the road construction and maintenance," and so forth. Of course I believe those who drafted the bill desire to place that power in the hands of the President, because no one would have access to him. However, if we wish this provision to be meaningful, and if we really mean what we provide in the bill when we include the provision that this can be done whenever the public interest demands it, let us put the authority in the Secretary, and permit him to take action.

So, Mr. President, I send the amendment to the desk, and ask that it be printed and lie on the desk until tomorrow.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. ALLOTT. Mr. President, I also call attention to the review provided by the bill. On page 10 of the bill we find the following provision:

> *Provided, further,* That where a resolution of opposition to any such recommendation has been introduced, a hearing thereon shall be held within thirty days by the committee to which such resolution has been referred.

The difficulty arises from the fact that 30 days is too long a period of time. The Reorganization Act of 1949—and the procedures under the bill are subject to that act—contains a provision that immediately after 10 days following the filing of any resolution and its referral to a committee, any Member of the House or any Member of the Senate may move to discharge the committee from the further consideration of the resolution. But if such a motion were made on the 11th day, for example, the committee would not be required to hold a hearing for 20 days after that, but still be in compliance with this provision of the bill.

So this amendment is a simple one which provides that the word "thirty" be changed to the word "five", so that the committee will have to hold a hearing within the limitation time provided under the Administrative Procedures Act, and so that the Member of the House or the Member of the Senate who makes the motion to discharge the committee from the further consideration of the resolution will have in his hand, when he comes to the Senate or to the House, as the case may be, a hearing upon the resolution, and will have an opportunity to question and to cross-question witnesses and to provide a record and to have the record available for debate.

Mr. President, I ask that this amendment be printed and lie on the table until tomorrow.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. METCALF. Mr. President, will the Senator yield?

Mr. ALLOTT. I am happy to yield to the distinguished Senator from Montana.

Mr. METCALF. Would the amendment be an amendment to a provision of the Reorganization Act or the provision on page 10, line 14, which reads "shall be held within thirty days"—so that it would read "five days"?

Mr. ALLOTT. It is an amendment to line 14. "Thirty" would read "five".

Mr. METCALF. There would be no change in the other provisions of the Reorganization Act?

Mr. ALLOTT. No, the amendment would not affect the Reorganization Act, as such, or the Administrative Procedure Act.

Mr. METCALF. I merely wished to be clear as to the effect of the proposed amendment.

Mr. ALLOTT. The amendment would only change the time of hearing from 30 days to 5 days, so that anyone who would desire to avail himself of the so-called advantages of the bill would really have some advantage he could take.

Mr. President, tomorrow I shall offer another amendment which would deal with page 3, line 23. I shall not discuss the amendment in detail today. The gist of it is that primitive areas would not be placed within the wilderness system following enactment of the bill, but, they would be assured their preservation in their present category and their protection until such time as they could be classified by the appropriate Secretary and recommendations made as to their exclusion from or inclusion in the wilderness system.

I ask unanimous consent that the amendment be printed and lie on the desk. I am sure that members of the committee fully understand the purpose of the amendment.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment is as follows:

> On page 3, line 23, strike out all through line 3 on page 6 and insert in lieu thereof the following:
>
> "(b) (1) The wilderness system shall include all areas within the national forests classified on the effective date of this Act by the Secretary of Agriculture or the Chief of the Forest Service as wilderness, wild, or canoe: *Provided,* That the areas within the national forests classified as primitive may be included in the wilderness system as hereinafter provided. Following enactment of this Act, the Secretary of Agriculture shall, within ten years, review in accordance with paragraph C, section 251.20, of the Code of Federal Regulations, title 36, effective January 1, 1959, the suitability of each primitive area in the national forests for preservation as wilderness and shall report his findings to the President. While being reviewed and until action is taken as provided by this subsection, primitive areas shall be administered so as to preserve their present status and condition. Before the convening of Congress each year, the President shall advise the United States Senate and House of Representatives of his recommendations with respect to the inclusion within the wilderness system, or exclusion therefrom, of each area on which review has been completed in the preceding year, together with maps and definition of boundaries: *Provided,* That the President may, as a part of his recommendations, alter the boundaries existing on the date of this Act for any primitive area to be included in the wilderness system, recommending the exclusion and return to national forest land status of any portions not predominantly of wilderness value, or recommending the addition of any contiguous area of national forest lands predominantly of wilderness value; *Provided further,* That following such exclusions and additions any primitive area recommended to be included in the wilderness system shall not exceed the area classified as primitive on the date of this Act. The recommendation of the President with respect to the inclusion in the wilderness system, or the exclusion therefrom of a primitive area, or portions thereof, shall become effective subject to the provisions of subsection (f) of this section: *Provided,* That if Congress rejects a recommendation of the President and no revised recommendation is made to Congress with respect to that primitive area within two years, the land shall cease to be a primitive area and shall be administered as other national forest lands: *And provided further,* That primitive areas with respect to which recommendations are submitted to Congress on the eighth, ninth, and tenth years of the review period herein provided shall retain their status as primitive areas until the expiration, in respect to each area, of a full session of Congress, two years for resubmission of revised recommendations to Congress by the President, and, if so resubmitted, until the expiration of a full session of Congress thereafter. Recommendations on all primitive areas not previously submitted to the Congress shall be made during the tenth year of the review period. Any primitive area, or portion thereof, on which a recommendation for inclusion in the wilderness system has not become effective within fourteen years following the enactment of this Act shall cease to be a primitive area and shall be administered as other national forest land."

Mr. ALLOTT. Mr. President, on page 17 of the bill is a section which, as I have stated, has caused us much trouble. There is a provision that purports to refer to mining, which I wish to discuss. I have already pointed out that it is next to impossible—if not impossible—for anyone to get the President's ear for the purpose of determining whether or not a certain area should be explored and mined for oil, gas, or other minerals. The amendment which I propose would affect the mining provision which is now in the bill, which is utterly meaningless, and which would never have any effect.

Mr. President, I ask unanimous consent that the amendment may be printed, that it lie on the table until tomorrow, and that it be printed at this point in the RECORD.

The PRESIDING OFFICER. The amendment will be received and printed and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment is as follows:

On page 17, line 1, strike out all through "(B)" on line 14 and insert in lieu thereof the following:

"(2) Within national forests and public domain areas included in the wilderness system: (A) Notwithstanding any other provisions of this Act, until midnight, December 31, 1977, laws of the United States pertaining to mineral leasing and mining shall, to the same extent as applicable prior to the effective date of this Act, extend to all lands affected by this Act; subject, however, to such reasonable regulations as may be prescribed by the Secretary having jurisdiction over the area consistent with the use of the land for mineral development and exploration drilling. Subject to valid rights then existing, effective January 1, 1978, the minerals in lands designated by this Act as wilderness areas are withdrawn from all forms of appropriation under the mining laws and from leasing under the mining laws and from leasing under the Mineral Leasing Act and all amendments thereto. *Provided,* That after December 31, 1977, the appropriate Secretary may, within a specific area and in accordance with such regulations as he may deem desirable, authorize prospecting (including but not limited to the exploration and production of oil and gas).

"(B) The appropriate Secretary may within a specific area and in accordance with such regulations as he may deem desirable authorize the establishment and maintenance of reservoirs, water-conservation works, transmission lines, and other facilities needed in the public interest, including the road construction and maintenance essential to development and use thereof, upon his determination that such use or uses in the specific area will better serve the interests of the United States and the people thereof than will its denial; and (C)".

Mr. ALLOTT. Mr. President, I have one final amendment which I shall offer tomorrow. I am making my remarks so that Senators may be aware of the nature and the purposes of my amendments. The amendment, relating to page 21, line 9 of the bill, would strike out the section of the bill concerning a land use commission, a provision which was inserted in the bill to affect one State. I believe there is no justification for treating any one State any differently from another. In this instance the Secretary of Agriculture himself recommended that we exclude that provision from the bill.

Mr. President, I send the amendment to the desk and ask that it lie on the table. I ask unanimous consent that it may also be printed in the RECORD.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment is as follows:

On page 21, line 9, strike out all through line 4, page 22.

Mr. ALLOTT. In conclusion, we should have a wilderness system. We should have a wilderness bill. I desire to be protected from the precipitous actions of our Secretaries of Agriculture and our Secretaries of the Interior. We have found that they are capable of precipitous action. We found that they were capable of such action when they included the Selway-Bitterroot area last year.

It is my hope that we could have a wilderness bill which would protect all Americans—not merely those who desire wilderness, but also those who are interested in true conservation, those who are interested in the development of the West, and those who wish to see restored to Congress control of that portion of our congressional duties which we have relinquished. As the distinguished Senator from Idaho has said, it is true that, under the bill, we would have more control than we have had. But we would not have the control that we should have. What is needed is the right and the power to exert control over lands that are going into wilderness areas in the same way that we do lands that go into the national park system. Otherwise we will actually have abrogated much of our responsibility and our power, and we will be afflicted with more woes than Job ever was.

Mr. METCALF. Mr. President, will the Senator from Colorado yield?

Mr. ALLOTT. I am happy to yield.

Mr. METCALF. So that the discussion will be in today's RECORD and available for Senators to read, I desire to take some time to discuss the power which the Senator from Colorado suggests we should recapture. As was very brilliantly outlined by the Senator from Idaho [Mr. CHURCH], who is handling the bill, we are only dealing with Federal land that has a certain specific use. We are recapturing some of the power that we delegated 30 to 50 years ago.

Mr. ALLOTT. Is that not the statement I just made?

Mr. METCALF. Yes.

I wish now to talk about the other Federal land, about which the Senator from Arizona was concerned, land with which all of us in the Western States are concerned. That is all the other Federal land that is not incorporated in a primitive area, in a national park, in a wilderness area, in a fish and wildlife or in a canoe area. As to those vast Federal lands, the bill would give authority to Congress that the Senator is seeking.

The bill provides that no new wilderness area shall be created out of areas that are not now under wilderness use or under use similar to wilderness use without an affirmative and specific act of Congress.

Mr. ALLOTT. If the Senator's statement is in the form of a question, I shall be happy to answer. The Senator is completely correct. But the fact is that it is a statement without meaning. None of the areas of which he has spoken will ever be included in the wilderness areas because they would not be useful for that purpose. It is not that kind of area and not that kind of land.

As far as I know, at the present time the Department of Agriculture has already classified as primitive areas and as wilderness areas almost every strip of land in this country which could possibly be classified as such.

The Senator from Colorado was a faithful attendant at the hearings. The Senator will recall that several witnesses suggested that, contrary to our prediction a few years ago, the amount of land in wilderness and primitive areas in the national parks, and so forth, has grown in the last few years. Right now some of the people who were proponents of the measure are suggesting that other wilderness areas and other primitive areas in other parks shall be created. Under present law, as the Senator from Idaho has said, such areas could be created by a stroke of the pen. If the land is national forest land, the area could be created out of the national forests by a decision of the Secretary of Agriculture. But if the bill should pass, we would have to have an affirmative act to create a wilderness area just as we create a national park or authorize a Bureau of Reclamation project.

I merely wish to say to the Senator that if, under section (h), page 11, of the bill, he is perfectly happy to have other areas reviewed affirmatively, I can see no real basis for differentiation as to why we should have a different system for the areas that have been qualified as wilderness areas.

Mr. METCALF. Merely because——

Mr. ALLOTT. I should like to remind the Senator that I have the floor. I yielded to him. I at least want to keep enough control so that I can answer in full before I yield to him again.

The fact is that the Senator was talking about areas which are outside of the primitive, wild, park, game refuge, and so forth, areas, and the Senator says, "This is all right." There is no justification for making a distinction as between the two. I made this statement before the Senator took his feet: I agree that by the bill, if it should become law—and the Lord forbid that it ever should become law—we would be recapturing a portion of the powers which we delegated away a long time ago. The point is that we would not be recapturing enough. We would not recapture enough so that the Congress would consider every acre which was to go into a wilderness system on exactly the same basis it considers every acre which is to go into the park system.

Mr. METCALF. Mr. President, will the Senator from Colorado yield?

Mr. ALLOTT. I am happy to yield to the Senator.

Mr. METCALF. I thank the Senator. I did not mean for the discussion to be a series of questions. I merely wished to discuss with the Senator a phase which the senior Senator from Colorado and the junior Senator from Colorado had omitted.

I refer to the effect of the bill on other areas of the public domain which are not included in these various categories.

I should like to cite, for information, the ORRRC report, which the Senator from Colorado cited. On page 132 of the report there is the quotation:

> Portions of national forests, parks, monuments, wildlife refuges, game ranges, and the unreserved public domain meet the basic criteria of primitive areas.

Mr. President, I ask unanimous consent that an excerpt from the report, from which I have quoted, may be printed in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

> Portions of national forests, parks, monuments, wildlife refuges, game ranges, and the unreserved public domain meet the basic criteria of primitive areas. The natural environment has been undisturbed by commercial utilization, and they are without roads. Some of these areas are managed for the purposes of wilderness preservation under broad statutory authority. Certain class V areas of more than 100,000 acres in national forests have already been set aside by the Secretary of Agriculture as wilderness areas. Others between 5,000 and 100,000 acres have been set aside by the Chief of the Forest Service as wild areas.
>
> There is widespread feeling, which the Commission shares, that the Congress should take action to assure the permanent reservation of these and similar suitable areas in national forests, national parks, wildlife refuges, and other lands in Federal ownership. The objective in the management of all class V areas, irrespective of size or ownership, is the same—to preserve primitive conditions. The purpose of legislation to designate outstanding areas in this class in Federal ownership as wilderness areas is to give the increased assurance of attaining this objective that action by the Congress will provide.

Mr. METCALF. I now skip some of the excerpt, to the point:

> There is widespread feeling, which the Commission shares, that the Congress should take action to assure the permanent reservation of these and similar suitable areas in national forests, national parks, wildlife refuges, and other lands in Federal ownership.

I am suggesting that by the passage of the bill, with respect to other lands in Federal ownership and the unreserved public domain, we would be recapturing for the Congress an affirmative declaration of congressional action to create a wilderness out of those lands, which is sought by the two Senators from Colorado.

Mr. ALLOTT. Then the Senator is recommending, as I understand, that other lands should go into the system, other than those contemplated by the pending bill?

Mr. METCALF. I am not recommending. The ORRRC report so recommends.

Mr. ALLOTT. I thought the Senator was citing it with approval.

Mr. METCALF. I was citing it in response to the suggestion made by the Senator from Colorado that there were no lands other than the primitive areas, and so forth, which were capable of wilderness use. I was suggesting that there are people, including the authors of the ORRRC report, who say that there are other lands in the public domain and national forests which meet the criteria for wilderness, and who wish to incorporate them into a wilderness system.

Mr. ALLOTT. I know that the Senator argues his point with great sincerity and with great belief in what he says. I should like to invite attention to the same section of the report to which the Senator has referred. On page 131 of the ORRRC report, it is stated:

> Recommendation 8-6: Congress should enact legislation providing for the establishment and management of certain primitive areas (class V) as "wilderness areas."

There was nothing in the report about classifying all primitive areas as wilderness areas. That is what we would be doing, under the form of the bill as it is now being considered. We would include all primitive areas to start with in the wilderness system.

Mr. METCALF. The very next paragraph, which I have had printed in the RECORD along with my remarks, lists the national forests, national parks, monuments, wildlife refuges, game ranges, and the unreserved public domain, as meeting the basic criteria of primitive areas, as being lands which should go into the wilderness system.

Mr. ALLOTT. I have one question for the Senator. It is more a rhetorical question than an actual one.

If the affirmative action of the Congress is the proper way to bring in the other areas, why is it not a proper way to apply to the present bill?

Mr. METCALF. As the Senator from Idaho so eloquently pointed out, these areas are now and have been for more than 30 years primitive, for wilderness use. We would only continue the basic use which has existed for more than 30 years. We would not be using any of these acres of land for anything else; whether national parks, primitive areas, or designated as wilderness.

Mr. ALLOTT. I should have to disagree with the Senator, because if the primitive areas come into the wilderness system under the terms of the bill, even though there may be mining and some forestry in some of the primitive areas now, there would not be any in the future.

Mr. METCALF. For 30 years these lands have been administered substantially as wilderness areas.

Mr. ALLOTT. There has been mining and some forestry. So if we should bring the lands into the wilderness system under the terms of the bill, all that would stop immediately.

Mr. METCALF. The very purpose of the review is to protect the interests which have been created. The people involved have had an opportunity during all of these past years to go in and prospect the lands. They have not lumbered in these areas. They have not built roads into these areas. By and large, substantially they have been administered in the same manner as wilderness areas or national parks for 30 years.

What we are seeking, under techniques which have been established for many years in the Congress, under the provisions of the Reorganization Act, is to quickly take care of those lands that have a basic wilderness use, and then to provide that in respect to any future creation of a wilderness area Congress will, as the Senator from Colorado desires, affirmatively authorize such creation and establish the boundaries in the same way as a law is passed.

Mr. ALLOTT. Mr. President, I merely say to the distinguished Senator that I know the way he feels. I can hardly sympathize with his point of view, because in my opinion there is no justification for arguing that the Congress should affirmatively review areas outside of the specified ones which might possibly be included in the future. I do not think any of these lands would come in, because mostly they are not of a quality which would classify them as wilderness areas. But there is no basis in fact for a distinction as to justifying one method for these lands and another method for the lands which are included under the terms of the bill at this time.

Mr. METCALF. Mr. President, I thank the Senator from Colorado for yielding to me.

Mr. ALLOTT. I was happy to do so.

Mr. DOMINICK. Mr. President, will my colleague yield to me?

Mr. ALLOTT. I am happy to yield to my distinguished colleague.

Mr. DOMINICK. I was intensely interested in what my colleague said, for I consider it to be an extremely fine analysis of the bill and the problems inherent in its consideration.

There is one question which I think might pinpoint the discussion the Senator was having.

It is my understanding that we in the Congress must take affirmative action to include within the wilderness system all lands now not classified in specific uses. Second, we must take affirmative action to take from forest lands particular portions and put them in national parks. Third, we must take specific action to authorize reclamation projects, part of which may be within the public lands—a great deal of which in fact are within the public lands system.

Can my colleague see any justification for making the sole exception to the generally conceded procedure the lands which are classified in this bill as primitive lands?

Mr. ALLOTT. I shall have to answer my distinguished colleague in the negative. I am at a loss as to any legal reason or other method of logic which would say that we should change the method for bringing in the primitive areas, to make it different from all the instances my colleague has cited. The logic of such a conclusion escapes me.

Mr. DOMINICK. Does the distinguished Senator have any specific example he might give in which the type of procedure contemplated under the pending bill is applied to any other substantive legislation?

Mr. ALLOTT. Of course, the Senator is aware that it is applied to recommendations of the President for reorganization of Government and it has been used in that respect, but I do not know, offhand, of another one that occurs.

Mr. DOMINICK. Are not those recommendations solely concerned with the executive department?

Mr. ALLOTT. They are solely concerned with the executive department.

Mr. DOMINICK. Would the Senator think that was substantially different from what the responsibility of Congress is with respect to our national resources and our public lands?

Mr. ALLOTT. It occurs to me the responsibility is entirely different. The act to which I previously referred, under which the President makes recommendations to reorganize the executive departments, grew out of the Hoover report. They said, "We want to go ahead with the reorganization of our Government. We want to give the President the chance to do it, but we want Congress to have a chance to review it." So the President was given the right to reorganize the executive branches of Government, with the Congress having the right of review.

That is not the same as the case before us. Here we are dealing with the fundamental responsibility of the assets of the United States. They do not belong to my colleague or to me; they belong to all the people. We are dealing with those assets now. We are disposing of them.

I discussed this matter at great length on the floor of the Senate 2 years ago. In the original action in giving this power to the Secretary of Agriculture, or even admitting that he had it, Congress was negligent in its duties. It is my hope that we will take back that power, or retain it, because these are assets which I think we should consider only affirmatively.

The argument is made that we cannot get action on these proposals. The other party is in control of the Congress. It has an almost two-to-one majority in the House, and a better than two-to-one advantage in the Senate. I cannot believe that it cannot bring before Congress any bill it wants to. The Committee on Interior and Insular Affairs considers any bill they wish to bring up. I have not known of any bill that has not been brought before the committee that the majority party wanted to bring to the floor. That is no argument, in my mind. The other party has an effective majority. It can bring any of these bills to the floor if it wants to.

Mr. DOMINICK. I think we have brought out the point at issue, very frankly.

Mr. CHURCH obtained the floor.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. CHURCH. I yield to the Senator from Alaska.

Mr. GRUENING. I should like to address a question to the distinguished Senator from Colorado [Mr. ALLOTT].

Am I correctly informed that the Senator from Colorado has submitted an amendment to strike out the final provision in the bill which takes care of the special situation in Alaska?

Mr. ALLOTT. The Senator is correct.

Mr. GRUENING. Does the Senator realize that the conditions in Alaska are quite different from those in any other State? It happens that Alaska has gone further in setting aside areas that would be eligible for wilderness than has any other State in the Union. In Alaska is set aside in national parks two-fifths of the total national parks areas of the entire Nation. In wildlife ranges and refuges we have in Alaska virtually twice the total land set aside in the other 49 States. In national forests we now have larger areas than any other State of the Union. So Alaska has not only done its part in providing areas potentially available for designation as wilderness, but far more. I am fearful that this trend may go ahead still further unless there are some safeguards. Section 9, dealing with land use commissions, seeks to provide them. It seems to me that that section, which merely provides that a study be made before action is taken, is a reasonable and a modest one. It would merely provide information to guide the appropriate Secretary before he makes his recommendations to the President before action is taken. It provides only a minimum safeguard for the vast area of Alaska, in which so much more land is already in Federal ownership than in any other State.

I should dislike seeing that provision withdrawn. I hope the Senator will not press his amendment at this time.

I wonder why he feels the provision for Alaska should be deleted?

Mr. ALLOTT. I will answer the Senator in two ways. As he knows, since the territory of Alaska became a State I have, in the Committee on Interior and Insular Affairs, been most of the time with the Senator from Alaska—in the main, if not almost entirely. The Senator from Colorado has been sympathetic to legislation which pertained to Alaska, and which perhaps gave Alaska an advantage that was not available to the other States.

Mr. GRUENING. I thank the Senator for whatever he has done, and I hope he will maintain the same attitude in the future.

Mr. ALLOTT. While this section was in the bill of 2 years ago, and I recall when the Senator offered it, I feel it gives the Commission too much power. I feel it should not be applied to one State any more than to other States.

I read now from page 30 of the committee report, which is a letter from the Department of Agriculture:

> As worded, the provisions of section 9 for a Presidential Land Use Commission would apply only to the State of Alaska. We recognize that Federal ownership of about 99 percent of the land area of the State of Alaska presents a situation peculiar to that State, and have no particular objection to such a Commission in relation to Alaska. However, the scope of the duties of the Commission would go to all federally owned land in the State and not just to lands in wilderness-type areas.
>
> We therefore question whether provision for such a Commission should be included in legislation which otherwise deals only with wilderness-type areas. We therefore suggest that all of section 9 on pages 19 and 20 be deleted and the succeeding sections be renumbered accordingly.

I answer the distinguished Senator in two ways: First of all, the Land Use Commission section takes in too much territory. I do not think it should be applied solely to Alaska. Second, I am simply following the recommendation of the Department of Agriculture.

Mr. GRUENING. I appreciate the point of view of the Senator. I point out that one of the reasons why this is a special provision for Alaska—and I can understand the feeling on the part of my colleague that all States should be treated alike—is that, it should be recalled, Alaska entered the Union so much later than the other States, and was subject, during its long stepchildhood, to a rampant and militant bureaucracy which often imposed its will arbitrarily and over the protests of Alaskans. At the same time Alaska was discriminated against and excluded from much beneficial legislation enacted for the other States. Alaska should be given a chance to undo some of the damage done to it when it was not a State. Section 9 simply provides for an advisory Commission. It does not compel anything. It alters nothing. The power of Congress is not diminished.

If the Senator from Colorado will not withdraw his amendment to delete this section, I hope it will not prevail. I understand his feeling that States should be treated alike, but, after all, there is a vast difference, not merely in the historical background, but in the great size of Alaska and the tremendous withdrawals that have taken place for various purposes potentially related to wilderness. No State had so little land of its own at the time it came into statehood; 99 percent or more was in the Federal domain, and even after the provisions of the Statehood Act go into effect, will be entitled to only 27 percent of its area, and by no means the best land.

If the provisions of section 9 are not allowed to remain in the bill without revision, and the provision on advice is not maintained, I am fearful of what may happen.

A few years ago a bill was introduced by the previous Secretary of the Interior to withdraw 9 million acres of arctic wilderness in the northeast corner of the State. Extensive hearings were held, and this proposal was rejected by the Congress. Nevertheless, the Secretary of the Interior withdrew that amount.

Immediately, of course, efforts were made by the Interior Department to get appropriations to manage this remote wilderness, which my colleague and I opposed, because if it was to be left wilderness it should be left alone. This is why Alaskans may well be fearful unless we have this moderate safeguarding amendment, for study before recommendations for more wilderness withdrawals are made.

As I say, the Commission which would be appointed by the President would be merely advisory, and would merely consult with the Secretary of Agriculture and the Secretary of the Interior, and would have no other authority. I am hopeful that the amendment will remain in the bill. I am sure that it will not do the damage that my friend from Colorado anticipates.

Mr. HUMPHREY. Mr. President, I should like to make a brief statement in support of the pending bill. I am proud to be counted as a supporter of the wilderness bill. It is a measure which received tremendous support in newspaper after newspaper across the length and breadth of our land. The editorial policy of the overwhelming number of newspapers in the Nation supports the wilderness bill.

During the 85th and 86th Congresses, I was privileged to be the principal sponsor of the proposed legislation. In the 87th and 88th Congresses, this task has been assumed by the able and distinguished Senator from New Mexico [Mr. Anderson], together with the Senator from California [Mr. Kuchel], myself, and the Senator from Idaho [Mr. Church]. All the cosponsors are listed on the bill.

In 1961 the Senator from Idaho [Mr. Church] guided the wilderness bill, then known as S. 174, to an overwhelming victory by a vote of 78 to 8. This substantial margin testified to two primary facts; one, it demonstrated the legislative adroitness and skill of the Senator from Idaho; two, it indicated the fundamental soundness of the legislation.

It should be remembered that this type of legislation has been processed over the years in the appropriate committees of Congress. The refinements which are contained in the pending bill are the result of the most careful scrutiny that any proposed legislative program has ever received.

I believe we have before us an extremely worthwhile bill. As I indicated in my statement before the Committee on Interior and Insular affairs, this solid vote of confidence, the vote of 78 to 8, did not occur by accident or error. It reflected the reasonable, temperate, and moderate procedures contained in the proposed legislation, to preserve certain areas of the Nation within a national wilderness preservation system.

It should be quite obvious to every American citizen that if future generations are ever to have the privilege of seeing the native beauty of wilderness areas, or areas that have been untouched by commercialism, this legislation which is before us must be adopted.

During the 8 years in which the proposed legislation has been before Congress, many important modifications have been effected in the specific procedures for identifying and protecting certain areas of wilderness. For example, the proposal to establish a permanent national wilderness preservation council has been eliminated. The original definition of a wilderness area has been modified considerably. The regulations for the protection of wilderness areas have been revised and liberalized. Each of these changes was made because the proponents of the legislation were determined to seek a bill that recognized the need for wilderness preservation but which did not unduly hamper present land-use programs or legitimate economic, commercial, or commodity uses.

I do not believe it is necessary for me to speak at length about the undeniable benefits that wilderness resources will impart to future generations of Americans. As our civilization becomes progressively more mechanized, automated, and dehumanized, the value of preserving the primeval character of certain designated areas will increase manifold.

This will represent a legacy of incomparable value to generations hundreds of years hence, because it will be a gift beyond human creation.

As a matter of fact, I am not at all sure that the preservation of these wilderness areas may not make a great contribution to our individual and national mental health. I believe that as we preserve these areas, we may very well economize in the building of institutions for taking care of people who are the victims of the terrific tensions of the modern day world.

In the State of Minnesota, we are proud to have such a national forest, which is a wilderness area. It is one of the most beautiful areas in the world. It is untouched by commercialism. It is a constant source of enjoyment and recreation for thousands of families. It has become a source of great recreational opportunity for the families of our Nation. Thousands of families have an opportunity to enjoy the blessings that only God Himself can give to people in this beauty of the native area.

These lands that we speak of are not beyond human protection and preservation. The national wilderness preservation system containing national forest areas, national park system areas, and national wildlife and game range areas, will insure that these federally owned lands will be administered in such a way as to leave them unimpaired. I am confident that an overwhelming majority of Senators will recognize the historic nature of our opportunity to establish this legacy.

I really cannot believe that anyone would oppose it, that anyone would momentarily put private property ahead of the long-range interest of the people.

I wish to congratulate the principal sponsors of the proposed legislation, the distinguished Senator from New Mexico [Mr. Anderson] and the distinguished Senator from California [Mr. Kuchel]. They have provided us with determined, courageous, and bipartisan leadership. Similarly, the distinguished Senator from Idaho [Mr. Church] has done a magnificent job in managing the proposed legislation in the Interior Committee and on the Senate floor.

I am confident that the efforts of these devoted public servants will be richly rewarded as countless generations of future Americans reap the benefits of their wisdom, their foresight, and their determination.

In fact, Mr. President, as a cosponsor of the proposed legislation and as one who initiated it some years ago, and took a great deal of criticism, much of which was very vicious and at times most disturbing and distracting, I wish to say that I am more proud of my name being listed as a cosponsor of this bill than of almost any other bill that I supported in Congress. I can think of no greater service that a man can perform at this stage for future generations in terms of our domestic legislation program, than the bill that is before us. Nothing is more important than for us to stake out, so to speak, and to protect these areas of America that are known as wilderness areas, to make sure that generations yet to come will be able to enjoy the blessings of our time and the heritage of this great Nation.

Again I commend the Senator from Idaho.

Mr. CHURCH. Mr. President, I appreciate the remarks of the Senator very much; but I believe he has been overly modest with respect to his own role in connection with the proposed legislation. He is the father, the initiator, the pioneer, who first submitted wilderness legislation, some 6 years ago, in March of 1957, and it has been a hard, long, legislative road since.

Ten hearings have been held on the proposed legislation, four in Washington and six in the field. Two thousand, eight hundred and twenty-five pages of testimony have been taken. Such has been the interest in the proposed legislation and in the struggle to adopt it. In connection with the long, hard fight, the man who got it all started is the distinguished Senator from Minnesota. We are all greatly indebted to him for his efforts in behalf of the millions of Americans who will receive a lasting profit and benefit from his efforts.

Mr. HUMPHREY. I thank the Senator for his kind remarks. It is something to get something started, but another to bring it to a successful conclusion.

I am not trying to be overly generous when I say that the Senator from Idaho and the Senator from New Mexico and the Senator from Montana, and the few other Senators who have carried on this fight, particularly in committee, are deserving of our thanks and gratitude. I can assure the Senator that this legislation is looked upon by people throughout the Nation as one of the finest bits of the legislative program that we have before us. I salute them for what they are doing.

Mr. CLARK. Mr. President, I wish to express my strong support for the pending measure, the National Wilderness Preservation Act. We who live along the Atlantic seaboard might at the first blush seem to have only an indirect interest in the proposed legislation. Yet the preservation of our wilderness territory, mostly in the Mountain States of the Far West and Alaska, while it may seem a long way from Pennsylvania, is nevertheless definitely in the national interest.

I have supported such proposed legislation every time it came before the Senate since I was first elected to this body. I support it again. Actually, I wish it were stronger. In my view, we could have gone further than the pending measure does to preserve our wilderness lands. Nevertheless, I realize the necessity for compromise. I know we are engaging in the art of the possible. At least, the bill makes a substantial

start toward setting aside for posterity and for those who love the wilderness to camp and fish, and to some extent hunt in it, the opportunity to do so.

I particularly commend the Senator from Idaho [Mr. CHURCH] for his leadership in this regard. It is a leadership which is not without risk, for I know that there are within his State strong interests who oppose the proposed legislation, interests which, in my opinion, do not represent the better view on this controversial subject. The Senator from Idaho, who I am happy to say was returned to this body last fall by a very substantial majority, was brave indeed in fighting those strong vested interests in his own State.

It is nice to know that, every now and then, in elections to this body, right, in the long run, on the whole, does to some extent tend to prevail. I compliment the Senator from Idaho for his taking the national interest on many problems which, ostensibly, might seem to be of very little interest to his State. Need I add that I include the mass transit bill in this regard? There are those who sometimes think Senators engage in log rolling; that "If you scratch my back, I'll scratch yours," and thereby proposed legislation is passed which otherwise could not be passed.

I have no hesitation in saying that it is my clear opinion that the wilderness bill is in the national interest, without regard to any other proposal coming before Congress, just as the mass transit bill was in the national interest, without regard to any other proposed legislation which might come before Congress. I have no guilty conscience—in fact, I sleep well at night—in supporting the wilderness bill—which, as I say, is of little immediate interest to the people of Pennsylvania—just as I supported the mass transportation bill, which is of imperative importance to the people of our State; and I am indeed happy to know of the prospects for the prompt passage of the bill by the Senate. I hope and pray that the other body will be equally alert and equally intelligent in following the national interest.

Mr. KUCHEL. Mr. President, this is not the first time that I have been a coauthor of the wilderness bill, nor will it be the first time that the Senate will pass it—as the Senate will do this week.

In the first part of the bill we find the following:

> SEC. 2. (a) The Congress recognizes that an increasing population, accompanied by expanding settlement and growing mechanization, is destined to occupy and modify all areas within the United States and its possessions except those that are designated for preservation and protection in their natural condition. It is accordingly declared to be the policy of the Congress of the United States to secure for the American people of present and future generations the benefits of an enduring resource of wilderness. For this purpose there is hereby established a National Wilderness Preservation System to be composed of federally owned areas in the United States and its possessions to be administered for the use and enjoyment of the American people in such manner as will leave them unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of these areas, the preservation of their wilderness character, and for the gathering and dissemination of information regarding their use and enjoyment as wilderness.

Mr. President, the first question for me and for the other Members of the Congress to ask themselves is whether the bill is in the public interest. There will be no quarrel with any Senator concerning his answer to that question. I think the question should be answered unanimously in the affirmative.

The next question is whether the bill accurately and reasonably carries out the provisions of this legislative intent. On that subject there is in this Chamber a divergence of views. For my part, I answer that question also in the affirmative. I believe that the interests of all people of our country are advanced by the provisions of the bill. Other Senators have spoken earlier today in regard to those provisions; and I shall not take the time of the Senate or encumber the CONGRESSIONAL RECORD by submitting extended remarks on the bill.

I make this point, Mr. President: As has been stated heretofore, under present law, the Secretary of Agriculture has complete, untrammeled authority to classify as wilderness any of the public domain now under his jurisdiction, if he so desires. With respect to his authority as well as the authority now existing in the Department of the Interior, the bill provides for a procedure by which lands in the public domain not now classified as wilderness shall parcel by parcel and piece by piece be examined and explored; and provision is made for a hearing at which interested American citizens—including local Government officials—will be able to support or oppose any proposed classification as wilderness of any parts of the public domain.

If, for example, the Department were to overrule the objectors, and were to determine that, in its judgment, any given parcel should be classified as wilderness, provision is made for an appeal to the President. There, again, this measure provides for the filing of objections. Let us assume that the White House concurred in the determination made by the Department. The bill provides that either of the two Houses of Congress can reject, repudiate, and overrule the decisions made in the executive branch. What is wrong with that, Mr. President? Who honestly and logically can argue against that approach and the due process followed at various stages under that approach?

Today, Congress has no control or check on the exercise of discretion in the executive branch. This bill provides that Congress shall have such control or check. However, far more important is the fact that if the bill is enacted into law, the American people of your generation, Mr. President, and mine and the American people of succeeding generations will have an opportunity in their lifetime to see the pristine beauty with which the Creator endowed the North American land mass, for this measure will preserve for the Americans of today and for those who come tomorrow the beauty of our country in its primitive state.

Mr. President, I wish to make another point for the benefit of the people of California. My State is a semiarid State; and a U.S. Senator from California is not worth his salt if he ever forgets the necessity to supply more water to the people who now live in California and to those who are coming there each year at the rate of over a half a million or more. We had before us the question of whether the Federal Power Commission should continue its jurisdiction with respect to matters of water and power, or whether we should prevent it from operating in areas designated as wilderness. There was a dispute about that. The Interior Department recommended that Congress eliminate all the jurisdiction of the Federal Power Commission as provided by this measure. To the credit of the Senate Committee on Interior and Insular Affairs, it rejected that recommendation; and it has written clearly into the bill a provision that with respect to problems of water under the jurisdiction of the Federal Power Commission, the present law with respect to that jurisdiction shall remain in effect.

Mr. President, those are the brief comments which I wished to make here today. In past Congresses and in the discussions which have occurred in the Committee on Interior and Insular Affairs, I have spoken at great length on this subject. I want the RECORD to show my statement that the bill is in the public interest.

This measure is not one of partisan or political concern, Mr. President. U.S. Senators from both parties stand on this floor and speak in favor of the bill. Other U.S. Senators from both parties stand on this floor and speak in opposition to the bill.

A year ago the bill was passed overwhelmingly by the Senate. I trust that this year, once again, the bill will be passed by the Senate; and I hope that in this Congress—different from the last session—the Members of the House of Representatives likewise will have an opportunity to vote their judgment as to whether the bill should become law.

Mr. CLARK obtained the floor.

Mr. CHURCH. Mr. President, will the Senator yield that I might express my appreciation to the able Senator from California?

Mr. CLARK. I yield.

Mr. CHURCH. I desire to express my appreciation to the Senator for the very fine support which he has given the bill over the years. He has been one of the stalwart champions of wilderness legislation. In giving the bill that kind of support, he has demonstrated his farsightedness in that field as he has demonstrated statesmanship on other questions that pertain to the wise conservation of the Nation's resources.

The people of California can be very proud of him in the role he has played in connection with the proposed legislation and, as a Democrat who stands on this side of the aisle, I wish to extend my personal appreciation to him.

Mr. KUCHEL. I should like to give my friend and colleague my unbound thanks for his generous comment. I am grateful to him. I sincerely believe that he, I, and others who feel as we do can supply a leadership that will result in the enactment of the bill into law.

Mr. CHURCH. Mr. President, if the Senator from Pennsylvania will indulge me one more minute, I should like to place into the RECORD some statistics that I think are called for in view of the discussion that has heretofore taken place today on the pending measure.

Mr. CLARK. I am happy to yield.

Mr. CHURCH. Mr. President, I am sorry that the senior Senator from Colorado is not present. I believe he would not take offense if I placed the figures in the RECORD, for he will have an opportunity to review them when the RECORD is published today and to comment on them tomorrow, should he see fit to do so.

I ask unanimous consent that the figures to which I have referred be printed at this point in the RECORD.

There being no objection, the figures were ordered to be printed in the RECORD, as follows:

	Acres
Total land area of the United States	2, 313, 733, 120
Total Federal lands	767, 766, 435
Total land in national forests	181, 600, 000
Total national forest land subject to S. 4	14, 138, 000

Mr. CHURCH. In the course of his remarks, the senior Senator from Colorado mentioned that the bill would authorize the establishment of a wilderness system which would comprise some 12 percent of the public domain. He observed that only 1 percent of our people actually use the wilderness. On that basis he concluded that we would be giving a disproportionate amount of public lands over to a very small number of people to utilize and to enjoy.

Mr. President, I question those figures in two respects. First, members of the committee staff advise me that the correct figure is not 12 percent of the forest lands but somewhere between 7 and 8 percent of the forest lands.

Furthermore, the land about which we are talking is a part of one great country. If we are going to compare the numbers of people who enjoy the wilderness with the amount of land that we would set aside, then the comparison must be based upon the land set aside as it relates to all of the area of our country.

Today we have 2,313,733,000 acres of land in the United States of America. After the review provisions which are established in the bill have been completed and the wilderness system that would be authorized by the proposed legislation has been established, it is estimated that it would run to between 35 and 40 million acres, which is approximately 1½ percent of the total area of the United States. So that if the figures have any meaning at all, I suggest that a very definite balance has been struck between the area set aside and the numbers of our people who, over the years, will enjoy it. I placed my figures in the RECORD because I think they put the subject in proper perspective, particularly in view of remarks made earlier by the senior Senator from Colorado.

Mr. President, I am now prepared to yield the floor. I wish to say to my good friend from Pennsylvania that I appreciate the fact he has been so generous in allowing me and other Senators to speak. It is typical of him to stand aside and let others take the floor. I commend him for it. I hope he has no further difficulty in getting his own remarks into the RECORD before he adjourns the Senate.

Mr. CLARK. I thank the Senator for his kind and generous remarks. My good friend from California, who is terse, desires that I yield to him briefly. I am only happy to do so.

CHOOSING CONTRACTORS TO DO FEDERAL WORK

Mr. KUCHEL. Mr. President, I thank my good friend, the Senator from Pennsylvania. I shall not add to his difficulties.

Mr. President, a few days ago the distinguished senior Senator from New Jersey [Mr. CASE] introduced a measure providing that Americans should be given more facts with respect to how contractors are chosen by the Federal Government in matters of defense and of space agency procurement contracts. When he introduced that proposed legislation, the able Senator said:

> A full disclosure of all relevant facts would benefit everybody. An informed public opinion would exert irresistible weight in support of decisions which are soundly based and against those which are not. It would reduce to a minimum improper pressure on Government officials. It would restore public confidence in the integrity of Government.

Mr. President, I completely agree with what the able Senator from New Jersey had in mind in introducing his proposed legislation and with the comments he has made concerning it.

So do distinguished newspapers and able columnists. I ask unanimous consent that the excellent editorial published in the Washington Post on Friday, March 1, and comments made by two distinguished American columnists, Mr. Marquis Childs and Mr. Roscoe Drummond, dealing with the subject all be printed at this point in the RECORD.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Mar. 1, 1963]

CONGRESS AND CONTRACTS

The practice of letting favored Congressmen announce the award of Government contracts in their districts may have some partisan advantages, but the cost is high in terms of the longrun public confidence. Of course Senators and Members of the House are delighted to make known that so many millions of dollars will be spent in their States or districts because their constituents will assume that the announcer has wielded a potent influence in the matter. The difficulty with the practice is that such an inference is often false and that if it were true it would suggest a scandal.

The official policy of the Defense Department is the antithesis of favoritism. It provides: "Our first and paramount objective is to acquire weapons and materiel which fully meet our qualitative, quantitative and delivery requirements—at the lowest overall cost. Whenever our specifications are sufficiently precise, we must obtain competition through formal advertised bidding procedures as required by law." But when the Department announces the awarding of contracts through Democratic Congressmen and denies a comparable privilege to Republican Congressmen, it seems to fly into the face of its own policy.

The effect on Congressmen is likely to be especially unfortunate. Certainly it tends to intensify the pressures on the Department from legislators who want a larger share of the huge defense budget spent in their districts. The net effect is to encourage legislators to think of defense expenditures, not in terms of the maximum national security, but in terms of swinging lucrative contracts to their hometowns.

Instead of cultivating the impression of a cozy liaison between the Defense Department and Members of Congress in the letting of contracts, Congress ought to be strengthening the safeguards against special influence and favoritism. Senator CASE, of New Jersey, has proposed a bill requiring that all ex parte communications in regard to defense or space contracts by persons other than the bidder be recorded for public inspection. He would also require, in the case of negotiated contracts, the disclosure of the basis on which the contract was made, except for classified information, and set up a House-Senate watchdog committee to review such contracts.

This is the direction in which Congress ought to be moving. With billions of dollars flowing from the Treasury to defense and space contractors, it is of the utmost importance to avoid favoritism and even the appearance of using defense projects as political bait.

[From the Washington Post, Mar. 20, 1963]

ARMS RACE SEEN INFECTING POLITICS

(By Marquis Childs)

The noisy quarrel, which is essentially between two giant contractors and their congressional backers. Over the TFX plane contract points up the ever-growing entanglement of huge defense spending with the politics of who gets what.

The Senate subcommittee investigating the $6.5 billion contract has taken after Secretary of Defense McNamara on the ground that he gave the contract to General Dynamics even though Boeing entered a lower bid. McNamara's answer is that economies to be achieved through developing a single plane for both the Air Force and the Navy determined the award. A resolute man, he shows no signs of reversing his decision.

The Defense Department has responded by saying, in effect, that you can hardly expect an unbiased finding when Senators with a direct stake in the outcome sit on the investigating committee. The accusing finger is pointed at Senator HENRY M. JACKSON, Democrat, of Washington, for whom the Boeing plant in Seattle and its payroll must be a major consideration.

But it is possible that JACKSON, with his wide and continuing interest in national security, would welcome a way out of the pressures that inevitably bear down on a Senator with important defense industry in his State. If he can deliver for a particular industry back home he may at the same time be doing a disservice to the Nation.

That is why the Senate, instead of indulging in the quarrel currently going on, would do well to give serious consideration to the proposals of Senator CLIFFORD CASE, Republican, of New Jersey. CASE put in bills the other day calling for complete public disclosure of all communications whether written or oral and from Members of Congress and anyone in the executive branch seeking to influence the awarding of a contract. He would also require full and prompt disclosure of the basis on which a negotiated contract is granted.

Of the $60 billion a year in defense and space contracts an estimated 65 percent are negotiated without competitive bidding. This is a wide-open invitation to pull and push. While by most accounts McNamara has done a remarkable job of standing up to these pressures, it is too great a burden to put on one man.

CASE, in introducing his proposals, cited examples of the "I can do more for you" theme that is more and more resorted to. He quoted speeches by President Kennedy in last year's election in Pennsylvania and West Virginia, claiming a marked increase in Government contracts for those States under his administration, with the President urging election of Democratic Governors to continue this collaboration.

The Defense Department has fallen into the habit of allowing Senators and Representatives to announce important defense contracts in their States and districts. That tends to create the impression they are responsible for obtaining this prize. In most instances the impression is false but there is rivalry for the local headlines that come out of such an announcement.

Senator CASE has a third proposal. That is to establish a joint Senate-House committee to review defense and space contracts, with special attention to negotiated contracts. It would be made up of a Democrat and a Republican each named from the Senate and House Appropriations Committees, Senate and House Government Operations, and Senate and House Space Committees.

It would bear a family resemblance to the Committee on the Conduct of the War which Harry S. Truman so ably directed in World War II.

That any of the CASE proposals will be adopted seems unlikely even though five other Senators have joined in sponsoring the bills. The joint committee on contracts cuts across too many privileges and perquisites which present committee chairmen cling to.

With each succeeding election, so long as defense budgets run at $55 or $60 billion, the game of contract promise and grab will become more deeply entrenched in the political system. As this system prevails any meaningful disarmament is bound to become more difficult. Each Member of Congress will have a stake in keeping the home plant going. This has already been demonstrated in areas where aircraft contracts have been cut back as missiles have begun to dominate.

In his farewell address President Eisenhower spoke solemn words of warning about the growing influence of what he called the military-industrial complex. Today it might better be called the military-industrial-political complex.

[From the Washington Post, Mar. 26, 1963]

DEFENSE CONTRACTS—CONGRESS SHOULD CHECK

(By Roscoe Drummond)

Despite the respect and confidence which the top civilian leadership of the Pentagon has well earned, especially Defense Secretary Robert McNamara and Deputy Secretary Roswell Gilpatric, I submit that instead of there being too much congressional checking of defense there isn't enough.

Take the TFX plane contract which the Senate Committee on Government Operations is now investigating. This was awarded to General Dynamics although three different military panels had recommended that it go to Boeing.

There is no evidence that Secretary McNamara yielded to partisan pressures. It is clear that he had a rational basis for the decision he made. But here, at one stroke, is $6,500 million going to one corporation to build a supersonic Navy-Air Force fighter plane which the military would prefer to have built somewhat differently. The issue is primarily one of economy—the McNamara-approved single two-service plane, which could be used both from the ground and from carriers, versus two somewhat different and thus more expensive planes sought by the Navy and Air Force.

Even if you have read everything that has been said on this matter, I do not see how you or I can adequately judge the conflicting contentions. Mr. McNamara made an honest and defensible decision, but no outsider who isn't devoting almost continuous scrutiny to the evidence can have any basis for being sure it was the best or wisest decision.

This is why responsible, expertly staffed congressional investigation is desirable and can be a boon to the Defense Department itself.

There is not enough of this kind of investigation. It is sporadic. It needs to be continuous. With approximately $60 billion going into defense and space contracts, we need more doublechecking, not less. About 65 percent of these are negotiated contracts let—for quite sound reasons—without competitive bidding.

The amount of money going into defense and space continues to mount. The defense budget has been increased 25 percent in the last 2½ years. The rate of growth in defense spending may taper off in a year or two, but the space budget will increase substantially.

With this kind of money involved, even the best Pentagon decisionmaking needs steady scrutiny by people outside the Defense Department. It will be a protection to the Defense Department. Even if the McClellan committee decides that the McNamara-Gilpatric team was in all ways prudent and courageous and sound in the TFX contract, let's not stop there. Congress ought not to limit its investigations to ex parte complaints.

This is why the recent proposals of Senator CLIFFORD CASE, Republican, of New Jersey, are all headed in the right direction. Their effect would be to give some additional bone and muscle to congressional scrutiny. To this end CASE proposes:

1. A permanent joint Senate-House committee to give continuous attention to defense and space contracts. It would be fully bipartisan, with one Democrat and one Republican named from the present committees which have specialized knowledge—House and Senate Appropriations, Government Operations, and Space.
2. Complete public disclosure of all communications seeking to influence the letting of defense contracts—oral or written by anybody, Congressmen, ex-Congressmen-turned-lobbyists, presidential aids.
3. And, in the end, a full public exposition by the Defense Department setting out the basis for the award of a contract.

These are needed and sound steps. They would strengthen congressional scrutiny. They would make it continuous rather than sporadic. They would reduce the massive outside pressures, which can be countered when they are open but are hard to resist when they are under the table. My information is that most, if not all, the civilian heads of the Pentagon would welcome all of these measures. They should.

CONGRESSIONAL REORGANIZATION

Mr. CLARK. Mr. President, I intend to speak on the need for congressional reorganization. In a few minutes the Senate will adjourn for the purpose of going to the opening of the professional baseball season. I shall go, too. I am looking forward to a good game.

However, it is rather amusing that we abandon our usual custom of coming in at noon, and come in at what to most Senators is really the ungodly hour of 9 o'clock this morning so that we could get at least a little business done, and then all go to the ball game.

That is all right with me. Last week we had an informal recess from a little after 10 o'clock in the morning until after 2 o'clock so that certain Senators could greet the cherry blossom queens from their States. That is fine. I am for cherry blossoms; I am for queens. They were beautiful girls. They deserved all their honors. It was a shame that the cherry blossoms blew off before most of the queens had an opportunity to be crowned.

Mr. President, I do think that in between our cherry blossom recesses and our baseball fun we ought to give a little bit of thought as to whether the Senate of the United States is really doing the job it ought to be doing.

It will be no news to my colleagues and the readers of the CONGRESSIONAL RECORD to learn that in my opinion it is not.

In the Washington Post of April 5 appeared a very good column written by my friend Roscoe Drummond entitled "Congress—Why It Falters."

Mr. Drummond, a very acute observer of the congressional scene, asks the question as to what is the crucial issue before the 88th Congress. He concludes that the issue of highest priority on the agenda is the reorganization of Congress itself. I agree.

Mr. Drummond believes that the most urgent need is to improve the future of Congress and, indeed, to make sure that it has a future. I agree. While in my opinion the executive arm of our Government has been doing an outstanding job and did an excellent job even during the years of the Eisenhower administration, and while the judicial branch of our Government in my opinion has been farsighted, forward-looking, intelligent and sound, the legislative branch has been under increasing criticism. In my opinion that criticism is largely justified.

Mr. Drummond comments that Congress has already lost its capacity to transact the public business carefully, responsibly, and efficiently.

He points out that it has lost this capacity by attempting to deal with space-age problems with iron age tools. The cliche which I prefer is "with horse and buggy tools," but perhaps "iron age tools" is a more accurate term, historically.

Mr. Drummond comments on the vast amount of time and public attention, both in the committee and on the Senate floor, which has been taken by the TFX controversy. He suggests that everybody would agree that $6.5 billion should not be spent casually. He points out that it was not, that it is not going to be, that the investigations in the Defense Department have been painstaking and meticulous, that there has been a good deal of controversy, and that the controversy has been resolved by the individual who under the law is supposed to resolve it, the Secretary of Defense.

Nevertheless, one of our able congressional committees has thought it worthwhile to go into an extensive review of that decision. I do not say the committee had no right to do so. Clearly it did.

Mr. Drummond says the committee did, too, but he points out that last October, after Congress had been in session for 173 days, in the last 4 harried days before adjournment we rushed through five appropriation bills totaling $15,850 million, or one-sixth of a $93 billion budget. He suggests that $15 billion should not be appropriated casually. He comments, "It was." I agree with him.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. CLARK. I should prefer to finish my remarks, but I will yield to the Senator for a question. I do not want to get into a colloquy with the Senator at this time. I should be glad to do that when I finish.

Mr. PROUTY. I will wait for the Senator to finish.

Mr. CLARK. Mr. President, it is suggested by Mr. Drummond that the time may come when Congress will look into the mirror and do something about its own failure to transact the public business carefully, responsibly, and efficiently. He quotes with approval comments made early in this session by the National Committee for an Effective Congress, to the effect that last year Congress found it almost impossible to finish its business.

The Senate did not even organize this year until the end of February.

This committee—an able committee with which all Senators are familiar—suggests that "Congress is not handling its workload because it has not organized its time, its talents, and its resources to meet the space-age tasks which today's world imposes upon it."

Mr. President, I ask unanimous consent that the column written by Mr. Drummond may be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS—WHY IT FALTERS

(By Roscoe Drummond)

What is the crucial issue before the 88th Congress? Is it the tax bill or medicare or aid to education?

All of these are important, but I am convinced that the issue of highest priority on the agenda of this Congress is the reorganization of Congress itself.

Many things need to be done to improve the future of the country, but the most urgent need is to improve the future of Congress—to make sure it has a future.

The fact is that Congress has already lost its capacity to transact the public business carefully, responsibly, and efficiently. It has lost it by attempting to deal with space age problems with iron age tools.

Look at one example:

The Senate's Government Operations Committee is worried and is therefore vigorously investigating whether the Department of Defense may have made a mistake in selecting the TFX fighter plane and awarding the $6.5-billion contract to General Dynamics.

The military put in months investigating how this plane should be built. After the facts were laid out, the civilian heads reviewed them exhaustively for many weeks. Six and a half billion dollars shouldn't be spent casually. It wasn't.

Last October, after Congress had been in session 173 days, in the last four frantic harried days before the session expired, it rushed through five appropriations bills totaling $15,850,000,000—one sixth of a $93-billion budget. Fifteen billion dollars shouldn't be appropriated casually. It was.

I am not saying that Congress should not investigate the TFX contract for fear it was casually decided. I am simply asking when Congress is going to look into the mirror and do something about its own failure to transact the public business carefully, responsibly, and efficiently.

Year after year, as cited above, it appropriates huge sums with the back of its wrist as it rushes home to tell the voters what a good job it is doing.

Congress appropriates everything piecemeal. It never examines the budget in toto. Different committees look at different parts. Congress never looks at the whole.

After authorizing the expenditure of billions of dollars each year, Congress fails to give itself adequate staff to review the misuses of Federal funds reported to it by its own agency, the General Accounting Office.

This is not the only evidence of congressional disorganization. The National Committee for an Effective Congress makes this early-session report:

"Last year Congress found it almost impossible to finish its business. This year Congress found it almost impossible to get started. The Senate did not even organize its committees until the end of February.

"This year the session was accompanied by a rising public chorus questioning the structure and function of Congress, but the suggestion echoes within Congress itself that reforms are in order.

"Congress is not handling its workload."

Congress is not handling its workload because it has not organized its time, its talents, and its resources to meet the spage age tasks which today's world imposes upon it.

Fortunately there are some influential Senators and Congressmen who are acutely aware that Congress must modernize its machinery for transacting the public business. There is formidable resistance from those Members who would rather have a weak and ineffectual Congress than give up special privilege and personal power.

Time is running out because this session of Congress is further behind than the last.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. CLARK. I yield to the Senator from Vermont.

Mr. PROUTY. I will not engage in any colloquy, I assure my friend from Pennsylvania.

I should like to invite the Senator's attention to the fact that Mr. Drummond also pointed out that one of the great difficulties encountered, particularly by the minority, in both the House of Representatives and the Senate, is that we do not have adequate committee staff members.

Mr. CLARK. I agree with the Senator from Vermont. I do not think the minority does have a sufficient number. I should like to help the Senator get them.

Mr. PROUTY. As the Senator well knows, I am chairman of the Subcommittee on Education and chairman of the Subcommittee on Employment and Manpower of the Committee on Labor and Public Welfare.

Mr. CLARK. Hardly the chairman, but at least the ranking minority member.

Mr. PROUTY. The ranking minority member. I thank the Senator for correcting me. I hope someday to be chairman.

Mr. CLARK. I hope the Senator will not be, but I love him very much.

Mr. PROUTY. In any event, I do not have a single staff member on whom I can rely assigned to me on either of those subcommittees. The Senator can undertand very well, considering the problems with which we are confronted, that it is impossible for any of us on the minority side to do adequate justice to legislation presented before us.

I hope very much that the Senator will exercise his influence with the minority leader, so that the Republicans may have adequate staff members.

Mr. CLARK. With the majority leader.

Mr. PROUTY. With the majority leader.

Mr. CLARK. I have great sympathy for the Senator's position. I was about to invite attention to one of the subjects which is on the table, S. Res. 81, submitted by the Senator from Vermont, to provide for a more equitable distribution of staff members of committees. I am a member of the Committee on Rules and Administration, though, to be sure, one of the most junior members. I shall be glad to use my influence to see that a prompt hearing is given to the Senator on that resolution. I urge him to get in touch with other members of the committee for that purpose.

Mr. PROUTY. I appreciate the Senator's help very much.

THE SENATE CALENDAR

Mr. CLARK. Mr. President, among the other matters listed on our calendar under "Subjects on the Table" are Senate Resolutions 9, 10, and 80, offered early in the session, to amend the cloture rule of the Senate.

It has seemed to me for some time that the Senate, which has been, as I shall show later, in very brief sessions during the past 3 months—many times it has met only twice a week, frequently has come in late and adjourned early—might well devote its attention to that part of the reorganization of the Congress which is set forth in the cloture resolutions, but the leadership thought otherwise. I am in no position, as merely one Senator, to bring the resolutions again before the Senate for consideration. I express the hope that before the 88th Congress adjourns those resolutions will be brought before the Senate and brought to a final vote on their merits. This I believe could be done, if the leadership on both sides of the aisle were really in favor of majority rule.

Fifty-six Senators in this body, including the present distinguished occupant of the chair, the Senator from Connecticut [Mr. RIBICOFF], and the only other Senator on the floor as I speak, the able Senator from Wisconsin [Mr. PROXMIRE], favor that action.

I think it is high time that majority rule did take over in the Senate, and the Senate should be able to act when its majority not only is ready for action, but also has indicated how it would act.

(At this point Mr. BURDICK assumed the chair as Presiding Officer.)

Mr. CLARK. Mr. President, I turn to a discussion of today's calendar; the calendar for Monday, April 8, 1963. I note that in addition to the "Subjects on the Table," which I have briefly discussed, there are only four pieces of proposed legislation on the calendar for action, under the heading of "General Orders Under Rule VIII."

Two of them—a bill to establish a National Wilderness Preservation System, and a bill to authorize the establishment of a Youth Conservation Corps and to authorize local area youth employment programs—will be acted on before our Easter recess, which officially will begin toward the end of this week, and which I hope because I intend to take full advantage of it—will unofficially continue until Monday, April 22, statements to the contrary notwithstanding.

It is extraordinary, Mr. President, that on this 8th day of April, after 3¼ months of laboring, we have been able to produce so small a litter of mice as this legislation to which I have referred, but "That's all there is, there isn't any more."

Why is that? Why has there been such a small output? The Senate has passed only two major bills—the mass transit bill, which after extensive debate was passed, on April 4; and the 4-year extension of the draft, which might well also have resulted in substantial and meaningful debate for a good many days, because, goodness knows, the Draft Act is in great need of being gone over, revised, and put through a fine-tooth comb. But that bill passed in 10 minutes.

The Banking and Currency Committee, from which the mass transit bill was reported, did not even meet until February 26, although there was no reason in the world, under rule XXV, why the Banking and Currency Committee could not have met as early as Wednesday, January 9, or some 7 weeks—at least 6 weeks—before it did meet.

In all the Senate has acted on 34 routine money resolutions, which took about 2 days. We have passed only 12 public bills, mostly of a minor or noncontroversial nature.

Mr. President, I ask unanimous consent that a list of those 12 bills together with an analysis of time consumed by the Senate since the start of the session, may be printed in the Record at this point in my remarks.

There being no objection, the list was ordered to be printed in the Record, as follows:

Analysis of record—Jan. 9 through Feb. 25

Date	Senate	Time in session
Wednesday, Jan. 9	12:00-12:57	0:57
Thursday, Jan. 10	12:00- 1:04	1:04
Friday, Jan. 11	(1)	
Monday, Jan. 14	12:00- 3:21	3:21
Tuesday, Jan. 15	12:00- 5:48	5:48
Wednesday, Jan. 16	12:00- 5-55	5:55
Thursday, Jan. 17	12:00- 5:25	5:25
Friday, Jan. 18	12-00- 3:51	3:51
Monday, Jan. 21	12:00- 5:51	5:51
Tuesday, Jan. 22	12:00- 5:55	5:55
Wednesday, Jan. 23	12:00- 4:56	4:56
Thursday, Jan. 24	12:00- 5:40	5:40
Friday, Jan. 25	12:00- 5:14	5:14
Monday, Jan. 28	10:00- 6:07	8:07
Tuesday, Jan. 29	10:00- 6:04	8:04
Wednesday, Jan. 30	11:00- 1:34	2:34
Thursday, Jan. 31	12:00- 5:40	5:40
16 sessions		[2] 78:22
Friday, Feb. 1	(1)	
Monday, Feb. 4	10:00- 5:10	7:10
Tuesday, Feb. 5	10:00- 5:11	7:11
Wednesday, Feb. 6	10:00- 5:02	7:02
Thursday, Feb. 7 [3]	10:00-11:27	1:27
Friday, Feb. 8	(1)	
Monday, Feb. 11	12:00- 3:30	3:30
Tuesday, Feb. 12	(1)	
Wednesday, Feb. 13	(1)	
Thursday, Feb. 14	12-00- 3:18	3:18
Friday, Feb. 15	(1)	
Monday, Feb. 18	12:00- 1:56	1:56
Tuesday, Feb. 19	12:00- 5:45	5:45
Wednesday, Feb. 20	12:00- 5:54	5:54
Thursday, Feb. 21	12:00- 5:26	5:26
Friday, Feb. 22	12:00- 1:10	1:00
Monday, Feb. 25	12:00- 4:29	4:29
12 sessions		[2] 55:58

[1] Not in session.
[2] Average length of session less than 5 hours.
[3] Date of cloture vote.

Analysis of record Feb. 26 through Apr. 5

Date	Senate	Time in session	Legislative action
Tuesday, Feb. 26			Not in session.
Wednesday, Feb. 27			Do.
Thursday, Feb. 28	12:00-3:36	3:36	
Friday, Mar. 1	12:00-5:17	5:17	
Monday, Mar. 4	12:00-4:16	4:16	Passed S. 13 (Arkansas land transfer), S. 345 (Hawaii housing)
Tuesday, Mar. 5			Not in session.
Wednesday, Mar. 6			Do.
Thursday, Mar. 7	12:00-7:08	7:08	
Friday, Mar. 8	12:00-3:00	3:00	Passed S. 816 (establishment of a Commission on Science and Technology.
Monday, Mar. 11	12:00-2:27	2:27	Passed S. 20 (outdoor recreation, plus 34 money resolutions).
Tuesday, Mar. 12			Not in session.
Wednesday, Mar. 13			Do.
Thursday, Mar. 14	12:00-7:54	7:54	
Friday, Mar. 15	11:00-3:46	4:46	Passed H.R. 2438 (draft extension).
8 sessions		39:14	
Monday, Mar. 18			Not in session.
Tuesday, Mar. 19	12:00-3:50	3:50	Passed S. 1089 (cadmium), H.R. 212 (veterans), H.R. 2085 (taxation), H.R. 1597 (tax).
Wednesday, Mar. 20			Not in session.
Thursday, Mar. 21	12:00-5:05	5:55	
Friday, Mar. 22			Do.
Monday, Mar. 25	12:50-3:02	3:02	
Tuesday, Mar. 26			Do.
Wednesday, Mar. 27			Do.
Thursday, Mar. 28	12:00-5:30	5:30	190 hours, 21 minutes.
Friday, Mar. 29			Not in session.
Monday, Apr. 1	12:00-6:02	6:02	Passed S. 1035 (dual rate contracts).
Tuesday, Apr. 2	11:00-6:08	7:08	Passed H.R. 4374 (Winston Churchill).
Wednesday, Apr. 3	10:00-6:15	8:15	
Thursday, Apr. 4	11:00-4:34	5:34	Passed S. 6 (mass transit).
Friday. Apr. 5			Not in session.
44 sessions		222:50	12 bills and 35 resolutions.

Mr. CLARK. It has been said that the only reason why we do not act any more quickly than we do is because the committees are busily at work on the President's program and on important legislation which Members desire to bring before this body on the floor which is not in the President's program.

I point out, however, that 47 committees or subcommittees of the Senate have held 233 meetings. There have been 63 possible weekday meeting days. On nine of them no meeting of any sort was called. This is an average of less than 4 meetings a day for those 47 committees or subcommittees.

I note in passing that the Finance Committee has met only six times, and not at all on that bill to which, in my opinion, and in the opinion of many other Senators, they should be devoting their attention, which is the President's tax revision and tax reform bill.

Let it be noted that there is nothing in the Constitution that would keep the Finance Committee from doing exactly what the Appropriations Committee has been doing, namely, holding preliminary sessions. Just as the Appropriations Committee does, the Finance Committee could hold preliminary sessions on tax revision and tax reform, in order that when legislation comes over from the House the Senate will be able to act promptly on the legislation. I commend the Appropriations Committees for this action. I deplore the failure of the Finance Committee to follow the same course of action.

Let no one think that the Constitution prevents a committee that deals with revenue raising from holding preliminary sessions in order to hear administration witnesses and other experts before the House sends the bill over to the Senate. There is no constitutional prohibition against hearings. Indeed a year ago hearings took place in the Finance Committee on the so-called Du Pont bill long before the House had acted on the proposed legislation.

In my judgment, this is probably one of the best ways in which the time of the 100 Members of this body could be saved. If the Finance Committee would only move forward with their hearings, it could report the bill out of the committee, and the Senate could act on it within 30 days of the time it gets the tax bill from the House.

In my opinion, if we are still in session by Labor Day, if we stay here long after Labor Day, the primary reason will be that the Finance Committee did not choose to meet and to conduct preliminary hearings on the administration's tax bill.

The Senate has held 44 different sessions, totaling 222 hours, in this session of the Congress, an average of 5 hours per session.

The Senate was not in session on 19, or 30 percent, of the 63 weekdays on which it could have met.

To be sure, as was pointed out, there has been very little business for floor action, but there has been ample need for committee action. I suggest committee action has been inadequate.

Let us take a look at the action which has been taken on the President's program. Thirty-four administration legislative requests have come to the Senate and have been referred to Senate committees for action. As of the 21st of March, which is the last date for which the Democratic policy committee has a memorandum available for Democratic Senators, no action whatever had been taken on 23 of those legislative recommendations of the President. That is over two-thirds of all his requests. This includes no action in committee as well as no action on the floor.

I conclude that Congress is off to an unjustifiably slow start. The committees should have been organized during the first few days of the session, instead of on February 25. There was no legitimate excuse for not doing this. Let no one say that it was the fight over the rules change which made it impossible, because those who were in favor of the rule change were willing for the committees to meet. It was those who were against the rules changes who refused to permit committees to meet, and thus unjustifiably delayed the work of the Senate.

From January 9 to February 7, when the rules debate terminated, there were only 7 days when the Senate met before noon. There was nothing to prevent morning committee meetings on these days.

My next point is that fewer, longer daily sessions with more days set aside fully for committee work in the first months of the opening session of the Congress could save at least 1 month of time and move up adjournment by that much.

There is not one Senator who does not want to get out of the session by the middle of summer. There is no reason why the Senate could not get out of the session by the middle of the summer, having done all the work we wanted to do, except for the fact that we are so tied up in our redtape, so tied up in horse-and-buggy practices, so tied up by procedures which prevent the Senate from using modern methods of business, that, like Ferdinand the Bull, we sit under the tree and smell the flowers while the rest of the world goes by.

There is another aspect of the problem which I want to discuss, and that is the inordinate amount of time the committees take out of the busy lives of executives of our Government. I wrote to each of the Cabinet officers in the President's Cabinet some weeks ago, asking him to compile for me the amount of time which the chief Cabinet officers had been forced to expend in testifying before congressional committees during sessions of the 87th Congress in 1961 and 1962.

I do not say that it is not frequently necessary for members of the executive branch to come before the committees of Congress and testify. It is. But I do say if we had joint sessions of relevant Senatorial and House committees, the enlightenment which the witness would furnish to committee members would be the same as it would be otherwise, and the amount of time they would have to spend testifying would be cut in half—perhaps not quite in half, because there would be more committee members to ask questions but decreased substantially. And I suggest there is not much excuse for the time spent, as it now frequently is, in coming before two or three or more committees exercising jurisdiction over the same subject matter, when their testimony and time in contribution to the national interest could be very much curtailed.

Cabinet officers from the Treasury, Defense, Agriculture, Justice, Commerce, Interior, Labor, State, Post Office, and Health, Education, and Welfare Departments during the 87th Congress appeared 592 times before congressional committees. This consumed a total of 1,394½ hours of their time.

I ask unanimous consent that the schedule which I have caused to be prepared, showing the amount of time spent by these Cabinet officers in appearing before congressional committees, be printed at this point in the Record.

There being no objection, the table was ordered to be printed in the Record, as follows:

1961 and 1962

Department	Appropriation bills				Other bills				Briefings				Special			Total	
	House		Senate		House		Senate		House		Senate		Times	Hours	Committee	Times	Hours
	Times	Hours	Times	Hours	Times	Hours	Times	Hours	Times	Hours	Times	Hours

[1] House and Senate.

[2] No specific figures.

Mr. CLARK. So, Mr. President, I hope in due course the Senate will pay heed to the suggestions of Roscoe Drummond and James Reston, to which I have referred many times before, and to the many other commentators and practically every political scientist in the United States of America who has considered this subject, and many of our own Members, and get on with the work of congressional reorganization, for that indeed is the crucial task of this Congress; and I hope it will be done before it is too late.

DISARMAMENT

Mr. CLARK. Now I turn briefly to another subject, which has to do with the subject of disarmament.

I note that on April 3 of this year the able junior Senator from Washington [Mr. Jackson] placed in the Congressional Record a lecture which had been delivered by Mr. David E. Lilienthal entitled "The Mythology of Nuclear Disarmament." The text of the lecture appears in the Congressional Record at pages 5583–5584.

I have the highest admiration for Mr. Lilienthal. In fact, I believe that he is one of the great living Americans. The work he has done in connection with the Tennessee Valley Authority has earned for him a deserved permanent place in American history. The magnificent impromptu comments he made on what the United States meant to him, before a congressional committee, which was badgering him, some few years ago, has justly gone down in the annals of permanent eloquent prose as an outstanding appreciation of our country.

Yet, in my judgment, Mr. Lilienthal is just plain wrong in the position he takes toward disarmament and world peace.

His main theme is that it is both futile and dangerous to concentrate on disarmament while the real causes of war tensions remain.

Mr. President, as long as man is as imperfect as he is today, as long as he reacts like a human being, just so long are there going to be world tensions. As long as we have national States, there will always be tensions, and there will always be problems. If we want to get rid of the delicate balance of terror in which we live, until all international tensions have relaxed we are going to wait until the end of the world. That end could come sooner than we think, if we do not do something about armaments.

So I say in that regard, with deep regret, Mr. Lilienthal is just plain wrong in this basic assumption.

He also states that nuclear war is not inevitable; that the way to peace lies through the "slow sure growth of community among men."

Of course that is true. Nuclear war is not inevitable, but it is pretty close to it today, unless we start taking some positive steps to eliminate the delicate balance of terror and to reduce the heavy burden of armaments which lies heavy on the shoulders not only of the American people but also on the shoulders of the Russian people, and in addition, on the shoulders of many other taxpayers in countries across the face of the world.

Mr. Lilienthal makes four criticisms of the pending disarmament negotiations.

First, he says that these negotiations tend to increase ill will and mutual suspicion and produce a dangerous cycle of high hopes and disenchantment. Geneva, he says, is a minus for peace.

Mr. President, this I categorically deny. I was present as a congressional observer for 2 weeks at the Geneva Disarmament Conference last fall. I observed the Russian delegates and the American delegates, and the delegates of nations alined with the West and those who are alined with the Communist world.

I can state categorically that nowhere did I see any ill will created by these interchanges on the part of the delegates. The delegates all behaved as civilized mature human beings with mutual respect for each other.

To be sure, there was disagreement between what the Russians felt should be done and what the Americans felt should be done; but I do not believe that these interchanges create ill will. I believe they have contributed to the eventual hammering out agreements, in connection with which both parties negotiate from respected strength.

Then Mr. Lilienthal says that the absence of China and France from the bargaining vitiates efforts along this line.

This is not true. If we can come to agreement with the Soviet Union, I am confident it will be possible to bring both France and China into line. While I believe it is difficult to negotiate without France and China, this is a rather insignificant difficulty in the face of what can be done if the two greatest powers in the world can get together.

The third point Mr. Lilienthal makes is that disarmament negotiations distract and dilute our enemies from the multiple, diverse ways in which we can build a community of interest which is the only real hope for world peace.

This, again, I categorically deny. There are all kinds of ways to build a community of interest. Disarmament negotiations are probably the most effective. There is no reason why these negotiations should not continue to a successful conclusion, at the same time that every other effort goes forward in the building of a community of interest, which I join Mr. Lilienthal in believing is the most important single way of bringing about real peace.

Mr. Lilienthal's fourth and last point is that disarmament negotiations are either unrealistic, because military force is growing as they go on, or cynical, because they are being used for propaganda and a cause of disillusionment.

Again I categorically deny this. The differences between the Soviet Union and ourselves both with respect to the test ban and with respect to general and complete disarmament, which is the fixed national policy of President Kennedy, as well as of the Soviet Union, have been shrinking constantly over the last few years. The differences between us is now relatively slight. I am optimistic and I am hopeful that the negotiations will continue to a satisfactory result within the foreseeable future.

In summary, Mr. Lilienthal believes that war cannot be abolished by trying to abolish the weapons of war, so long as the basic causes of war remain; and that by concentrating on the attempts to abolish the weapons, we divert our efforts from the task of eliminating the basic causes.

This, I suggest, is superficial and only half the coin. We have to do both.

I deeply regret that so able, and, indeed, so great an American should thus place himself in support of those in this country who have a cynical point of view with respect to the issue which confronts the world and how to eliminate the delicate balance of terror.

A far sounder approach to this problem has been made by one who is perhaps as equally great an American, the Honorable James J. Wadsworth, the former chief of our disarmament delegation at Geneva, and the former U.S. Ambassador to the United Nations, and presently president of the Peace Research Institute in Washington, D.C. He is a man who is respected by practically every American. In a brilliant article entitled "Let's Be Adult," published in the December 29, 1962, issue of the Saturday Review, Mr. Wadsworth says that he was brought up, as were many of us, and as indeed we all were, as a great supporter of military preparedness. But he states, further:

> To me, peace is just the only thing that makes sense. I believe in peace precisely because I am a devoted American who would volunteer to fight for his country if she were at war.

However, he states that he hopes that honorable alternatives can be found to keep war from our shores and from the whole world.

Mr. President, I share these hopes.

Mr. Wadsworth continues:

> The tensions of the cold war have created a strongly belligerent posture among many Americans.

Surely no one who has listened to speeches made on this floor by some of our colleagues can come to any other conclusion. Some of this is understandable, Mr. Wadsworth says, but some of it is largely a matter of public confusion over the news.

In this I concur.

Mr. Wadsworth continues by saying that it is a sad commentary on our capacity for adult thought that in the last analysis so many of us still appear to prefer the rumble of the mindless physical conflict for the settlement of argument. We must decide whether we are strong enough to ignore the occasional accusation of "chicken," as one small boy defies another.

> If we have confidence that our way of doing things is better than that of our competitors, then we don't have to prove it by force. What we desperately need to do, then, is to develop the force of example which proclaims our inward force of character.

Mr. Wadsworth goes on to point out:

> Our military-minded friends will retort that force of character cannot protect the country against a "mad dog" neighbor country, if the latter decides to attack. Probably true. But the point is that some people are more anxious to go out and shoot what they think is a mad dog than to make sure that it is really mad.

Again, I agree. Then Mr. Wadsworth says:

> It might therefore prove helpful to everyone if we reminded ourselves—

And I again agree—

> if we reminded ourselves, regularly and out loud, that the primary cause is the quest of peace and that the secondary part is the surmounting of the difficulties blocking that quest. Singlemindedness is a trait which can range from admirable devotion to stupid stubbornness, but unless we are singleminded about peace we might just as well forget it.

Mr. Wadsworth concludes—and I shall not detain the Senate with a longer summary of what he has to say:

> Let me be quite clear: no one disapproves more than I do—

And I agree—

> of being pushed around. I have the same wholly human reactions to indignity and injustice as most men. I do not advocate "turning the other cheek" as the preferred path to peace.

I interpolate: I am wholly opposed to unilateral disarmament.

> Rather, I insist that we can block or parry the first blow, thus making the "turning" unnecessary. But, though I understand human reaction, I cannot condone either the belligerence of the Communist line or the counterbelligerance which that line creates in the United States of America. Both reactions are simply not adult, in the light of the holocaust to which they can lead.
>
> So we must give more thought and attention—

And I concur—

> to what I call the "Three A's": the Attitude which can help create the Atmosphere in which we can take the Action which will lead us and our adversaries away from the brink of disaster together. Neither of us really wants to jump off: this would mean destruction for us both. Why not, then, put as much thought and energy into creating and developing such a course of action as we do in creating and developing ever newer and more devastating weapons? Which course is more likely to be our salvation in the long run? Which makes more sense? Let's try being adult for a change.

Mr. President, I ask unanimous consent that Mr. Wadsworth's article may be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S BE ADULT

(By James J. Wadsworth)

In common with most boys of my generation, I was brought up a devoted military-preparedness advocate. I majored in military science (ROTC) at college, then enlisted in the National Guard, took my commission in the cavalry, and served with the guard for 11 years. When war threatened in 1941 I tried to get my commission out of mothballs, but, failing my physical, took a job in an aircraft company where I fought the war, meanwhile acting as inspector general of a New York State guard regiment headquartered in Buffalo.

All in all, I was and still am about as poor a candidate for what is called pacifism as can be imagined. By that I mean that peace, to me, is not something one espouses for religious, moral, or ethical reasons, or even political reasons. To me, peace is just the only thing that makes sense. I believe in peace precisely because I am a devoted American who would volunteer to fight for his country if she were at war; but I am also one who fervently hopes that honorable alternatives can be found to keep war from our shores and from the whole world.

It strikes me that as a first step toward finding such alternatives we Americans should take a more objective view of our "peace versus war" posture. Let's explore that idea for the moment, in terms of a common denominator. We are all familiar with the way children fight with each other: Somehow the whole outlook of the child seems to revolve around the question of who started the fight and who, therefore, is solely to blame. Such wrangling is part of what I call the playground procedure. Don't you think that the adults in high office should by now have improved a bit on the routine?

Of course, we know they haven't. Take the ever-current argument about nuclear tests. It offers plenty of material for discussion, but since September 1961, the free world has confined itself, in the main, to reiterating the accusation that the Russians "broke the moratorium" that had "been in effect nearly 3 years." People seem to forget, however, that there had never been an agreed moratorium, and that on December 29, 1959, President Eisenhower proclaimed that as far as the United States was concerned, there was no moratorium and that we felt ourselves free to test at any time. People also forget that, since then, the United States has turned down no less than three suggestions on the part of the Soviets and the nonalined states that a moratorium be entered into. Now, I have no quarrel with that policy at this time—an unpoliced moratorium can be a dangerous thing. I merely feel that when we insist on saying the Soviets broke a moratorium we refused to recognize as existing, we are behaving in an unadult way.

Perhaps, too, we should have listened with more care to the statements of Soviet representatives during the late summer and fall of 1958, and ever since. Many times, both at Geneva and elsewhere, we were told plainly that the Soviet Union considered it her right to conduct as many tests as had the United States and the United Kingdom put together. The main reason for Soviet resumption a year ago was indeed for the purpose of catching up, both in technology and in number of shots. I don't condone it: I think it was a bad business, but at least we were warned, even if the warning itself was not very adult.

It is interesting to note that the Soviet series conducted in 1962 seems to have occasioned only mild disturbance within the administration, and interesting too that the decision to resume U.S. tests in March of 1962 was made in the full expectation that another Russian series would follow. There was considerable speculation that after both series have been completed the Soviets would be more amenable to a test ban treaty. But mark this well: there are few persons in official Washington today who are ready to say that the latest Soviet series will not trigger of still another U.S. series. And, if the United States does fire another series, what then? If the Soviets follow the Playground Procedure, we know the answer.

The tensions of the cold war have created a strongly belligerent posture among many Americans. Some of this is understandable, some of it unjustified by the facts, and some largely a matter of public confusion over the news. I find it all over the country, however, coming from all sorts of people. They say they are tired of being pushed around and lied about and lied to; that it is time we stood up on our hind legs and did some pushing ourselves. If you ask them whether they want an all-out nuclear war, they say "No," but they don't fear it as much as they used to because they have become accustomed to the talk about it—perhaps "numbed" would be a better word. But they call for a military invasion of Cuba in almost the same breath as they reject war.

Perhaps the most dangerous factor in this attitude is that people who have it don't see any inconsistency in it. Perhaps this is one of the reasons why one of the great Communist inconsistencies of all time seems to have made little impression on the U.S. public, or the press, or even the Government. This inconsistency lies in the fact that the Soviet Union incessantly calls for general and complete disarmament, and just as incessantly proclaims its support both now and in the future for "wars of liberation." How one can advocate war and disarmament in the same breath I have never been able to discover, but our most belligerent Americans fall into the same trap.

Look at the situation in Berlin from the standpoint of the Playground Procedure. The facts are grim: they include not only the infamous wall, but the existence of massive Soviet and East German military strength right across the street. Even so, would Khrushchev readily go to war over Berlin—I mean, all-out war, which could not be avoided in such a tinder box? Yet until Cuba, Khrushchev kept pacing that chip on his shoulder with bombastic and provocatory statements, and Secretary McNamara kept threatening to knock it off by proclaiming that we have loaded nuclear weapons in our airplanes, ready at the end of the runways to take off if the President gives the word.

Haven't we seen this before? Haven't we heard it over and over again in the backyards, playgrounds, and parks of our communities? The buildup for the original charge, usually to such a point where the accused has to embrace a position of aggression never contemplated; the resentment and counterbelligerence of the accused at being unfairly pushed around; the inexorable increase of pressure, tension, and bellicosity to avoid the stigma of being "chicken," with sensation seekers yapping "let's you and him fight"—this is the cold war in our world today. It is a sad commentary on our capacity for adult thought that in the last analysis so many of us still appear to prefer the rumble—the mindless physical conflict—for the settlement of arguments.

Consider for a moment the concept underlying the "rumble" mentality—that if you are big and strong enough, no one will attack you. As it happens the writer of this article, who is 6 feet 4 inches tall and weighs 240 pounds, can controvert this notion. For, the fact is that there will always be those who are out to prove something (heaven knows what) by attacking the big guy. The fact that he is big is no more a deterrent against attack than the penalty of the law, even of capital punishment, is enough of a deterrent against crime. Yet it is worth remembering that the big fellow himself can often control the situation by the exercise of adult thinking.

To scorn a trial by battle is very difficult. Our ingrown ideals of courage forbid us to refuse such a trial. Yet if to be strong automatically makes us a target for some (as indeed it does), then we must decide whether we are strong enough to ignore the occasional accusation of "chicken." If we have confidence that our way of doing things is better than that of our competitors, then we don't have to prove it by force. What we desperately need to do, then, is to develop a force of example which proclaims our inward force of character.

Our military-minded friends will retort that force of character cannot protect a country against a "mad dog" neighbor country, if the latter decides to attack. Probably true. But the point is that some people are more anxious to go out and shoot what they think is a mad dog than to make sure that it is really mad. They don't want to inquire whether some other action might not be more effective. There are even those who instead of killing the dog prefer to throw stones at it, or even to tie tin cans to its tail, which is what international diplomacy calls provocative acts. Either way, such people are not even trying to live up to their self-proclaimed label of "peace-loving."

Both the great power blocs say: "We want to survive in peace." Significantly, in the United States, that simple phrase is almost inevitably followed by the word "but": "But we cannot allow communism to take over the world"; "but the Communists understand only the language of strength"; "but the Berlin wall represents a challenge we can't afford to sweep under the rug." Whether these statements are right, wrong, or half-true, the important word in them is the "but," for it means that the simple phrase that precedes it (e.g., "We want peace") is secondary in our minds. It means that we really do not want peace under existing conditions, and that preliminary fighting may still be necessary. We have used the same "but" for the last 15 years to becloud our position in the disarmament debates and other negotiations involving the world's nations; and though it is only a tiny word, it has seemed to our antagonists and even some of our friends to qualify our acceptance of disarmament as a principle.

It might therefore prove helpful to everyone if we reminded ourselves, regularly and out loud, that the primary cause is the quest of peace and that the secondary part is the surmounting of the difficulties blocking that quest. Singlemindedness is a trait which can range from admirable devotion to stupid stubbornness, but unless we are singleminded about peace we might just as well forget it.

Today our leadership is still indulging in the same qualifying method of enunciating policy. The other day I heard a TV news commentator describe the U.S. posture in these terms: "The administration is determined to add to our military strength to seek disarmament." What kind of double talk is that, and what does it really mean? Our President and our top military men tell us there is no security in piling new armaments on top of old ones, but we seem determined to do it, come what may. Why do some Americans in high office display such an appalling disregard of the world? It is customary, of course, to explain away the arms escalation by saying it is merely a reflex response to what others are doing. If we were the definite underdog in this weapons business, if we needed desperately to catch up with a much more powerful adversary, I could perhaps understand this argument. But this is not the case. We do not occupy a position of weakness at all.

We have enough weapons to destroy all our potential enemies many times over.

Why then the emphasis on increasing our military potential? Is it to frighten the Soviet Union into disarmament? That simply does not make sense. If there is one truth that has been proved out in the past, it is that a strong and proud Nation will go to almost any lengths to keep from being surpassed militarily—to catch up if they are behind, and to keep ahead if they are ahead. Frighten the Soviet Union into disarmament? You might just as well try to frighten the United States into Communism.

My quarrel with my government, as well as with the governments of friend and foe alike, is, therefore, that they have not convinced even themselves that a world without war is worth a supreme effort. No Nation has ever tried an all-out, concerted, organized offensive against war as the method of settling international disputes. Many have joined together in treaties, agreements, leagues, and associations such as the United Nations, but each of them has always felt it necessary to reserve the right, out loud, to take unilateral military action should they deem it necessary.

Up until the era of the nuclear weapon this preoccupation with force-as-policy was neither surprising nor particularly vulnerable to criticism. Most wars arose from the desire for power or aggrandizement or the annexation of valuable territory. It seemed worth the time and expense of most nations either to plan for or to guard against aggression for such purposes. But it is no longer as simple as that, nor are the consequences of a shooting war in the same league today with those of times past. Therefore, if we are interested in survival, and most human beings are, we are forced in our own self-interest to find honorable alternatives to shooting.

It is all very well to swagger and strut and warn of our power and defy the antagonist to knock off the chip. Play-acting of this sort may still carry considerable weight in the playground, but not in 20th-century diplomacy, because the nuclear weapon has in fact become the great equalizer between the warring camps. A new way of impressing the adversary must therefore be found which will have the effect of removing the wholly uncalled-for pressures that characterize the cold war impasse.

No one has all the answers, but they exist somewhere, and they will be found. On the level of brute, man-to-man contention, we humans have often come to the realization that fighting is not as important as learning to get along; we have come to understand that the energy, substance, and blood wasted in fighting can be put to far better use in peaceful, cooperative pursuits. In such situations, neither man need be afraid of the other's strength. Each man may well figure he has a good chance of winning any set-to, regardless of his antagonist's brawn. Yet both men can find in judging each other's potential that there is room for respect, even without total agreement, and can find that this respect leads gradually to cooperation and perhaps even to friendship. Is such an evolving friendship impossible between nations? It has, after all, not proved impossible between neighbors, between communities, between cities and States.

But such respect and cooperation do need a new atmosphere, a new environment in which to thrive. And the more we yip and yap about how we should not only flex but use our muscles, the further we remove ourselves and our friends from that environment. Let me be quite clear: no one disapproves more than I do of being pushed around. I have the same wholly human reactions to indignity and injustice as most men. I do not advocate "turning the other cheek" as the preferred path to peace; rather, I insist that we can block or parry the first blow, thus making the turning unnecessary. But, though I understand human reaction, I cannot condone either the belligerence of the Communist line or the counterbelligerence which that line creates. Both reactions, are simply not adult, in the light of the holocaust to which they can lead.

So we must give more thought and attention to what I call the "Three A's": the attitude which can help create the atmosphere in which we can take the action which will lead us and our adversaries away from the brink together. Neither of us really wants to jump off: this would mean destruction for us both. Why not, then, put as much thought and energy into creating and developing such a course of action as we do in creating and developing ever newer and more devastating weapons? Which course is more likely to be our salvation in the long run? Which makes more sense? Let's try being adult.

Mr. CLARK. Mr. President, the New York Times this morning published a splendid letter, also written by Mr. James J. Wadsworth, on the subject of the test ban, in which he denies that the Hosmer committee of the House, a partisan Republican committee, speaks for all House Republicans. He points out that the Republican leadership in the other body "has left the impression that the GOP as a whole opposes the administration's current test ban policy."

Mr. Wadsworth states categorically that this is not true. I am glad to note this comment by a very able, effective member of the Republican Party. He discusses rather critically the report of the Hosmer committee, pointing out that they made their first report when they had heard only one side of the story, and that after the second side, the administration side, was in, they gave it very little publicity. Mr. Wadsworth concludes his letter by saying:

> If this administration is guilty of anything—

And he does not say that it is—

> It is the failure to educate the public to the comparative risks of continued testing versus a treaty.

I commend Mr. Wadsworth for his very able statement of support for the test ban position of the President of the United States and his advisers.

Mr. President, I ask unanimous consent that Mr. Wadsworth's letter may be printed at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Test-Ban Report Attacked—Wadsworth Denies Panel Speaks for All House Republicans

To the EDITOR OF THE NEW YORK TIMES:

Critics of the protracted efforts to achieve a nuclear test-ban treaty with the Russians have been most outspoken since the chances of agreement seemed to improve in the wake of the Cuban crisis. These critics are to be found in both parties, as are the consistent advocates of a workable treaty. Unfortunately, however, the Republican leadership in the House has left the impression that the GOP as a whole opposes the administration's current test-ban policy.

This impression has been left by Representative CRAIG HOSMER's Republican House panel on nuclear testing, whose reports are signed by the entire GOP leadership. The panel's first report, presumably based on the views of experts whose antitest-ban views were already well known, was released to the press before scientists with a different approach could be heard.

Not surprisingly, the first report concluded that "the present basis for negotiations on detection machinery fails to offer realistic probability of detecting violations." Yet it was not until almost a month later that Government witnesses spelled out the areas of recent progress in underground test detection before the hearings of the Joint Committee on Atomic Energy.

Anyone seriously interested in the facts could hardly be in a position to judge the detection machinery without hearing from the men most closely associated with making it work.

UNDERGROUND EXPLOSIONS

Now the hearings are over and Mr. HOSMER's panel has issued another report. This time the panel has seized upon one bit of testimony, carefully ignored other statements, and has come to the conclusion that the American-British detection system cannot detect small underground nuclear tests over an area of 2.5 million square miles in the U.S.S.R.

The Hosmer panel's calculations are based on the assumption that secret Soviet tests would be conducted in dry alluvium, a soft earth. But the panel ignored the testimony of Dr. Franklin Long of the U.S. Arms Control and Disarmament Agency, who indicated that there are only two small areas of alluvium in the U.S.S.R. One is on the Iranian and Afghan borders, the other about 400 miles from Iran. Both are within detection range of stations outside of the U.S.S.R.

As a Republican and as the former chief negotiator for the Eisenhower administration, which initiated the nuclear test-ban talks, I find the operation of the Hosmer panel one of the most unfortunate domestic developments since I served in Geneva. It is biased in its presentation of the argument and misleading in its pretense of speaking for all House Republicans. I feel sure that the panel does not reflect the views of all Republicans in the House and certainly in the Senate, which must ultimately ratify any treaty which is signed.

BASIS FOR NEGOTIATIONS

Some congressional and press attacks on continued efforts to reach agreement imply that the top officials of the administration and their negotiators are "giving away" our national security, piece by piece. Levelheaded Americans know that successful negotiations must be based on a structure of mutual advantages for both sides. A workable nuclear test ban—and further steps toward mutual disarmament—would improve the security of both major powers as well as all other nations.

If this administration is guilty of anything, it is the failure to educate the public to the comparative risks of continued testing versus a treaty. President Kennedy made a cogent point during his press conference of March 21 when he spoke of the probability that many more nations would have the nuclear weapon by the mid-seventies. I hope he will continue to voice this warning until it is well understood. When the public is made aware of the choice we face, it can intelligently weigh the risks of new paths of international security.

Mr. CLARK. Mr. President, I conclude as follows: Let us stop playing games with disarmament, as though we were little boys. Let us put away our tin soldiers. Let us disavow the "war whoopers," as Walter Lippmann calls them. Let us forget all this nonsense about "eyeball to eyeball" and "Who is going to blink first?" In short, let us grow up. This is serious business. We are not on a juvenile Western television circuit, where the goodies are our boys shooting up the baddies, and the baddies, named Vladimir, are all trying to shoot us up.

We are living in a stark, harsh world of the mid-sixties. We cannot retreat into euphoria. Nor can we recapture the mood of the First Crusade. Let us not get into a holy war on 700 years of controversy between Mohammedan and Christian led to no intelligent conclusion. Let us not get into a long, bitter shooting war with those with whom we disagree, with the same unfortunate result as a thousand years ago.

Let me suggest that we are not playing a high school football game with the Russians. Let us support the hardboiled realists of our administration, and indeed of President Eisenhower's before them, who say there is no alternative to peace, who say that war is unthinkable. Let us get on with the long, hard, tough negotiation from strength, which, in the long run, is the only road to a lasting peace, which, in my opinion, will inevitably lead to the President's objective; namely, general and complete disarmament under enforcible world law.

Mr. PROXMIRE. Mr. President, I wish to congratulate and commend the distinguished Senator from Pennsylvania upon the speech he has just made. I am conscious of the fact that David Lilienthal was a great public service commissioner in Wisconsin before he became the head of TVA.

I agree with the Senator from Pennsylvania that Mr. Lilienthal is a man of wisdom, restraint, and responsibility. Nevertheless, I think the answer which the Senator from Pennsylvania has given to the Lilienthal thesis, which is, that we should not engage in disarmament discussions and should not sign a disarmament treaty because such a treaty is superficial and does not go to the basic causes of war, is completely correct. I support the Senator from Pennsylvania wholeheartedly. We must work on both ends of the problem. We must work on the basic causes of war—poverty, illiteracy, mistrust—as well as work night and day to do what we can to limit the forces of destruction, which of themselves certainly can cause war.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. CLARK. I thank the Senator for his support of my position in this regard, and I welcome it. I assure him that he and I do not stand entirely alone.

Mr. PROXMIRE. Mr. President, earlier today I placed in the RECORD a column by Max Freedman, in which he protested that the excellent speeches made by the majority whip in favor of a treaty for the control of nuclear weapons testing have not been given the kind of national attention and publicity which they should have received. The Senator from Pennsylvania also has been making speeches in the Senate on this subject, and his speeches have not received the attention which they deserve.

Mr. CLARK. Does the Senator from Wisconsin recall that a number of us came to the Chamber when the Senator from Minnesota [Mr. HUMPHREY] was making his speech on the floor several weeks ago? I think six or seven of us engaged in a colloquy with him at that time. I receive plenty of publicity; I am not looking for more; but I think it is a great shame that the Senator from Minnesota should have received, so far as I know, only one little stick of type in the Washington Post; I saw no other comment on his speech in any other newspapers. To my way of thinking, his speech was one of the great speeches delivered at this session of Congress.

Mr. HART. I, too, should like to thank the Senator from Pennsylvania for again pricking the conscience of the Senate concerning the overshadowing question which confronts America today and will confront it in the years ahead.

It is remarkable that we can discuss at great length a great variety of things, ranging from A to Z, and yet we seem consciously to ignore the fact that all that litany from A to Z will evaporate if we do not face up to this problem.

Again I salute the Senator from Pennsylvania for insisting that we obtain a sense of priority.

Mr. CLARK. I thank the Senator from Michigan for his comments. May the three of us—the only Senators on the floor—and also the present Presiding Officer, the Senator from North Dakota [Mr. BURDICK], express the hope that this point of view will be adequately reported in the press and on the television and the radio.

FEDERAL POWER COMMISSION RECORD ON LANDIS' RECOMMENDATION

Mr. PROXMIRE. Mr. President, in December 1960, shortly after President Kennedy was elected, and before he took office, Dean Landis, of the Harvard Law School, was appointed to make a study of the quasi-judicial agencies of the Federal Government. He made a very intelligent, thoughtful, and critical appraisal of them. He also made a series of recommendations as to how they might improve their operations.

I may point out that, in the judgment of many persons, these quasi-judicial agencies have a more profound influence on the American people and on their way of life than does almost any other area of Government operation. These quasi-judicial agencies include the Federal Power Commission, the Federal Trade Commission, and many others. They affect the content of much of what we see on the television and much of what we hear on the radio; and they also have a definite effect on the rates we pay for gas and fuel oil, on the cost of transport, and on the health of all these industries.

On January 11, I wrote to each of the agencies, and asked what progress they had made on the Landis recommendations. Previously, I have placed in the RECORD the replies which came from other agencies. Today, I should like to call attention, very briefly, to a reply I received from Mr. Swidler, Chairman of the Federal Power Commission. He acknowledged the criticisms made by Mr. Landis and conceded their validity when he said:

> The present members of the Federal Power Commission have been fully aware of the serious questions raised by Mr. Landis' December 1960 Report on Regulatory Agencies, particularly those associated with the Commission's past inaction and past failure to protect the consumer interest.
>
> We have taken numerous steps to achieve the goals set forth in Mr. Landis' report even though our experience has indicated that all of his detailed suggestions were not in the public interest.

Mr. Landis called the Federal Power Commission a classic example of the breakdown of the administrative process. He pointed out that laws passed by Congress and decisions made by the Supreme Court have been flouted and ignored by the FPC.

The letter from Mr. Swidler is a significant justification of the record of his agency in meeting the Landis criticisms. I do not fully share Mr. Swidler's opinion; and at a later time I intend to evaluate and appraise further the progress made by the Federal Power Commission.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the letter of March 1, from Mr. Swidler, Chairman of the Commission; and also a release by the Federal Power Commission, dated January 30, reporting on recent activities of the Commission; and a further release, dated February 13, by the FPC; and several statistical tables which set forth the progress made by the Commission.

There being no objection, the letter, releases, and tables were ordered to be printed in the RECORD, as follows:

FEDERAL POWER COMMISSION,
Washington, D.C., March 1, 1963.

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PROXMIRE: I regret the delay in responding to your letter of January 11, but as was explained to your staff the press of official business made it impossible to prepare in a shorter period of time the detailed response which your inquiry deserves.

The present members of the Federal Power Commission have been fully aware of the serious questions raised by Mr. Landis' December 1960 Report on Regulatory Agencies, particularly those associated with the Commission's past inaction and past failure to protect the consumer interest.

We have taken numerous steps to achieve the goals set forth in Mr. Landis' report even though our experience has indicated that all of his detailed suggestions were not in the public interest. As you know, when the present members of the Commission took office we were faced with backlogs in the natural gas field and a withering away of responsibilities in the electric power field which had accumulated over a period of years. We have made major advances in the past year in clearing away the backlog of natural gas cases and bringing stability to gas prices, and in revitalizing our activities in carrying out our statutory responsibilities under the Federal Power Act. These advances have been accomplished through organization changes, new procedures, clear policies, and a greater sense of urgency by the Commission as well as its staff.

I am enclosing a recent press release describing our progress in the four major natural gas regulatory areas. This report contains complete statistics on our natural gas caseload.

As you know, many of the recommendations contained in Mr. Landis' report called for the President to submit to the Congress reorganization plans for the various regulatory agencies, including the Federal Power Commission. Since the initiation of these proposals rests with the President, I shall not comment on them.

Mr. Landis devoted a considerable portion of his report to the suggestion that the FPC should utilize section 7(f) of the Natural Gas Act to eliminate the processing of thousands of independent producer and pipeline certificate applications. Section 7(f) permits a natural gas company to enlarge or extend its facilities to supply increased market demands within its service area without further FPC authorization.

In considering the application of this provision to pipeline companies, the Commission last year dismissed a series of long-pending applications seeking such determinations, holding that the service area provision is not an exception that can be applied without reservations. We concluded that the determination can be applied to a company such as the Washington Gas Light Co., which is in probably a unique position, engaged solely in local distribution of gas even though its system crosses State lines in the Washington, D.C., metropolitan area. On the other hand, we denied a request by Arkansas Louisiana Gas Co., which is typical of the interstate pipeline systems, finding that it was seeking a service area determination which would allow it unlimited rights to construct facilities within a contiguous geographical area that includes a large portion of one State and small areas of two others. Such an exemption would be an abdication by the Commission of the full jurisdiction that Congress intended that the Federal Power Commission exercise over interstate transporters of gas. Copies of the Washington Gas Light and Arkansas Louisiana orders are enclosed.

We have achieved the purposes of the section 7(f) by proscribing regulations which permit pipelines through budget-type authorizations to construct additional facilities to existing customers is specified relatively small amounts without further approval of the Commission.

Mr. Landis specifically suggested that small natural gas producers should be exempted from regulation.

The suggestion that the Commission should exempt all producers below a certain size has been thoroughly explored and we have had to reject this course for reasons both practical and legal. First, the Natural Gas Act does not permit us to exercise such a discretion. The statute requires the Commission to regulate natural gas companies, and no leeway is provided which would permit us to treat certain classes of companies, such as small independent producers, any differently than other types of companies. Secondly, even if the statute did permit such exemptions, there are other problems, including the likelihood of triggering escalation clauses in major contracts, if the small producers are freed to operate outside of our price ceilings.

The Commission has taken many steps to reduce the burden of regulation for small producers and make independent producer regulation effective. The most important actions are the area rate proceedings which obviate the necessity for case-by-case determinations for the thousands of independent producers and enable us to fix just and reasonable rates for an entire producing area in one proceeding. We have also developed simplified forms for small producers to use in making filings with the FPC, which reduce the burden on the producer as well as simplifying the processing within the Commission.

Other recommendations made by Mr. Landis, including those relating to planning, budget management, and the development of new policies and procedures designed to improve administration and expedite the substantive work of the Commission have been considered and acted upon during the past 18 months with good results.

Applications for certificates of public convenience and necessity require notice of application and hearing and are acted upon at the earliest date possible consistent with statutory requirements and other matters pending. An abridged procedure is employed when no opposition is filed to a certificate application and the Commission staff recommends that the certificate be granted by the Commission as in the public interest. This procedure permits a large number of cases to be decided in a single order and facilitates prompt disposition of pipeline certificate applications. The Commission has intensified its efforts to use the abridged hearing procedure whenever feasible. Thus, 1980 pipeline and independent producer certificates representing 83.6 percent of all certificates granted during fiscal year 1962 were processed in this manner.

Present Commission experience concerning cases initiated since July 1, 1961, shows that the time required for disposing of all types of cases has been greatly reduced as compared with the record in the past. For example, 13 were decided in an average of 179 days after filing or suspension, compared to an average of 815 days for 67 cases decided by the prior Commission in fiscal years 1960 and 1961. Although the 13 cases are only a small sample, their processing time is indicative of the progress being made to shorten the proceedings.

On July 1, 1961 there were 116 pipeline rate cases pending. These involved accumulated revenues collected by the companies, subject to possible refund to the consumer, totaling over a billion dollars. By January 1, 1963, the backlog had been reduced to 48 cases with possible refunds amounting to $471 million. During this 18-month period, 85 cases were disposed of and refunds totaling $350 million were ordered by the Commission. Thirty-nine of the 85 cases were disposed of in the last 6 months and refunds ordered in this period totaled more than $252 million. Rate reductions ordered in these same cases totaled $62 million annually. Eighty-four of the 85 cases were inherited from the former Commission and the great majority were decided through the settlement process.

The disposition of our backlog of independent producer rate cases cannot be expected until we can conclude the first two area rate cases now underway. The hearing in the lead case is now well along. These proceedings have been devised to dispose of hundreds of cases in a single decision. Over 900 of the 2,940 cases pending December 31, 1962, have been consolidated into the two area proceedings. The Commission staff is presently developing plans for area rate proceedings to fix just and reasonable rates for the remaining major gas producing areas in the country.

We have identified the workload and established controls to insure that all types of cases move in an orderly and timely manner from one processing stage to the next. We have established time standards throughout the formal hearing process and are making every effort to meet or excel the standards.

To enable us to process our cases more expeditiously, we have also:

(a) Required natural gas companies to submit their case-in-chief and all supporting data verified by an independent certified public accountant at the time a rate increase is filed, thus eliminating the need for extended field investigations as a part of rate cases.

(b) Made more extensive use of prehearing conferences to clarify issues and, where possible, eliminate immaterial or peripheral issues.

(c) Established guidelines limiting the type of evidence necessary to determine initial prices of natural gas in independent producer certificate cases.

(d) Initiated action to require electric utilities, when filing schedules of rates subject to our jurisdiction, to support these filings with cost information.

In line with another recommendation in the Landis report, the position of Assistant to the Chairman has been established to assist in carrying out the important duties of the Chairman's office. The assistant acts as the adviser and personal representative of the Chairman, who under Reorganization Plan No. 9 is responsible for the executive and administrative functions of the Commission. Other members of the Commission now also have personal assistants to help them handle the heavy workload of the Commission.

Mr. Landis recommended that individual commissioners should be responsible for enunciating the grounds on which conclusions are reached in decisions. On May 1, 1961, the Commission announced that its opinions generally would be issued in the name of the individual commissioner preparing the opinion. This policy has resulted in expediting the disposition of cases and improved the quality of our opinions by providing close Commission supervision.

In response to your final question, the Commission's total appropriation for the current fiscal year (1963) is $10,700,000, which compares with $6,932,500 in fiscal 1959.

I have concentrated largely on our progress in natural gas regulation, since the main weight of the Landis report and the heavy backlogs were in this area. The Commission during the last year and a half has taken strong action to revitalize its activities in electric power regulaton to correct the results of past inaction and past disregard of consumer interests. I am enclosing a list of recent accomplishments of the Commission, describing progress in all of our major areas of responsibility.

If you need any further information, please let me know.

Sincerely yours,
JOSEPH C. SWIDLER,
Chairman.

RECENT ACTIVITIES OF THE FPC

NATURAL GAS

1. In the past 18 months the Commission has disposed of two-thirds of the billion-dollar backlog of pipeline rate cases it inherited and has ordered interstate pipelines to refund $350 million and reduce their rates for the future by over $62 million annually.

2. The rapid increase in the wellhead price of gas sold in interstate commerce has been halted. The average price has been virtually stabilized in the past year.

3. The Commission has wholeheartedly carried out its responsibility for regulating

sales of gas in interstate commerce by independent producers. We have ordered producers to refund over $30 million.

4. The Commission has underway a comprehensive study in cooperation with the State commissions to determine the extent to which natural gas rate refunds reductions are being passed on to the ultimate consumer.

5. The Commission has pushed forward with area rate proceedings to fix just and reasonable rates for producers and the hearing in the lead case involving hundreds of producers in the Permian Basin of Texas and New Mexico is well along toward completion.

6. The interim area ceilings for sales of new gas in the important producing areas of southern Louisiana and Texas Railroad District 4 were reduced by 2 cents per thousand cubic feet.

7. The Bureau of Natural Gas was reorganized to pinpoint responsibility and assure that cases were speeded to a prompt conclusion.

8. The Commission adopted a rule requiring pipelines to file complete backup information with rate increase requests, thus eliminating field investigations and enabling the Commission to set cases for hearing at once and dispose of them promptly.

9. The Commission adopted a rule which outlaws new contracts for the sale of gas by producers that contain indefinite escalation clauses, such as the so-called favored-nations clauses, which have caused much of the inflation in the price of gas in the past.

10. The Commission adopted a rule prohibiting ex parte communications dealing with the merits of contested cases.

11. The Commission has taken many steps to ease the burden of regulation on the small independent producer.

a. We have devised a one-page form in which they can file for increases which are not in excess of our ceilings.

b. Our area rate policy, in which the rates for all the producers in an area are determined in a single proceeding, relieves the small independent producer of the burdens of individual rate proceedings.

12. A field office has been established in Houston, Tex., to insure closer supervision of personnel working in the field and serve as a clearinghouse for the problems of the producers in the area.

13. We have established an Office of Economics to assist the Commission in planning the future course of regulation of the natural gas industry because economic problems go to the core of regulatory policy.

14. The Commission has established guidelines which limit the evidence in producer certificate cases and will enable the Commission to hold the line on the price for new gas and at the same time dispose of certificate applications expeditiously.

15. In opinion No. 369 issued November 30, 1962, the Commission rejected a price increase by H. L. Hunt and others that would have created a new, higher price plateau for natural gas in southern Louisiana and Mississippi. The decision was the present Commission's first decision in a litigated gas producer rate case and demonstrated our determination to hold the line against unjustified increases in natural gas prices.

16. In opinion No. 348 issued October 23, 1961, the Commission held that it had jurisdiction over the sale of all of the gas moving in interstate commerce, even though some of the gas was consumed in the producing State. The Commission thus prevented possible increased costs to interstate customers by the use of contractual arrangements purporting to segregate certain volumes of gas from the interstate stream and thus to avoid FPC jurisdiction over the price paid to the producers.

17. In opinion No. 351 issued January 22, 1962, the Commission decided the famous CATCO case on remand from the Supreme Court. The decision reduced the initial price for this large sale of gas in southern Louisiana from 21.4 cents per Mcf down to 18.5 cents and ordered refunds of the higher amounts previously collected.

18. In opinion No. 366 issued October 19, 1962, the Commission decided the rate of return issue in four rate cases involving El Paso Natural Gas Co. pending before the Commission since 1955. The case was set for hearing in July 1961 and the interim order procedure, which the Supreme Court recently approved and described as "not only entirely appropriate but in the best traditions of effective administrative practice," was used by the Commission to expedite the decision. The Commission ordered refunds which will total over $68 million, exclusive of interest, on the rate of return issue alone and ordered rate reductions of 15.8 million annually which were made effective before the end of 1962 over the protest of El Paso. The reduced rates were therefore in effect in time to lower the 1963 price of intrastate gas in California which is controlled by the January 1 price fixed by the FPC for interstate sales.

ELECTRIC POWER

1. The Commission is conducting a national power survey to encourage the voluntary interconnection and coordination of the Nation's power systems on a regional and interregional basis. The Commission's objectives are to promote the maximum use of the latest technology in the electric power field to provide lower rates to consumers. The survey has already stimulated many new interconnections between companies. The advisory committees we have formed have provided a forum for all segments of the industry—public, private, and cooperative—to meet and discuss their expansion plans in light of the national interest in providing low cost electricity in all parts of the country.

2. When the present members of the Commission took office the Commission's electric rate regulation functions were practically nonexistent. There were only four professional people engaged in electric rate work. The Commission took immediate action to exercise its responsibility to regulate the wholesale rates of electric utilities in interstate commerce which is one of the primary consumer protection functions of the Federal Power Act.

3. The Commission transferred the electric rate staff from the Bureau of Natural Gas where it was buried and made it a prominent part of a new division in the Bureau of Power. We have built up the electric rate staff within the limits of existing manpower and we are seeking funds to enlarge the staff to the minimum required to carry out effective rate regulation.

4. Many utilities did not even have their wholesale rates in interstate commerce on file with the Federal Power Commission. We are requiring that these rate filings be made and where necessary have issued a show-cause order to require the filings. Over 1,000 electric rate filings were made with the Federal Power Commission in the last 6 months of 1962.

5. The FPC has issued a proposed rule that will require electric companies to support their rate filings with cost information to facilitate meaningful Commission review.

6. The Commission is preparing a list of all the public utilities subject to the Commission's jurisdiction which we will publish shortly.

7. The Commission has announced a proposed rule requiring strict and detailed accounting for political expenditures by power companies. (The rule applies also to natural gas companies.)

8. The Commission has taken action to carry out its responsibility for collecting the money owed the U.S. Treasury from downstream hydroelectric projects that benefit from upstream Federal developments.

(a) A provision is being inserted in all new licenses which will require annual payments for headwater benefits based upon a formula.

(b) We have announced a rule which will accomplish the same purpose for existing projects.

In this fiscal year we are collecting $1,750,000 in headwater benefits for the Federal Treasury which is three times as much money as has been collected in the entire history of the FPC. We estimate that in the next year we will collect $4 million.

9. The Commission in Opinion No. 356 on April 19, 1962, ruled that a pumped storage hydroelectric project was subject to the Commission's jurisdiction. The Commission emphasized that the Federal Power Act conferred broad authority on the Commission to insure the most comprehensive use of the Nation's water resources.

10. The Commission in opinion No. 357 on April 25, 1962, spelled out a new policy in issuing licenses for non-Federal hydro projects built prior to 1935 and still operating without a license. The FPC concluded that these projects should not be given the benefit of the maximum 50-year licenses allowed under the Federal Power Act but should be licensed for a shorter term. We are making a concerted effort to bring these projects under license.

11. We have accelerated the pace of our hydroelectric licensing work. In the last 6 months of 1962 licenses were issued for projects whose construction will add $260 million to stimulate the Nation's economy.

12. We have proposed a rule requiring all licensees to submit a comprehensive plan for public recreation with their license applications to assure that the general public obtains the full benefits of the recreation potential of hydroelectric projects built under FPC license.

[From Federal Power Commission Release No. 12,497; G-6907]

FPC Chairman Swidler Reports Progress in All Natural Gas Regulatory Areas During 1962

WASHINGTON, D.C., February 13, 1963.—The Federal Power Commission cut its pipeline rate case backlog by well over half during 1962, reducing the number of cases on hand from 90 to 41 and the annual dollar amount of proposed increases from $388.2 million to about $151 million, Chairman Joseph C. Swidler reported today.

The FPC during 1962 also made substantial progress in its other three natural gas regulatory areas, Chairman Swidler said. He reported—

A reduction of $16,098,417 in the backlog of proposed annual rate increases by independent producers of natural gas.

A decrease from about $1.1 billion to $914 million in the amount of proposed construction in pending pipeline certificate applications.

A reduction from 3,209 to 2,814 in the number of producer certificate applications pending.

The $1,099,090,000 accumulation of excess rates collected subject to refund 6 months ago by natural gas pipelines was reduced to approximately $470,779,443 at the end of 1962.

During the quarter ended December 31, Chairman Swidler said, the FPC disposed of

23 pipeline rate increase cases involving $96,070,000 annually. At the same time it ordered refunds estimated at $184,946,172, plus interest.

More than two-thirds of the $151,009,400 in pipeline rate increases pending at year's end was involved in five cases. One of these is before the Commission, two are awaiting initial decision by FPC examiners, and two are undergoing staff investigation.

The annual dollar amount involved in proposed rate increases by independent natural gas producers dropped for both the year and for the last quarter of 1962. The Commission had on hand proposed increases totaling $167,525,597 at the beginning of the year, and this was reduced to $158,159,192 by September 30, and to $151,427,180 at year's end. However, the number of cases on hand rose approximately 5 percent from 2,756 at the beginning of the year to 2,881 on September 30 and 2,905 on December 31.

Chairman Swidler also reported an across-the-board reduction in the amount of proposed construction in pending pipeline certificate applications for both the quarter and the year.

Pending applications, measured by the estimated construction costs, were reduced from $1.1 billion to about $914 million for the year; the miles of pipeline in pending applications was reduced from 8,782 to 8,582; and measured by compressor horsepower the reduction was from 772,783 to 612,960. The number of cases on hand, however, rose from 206 to 224 during the year. Corresponding reductions for the quarter were $1,036,230,973 to $913,783,652 (construction costs); 9,414 to 8,582 (miles of pipe); and 767,942 to 612,960 (compressor horsepower).

Hearings have been completed on nearly half of the $913,783,652 backlog of proposed new construction on hand December 31, and approximately $120 million was being held up awaiting further information or action by the applicants or the disposition of other cases.

More than $351 million of the pending pipeline construction applications, or more than one-third, is proposed in the five largest cases. Four of these applications are through the hearing stage, and the fifth is ready for hearing. Temporary authorization has been granted for construction of $138,227,922 of the new construction proposed in pending applications.

The number of pending applications by independent producers seeking authorization to sell gas in interstate commerce was reduced from 3,209 at the beginning of the year to 2,814 on December 31, 1962. The FPC during the year disposed of 2,039 such applications. Temporary authorizations had been issued in 1,892 of the 2,814 cases still pending at year's end. Of the remaining 922 applications, 300 involve service for which temporary certificates have not been requested or which are new filings still being processed. For the last quarter, however, there was an increase in the number pending from 2,557 to 2,814.

The attached tables show statistics as of the end of the last quarter, with comparisons with the preceding quarter and the quarter ended a year earlier. The statistics are divided into four tables—pipeline certificate cases, pipeline rate cases, producer certificate cases, and producer rate cases. The tables include summary remarks concerning the more significant aspects of the statistics.

The publication of these statistics completes the first full year of coverage through the quarterly reports, initiated by Chairman Swidler at the beginning of 1962.

TABLE I.—*Pipeline company certificate filings and actions (construction and operation only)*

	Number of applications, quarter ending—			Miles of pipeline, quarter ending—			Compressor horsepower, quarter ending—			Estimated cost		
	December 1962	September 1962	December 1961	December 1962	September 1962	December 1961	December 1962	September 1962	December 1961	December 1962	September 1962	December 1961
Pending start of quarter	194	200	195	9,414	10,202	7,432	767,942	785,197	590,298	$1,036,230,973	$1,101,470,293	$934,623,381
Applications filed during quarter	71	49	53	916	616	1,830	73,590	55,410	192,050	121,123,452	86,333,844	242,418,571
Certificates issued during quarter	38	51	39	1,562	1,403	476	228,572	72,665	9,565	230,865,173	151,522,153	71,866,821
Otherwise disposed of during quarter	3	4	3	186	1	4	----------	----------	----------	12,705,600	51,011	30,544
Pending end of quarter	[1][2] 224	194	206	[3] 8,582	9,414	8,782	[3] 612,960	767,942	772,783	[3] 913,783,652	[4] 1,036,230,973	1,104,144,587

[1] Increase during quarter.

[2] Includes 82 applications on which temporary certificates involving $138,227,922 in estimated construction cost have been issued.

[3] Reduction during quarter.

[4] Adjusted to include amendments and supplements to applications and modifications of certificates.

Analysis of cases pending

	Dec. 31, 1962	Dec. 31, 1961
Additional information requested	$11,548,000	$61,955,000
Undergoing staff analysis	69,714,047	171,622,030
Ready for hearing	125,225,404	188,266,145
Hearing in progress	178,208,630	387,598,061
Before examiner for decision	197,110,200	84,253,994
Before Commission	212,365,567	27,458,000
Pending action by applicant or in other cases	107,302,320	164,702,662
Total major projects pending ($700,000 or more construction cost)	901,474,168	1,085,855,892
Minor projects pending	12,309,484	19,288,695
Total, all projects pending	913,783,652	1,105,144,587

5 largest certificate applications pending Dec. 31, 1962

Name of company	Docket No.	Estimated construction cost	Status
Colorado Interstate Gas Co.	G-16904	$99,745,673	Before Commission.
Columbia-Gulf Transmission Co.	CP-62-89	72,225,300	Before examiner for decision.
Oklahoma-Illinois Gas Pipeline Co.	CP-62-260	64,130,000	Ready for hearing.
El Paso Natural Gas Co.	G-16235	58,685,000	Before Commission.
Tennessee Gas Transmission Co.	CP-60-94	56,624,000	Before examiner for decision.

TABLE II.—*Pipeline company rate filings and actions*

	Number of dockets, quarter ending—			Annual amount, quarter ending—		
	December 1962	September 1962	December 1961	December 1962	September 1962	December 1961
Filings under suspension, start of quarter	64	76	101	$247,042,400	$277,189,100	$394,764,500
Increases suspended during quarter	----------	2	----------	37,000	8,582,900	----------
Increases allowed without suspension during quarter	----------	3	----------	----------	826,500	600
Disposition of suspension proceedings during quarter [1]	23	14	11	96,070,000	38,729,600	6,573,600
Increases allowed after hearing and decision	5	----------	----------	9,849,000	----------	----------
Increases disallowed or withdrawn after hearing and decision	----------	----------	----------	8,054,000	----------	----------
Increases allowed by settlement proceedings	18	14	11	56,726,900	13,026,500	3,275,000
Increases disallowed or withdrawn by settlement proceedings	----------	----------	----------	21,440,100	25,703,100	3,298,600
Filings under suspension, end of quarter	[2][3] 41	64	90	[3][4] 151,009,400	247,042,400	388,190,900

[1] Cases disposed of during the last quarter provided for refunds estimated to total $184,946,172, plus interest.

[2] Includes 8 cases still pending which have been disposed of except for subsidiary issues.

[3] Reduction during quarter.

[4] The accumulated amount of revenues collected subject to possible refund was $470,779,443 on Dec. 31, 1962, compared with $1,099,090,000 on July 1, 1962.

5 largest pipeline rate suspensions as of Dec. 31, 1962

Name of company	Docket No.	Annual amount suspended	Status
El Paso Natural Gas Co.	G-12948 et al.	$62,526,000	Awaiting examiner's decision.
United Fuel Gas Co.	G-20270	14,614,500	Do.
Southern Natural Gas Co.	G-18512	10,135,400	Undergoing staff investigation.
Michigan-Wisconsin Pipeline Co.	RP60-9	8,507,900	Before Commission.
Northern Natural Gas Co.	G-15335	8,137,000	Undergoing staff investigation.

TABLE III.—*Independent producer gas certificate filings and actions (service and abandonment)*

	Number through quarter ending—		
	December 1962	September 1962	December 1961
Pending start of quarter	2,557	2,520	2,973
Applications filed during quarter	402	404	453
Certificates issued during quarter	[1] 80	311	142
Otherwise disposed of during quarter	65	56	75
Pending end of quarter	[2] [3] 2,814	2,557	3,209

[1] None of these certificates were conditioned to require reductions in the initial sales price of the gas.

[2] Temporary authorizations have been issued in 1,892 of these cases. Of the remaining 922 pending applications, 300 involve service for which temporary authorization cannot be issued. The remaining 622 cases include those for which temporary authorizations have not been requested or which are new filings still being processed.

[3] Increase during quarter.

TABLE IV.—*Independent producer rate filings and actions*

	Number of dockets,[1] quarter ending—			Annual amount, quarter ending—		
	December 1962	September 1962	December 1961	December 1962	September 1962	December 1961
Filings under suspension, start of quarter	2,881	2,902	2,563	$158,159,192	$164,870,541	$165,787,033
Increases suspended during quarter	191	96	203	3,682,301	5,115,468	2,406,941
Disposition of supension proceedings during quarter	167	117	10	10,414,313	11,826,817	668,377
Increases allowed after hearing and decision	6					
Increases disallowed or withdrawn after hearing and decision				85,465		
Increases allowed by settlement proceedings	161	117	10	5,502,432	3,181,997	491,654
Increases disallowed or withdrawn by settlement proceedings				4,826,416	8,644,820	176,723
Filings under suspension, end of quarter	[2] [3] 2,905	2,881	2,756	[4] 151,427,180	158,159,192	167,525,597

[1] A docket may include 1 or more filings.

[2] Includes 901 dockets in area rate proceedings now in progress.

[3] Increase during quarter.

[4] Reduction during quarter.

NOTE.—A substantial portion of the suspended independent producer rate filings are held pending determination of the proper area price in a formal proceeding. The Commission is currently devoting the efforts of a considerable portion of its staff, in expediting area hearings, docket No. AR 61-1 and AR 61-2, and significant decrease in number of suspensions on hand is not anticipated pending conclusion of such hearing.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. PROXMIRE. Mr. President, if there is no further business to come before the Senate at this time, I move that, in accordance with the order previously entered, the Senate stand adjourned until tomorrow at 10 o'clock a.m.

The motion was agreed to; and (at 1 o'clock and 4 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Tuesday, April 9, 1963, at 10 o'clock a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate April 8, 1963:

U.S. ARMY

The following-named officers for temporary appointment in the Army of the United States, to the grades indicated, under the provisions of title 10, United States Code, sections 3442 and 3447:

To be major generals

Brig. Gen. John Edward Kelly, O20156, Army of the United States (colonel, U.S. Army).

Brig. Gen. Louis Alfred Walsh Jr., O19567, U.S. Army.

Brig. Gen. Elmer John Gibson, O19822, U.S. Army.

Brig. Gen. Edwin Hess Burba, O31518, Army of the United States (colonel, U.S. Army).

Brig. Gen. Alexander Day Surles Jr., O20622, Army of the United States (colonel, U.S. Army).

Brig. Gen. Benjamin Henry Pochyla, O30103, U.S. Army.

Brig. Gen. Joe Stallings Lawrie, O20914, Army of the United States (colonel, U.S. Army).

Brig. Gen. William Roberts Calhoun, O19256, U.S. Army.

Brig. Gen. Walter August Jensen, O19006, U.S. Army.

Brig. Gen. George Thomas Powers 3d, O19137, U.S. Army.

Brig. Gen. Jackson Graham, O20553, Army of the United States (colonel, U.S. Army).

To be brigadier generals

Col. Julian Johnson Ewell, O21791, Army of the United States (lieutenant colonel, U.S. Army).

Col. Howard Wilson Penney, O22917, Army of the United States (lieutenant colonel, U.S. Army).

Col. Peter Clarke Hyzer, O20589, U.S. Army.

Col. Walter Evans Brinker, O21776, Army of the United States (lieutenant colonel, U.S. Army).

Col. Richard Thomas Cassidy, O23213, Army of the United States (lieutenant colonel, U.S. Army).

Col. Emil Paul Eschenburg, O23469, Army of the United States (lieutenant colonel, U.S. Army).

Col. John Norton, O23858, Army of the United States (lieutenant colonel, U.S. Army).

Col. Leland George Cagwin, O23200, Army of the United States (lieutenant colonel, U.S. Army).

Col. Albin Felix Irzyk, O24158, Army of the United States (lieutenant colonel, U.S. Army).

Col. Walter Philip Leber, O25130, Army of the United States (lieutenant colonel, U.S. Army).

Col. William Charles Gribble, Jr., O23695, Army of the United States (lieutenant colonel, U.S. Army).

Col. Harry Jarvis Engel, O39840, Judge Advocate General Corps, U.S. Army.

Col. Richard Pressly Scott, O23787, Army of the United States (lieutenant colonel, U.S. Army).

Col. Robert Clinton Taber, O25270, Army of the United States (lieutenant colonel, U.S. Army).

Col. Charles Pershing Brown, O23544, Army of the United States (lieutenant colonel, U.S. Army).

Col. Keith Lincoln Ware, O33181, Army of the United States (lieutenant colonel, U.S. Army).

Col. George Lafayette Mabry, Jr., O34047, Army of the United States (lieutenant colonel, U.S. Army).

Col. Woodrow Wilson Vaughan, O23004, Army of the United States (lieutenant colonel, U.S. Army).

Col. Ralph Longwell Foster, O22669, Army of the United States (lieutenant colonel, U.S. Army).

Col. George Parker Warner, O32462, Army of the United States (lieutenant colonel, U.S. Army).

Col. Raymond Leroy Shoemaker, Jr., O22978, Army of the United States (lieutenant colonel, U.S. Army).

Col. Clarence William Clapsaddle, Jr., O22972, Army of the United States (lieutenant colonel, U.S. Army).

Col. Willard Pearson, O44466, Army of the United States (lieutenant colonel, U.S. Army).

Col. William Eugene DePuy, O34710, Army of the United States (lieutenant colonel, U.S. Army).

Col. William Joseph McCaffrey, O22065, Army of the United States (lieutenant colonel, U.S. Army).

Col. Edward Paul Smith, O22063, Army of the United States (lieutenant colonel, U.S. Army).

Col. Joseph Alexander McChristian, O21966, Army of the United States (lieutenant colonel, U.S. Army).

Col. Fred Wilbur Collins, O33425, Army of the United States (lieutenant colonel, U.S. Army).

Col. Herron Nichols Maples, O45920, Army of the United States (lieutenant colonel, U.S. Army).

Col. Robert Bruce Smith, O46241, Army of the United States (lieutenant colonel, U.S. Army).

Col. Kenneth Howard Bayer, O23551, Army of the United States (lieutenant colonel, U.S. Army).

Col. George I. Forsythe, O24510, Army of the United States (lieutenant colonel, U.S. Army).

Col. Richard Joe Seitz, O33979, Army of the United States (lieutenant colonel, U.S. Army).

Col. Arthur Lorenzo West, Jr., O25269, Army of the United States (lieutenant colonel U.S. Army).

Col. Ellis Warner Williamson, O34484, Army of the United States (lieutenant colonel, U.S. Army).

Col. Robert Edmonston Coffin, O25234, Army of the United States (lieutenant colonel, U.S. Army.

Col. Dayton Willis Eddy, O24565, Army of the United States (lieutenant colonel, U.S. Army).

Col. George Gray O'Connor, O21088, Army of the United States (lieutenant colonel, U.S. Army).

Col. Thomas Mull Crawford, O21983, Army of the United States (lieutenant colonel, U.S. Army).

Col. Thomas Augustine Kenan, O22670, Army of the United States (lieutenant colonel, U.S. Army).

Col. Elias Carter Townsend, O31680, U.S. Army.

Col. Henry Augustine Miley, Jr., O22993, Army of the United States (lieutenant colonel, U.S. Army).

Col. Joseph Miller Heiser, Jr., O43773, Army of the United States (lieutenant colonel, U.S. Army).

Col. Charles William Eifler, O32614, Army of the United States (lieutenant colonel, U.S. Army).

Col. Austin James Montgomery, O51942, U.S. Army.

Col. Raymond Chandler Conroy O33276, Army of the United States (lieutenant colonel, U.S. Army).

Col. Bryan Coleman Thomas Fenton, O20088, Medical Corps, U.S. Army.

Col. Conn Lewis Mulburn, Jr., O20405, Medical Corps, U.S. Army.

Col. Joe Morris Blumberg, O29332, Medical Corps, U.S. Army.

The following-named officer, under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. James Karrick Woolnough, O18709, U.S. Army.

U.S. MARINE CORPS

Having been designated, in accordance with the provisions of title 10, United States Code, section 5232, for commands and other duties determined by the President to be within the contemplation of said section, the following-named officer, for appointment to the grade indicated while so serving:

To be lieutenant general

Maj. Gen. Charles H. Hayes, U.S. Marine Corps.

U.S. NAVY

Rear Adm. William A. Brockett, U.S. Navy, to be Chief of the Bureau of Ships in the Department of the Navy for a term of 4 years.

Adm. Robert L. Dennison, U.S. Navy, for appointment to the grade indicated, on the retired list, pursuant to title 10, United States Code, section 5233.

Having been designated under the provisions of title 10, United States Code, section 5231, for commands and other duties determined by the President to be within the contemplation of said section, the following-named officers for appointment to the grades indicated while so serving:

To be admiral

Vice Adm. David L. McDonald, U.S. Navy.

To be vice admiral

Rear Adm. William E. Gentner, Jr., U.S. Navy.

IN THE ARMY

The nominations beginning Raymond G. Andrews to be first lieutenant, and ending Gabriel J. Zinni to be second lieutenant, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on March 15, 1963;

The nominations beginning Ned E. Ackner to be colonel, and ending Hugh M. Zumbro to be second lieutenant, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on March 28, 1963; and

Eckwood H. Solomon, Jr., for appointment in the Regular Army of the United States, in the grade of second lieutenant, under the provisions of title 10, United States Code, sections 3283, 3284, 3285, 3286, 3287, and 3288, which nomination was received by the Senate and appeared in the CONGRESSIONAL RECORD on March 15, 1963.

IN THE NAVY

The nominations beginning Adolphus R. Allison, Jr., to be lieutenant commander, and ending Clarence Van Eaton to be lieutenant (junior grade), which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on March 28, 1963.

EXTENSIONS OF REMARKS

The Maine Chicken Barbecue

EXTENSION OF REMARKS

OF

HON. STANLEY R. TUPPER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1963

Mr. TUPPER. Mr. Speaker, at a time when all of our States seek greater employment opportunities for their citizens, it has become most important to increase consumer demand in this country and abroad for the countless goods and products produced in the United States.

It seems timely for me to acquaint my colleagues with a most successful sales promotion event in Washington, D.C., which should prove beneficial to several State of Maine food products. I refer specifically to a Maine chicken barbecue sponsored by the Maine State Society on April 3 at the Kenwood Golf and Country Club. Featured on the menu was Maine chicken barbecued on the grounds by experts, Maine potatoes and peas, and topped off by Maine blueberry pie.

This barbecue would have been judged a success by any standards. Three hundred and fifty loyal State of Maine people, temporarily displaced from the Pine Tree State and living in Washington, D.C., turned out to dine on Maine delicacies, listen to the Honorable Orville Freeman, Secretary of Agriculture, and meet Maine's lovely cherry blossom princess and "Miss Maine Vacationland," Miss Sarah Allen.

The more intangible benefit from this affair came from acquainting a host of people, including food brokers and food retailers in the Washington area with a few food items produced in Maine, of which we are justly proud.

Executives from all the major chainstores attended as well as representatives from several embassies of countries that import Maine agricultural produce.

This most successful affair was the brainchild of the imaginative president of the Maine State Society, Hon. James V. Day, better known in Washington as a member of the Federal Maritime Commission. Cooperating to the fullest extent were the Maine State Department of Agriculture and the Maine Poultry Growers Association.

The resulting good will and extensive publicity could very well open new markets for Maine produce; I commend Commissioner Day and other officers of the Maine State Society.

I have been assured that the famous Maine State Society annual lobster dinner will be put on again this summer, with extra trimmings.

The day of the Yankee peddler may be gone, but there are still ways to get people everywhere to recognize superior products. The formula is still the same, a little initiative and a lot of hard work.

A National Lottery

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1963

Mr. FINO. Mr. Speaker, in spite of the whopping $98.8-billion budget—the biggest ever submitted by any administration in war or peace—many of the needs of the American people are being pushed aside.

While the need for more and better schools for our children is vital, we find that education must wait because we are short on funds.

While the need for medical care for the aged is urgent, we find that we cannot provide a health care program unless we raise taxes, social security taxes.

While there exists an ever-increasing need for more housing for the elderly, we find that there are insufficient moneys to properly house our senior citizens.

While there is a need for more adequate benefits for our disabled veterans, we find that our budget cannot stand this additional expenditure.

While there is a desperate need for tax relief for the overburdened wage earners, we find that a tax cut can only be given at the expense of creating a bigger deficit and a larger national debt.

Mr. Speaker, I can go on and on but the answers are always the same, we cannot afford these needed services. Now, if there were no other avenue open to us, I would agree. But, we can find the money to accomplish many of these objectives if only we used a bit of horsesense.

The answer, Mr. Speaker, is a national lottery. By promoting a national lottery, we could raise easily, painlessly and voluntarily over $10 billion a year in new revenue.

Instead of letting all the money that is spent on betting—$50 billion a year—disappear into the hands of the underworld, we can tap this tremendous source of revenue for our own welfare and the public's good.

In a national lottery, Mr. Speaker, we can find not only the answer but the money to take care of many of these needs of our American citizens.

Mrs. Blanche W. Noyes Is Among Six Named To Receive 1963 Federal Woman's Award — Outstanding Achievements Credited to Honorees

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1963

Mr. RANDOLPH. Mr. President, an article by Reporter Sue Cronk in the April 7 issue of the Washington Post discusses the naming of six outstanding women employed by the Government as recipients of the 1963 Federal Woman's Award.

Established in 1960, this award recognizes women in the Federal employ who have contributed to the quality and efficiency of the career service, influenced major programs, and demonstrated personal qualities of leadership, judgment, integrity, and dedication. Heading the panel who selected the six 1963 recipients was News Commentator David Brinkley. Other judges were TV Personality Betty Furness; Katharine E. McBride, president of Bryn Mawr College; and H. Ladd Plumley, president of the U.S. Chamber of Commerce.

It is a pleasure to note that one of the ladies accorded this high honor is Mrs. Blanche W. Noyes, former Bendix Trophy winner and an air-marking specialist for the Centers and Towers Project Branch, Installation and Materiel Service, Federal Aviation Agency. A cherished friend, Mrs. Noyes is an experienced and capable aviatrix who has logged some 13,000 certified air hours. I have been privileged to fly with her as a passenger on many occasions, and have often joined her as a participant in ceremonies and programs sponsored by segments of the aviation industry in West Virginia.

Mrs. Noyes has been a leader of thought in the field of aviation. The Post article states that—

> She has been directly and personally responsible for the Government's air-marking program. She has written and revised the technical handbook used by those who design and build air markers, and she has designed the U.S. standard heliport marker and the ground signals used by pilots awaiting rescue, in addition to helping many foreign countries set up their marking programs.

We are grateful to Blanche Noyes for these significant contributions which reflect her unswerving devotion to the public interest.

The 1963 Federal Woman's Award was also presented to the following:

Dr. Eleanor L. Makel, assistant to the director of the medicine and surgery branch, St. Elizabeths Hospital; Miss Bessie Margolin, assistant solicitor in the Department of Labor; Mrs. Katherine Mather, chief of the petrography section, Special Investigations Branch, Army Engineer Waterways Experiment Station, Department of the Army; Miss Verna C. Mohagen, director of personnel management, Soil Conservation Service, U.S. Department of Agriculture; Miss Eleanor C. Pressly, head of the vehicles section, Spacecraft Integration and Sounding Rocket Division, Goddard Space Flight Center, National Aeronautics and Space Administration.

Mr. President, I am confident that each Member of Congress will wish to join me in conveying these dedicated and distinguished ladies our heartfelt congratulations and gratitude for tasks well done.

ASCS Committeemen Honored

EXTENSION OF REMARKS

OF

HON. WM. J. RANDALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1963

Mr. RANDALL. Mr. Speaker, I want to take this opportunity to pay tribute to a special group of farmers in our Nation. They are the farmer ASCS committeemen who administer most of the action programs of the Department of Agriculture. The time is appropriate because 1963 is the 25th anniversary of the legislation establishing the present farmer committee system. The 75th Congress passed legislation which the President signed into law—Public Law 430—on February 16, 1938. It was, in part, an amendment to section 8(b) of the Soil Conservation and Domestic Allotment Act which directed the Secretary of Agriculture to establish local and State committees. While similar committees functioned from the time the Agricultural Adjustment Act was passed in 1933, these others were operating under directives issued by the Secretary of Agriculture, rather than by provision of law.

Under this law the Secretary was directed to establish local administrative areas which cannot cross county lines, with the provision that the participating farmers within such local areas were to elect three farmers to administer the program and represent them. This, then, amounts to an honor for these three elected farmers, but it also becomes a duty. It is an honor because it shows the esteem in which these men are held in their communities. It is a duty because many demands are made on their time, often when they can ill afford to take the time from operating their individual business, to attend meetings or perform other duties including explaining new programs to farmers and enrolling them in these programs.

We all know that over the years these committees have become increasingly interested and effective in the presentation of the programs to the farmers, as is so well evidenced by the following data on farmer participation in the agricultural conservation program during the past 5 years.

Year	Farms participating	Acres on participating farms	Cropland on participating farms
1958	1,114,459	400,763,000	157,230,000
1959	1,005,738	387,534,000	148,644,000
1960	1,055,872	391,421,000	152,199,000
1961	1,216,962	433,573,000	182,224,000
1962 [1]	1,270,000	440,000,000	185,000,000

[1] Estimated.

Actually, the total number of farmers who have participated in the ACP during this 5-year period is much nearer the 2 million figure, because there is a constant turnover of participants which, in 1962, was approximately 200,000, or 4 times the total increase over the preceding year. Because of the importance of the functions these committeemen perform in the limited time they are given the opportunity to work, it appears that more extensive use should be made of their talents whenever possible, as these men are the backbone of the program. This in no way detracts from the efficient and hard-working staffs maintained in their offices. They work as a team for the benefit of all farmers. One point which is frequently overlooked in the consideration of this program is the fact that it embraces all farmland. From time to time, special programs to treat production and conservation problems on certain types of land are considered and then enacted, but not all land is eligible. Some of these special programs include (a) the conservation reserve of the soil bank program, (b) the Great Plains program, (c) feed grains program, and so forth. Since under the ACP any farmland is eligible—it is this total of all land which we must depend upon for the Nation's food supply in the future—we must do everything possible to see that it is preserved rather than wasted away. Hence, it becomes increasingly important that these men—the community, county, and State ASCS committees—be given the necessary tools, including the opportunity to familiarize all farmers in their locale with the need for the preservation of the soil for future generations, and the necessary finances to enroll all farmers in the program.

For my part, I believe they have done a giantlike job to date with the tools provided for them to work with. They have earned all the acclamation accorded them by their fellow farmers. They deserve to be lauded for their years of dedication to duty. ASCS committeemen, we salute you.

A Shortage of Workers

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1963

Mr. CURTIS. Mr. Speaker, the No. 1 domestic problem in the United States today is the high rate of unemployment. One of the main causes of this serious problem is the fact that many of our unemployed lack the basic skills needed to fill existing job vacancies. We are suffering not so much from a shortage of jobs as from a shortage of manpower trained to fill those jobs.

During a recent interview for U.S. News & World Report, Labor Secretary Wirtz said that there are numerous opportunities, especially for young people, "in skilled jobs and in professional jobs such as teaching, medicine, nursing and engineering," as well as in many service occupations.

In order to reduce the steadily rising level of unemployment, we must equip our labor force through training and retraining to fill the skill demands of the jobs that are going begging. Because of the importance of Secretary Wirtz' remarks on this subject, I ask unanimous consent that an excerpt from his interview in the April 1 issue of U.S. News & World Report be inserted in the RECORD at this point.

The article follows:

EXCERPT FROM "WHY YOUNG PEOPLE FACE A SHORTAGE OF JOBS"—AN INTERVIEW WITH LABOR SECRETARY WIRTZ

Question. Are there jobs now for all those with skills?

Answer. Under the Manpower Development and Training Act we are training people at the rate of 50,000 to 60,000 a year, and so far we have been able to find work for most of those who finish the training program. If the economy can move up at the rate of 4 percent a year—the present goal—there would soon be full demand for our manpower supply. We are actually coming close to a shortage of skilled manpower in a number of occupations already.

Question. A shortage of workers? In what kinds of jobs?

Answer. This is already true in a good many types of engineering jobs, in teaching jobs, in many professional jobs and in skilled jobs in some trades.

Question. Aren't these jobs for college-trained people?

Answer. Not necessarily. Take the construction industry: Unless we train at a much faster rate than now through the apprenticeship program, there will be a real shortage of skilled workers in the construction industry.

Question. Who controls the apprenticeship program?

Answer. In general, the industry and the unions. There are problems in connection with apprenticeship training which have to be faced squarely.

Question. Has there been an arbitrary limitation of the number who can get apprenticeship training?

Answer. Yes, there has been some of that.

Question. Restraint on Negro training in particular?

Answer. In some unions there has been and still is racial discrimination in apprenticeship programs which cannot be justified or tolerated.

Question. Mr. Secretary, in what fields are jobs for younger people now available?

Answer. In general, the answer is in skilled jobs and in professional jobs such as teaching, medicine, nursing, and engineering. There is a shortage, too, of people just below the professional level, such as assistants to engineers and scientists, and so on.

Question. What about secretarial jobs?

Answer. In a good many cities job opportunities are available in service occupations, ranging all the way from secretarial work to domestic help, both male and female. In most cities it's hard for housewives to get the domestic help they need.

Question. But domestic work is not highly skilled. Why is it so hard to get domestic help at a time when there are so many people unemployed?

Answer. There are two problems here. One: It's a harder administrative job to bring thousands of workers together with thousands of housewives than it is to staff a single factory that employs several thousand workers. Often a housewife just wants somebody for part-time work.

There is also this problem: In this country there is a tradition of looking down on domestic service. To many workers even the most menial job on an assembly line is more attractive, has more status appeal, than a job taking care of somebody's house or yard, or working in a restaurant.

GOP Solons Fettered

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1963

Mr. RHODES of Arizona. Mr. Speaker, under the leadership of the Honorable FRED SCHWENGEL, of Iowa, studies have been made to determine the status of the minority as far as staff work in House committees is concerned. This study has shown a decided lack in the quantity of staffing which is available to the minority. On April 7, 1963, my colleague, the junior Senator from Arizona, the Honorable BARRY GOLDWATER wrote a column entitled "GOP Solons Fettered" which sets forth the complete case for adequate minority staffing in a succinct, well-ordered manner.

The article follows:

[From the New York Journal-American, Apr. 7, 1963]

WHAT I BELIEVE: GOP SOLONS FETTERED

(By Senator BARRY GOLDWATER)

Why doesn't the Republican minority in Congress exercise more weight in Government policymaking?

There are many reasons, such as the size of the majority, the role played by powerful Democratic committee chairman and the influence exerted by a Democratic President.

But another reason, one which doesn't get nearly enough attention, is the fact of inadequate minority staffs in the House and Senate.

Just as generals must, so Senators and Representatives depend heavily upon staffs to do the real digging and much of the work, pulling together the background on which a policy decision can be made. What witnesses will a committee hear? What is the status of similar legislation? What are the needs for proposed legislation, and so on? All this is the work of committee staffs.

Today, of course, the majority party, which is the Democratic Party, expects a substantial share of the staff to be appointed by them and to be working for them.

On committee after committee, however, the minority party has not been able to appoint any staff members at all. On most, there is at least a disparity of staff appointments far beyond the disparity in party representation.

Insufficient minority staffing makes legislation more dependent than ever upon the statistics, the witnesses, the proposals of the Democratic administration as transmitted through the majority. I would make this point just as emphatically if the situation were reversed and proper committee staffing was denied to the Democrats.

The need is for proper policies, properly researched, properly arrived at and understood above and beyond the desires of the particular administration running the executive branch.

This cannot be done without spadework on behalf of the minority position on the myriad questions coming before the House and Senate. Legislating is amazingly complex, reaching into every possible phase of American life. Some subjects could occupy the entire time of intelligent legislators to the exclusion of everything else.

What it boils down to, is help for busy Senators and Congressmen. Unless provided on a larger scale for minority Members of Congress, the case for the opposition in American political life will continue to suffer.

Unfortunately, too much importance is given to advancing the administration's program today. Just because a President sends a message to Congress and follows it up with specific legislation doesn't automatically assure that this is the best thing that could be enacted for the people.

Very often, just the opposite is the case. Sometimes it is the people's definite advantage to have Presidential requests opposed and defeated by their representatives in Congress. And because of this, the minority effort is extremely important. It definitely should be supported by the best staff work available.

A Timely Fable

EXTENSION OF REMARKS

OF

HON. GRAHAM PURCELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1963

Mr. PURCELL. Mr. Speaker, a modern fable with a strong point to make appeared on March 31. The newsletter of our able colleague from Texas, Hon. JIM WRIGHT, offers a subtle, but most effective, explanation of one of the most controversial transactions of modern times.

I heartily commend this document to my colleagues as enjoyable, enlightening, and eloquent literature.

The article follows:

A TIMELY FABLE

Once upon a time, in a fair and bountiful land where many animals lived, there stood a curious five-sided house. It nestled alongside a broad river in a big and majestic city.

In this house lived a mule, a goat, and a falcon. To them the other animals of the land had entrusted the job of protecting their country from an angry red bear which snorted the kind of fire from which the sun is made and, on occasion, thumped his shoe upon the table.

The mule, the goat, and the falcon all were anxious to protect the land, but among themselves they were very quarrelsome. Each had his own idea on how to defeat the red bear in case he should attack.

"I shall meet him on the land, and with my great mobility and firepower, I shall kick him to death," brayed the mule, flecking a bit of lint from his forest green suit.

"Tut, tut, there will be no need of that" sneered the goat, who was resplendent in his dark blue suit with gold stripes. "My specialty is the sea, and if the bear ever threatens our shores, I shall butt him right out of the water."

"Nonsense," jeered the falcon, proudly displaying the silver wings on his light blue suit. "If the bear should attack, I shall fly to his homeland, peck out his eyes and destroy his ability to fight."

So it went for many years, with the three animals incessantly bickering among themselves.

Nowhere did these arguments cause more concern than on a gentle hill which lay just across the river. Here lived a great herd of donkeys and elephants. Even though they themselves were not immune from petty jealousies, they realized there was a desperate need to eliminate the tumult within the great five-sided house. After the donkeys had done much braying and the elephants had done much trumpeting, they decided that another animal should be chosen to take complete charge of the occupants of the five-sided house.

Now it happened that in a large white house not far from the hill there lived an eagle. It was decided to let the eagle choose the animal to be in charge of the five-sided house, provided, of course, that the donkeys and the elephants approved of the eagle's choice.

Many years passed, and several different eagles moved in and out of the large white house. Each eagle chose an animal to live in the five-sided house. Alas, however, the mule, the goat, and the falcon never really stopped their bickering. They seemed to resent every animal that was put in charge of them, and each continued to go pretty much his own way.

Finally one day a new eagle moved into the large white house. This eagle had some very definite ideas about the animal that should be put in charge of the five-sided house. He wanted a wise, but young, owl.

It so happened that just such an owl lived in a busy city to the west. This owl made a living by providing engines to be used in crossing narrow inlets on the shore of a large lake, the Fjord Motor Co., some animals called it.

The owl consented to take charge of the five-sided house, and the animals on the hill generally approved.

"He's very wise," nodded the donkeys.

"And he can bring to the house the valuable cost-cutting lessons he learned in private enterprise," trumpeted the elephants.

Soon after moving into the five-sided house the owl discovered that the goat and the falcon were planning to buy new swords. Separate kinds, of course.

"Why can't you both buy the same type of sword and save money?" the owl asked.

"That's quite impossible," said the goat with a patronizing smile. "Yes, quite," agreed the falcon. When the owl asked why, the goat tried to explain.

"You see, my sword is to be used at sea," he said. "I have always bought a sword shaped sort of like a 'T'."

"And my sword," put in the falcon, "is to be used for the air and must have something of an 'F' shape."

The wise young owl pulled a slide rule out from under his wing and appeared quite thoughtful. "Perhaps an 'X' shaped sword might serve you both," he observed. "We could call it the TFX, and it would save a billion dollars."

Panic gripped the goat and the falcon.

"It won't work," cried one.

"It's never been done before," shrieked the other.

The owl consulted his slide rule again. "Nevertheless I think we should try it. Even though the TFX might not exactly suit your individual preferences, I will promise you that it will provide a far better sword than either of you now has."

Crestfallen and bitter, the goat and the falcon left the owl.

"Whatever shall we do?" cried the goat.

"We shall march straight to the Hill and complain to our powerful friends," said the falcon. "One of the donkeys is a particularly close friend of mine."

The goat appeared puzzled. "But aren't the elephants and the donkeys on the Hill also very close friends of the owl?" he asked.

"They have been," the falcon gloated. "But they may change their minds if we tell them that the owl is robbing us of an effective means of protecting the country, and that it would be cheaper and better to build two different swords."

"But is that true?" demanded the goat.

"Sure it is," smirked the falcon, winking and nudging the goat in the ribs. "Sure it is."

Moral: As long as we're going to have an owl, we ought to believe in him because he seems to be the only one who gives a hoot.

Accelerated Public Works Program

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1963

Mrs. KEE. Mr. Speaker, tomorrow Members of the House of Representatives will consider the 1963 supplemental appropriation bill.

In my opinion, based upon personal experience, it is essential that Congress appropriate the full $500 million requested by the President of the United States in order to continue the vital accelerated public works program, as authorized during the 87th Congress.

Mr. Speaker, immediately following the 1962 general election my office arranged and participated in a public meeting in each of the seven counties of the Fifth Congressional District to explain the Accelerated Public Works Act. Because of the extremely high percentage of existing unemployment, I knew the accelerated public works program would provide the only method available for our citizens to help themselves. This act made possible urgently needed temporary employment and at the same time made it possible for our local officials to improve local living conditions.

Our citizens have done all within their resources to create new and permanent private employment. Our unemployed, who are denied gainful employment through no fault of their own, are anxious to have an opportunity to work and support their families.

Because of continued increased unemployment, our community, city, and county officials have been forced to reduce essential services due to the fact they have no way to obtain local funds because of their decreased income. However, they have carefully considered the accelerated public works program and following detailed studies they have submitted applications for quite a few fully justified public projects. In each case our local officials have been able to arrange the required local financing because of the benefits provided by this program.

Not only in the Fifth Congressional District of West Virginia but also throughout the United States our local citizens have demonstrated their initiative and desire to improve their local areas. These public-spirited citizens have applications pending for Federal funds exceeding twice the amount requested. Unless the Congress appropriates the full $500 million as requested, our local citizens, who have worked so hard to do their part, will be discouraged, and failure to appropriate these funds will justify the fact that the efforts extended to improve local conditions will have been in vain.

Each of these communities, I might add, has expended funds in properly preparing their applications and because of the provisions of the act as previously authorized by the Congress, they fully expected that carefully chosen improvements would be approved. Without additional Federal funds these communities cannot move forward, simply because they do not have the financial resources. In this connection, I have worked closely with the officials of the Area Redevelopment Administration and other participating Federal agencies in following every application through each step. I have respect for these Federal officials for the completely fair and dedicated manner in which they have been doing a most difficult job. To my personal knowledge these officials have worked long hours, including Saturdays and Sundays, in an effort to process those applications which afford the greatest benefit for each dollar expended by the Federal Government.

Just last month southern West Virginia suffered the most disastrous floods in our history. These Federal officials came to see firsthand the unsurpassed damages. Some of our pending applications are in more urgent need now because of this disaster. I have seen firsthand the effectiveness of the accomplishment so far of the officials of the Area Redevelopment Administration and other agencies.

When it is considered that we have nearly one-third of our counties in the United States adversely affected by persistent and substantial unemployment, no one can successfully challenge the fact that we do have a major internal problem. I am firmly convinced that the accelerated public works program, Federal participation with local governments, is a very important investment in the future of our Nation. Therefore, Mr. Speaker, I respectfully plead with the Members of the House to vote the full $500 million for the continuation of the accelerated public works program. It is my firm conviction that we have an obligation to our citizens in these areas and to our future generations to appropriate these funds in order that our citizens may be able to help themselves and continue to look forward.

Senator Tower Explains the ABC's of Conservatism to a Liberal Texas Editor

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1963

Mr. GUBSER. Mr. Speaker, the April 6, 1963, issue of Human Events includes an excellent article entitled "Senator Tower Explains the ABC's of Conservatism to a Liberal Texas Editor."

The Senator's letter to the editor of the Texas Observer does a great deal to place the issue of liberalism versus conservatism in proper perspective:

SENATOR TOWER EXPLAINS THE ABC'S OF CONSERVATISM TO A LIBERAL TEXAS EDITOR

Mr. RONNIE DUGGER,
The Texas Observer,
Austin, Tex.

DEAR RONNIE: I am flattered that the Texas Observer has asked me to do something on my fundamental beliefs. In your note to me, asking me to do this piece, you observed that "* * * our readers have so little, substantially, in common with you." However, I am always glad to speak or write under critical, as well as favorable circumstances.

Too, I remember a line from Rudyard Kipling: "They cannot know England who only England know." Perhaps some exposure to an honestly expressed conservative viewpoint may cause some of my liberal friends to take better stock of their own positions.

At the outset, I should note that, too often, the doctrinaire liberal or the doctrinaire conservative tends to state his case in a manner that would convey the impression that he is God, dictating the Ten Commandments to Moses. I'm as guilty of this as anyone.

So, perhaps I should start with a little disarming humility and say that that I am aware that I have no monopoly on truth and, although political philosophies are things to which insincere men may, from time to time, repair for the sake of political expediency, I will concede the intellectual honesty of those who might be properly regarded as the real opinion leaders of the liberal movement.

LIBERALS POSSESSED OF A MASSIVE CONCEIT

However, it occurs to me that they are possessed of a massive conceit. As the attitude toward people low on the socioeconomic scale on the part of the old Tory Democrats of the last century may have been condescendingly philanthropic, so, too, the attitude of the American 20th century so-called liberal is one that sometimes appears to border on contempt for the ability of people in a society to regulate themselves.

Liberal intellectuals cling to the ancient notion that there must be a ruling elite which uses the coercive authority of the state as a means of ordering the lives and destinies of men, through complete planning of the political, economic and social processes.

As I see it, the function of Government is to preserve order in society—not to order society.

It is no more accurate to caricature the conservative as a bloated, greedy, avaricious moneybags, bent on the preservation of privilege and the exploitation of the poor, than it is to caricature the liberal as a bewhiskered, red-eyed, bomb-throwing anarchist.

Assuming that the liberal and the conservative have mutually compatible goals: to wit, the elevation of the whole condition of mankind, the enhancement of the individual dignity of man, consistent with our Judeo-Christian system of ethics, morality and humanity, the difference lies in the approach, the conservative being libertarian, the liberal, essentially egalitarian.

GOVERNMENT PLANNING GUESSWORK AT BEST

In the eyes of the conservative, the liberal approach, too often, becomes an end unto itself and is, therefore, destructive of the goal. The achievement of complete "equality," and its maintenance, it seems to me, would necessarily require substantial sacrifice of individual liberty and freedom of choice.

It appears to me the liberals are bent on the establishment of a system which would marshal the wealth and resources of the land and redistribute them in the form of welfare benefits and public works. While some liberals may not consciously seek the establishment of a Socialist state in America, I believe that many of the programs they advocate establish a trend in that direction.

In seeking the establishment of a planned economy, the liberal apparently fails to take into consideration the fact that capitalism, or the market-regulated economy, has proved to be the most productive system and has afforded the highest standard of living.

Government planning, as one wise man has observed, is not a mature way to organize an economy. It is unproven; it is educated guesswork at best. Carried to its ultimate, it is necessarily tyrannical in character in that it essentially determines what will be produced and consumed, at what jobs people will work and what compensations they will receive.

A market-regulated economy preserves the democracy of the marketplace in which people, by the manner in which they spend their dollars, in effect determine what goods and services will be produced.

A system in which taxes become confiscatory, in which there is extensive government competition with business, or at its worst, one in which the means of production, distribution, and exchange are nationalized, not only denies a certain amount of freedom of choice, it destroys incentive.

I am aware that conservatives are very often accused of placing property rights before human rights. I deny the allegation and defy the alleger. I consider that the right to own and exploit property for private subsistence, or gain, is an essential human right. It prevents the citizenry from being reduced to a status of complete dependency on the government.

I submit, further, that the honest and consistent conservative has equally high regard for other rights which those of us living in an Anglo-Saxon society have grown to expect, such as freedom of speech, press, assembly and worship. We believe in elaborate safeguards for the accused and equality in the eyes of the law.

On that last point, was it Anatole France who cynically said, "The law in its majestic equality prohibits the rich man from begging alms and sleeping under bridges, as well as the poor man"? I don't believe this comment could characterize our legal and political system, as the conservative thinks it should be. We do not seek to foster or preserve privilege.

INTENSE TAXATION PENALIZES SUCCESS

Consistent with our notion that government should preserve order in society and should foster a climate of freedom and growth, we approve such measures as antitrust laws and other legislation designed to protect the general citizenry against the unscrupulous and the greedy—laws that create a climate of opportunity for all the people, regardless of station or origin. In short, we seek a society in which all men can aspire to be successful and have some reasonable chance of realizing that aspiration.

We, therefore, resent a system of taxation and expenditure that penalizes success and encourages indolence, a regulatory system that will prevent one segment of the society from abusing its economic power—but, at the same time, allow, indeed, even encourage another segment to abuse its power with impunity.

Conservatives cling to the idea that ours is, historically has been, and ought to be, a classless society—one in which people move freely and without prejudice up and down the socioeconomic ladder. We are righteously, rightfully indignant at those who foment class war for political purposes.

It should be obvious to any but the most ignorant that the best interests of the working man are closely identified with the best interests of the proprietors and managers. Certainly, there are legitimate differences between labor and management on hours, wages, and working conditions. But generally, where a favorable climate for business exists, where business prospers, the working man prospers also.

MUST THERE ALWAYS BE ALTERNATIVES?

Too often, the cry is raised that we are "aginners"; we are nonprogressive because we oppose programs and proposals which are propounded by the administration. "What are you for?" we are asked.

We are for individual liberty and freedom of choice. We are for a market-regulated economy. We are for the responsibilities of government devolving on those organisms of government that are closest to the people. We therefore oppose that which is destructive of what we are for.

Being in the minority, it is our duty to oppose that which we consider to be conducive to the establishment of dangerous trends. When, and if, we succeed to a majority position, then we will propound our own programs—then it will be the liberals who have to hazard the accusations of obstructivism and negativism.

It is often suggested that we have no alternatives to the proposals of this administration. Why should we oppose bad proposals with programs and proposals that are less bad? Must there always be alternatives?

Well, Ronnie, that about wraps it up. I've probably left out a great deal that I should have said; but I hope this will give your readers some insight into the conservative mentality. We are not without humane feelings; we love our children; we support humanitarian causes; we give as generously of our time and energies to the betterment of our communities as the liberals do—perhaps more so.

We do not deny that responsibilities for the care of the indigent, the education of our children, and the elevation of the whole state of our society, exist. We simply believe that they should devolve on the individual, the family, the community, the local or State government to the maximum degree possible.

Many thanks to you and the Texas Observer for giving me this forum. It is a tribute to your desire to be fairminded.

Very truly yours,

JOHN G. TOWER.

Sites in Washington, D.C., With Facilities for the Handicapped

EXTENSION OF REMARKS

OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1963

Mr. MACDONALD. Mr. Speaker, annually Washington, D.C., plays host to over 10 million visitors. Of this number, many are handicapped and disabled. A request from a handicapped constituent regarding the facilities available to him at the various sites in Washington, D.C., made it apparent to me that a list of such facilities would be of value. Therefore, I would like to make known to the general public the following list of sites in Washington, D.C., with information concerning the facilities they provide for handicapped sightseers.

Aquarium: Basement of Commerce Building, 14th Street between E and Constitution NW., Sterling 3-9200. Open 9 a.m. to 5 p.m. daily and Sunday. Wheelchairs for the handicapped are not provided. The entrance of the Commerce Building has a few stairs. A ramp, however, at the rear of the building on Constitution Avenue provides access to the elevator. Special arrangements may be made by calling in advance.

Arlington National Cemetery: Jackson 2-3000. The grounds are open daily and Sunday, October through March, 8 a.m. to 5 p.m.; April through September, 8 a.m. to 7 p.m. Located here are the Tomb of the Unknown Soldier, the Amphitheater and the Custis-Lee Mansion. There is a change of guard at the Tomb every hour on the hour. No special facilities are provided for the handicapped. However, members of the staff, if contacted in advance, will usher handicapped persons around.

Botanic Gardens: First and Maryland Avenue SW., Capitol 4-3121, extension 6520. Open Sunday through Friday, 9 a.m. to 4 p.m. Open Saturday 9 a.m. until 12 noon. One wheelchair is provided for the use of handicapped persons. The building entrance consists of five stairs. There is no ramp. Special arrangements may be made by calling in advance.

Bureau of Printing and Engraving: 14th and C Streets SW., Executive 3-6400, extension 7514. Open Monday through Friday, 8 a.m. to 11 a.m. and 12:30 p.m. to 2 p.m., with the exception of holidays. Conducted tours are available. The Bureau provides wheelchairs for visitors because ordinary wheelchairs are too wide for the ramps. A system of ramps makes it possible for handicapped persons to avoid stairs. If desired, wheelchair service from one's automobile to the building can be arranged by calling in advance.

Capitol: Capitol Hill, Capitol 4-3121. Open daily and Sunday, 9 a.m. to 4:30 p.m. Open to those who hold passes to the gallery if Congress is in session until one-half hour after adjournment. Tours are available from 9 a.m. to 3:55 p.m. with groups forming every 15 minutes. The guide service is 25 cents for persons 10 years and older. The Capitol provides many wheelchairs for the handicapped. Several elevators and ramps make the Capitol accessible to the handicapped. Special arrangements for tours may be made by calling in advance.

Corcoran Gallery of Art: 17th Street and New York Avenue NW., Metropolitan 8-3211. Closed Monday, open Tuesday through Friday, 10 a.m. to 4:30 p.m.; Saturday, 9 a.m. to 4:30 p.m.; Sundays and holidays, 2 to 5 p.m. The gallery provides one wheelchair. A ramp entrance is available at the service entrance on E Street and should be arranged for by calling in advance.

Custis-Lee Mansion: Jackson 2-3000, extension 2146. Open daily 9:30 a.m. to 4:30 p.m., October through March; 9:30 a.m. to 6 p.m., April through September. Admission is 25 cents per person; persons under 18 years of age may be admitted free. No special facilities are provided for the handicapped. The mansion has several steep steps which might cause difficulties for the handicapped. However, the staff is willing to provide personal assistance and tours for the handicapped if contacted in advance.

Dumbarton Oaks: 1703 32d Street NW., Adams 2-3101. The gardens are open Monday through Saturday, 10 a.m. to 4 p.m.; Sundays and holidays, 1 p.m. to 4 p.m. One wheelchair is provided for the handicapped, although several steps in the garden make sightseeing difficult for the severely handicapped. In the fall 1963, two museums are scheduled to be opened. The entrance of one will have no steps, while the entrance of the other will have approximately three steps.

Federal Bureau of Investigation: 9th Street and Pennsylvania Avenue NW., Executive 3-7100. Open Monday through Friday, 9:15 a.m. to 4:15 p.m. Tours start every 15 minutes and last approximately 1 hour. Advance reservations are necessary for large groups. No special facilities are provided for the handicapped. However, there are no stairs at the entrance of the building, and most of the stairs inside of the building can be avoided by using elevators. We are informed by the Bureau that handicapped persons should try to avoid the peak tourist seasons. Special arrangements may be made by calling in advance.

Folger-Shakespeare Library: 201 East Capitol Street, Lincoln 6-4800. Open Monday through Saturday, 10 a.m. to 4:30 p.m. No special facilities are provided for the handicapped. However, there is a ramp at the entrance. It is not necessary to make advance arrangements.

Ford's Theatre—Lincoln Museum: 10th Street between E and F NW., Republic 7-1820, extension 2565. Open Monday through Saturday, 9 a.m. to 9 p.m.; Sundays and holidays, 12:30 p.m. to 9 p.m. The building in which Lincoln died is directly across the street and is open Monday through Saturday, 9 a.m. to 5:30 p.m.; Sundays and holidays 12:30 to 5:30 p.m. Admission to each building is 10 cents. Persons 18 years of age and under are admitted free. No arrangements are made for the handicapped. There are five or six short steps at the entrance to the Museum. Special arrangements may be made by calling in advance.

Franciscan Monastery: 14th and Quincy Streets NW., Lawrence 6-6800. Tours are conducted from 9 a.m. to 5:00 p.m. daily. No wheelchairs are provided for the handicapped; however, a long ramp extends along the side of the main church. It is not possible for a person in a wheelchair to enter the catacombs. Special plans for a large group should be made by calling in advance.

Jefferson Memorial: South Bank of the Tidal Basin, Republic 7-1820, extension 2145. Open daily and Sunday, 8 a.m. to 12 midnight. Special tours are available and may be arranged by calling in advance. No special facilities are provided for the handicapped. However, the guards will assist handicapped persons if requested to do so.

Library of Congress: First Street and Independence Avenue SE., Sterling 3-0400. The exhibit halls are open Monday through Saturday, 9 a.m. to 10 p.m.; Sunday, 11:30 a.m. to 6 p.m. Wheelchairs are available for handicapped persons. The guards will assist in lifting the chair if necessary. A special parking place in front of the building and special tours may be arranged in advance by calling the Stack and Readers' Division.

Lincoln Memorial: West Potomac Park at the foot of 23d Street NW., Republic 7-1820, extension 2573. Open daily and Sunday, 8 a.m. to 12 midnight throughout the year. No special facilities are provided for the handicapped. Personal help from the guards is available if requested. Blind persons may take their dogs into the memorial and may touch the pedestal.

Medical Museum, Armed Forces Institute of Pathology: 9th Street and Independence Avenue SW., Republic 7-6700, extension 64768. Open daily and Sunday from 9 a.m. to 5 p.m. One wheelchair is available. The entrance consists of several stairs, and no ramp is available. Two exhibit halls are located on the second floor and are accessible only by a staircase.

Mount Vernon: Mount Vernon, Va., South 5-2000. Open daily and Sunday, March through September, 9 a.m. to 5 p.m.; October through February, 9 a.m. to 4 p.m. Adult admission is 75 cents. The admission for school groups and children, grades 7-12, is 40 cents. Children under 12 years of age and school groups, grades 1-6, are admitted free. A number of wheelchairs are available for the handicapped. It is possible to arrange by calling in advance for a station wagon to meet and pick up handicapped persons at the gate as well as at the boat. The staff at Mount Vernon is able to provide better service for the handicapped persons during the nonpeak tourist seasons.

National Archives: Seventh Street and Pennsylvania Avenue NW., Worth 3-1110. Open 9 a.m. to 10 p.m. weekdays; 1 p.m. to 10 p.m. Sundays and holidays. Wheelchairs are not provided for the handicapped. However, a ramp is available at the Seventh Street entrance, and may be used if arrangements are made in advance. Special tours may also be arranged by calling in advance.

National Gallery of Art—Mellon Gallery: Sixth Street and Constitution Avenue NW., Republic 7-4215. Open daily 10 a.m. to 5 p.m.; Sundays, 2 p.m. to 10 p.m. There is a concert every Sunday evening at 8 p.m. in the east garden court starting in September and ending in June. Wheelchairs are provided for handicapped persons. There are no stairs at the entrance on Constitution Avenue. Special tours may be arranged in advance only when a group consists of more than 15 persons.

National Shrine of the Immaculate Conception: Fourth Street and Michigan Avenue NE., Lawrence 6-8300. Open daily 7 a.m. to 8 p.m. Sunday masses are held at 7, 8, 9, 10, 11, and 12 noon. Free guided tours are available every half hour. One wheelchair is provided for handicapped persons. The entrance to the building has no stairs. Elevators may be used in the building. Special tours may be arranged by calling in advance.

National Wax Museum: 500 26th Street NW., at E Street, National 8-2996. Open daily and Sunday, 9 a.m. to 9 p.m. The museum features monuments and personalities in American history. Admission: adults, 75 cents; children 6 through 12, 50 cents; children under 6, free. Wheelchairs are provided for the handicapped. There are no stairs at the entrance of the building. During the nonpeak tourist season special tours may be arranged by calling in advance.

Naval Observatory: 34th Street and Massachusetts Avenue NW., Decatur 2-9013. Open Monday through Friday for conducted tours at 2 p.m. only. For groups of 10 or more special advance arrangements should be made. No special facilities are provided for the handicapped. There are stairs at the entrance of the main building. Much walking, including several inclines, is required between the three buildings visited on the guided tour.

Smithsonian Institution Group: National 8-1810. Arts and Industries Building, Ninth Street and Jefferson Drive SW. Museum of Natural History, 10th Street and Constitution Avenue NW. Smithsonian Building, 10th Street and Jefferson Drive SW. Freer Gallery of Art, 12th Street and Independence Avenue SW. All of the above buildings are open daily and Sunday, 9 a.m. to 4:30 p.m. Wheelchairs are provided at the entrance of each building for handicapped persons. The entrances of many of the buildings have no stairs; however, not all of the buildings have elevators. In the past, special tours for the blind have been arranged and special exhibits prepared. Special arrangements may be made by calling extension 542 or 543.

Supreme Court: First, and Maryland Avenue NE., Executive 3-1640. Open Monday through Friday, 9 a.m. to 4:30 p.m.; Saturday, 9 a.m. to 12 noon. Conducted tours are available every 15 minutes except when the Court is in session. No special facilities are provided for handicapped persons. However, if advance reservations are made with the Marshal's Office—extension 281 or 282—the South Drive on Second Street can be used for easy access to the elevator. Special tours may also be arranged by calling the Marshal's Office in advance.

Washington Cathedral: Wisconsin Avenue and Woodley Road NW., Woodley 6-3500. Services are held Sunday, 7:30 a.m., 9 a.m., 11 a.m., and 4 p.m. Conducted tours are available daily, 9 a.m. to 4:30 p.m., and on Sunday, after 11 a.m. The cathedral and the Bishop's Garden are open from 9 a.m. to 5 p.m. daily and Sunday. The Memorial and Tomb of Woodrow Wilson, the only President buried in Washington, D.C., are located in the cathedral. Wheelchairs are provided for the handicapped. Handicapped persons should enter the cathedral at the west entrance because it has no stairs. Special tours may be arranged by calling in advance.

Washington Monument: On the Mall at 15th Street, Republic 7-1820, extension 2840. Open daily, March 20 through Labor Day, 8 a.m. to 11 p.m. Open daily, Labor Day to March 20, 9 a.m. to 5 p.m. The elevator fee is 10 cents for visitors 19 years and older. No wheelchairs are provided for the handicapped. However, special priviliges are given the handicapped in use of the elevator. It is possible for persons in wheelchairs to ride the elevator to the observation point at the top of the Monument.

White House: 1600 Pennsylvania Avenue NW., National 8-1414. Open Tuesday through Friday, 10 a.m. to 12 noon; Saturday, 10 a.m. to 2 p.m. One wheelchair is provided for the handicapped. The elevator may be used. Special arrangements should be made in advance through one's Senator or Congressman.

Zoological Park: 3000 Connecticut Avenue NW., Columbia 5-0743. The buildings are open during November through April, 8 a.m. to 4:30 p.m.; May through October, 8 a.m. to 5 p.m. The grounds are open throughout the year from daylight to dark. A limited number of wheelchairs are provided for the handicapped. Many ramps have been constructed in order that handicapped persons may avoid stairs. It is possible to secure directions from the Park Police for seeing maximum part of the park with the minimum effort. Special arrangements for the tour should be made by calling in advance. The park has restaurant facilities, and special arrangements for handicapped persons or groups of handicapped may be made by contacting Mr. Leech at Columbia 5-9434 or Columbia 5-3231.

Sightseeing at the Zoological Park is easier for handicapped persons during the summer months as the animals are kept out of doors and it is not necessary to enter the buildings.

SENATE

TUESDAY, APRIL 9, 1963

The Senate met at 10 o'clock a.m., and was called to order by the President pro tempore.

Rev. Robert Blakely McNeill, minister, Bream Memorial Presbyterian Church, Charleston, W. Va., offered the following prayer:

Lord God of all nations, whose lordship of the conscience is the basis of our freedom, whose grace confers dignity upon each person, and whose love is the ground of all human affection, look with favor upon those who dare grip the somber issues of our time.

In the intensity of daily conflict, if there is difference of opinion, let there be unity of spirit; if there is diversity of approach, let there be concurrence in purpose, strength in conviction, tolerance of opposition, malice toward none, and charity toward all.

We pray not for world dominion, but for world peace; not for power to destroy, but for a genius to reconcile; not for the right to judge others, but for the right to be judged aright by Thee.

Make of this Nation a sanctuary of good will, a priest of charity, and a prophet of a hopeful future.

We have not forgotten, O God, that this Government is but an assemblage of men, subject to every whim and weakness of human aspiration. Hear the prayers of each of them as they plead for wisdom, stamina, and integrity sufficient for the requirements of this day. Let Thy wisdom become their statecraft, and Thy sovereignty their urgency. We pray this in Thy holy name and spirit. Amen.

THE WILDERNESS ACT

The PRESIDENT pro tempore. Under the unanimous-consent agreement of yesterday, the Chair lays before the Senate S. 4, the so-called Wilderness Act, with respect to which there is a limitation on debate of 1 hour on each amendment and 1 hour on the bill.

The bill is open to amendment.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator from Montana will state it.

Mr. MANSFIELD. Under the limitation, who is to be in charge of the time?

The PRESIDENT pro tempore. The proponent of any amendment will be in control of the time available to those who favor the amendment. The Senator from Idaho [Mr. CHURCH] will be in control of the time available to those in opposition to an amendment. The two leaders are to be in control of the time available on the bill.

Mr. MANSFIELD. Yes. It is my understanding that the time available on the bill will be under the control of the Senator from Idaho [Mr. CHURCH] and the Senator from Colorado [Mr. ALLOTT]. Yesterday, I was informed by the distinguished senior Senator from Colorado [Mr. ALLOTT] of a death in his family. Therefore, I ask that the time under his charge be allotted by the junior Senator from Colorado [Mr. DOMINICK], and that the RECORD so show.

The PRESIDENT pro tempore. Very well.

Mr. MANSFIELD. I understand that the junior Senator from Colorado is seeking recognition.

Mr. DOMINICK. Mr. President, I suggest the absence of a quorum.

Mr. MANSFIELD. First, Mr. President, will the Senator from Colorado yield?

Mr. DOMINICK. I yield.

Mr. MANSFIELD. I wish to make it plain that the understanding is that the time required for the quorum call is not to be charged to the time available to either side, and also that at the end of the quorum call the Senator from Colorado [Mr. DOMINICK] will have the floor.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The absence of a quorum has been suggested; and the clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I move that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. NELSON in the chair). Is there objection? The Chair hears none, and it is so ordered.

Mr. DOMINICK. Mr. President, I call up amendment No. 38, and ask that it be stated.

The PRESIDING OFFICER. The amendment of the Senator from Colorado [Mr. ALLOTT] will be stated.

The LEGISLATIVE CLERK. On page 17, line 1, it is proposed to strike out all through "(B)" on line 14, and in lieu thereof to insert the following language:

> (2) Within national forests and public domain areas included in the wilderness system: (A) Notwithstanding any other provisions of this Act, until midnight, December 31, 1977, laws of the United States pertaining to mineral leasing and mining shall, to the same extent as applicable prior to the effective date of this Act, extend to all lands affected by this Act; subject, however, to such reasonable regulations as may be prescribed by the Secretary having jurisdiction over the area consistent with the use of the land for mineral development and exploration, drilling. Subject to valid rights then existing, effective January 1, 1978, the minerals in lands designated by this Act as wilderness areas are withdrawn from all forms of appropriation under the mining laws and from leasing under the mining laws and from leasing under the Mineral Leasing Act and all amendments thereto: *Provided*, That after December 31, 1977, the appropriate Secretary may, within a specific area and in accordance with such regulations as he may deem desirable, authorize prospecting (including but not limited to the exploration and production of oil and gas); (B) the appropriate Secretary may within a specific area and in accordance with such regulations as he may deem desirable authorize the establishment and maintenance of reservoirs, water-conservation works, transmission lines, and other facilities needed in the public interest, including the road construction and maintenance essential to development and use thereof, upon his determination that such use or uses in the specific area will better serve the interests of the United States and the people thereof than will its denial; and (C).

Mr. DIRKSEN. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. DOMINICK. Mr. President, I have called up amendment No. 38 to the so-called wilderness bill as the first amendment, because I think it will have a major bearing on the course of the proposed legislation through this body and through the other body, in the event the bill should pass.

This particular amendment of my colleague [Mr. ALLOTT] would provide that the ordinary Mineral Leasing Acts and mineral laws remain in effect in the areas within the wilderness system until December 31, 1977.

Under the wilderness bill as it has been reported by the committee, there is a provision only that under special circumstances the President can authorize prospecting for minerals only, including oil and gas; but this prospecting will not do any particular good so far as the actual discovery of mineral bodies which may well be vital to the security of this country is concerned. I say that it is not going to do any good advisedly.

In the first place, in the wilderness areas one is not permitted to bring in mechanized equipment, nor is there permission for any access roads. Consequently, a prospector within the wilderness system would be restricted by the sheer physical difficulties involved in going out and tramping through the wilderness area, carrying a pack on his back, or leading a burro, with a small miner's pick.

I think all Senators present are as well aware as am I that the modern methods and technology as to the discovering of ore bodies no longer rely on the classical system of the burro, the canary in the cage, and the little miner's pick that miners used to bring with them.

I am not talking about uranium. One might be able to find some more uranium, but under the present circumstances I gather, from what the Government says, that we have uranium "running out of our ears," so we do not have to worry too much about that.

I think it is worthwhile to conceive of the uranium problem we had some 13 years ago in order to put the amendment into context. At that particular time the Nation suddenly felt an urgent and vital need for the production of uranium ores for the national defense of this country. We were relying on supplies from the Belgian Congo and from Canada, and no one really knew whether there were any reserves of uranium in this country.

Most of the uranium reserves which were found in the process of the exploration which came subsequent to the incentives which were provided by Congress came within the States and the areas which will have a great portion of their territory blocked off from this kind of activity under the wilderness system, if it is approved.

Specifically getting down to the details of what I am talking about, in the hearings Mr. John Wolfe, who is president of the Colorado Mining Association, appeared before our committee and gave what I thought was one of the most illuminating speeches I have heard in a long time on the question of where mineral reserves and mineral resources might well be found. He pointed out that in Colorado alone about 95 percent of the mineral reserves which may be needed in the future can probably be discovered within approximately 1 percent of the actual territory of the State of Colorado.

I quote some portions of his testimony. On page 148 of the hearings he said:

> By the techniques which have been developed in the past 5 years, we can break the mountainous regions of the West into areas where the probability of success in mineral exploration is relatively homogeneous. When an explorations manager on a budget sees a probability index of 1 on the eastern half of Colorado and 1,000 on the western half, it is obvious where he will concentrate his effort. Within the western area you find a subarea with a probability index of 10,000.

I quote again:

> In the past, 95 percent of the production of the State of Colorado has come within that belt—

Which he showed on a map to the committee—

> and by these calculations it is indicated that 95 percent of the future production of these commodities will come from that area also.

The point I am making is that if we allow a reasonable period of time within which the ordinary mineral activities under our general mining laws and our mineral leasing laws can continue within the wilderness system, it will be possible during that period of time to discover these minerals in the area, and to stake out and to do the development and mining work. We can actually find these minerals within the period of time to be provided in this particular amendment.

After December 31, 1977, under this proposed amendment, the appropriations under the Mineral Leasing Act and under the mining laws will be knocked out. We will no longer have to worry about what the conservationists say about the despoiling of the wilderness areas by virtue of mining activities in those areas, unless the President decides that, under exceptional circumstances, we need such activities in the national security even more than we need the wilderness area.

The process of such exploration during that period of time will give the executive department and the Congress the opportunity of ascertaining which portions of this area may well be subject to removal from the wilderness system without harming the rest of the wilderness system, so that we will have a wilderness area and still have ascertained the necessity of having minerals subject to production within our own country.

Mr. President, what kind of materials are we talking about? Frankly, I do not know. In 1940 nobody was particularly looking for uranium. In 1945 nobody was particularly looking for the rare earths found in some quantities in the Western United States. In 1925 people were still looking for gold. Frankly, they are not still looking for gold anymore, because it cannot be produced at a profit.

We have a situation where almost any kind of mineral can become vital to the successful development of our national defense, our economy, and our industrial affairs and commercial enterprises.

It seems to me it is imperative that we keep open those areas which in many cases are the most highly mineralized areas in the United States for further exploration and development of the resources which might be found within the scope of the wilderness system as it is set up by the pending bill.

As I said before, we are not trying to ruin the bill, as has been asserted by some of the advocates of the wilderness system. We are not trying to do anything more than preserve the right, under existing laws, to be able to continue the exploration of those areas to determine whether or not the mineralized areas may safely be removed from the wilderness system because they are more valuable to the country by using them for mineral purposes.

Some other points were contained in Mr. Wolfe's testimony. At page 151 of the hearings, in answer to a question from my colleague from Colorado [Mr. ALLOTT] as to whether the existing provisions in the bill permit fruitful prospecting for minerals, Mr. Wolfe's answer was:

> In my opinion it would be almost impossible to persuade management—

By this term he is talking about management of a mining company—

> to budget money for studies in these areas, that we would feel that it was so—that the chances of being able to proceed and develop would be so remote that we would be extremely hesitant to spend the company's money in any area of that nature.

The senior Senator from Colorado [Mr. ALLOTT] went on to bring this point out. He asked the following question:

> Under the general provisions of the bill and under our present knowledge of your particular field—

Referring to Mr. Wolfe's field—

> would it be possible to do any prospecting without such a permit from the President?

Mr. Wolfe answered:

> There would be some phases of work that could be done. There are some regional bits of information that can be obtained. But it would be certainly much more difficult to go in with a mule and pick and shovel than if we could take in the modern tools which we have available to us.

The point I am making to the defenders of this bill is that we do not have to worry about mining, because there are provisions in the bill which provide the President will permit it to be done only if he feels it is important. But those provisions do not mean a thing, because the areas are locked up, there is no access to the areas, and the only way one could get into it would be with a mule and a pick and shovel.

Therefore, the Senator from Colorado [Mr. ALLOTT] has proposed this amendment, which is not all out, which is not designed to wreck the bill, which does not go as far as the Interior Committee in the other body went during the last session of Congress. It simply provides we will have until midnight, December 31, 1977, to operate in those areas under the mineral leasing and mining laws, subject to such reasonable regulations as may be prescribed by the Secretary having jurisdiction over the area, consistent with the use of the land for mineral development and exploration and drilling.

The amendment then goes on to provide, as I pointed out a little earlier, that after that particular time, the right of all forms of appropriations under the mining laws will expire subject only to existing rights that are then in effect.

It occurs to me—and I think this is a point which perhaps has not been brought to the attention of the Senator from Idaho [Mr. CHURCH] before this time—that this very exploration may provide the basis for the various departments in the executive department to determine whether or not a wilderness area at a particular point should be increased or decreased in size. Without this information available to them, which could be discovered under this amendment, they would in many cases be operating in the dark, in this particular field at least.

I do not know how many States would be involved particularly in the mining amendment we have before us. I know Colorado would be. I am reasonably sure the State of the Senator from Idaho would be. I am almost positive Nevada would be. I see present the Senator from Nevada [Mr. BIBLE]. I am reasonably sure—in fact, I am sure—the great State of Alaska would be involved.

It seems to me, where we are dealing with the mineralized portion of the United States and are simply cutting off any right for the further determination of where these resources are, that we are going beyond the reasonable scope of Congress to determine what is in the national interest. We are simply saying it is more important to have wilderness areas than to have the opportunity of determining where the mineral resources are.

Mr. BIBLE. Mr. President, will the Senator from Colorado yield me about 5 minutes, if he has completed his opening statement? I do not know what the time situation is.

Mr. DOMINICK. Mr. President, how much time do I have?

The PRESIDING OFFICER. The Senator has 15 minutes.

Mr. DOMINICK. I yield 5 minutes to the Senator from Nevada.

Mr. BIBLE. I thank the Senator from Colorado.

Mr. President, I rise to support the amendment offered by the junior Senator from Colorado [Mr. DOMINICK] on behalf of the senior Senator from Colorado [Mr. ALLOTT]. It seems to me this is a worthwhile amendment.

In my judgment, it does not do a disservice to the wilderness concept. As the Senator from Colorado knows, during the deliberations on the bill in committee, I offered an amendment which was a more severe amendment than the one presented by the junior Senator from Colorado on behalf of the senior Senator from Colorado.

The amendment I offered had no cutoff date of some 15 years after the passage of the bill, in whatever form it may be enacted.

I firmly believed then, and I firmly believe now, there is nothing irreconcilable in having mining within a wilderness area.

I pointed out during the committee deliberations then, and I repeat now, that the Committee on Interior and Insular Affairs in the past has done exactly that—permitted mining in national park areas, areas which are set aside for conservation and recreation uses.

For example, in the creation of Mount McKinley National Park, a park which contains 1,939,493 acres, mining is permitted.

In Death Valley National Monument, which is a great area in southern California of some 1,907,760 acres, mining is permitted.

The Organ Pipe Cactus National Monument is an area of lesser size, but still of considerable acreage. It consists of 330,874 acres. Mining is permitted in that area. In the Glacier Bay National Monument, consisting of 2,274,595 acres, Congress provided for mining rights in one section. Congress wrote such a clause into those acts. These are areas in which mining and other uses occur without any apparent difficulty.

In the last session of Congress, as the distinguished chairman of the Committee on Interior and Insular Affairs knows, we made considerable progress in the field of lakeshore and seashore legislation. We are presently considering those before the Public Lands Subcommittee of that committee. We did permit other use in the Cape Cod National Seashore. We certainly permitted other use in the Padre Island National Seashore, because we permitted oil exploration to exist side by side with the recreational benefits.

Then, too, on the west coast, in the Point Reyes National Seashore, we permit adverse use; not mining use, but continuation of grazing and dairying in that area.

In the last session of Congress, the Committee on Interior and Insular Affairs reported favorably two bills, one, the Great Basin National Park, in my own State of Nevada, consisting of an area of 123,000 acres. Mining there is specifically permitted. The other is the Canyonlands National Park bill, a bill that carves out 257,000 acres for a great national park. There, too, we permitted mining in one section.

My position, I would say to my distinguished friend from Colorado, is that in this amendment we are not creating an irreconcilable use. The two can exist side by side. We have spoken on this a number of times, and we should speak on it again. I shall certainly support the amendment of the Senator from Colorado.

Mr. DOMINICK. I thank the Senator very much. There are one or two points I should like to make while I am on my feet speaking on this amendment. I shall again quote from page 150 from the testimony of John A. Wolfe.

He was asked whether, because S. 174 had failed to become law in the last session, there had been increased exploration of these areas which might eventually be within the wilderness system, or whether it had cut back on such exploration. I quote Mr. Wolfe:

> Several large mineral-producing companies in the West have continued exploration in the proposed wilderness areas which are still open to entry. I have asked representatives of the exploration organizations of these companies if they have located within these areas what they consider to be significant desposits warranting detailed exploration. None of these companies would spend exploration funds on a deposit which it felt did not have a chance of producing gross values in excess of a hundred million dollars. I set the cutoff date on this study at September 1961 to evaluate the potential difference between the mineral wealth of the Nation today and what it would have been had S. 174 of the 87th Congress become a law on the date it was passed by the Senate. I found that at least one significant deposit has been discovered every 3 months. I asked each of these men with whom I discussed this matter if the fact that the last bill did not become a law had given impetus to their exploration activities within the proposed wilderness areas. Each answered that, on the contrary, the fact that similar legislation was hanging over these areas inhibited exploration expenditures in these regions. This is very much the case with the activities of my group. We are reluctant to budget money which stands in serious danger of being lost.

He testified a few weeks ago. It seems to me that this testimony pinpoints the very question I have been discussing. In the short period of time, exploration of these areas, which would be locked up from any development and exploration, had shown significant deposits, at least one every 3 months.

Apparently, in referring back to this fact, he is talking in terms of significant deposits, with a deposit producing at least a hundred million dollars.

Therefore, it seems to me that we are dealing with an enormous facet of the economic wealth of this country, and we should not ignore this and throw it to one side. That is why our amendment deals with this area, and I hope it will be adopted.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. ANDERSON. I hope the Senator from Colorado will not leave in the record the statement that these three deposits which they found every 3 months had the possibility of producing a hundred million dollars. His statement was that the companies would not spend exploration funds on a deposit which did not have that capacity. No significant deposit of that kind has been found in Colorado so far as I have heard.

Mr. DOMINICK. I do not know of any such deposit from my own personal knowledge. However, he said that they would not spend these funds unless it had that capacity or they thought that it had a chance of producing a hundred million dollar deposit. Then he goes on to say:

> I found that at least one significant deposit has been discovered every 3 months.

This presumably refers back to at least a very valuable deposit. I have been in the mining game myself, and I know that fervor and optimism are a part of every miner's makeup. If a miner did not have those characteristics, we would not have any mining going on. I would not say that this was the actual amount they had discovered.

Mr. ANDERSON. Did Mr. Wolfe indicate that these were deposits within a wilderness area?

Mr. DOMINICK. Yes. He said these are explorations that were made within wilderness areas.

Mr. ANDERSON. We raised the same question on that point. I did not have a chance to question Mr. Wolfe. However, we raised the question as to whether or not the maps which had been prepared and that were brought in to indicate areas affected by S. 4 were accurate. Dr. Boyd introduced them in evidence. It was conceded many areas outside the forests, long withdrawn, were indicated. Their status as to mining would not be changed. The discoveries could not be on these areas for they have long been closed. The Department of Agriculture has very strict regulations on prospecting in wilderness areas in the forests. They are not aware of any extensive prospecting or location of minerals in these areas.

Mr. DOMINICK. I call the Senator's attention to the first two sentences on page 150 of the hearings.

Mr. ANDERSON. He does say, "proposed wilderness areas." The Senator remembers that when we asked Dr. Boyd about the proposed wilderness areas, it developed that they were areas long closed to mining.

Mr. DOMINICK. Yes. I remember that statement. However, I still believe that the adoption of the pending amendment will take care of the point I have raised. I hope the Senator from New Mexico will support it, because I believe its adoption might be extremely important not only for our State and other States, but to his own State.

It seems to me that what we are doing here is merely getting permission to proceed with development within a limited period of time, so we can lay the basis to determine which mineral areas should be retained in the wilderness systems and which should be excluded from the wilderness system at a later date.

Mr. COTTON. Mr. President, may I be yielded 2 minutes on the bill?

Mr. ANDERSON. On the pending amendment?

Mr. COTTON. No, not on the amendment.

Mr. CHURCH. Mr. President, I shall be glad to yield 2 minutes to the Senator from New Hampshire on the bill.

Mr. COTTON. Mr. President, I am perfectly willing that this colloquy appear following the debate on the pending amendment, if that is desired.

I desire to ask the Senators in charge of the bill two questions for my own information. First, I note on pages 2 and 3 of the bill a definition of "wilderness." I shall not take the time out of the 2 minutes to read the entire definition; but it indicates that it is to be wilderness untrammeled. I take it that that means that there are to be no roads or highways through the area or no roads into it.

If the bill passes, and there are forest areas in the wilderness without entrance roads, does the bill preclude the building of roads for the purpose of harvesting timber in a reasonable way, consistent with sound conservation practices? Does the bill isolate the forests and prevent the building of roads under the authority of those in control, or does it not?

Mr. CHURCH. The wilderness system as defined in the bill is confined to certain specific areas which have already been specified as wilderness or primitive areas. Those areas are located in the national parks and in the national forests, where they have been designated as primitive areas and where no roads have been permitted for many years. So, apart from the areas which have already been set aside and so designated, and in which no roads have been permitted in the past, the bill has no application. However, in ordinary national park and forest lands, roads could be constructed where roads are not presently located.

Mr. COTTON. But not in lands affected by the pending bill?

Mr. CHURCH. Areas affected by the pending bill—in the national forests, for example—are the primitive areas which have been set aside as wilderness and in which roads are not now permitted under the existing regulations of the Forest Service.

Mr. COTTON. It is my recollection from past years, particularly when I served in the other body, that there has been, at certain periods, a long standing difference of opinion between the Park Service and the Forest Service as to whether the proper use is to let the forests remain virgin land, to let the forests rot and fertilize the ground, or whether the forests should be periodically harvested. Would the bill compel the former course in areas where forests exist?

Mr. CHURCH. Yes; I should say, however, that whatever differences of opinion may have existed in the past, the Forest Service now, as it has done for some years, strongly endorses the proposed legislation.

Mr. COTTON. I have one other question, which relates to the title of section 4, on page 14: "Acquisition of certain privately owned lands within the wilderness system." Section 4 begins:

> The Secretary of the Interior and the Secretary of Agriculture are each authorized to acquire as part of the wilderness system any privately owned land within any portion of such system under his jurisdiction—

Does the word "within" mean that the land which may be acquired under the act must be completely surrounded, or does it mean that it may be surrounded on three sides or be contiguous to?

Mr. CHURCH. I thank the Senator from New Hampshire for bringing it up, so that the record may be made perfectly clear. The understanding of the Committee on Interior and Insular Affairs on this point is that this language refers exclusively to any holding entirely surrounded by wilderness or primitive areas.

Mr. COTTON. That statement may be considered as a part of the legislative history of the bill?

Mr. CHURCH. Yes, it may. I am happy that the Senator from New Hampshire has raised the question, so that there will be no ambiguity or confusion about the understanding of the language.

Mr. COTTON. As the bill is now written, there is no right of condemnation?

Mr. CHURCH. The Senator is correct.

Mr. COTTON. Nor can any customary right or privilege, if there has been such, be taken away?

The PRESIDING OFFICER. The time of the Senator from New Hampshire has expired.

Mr. CHURCH. Mr. President, I yield a half minute to the Senator from New Hampshire, and a minute and a half to myself to respond to him.

Mr. COTTON. If there are existing rights-of-way or roads, or even ways that by prescription would be considered rights- of-way, are they preserved, too?

Mr. CHURCH. The Senator is correct. This is an amendment that I myself propose to the bill, because there are in my State inholdings—ranches—which were homesteaded many years ago and which lie entirely within primitive areas. We wanted to be perfectly sure that the owners of those ranches were guaranteed the customary usage of their property for ingress and egress according to the customary ways. So the bill provides, quoting now from section 4, page 14:

> *Provided, however,* That nothing in this Act shall be construed to confer a right of condemnation with respect to privately owned land within the boundaries of a wilderness area, or to impair any customary right or privilege heretofore enjoyed by the owners of such land, respecting access to it or to its ordinary use and maintenance.

Mr. COTTON. I take it that the language means a road or trail customarily used even if no legal right-of-way has been acquired because the land was owned by a corporation or for other reasons? Under the language in this bill such customary use would be presumed to have created a right-of-way?

Mr. CHURCH. The language speaks for itself. Whatever has been the customary method of ingress and egress would continue to be preserved.

Mr. COTTON. I thank the Senator from Idaho.

Mr. DOMINICK. Mr. President, the questions asked by the Senator from New Hampshire relate specifically not only to the points to which he was referring, but to the very amendment I have offered. Section 6(b), on page 16, clearly shows that there cannot be any access rights within any of the lands which are brought within the wilderness system, so far as road construction or the development of new roads is concerned. The only persons who would be entitled to retain any roads or access would be those who have inholdings. Consequently, any pertinent mining activity would be almost wholly barred by the present provisions of the bill, as would, of course, the harvesting of any timber that might be in any of the wilderness area. So that problem exists.

It seems to me that the amendment which I have offered, so far as mining is concerned, would specifically cure that problem and would allow 15 years in which to determine which of the areas should be taken out of the wilderness system and which should be permitted to remain within it.

Mr. CHURCH. Mr. President, I yield myself as much time as may be required, within the limitation.

At the outset, I must say it is very difficult for me to speak against the amendment. I am mindful of the importance of the mining industry. It is one of the chief industries of my State. I have always tried to uphold what I regard to be the legitimate interests of the mining industry. I have been the sponsor of many bills designed to be helpful to mining.

However, I am opposed to the pending amendment because I feel that to adopt it would be an act of contradiction. If wilderness areas are to be established and preserved, if we regard such preservation as being in the interest of our own and future generations, then the bill must be strong enough to protect the integrity of the wilderness it embraces. I submit that if this amendment were to be enacted into law, there would be no way, for the next 15 years, to guarantee the inviolability of the areas established—whereas the guarantee of their integrity is the very purpose of the bill.

Inasmuch as the Committee on Interior and Insular Affairs is largely composed of Members coming from the Western States, who understand the importance of mining, and strongly support mining activities, we have tried to be extremely reasonable in making every possible allowance for mining, which would not basically contradict the purpose of the bill or render it impossible to preserve these wilderness areas, once established by this legislation.

Let me refer to the provisions of the bill which make allowances for mining. First of all, there is the provision in section 6(b), which is to be found on page 16 of the bill. It makes clear that existing mines and valid, existing mining claims within the areas affected by the bill are to be preserved inviolate. The junior Senator from Colorado [Mr. DOMINICK] says another 15 years are needed for unrestricted exploration of these areas. Mr. President, I submit that there has been unrestricted exploration of these areas for more than a century; yet today only 6 mines are operating within the whole area which would be affected by this legislation. These mines will be unaffected and will continue their operations. All valid existing mining claims within the wilderness system are also protected by this legislation.

Furthermore, the bill provides that for the next 10 years, surveys are to be conducted by the Forest Service, within the primitive areas in the national forests, for the purpose of redefining the boundaries. The purpose of the surveys is to exclude from these areas portions which seem to have greater commercial value, or portions which seem to be more suitable for multiple use than for preservation as wilderness.

So I submit that, for the next 10 years, there will be ample opportunity for those tracts within the primitive areas of the national forests to be excluded whenever the surveys show there is commercially valuable mineral bearing rock which makes these tracts more valuable for commercial development than for preservation as wilderness.

Therefore, the difference, in this respect, may be only the difference between 10 and 15 years.

Mr. President, for one of these primitive areas in Idaho—the Selway-Bitterroot area—such a survey has been completed; and, in the process, over 450,000 acres were excluded, after they were found to have higher commercial value than wilderness value. So here, again, is a demonstration of how the bill can operate, during the next 10 years, to exclude from the primitive areas to be included in the wilderness system the mineral-bearing lands which have higher value for mining purposes.

But this is not all; the bill contains other protective provisions of even greater importance. Section 6(c)(8), on page 19 of the bill, provides that once the wilderness system has been established, limited prospecting can continue within the system as a matter of right, without need for permission from anyone. The only limitation on the prospecting is that it shall take such form as will not be incompatible with the surrounding wilderness environment. So all types of prospecting will not be denied within the wilderness system, once it has been established by the bill.

Finally, if I may call attention to section 6(c), on page 17 of the bill, in subsection (2) provision is made to allow for unrestricted prospecting and unrestricted mining within the wilderness system wherever the President finds that it is in the higher national interest to permit such prospecting or mining to occur.

I read from subsection (2) of section 6(c) of the bill:

> (2) Within national forest and public domain areas included in the wilderness system, (A) the President may, within a specific area and in accordance with such regulations as he may deem desirable, authorize prospecting (including but not limited to exploration for oil and gas), mining (including but not limited to the production of oil and gas)—

Then I read from line 11:

> upon his determination that such use or uses in the specific area will better serve the interests of the United States and the people thereof than will its denial—

So, Mr. President, we have made very liberal allowances for all the reasonable requirements of the mining industry. We even have provided that unlimited prospecting and unlimited mining may take place within given wilderness areas if the President finds that the national interest so requires.

But if we do not leave with the President the authority to make such a determination, and if, instead, we adopt this amendment, then, for the next 15 years, we shall have denied ourselves the tools with which to protect the integrity of the very wilderness areas which the bill is designed to establish. That would be a total contradiction of purpose.

For this reason, I feel that the amendment should be rejected.

Mr. President, let me make a final observation: The primitive areas which are really the subject of concern, insofar as this amendment goes, constitute between 7 and 8 percent of the national forest lands. When the reviews are completed, the primitive areas will comprise an even lesser part of the national forests. So the restrictions which do exist in the bill apply to only a very small part of the national forests, and apply not at all to the rest of the land, which remains open for unlimited prospecting and unlimited mining activity.

So I suggest that we keep our eyes upon the doughnut, not upon the hole. If we do, I believe we shall conclude that the provisions of the bill are as reasonable and as adequate as they can be made to protect the legitimate interests of the mining industry and still have a wilderness bill.

Therefore, Mr. President, I urge the Senate to reject this amendment.

Mr. DOMINICK. Mr. President, will the Senator from Idaho yield for several questions?

Mr. CHURCH. I am happy to yield.

Mr. DOMINICK. The Senator from Idaho stated, as I understand, that all of this is taken care of, because, after all, within the primitive areas the Secretary of Agriculture can make the reviews within the next 10 years, and therefore everyone will be happy. But it is a fact that the bill as it now stands does not permit the President to do that; only the Secretary of Agriculture would do it.

Mr. CHURCH. The resources of the Government—including the mining and geological agencies of the Government—will be available for the surveys. These lands are not new or unexplored. They are familiar lands. So I think the surveys will be useful to determine the portions of these areas which are mineral bearing and have mining potential. In my State, not a single mine is located in any of the primitive areas involved in the bill, and none has been located in them for many, many years, although for a century these areas have been open to unrestricted prospecting. Therefore, I do not feel that any hurtful restriction is being imposed by the bill.

Mr. DOMINICK. Mr. President, will the Senator yield for a question?

Mr. CHURCH. I yield.

Mr. DOMINICK. It is my understanding that the only prospecting which is permitted is the prospecting permitted under subsection 8, page 19, of the bill. It must be done in a manner compatible with the preservation of a wilderness area. The only other way in which prospecting could be done would be with the specific permission of the President. Can the Senator from Idaho indicate to me why the President would authorize prospecting in any of the proposed areas on the ground that it would better serve the interests of the United States, when there is no opportunity to try to show the President, except by geological maps which may already be in existence, as to whether or not any minerals are present in the area?

Mr. CHURCH. I can think of instances that might cause the Chief Executive of our country to open up given areas for further exploration for mining purposes. It might be that a need for special minerals essential to the national defense would require it. That is the first and most obvious consideration that comes to mind. Depressed economic conditions in a given area might be another reason for authorizing unrestricted prospecting, where the general evidence indicates that valuable minerals may be present. The national defense requirement is the most obvious. But I am sure that other considerations could also form the basis for granting permission to prospect and to mine.

Mr. DOMINICK. We certainly could not say that the opportunity was free and open, could we?

Mr. CHURCH. I merely say that we cannot maintain a wilderness and leave it free and open for exploration, for prospecting, for mining, and for commercial activities. We shall either have a wilderness or we shall not. I believe it is in the national interest to establish and to maintain a wilderness system for reasons I have already explained. There are good and bad mining promotions. I am aware of some mining ventures in my State—and I am sure the same have occurred in the State of Colorado as well—that have had more to do with the mining of stockholders than the mining of minerals. I refer to speculations that are hardly worthy of the price of opening up a wilderness. Unless in the bill the President is given authority to prevent this from happening, we cannot effectively protect the wilderness that the proposed legislation is meant to preserve. The two things are inconsistent. They are contradictory. The amendment concedes as much by imposing a 15-year cutoff upon itself. If the inherent contradiction were not present, why have a time limit? The very fact that a time limit is included is an admission that the two concepts are inherently contradictory. On that basis I oppose the amendment.

Mr. DOMINICK. Mr. President, will the Senator yield at that point?

Mr. CHURCH. I yield.

Mr. DOMINICK. Is it not also a fact that the authors of the bill recognize the need for prospecting; otherwise they would not be supporting the measure at all?

Mr. CHURCH. Mr. President, as I have said, I think we have made every reasonable allowance for the mining industry that can be made, consistent with the principle of the proposed legislation and the objective it seeks to accomplish.

I should like to yield now to the distinguished Senator from New Mexico.

Mr. ANDERSON. Mr. President, this is a subject that we have all considered a great deal. We have mining in my home State. I am glad to see the mines do well. But the amendment is not the route to take to see that they do so.

I admit that Mr. Wolfe was an interesting witness. The Senator from Colorado quoted a good deal of what he said. Immediately above the portion that he quoted, on page 150 of the hearings, is the following interesting observation:

> My own group has discovered one such deposit. If all of our preliminary work is substantiated, and if this deposit can be mined to depletion, at today's prices it will contribute $800 million. This would be the basis for $6 to $8 billion of construction.

That quotation leads me to believe that Mr. Wolfe was talking about an operation involving taking out materials for cinder block. I should hate to believe that the only place one could obtain materials for cinder block is in a wilderness area. There must be other places in which material for cinder block is available.

While Mr. Wolfe said much about how many significant discoveries have been made in the last few months, I point out that when one calls the Forest Service, a representative of that agency advises that they do not believe there have been any significant developments, except one development on the south end of Three Sisters, in respect to an area where gravel is being removed in order to make cinder block.

We have gravel all over the country. We do not have to go into a wilderness area to obtain it.

I call the attention of Senators to the fact that not too long ago we had a scandal because of what happened in the Al Sarena case. Some people had gone out and filed a mining claim on a virgin timber area in the State of Oregon. They never mined anything except the timber. They took out millions of dollars of timber on the basis of mining claims. I would hate to see wilderness areas destroyed that way.

The subject to me is not a new one. In the 81st Congress I introduced the bill S. 353 to protect the scenic values tributary to Aspen Basin Road and contiguous scenic areas inside the Santa Fe National Forest. We had to do that because the people were going into the forest, filing a mining claim on some gravel, removing one truckload of gravel, and then putting up a hotdog stand. Where we had the finest scenic values, we then had hotdog stands.

I introduced in the Congress a bill which became Public Law 81–94.

We have had this problem constantly everywhere we have attempted to protect land. It is easy to go into such areas, take out a small amount of material, and say, "This is the essential purpose of the activity."

Dr. Boyd, while testifying on behalf of the American Mining Congress, introduced into the record a brief he presented to the House 2 years before.

In that brief he had a table entitled "Discoveries S. 174 Would Have Prevented." When we pinned Dr. Boyd down, not a single one of those discoveries would have been prevented by the bill S. 174. Not a single one. He merely said, "Yes, they would have been prevented if the principles of S. 174 had been applied all across the United States."

Surely, if we proposed to stop mining everywhere, you could make a showing of mines that cannot be developed.

I asked the Department of Agriculture, which has charge of wilderness areas, if they knew of any of the significant discoveries in the State of Colorado that Mr. Wolfe had talked about. They said they had no knowledge of mineral discoveries in the national forests of any such magnitude as he was talking about in the last two years.

The Kennecott Copper Corp. was interested in a little place called Glacier Peak. It was about a 4- or 5-year-old claim. It had nothing to do with S. 174. It will be very interesting to follow along these developments and find out what great discoveries Mr. Wolfe was talking about as being made in the wilderness areas. I think he was talking about the national forests, not the wilderness areas.

When we pinned Dr. Boyd down, we found that he referred to 66 million acres being sterilized from mining by S. 4. There were not that many acres involved. He could not tell which acres being included were closed to mining long ago and which acres were not. We know which acres being put in the wilderness system have long been restricted. That includes acres in the wild, wilderness and canoe areas. The primitive areas will be reviewed.

Mr. President, I hope that the amendment will be rejected. I regard it as an extremely destructive amendment to the bill. I hope it will not be a part of the proposed legislation.

Mr. DOMINICK. Mr. President, I yield back the remainder of my time. I am ready to vote.

Mr. CHURCH. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to amendment No. 38 of the Senator from Colorado [Mr. ALLOTT]. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ANDERSON (when his name was called). On this vote I have a pair with the distinguished senior Senator from Colorado [Mr. ALLOTT]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

The rollcall was concluded.

Mr. METCALF (after having voted in the negative). On this vote I have a pair with the Senator from Nevada [Mr. CANNON]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withdraw my vote.

Mr. MANSFIELD (after having voted in the negative). On this vote I have a pair with the Senator from Texas [Mr. TOWER]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withdraw my vote.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Oklahoma [Mr. EDMONDSON], the Senator from North Carolina [Mr. JORDAN], the Senator from Ohio [Mr. LAUSCHE], the Senator from Missouri [Mr. LONG], the Senator from Rhode Island [Mr. PELL], and the Senator from Alabama [Mr. SPARKMAN] are absent on official business.

On this vote, the Senator from North Carolina [Mr. JORDAN] is paired with the Senator from Utah [Mr. BENNETT]. If present and voting, the Senator from North Carolina would vote "nay," and the Senator from Utah would vote "yea."

On this vote, the Senator from Alabama [Mr. SPARKMAN] is paired with the Senator from Wyoming [Mr. SIMPSON]. If present and voting, the Senator from Alabama would vote "nay," and the Senator from Wyoming would vote "yea."

On this vote, the Senator from Rhode Island [Mr. PELL] is paired with the Senator from Oklahoma [Mr. EDMONDSON]. If present and voting, the Senator from Rhode Island would vote "nay," and the Senator from Oklahoma would vote "yea."

I further announce that, if present and voting, the Senator from Ohio [Mr. LAUSCHE], and the Senator from Missouri [Mr. LONG] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT] is absent because of the death of his mother.

The Senator from Utah [Mr. BENNETT] and the Senator from Wyoming [Mr. SIMPSON] are absent on official business.

The Senator from Kentucky [Mr. COOPER], the Senator from Nebraska [Mr. CURTIS], the Senator from New York [Mr. JAVITS], and the Senator from Texas [Mr. TOWER] are necessarily absent.

The Senator from New Jersey [Mr. CASE] is detained on official business.

The respective pairs of the Senator from Colorado [Mr. ALLOTT] and that of the Senator from Texas [Mr. TOWER] have been previously announced.

On this vote, the Senator from Utah [Mr. BENNETT] is paired with the Senator from North Carolina [Mr. JORDAN]. If present and voting, the Senator from Utah would vote "yea," and the Senator from North Carolina would vote "nay."

On this vote, the Senator from Nebraska [Mr. CURTIS] is paired with the Senator from New Jersey [Mr. CASE]. If present and voting, the Senator from Nebraska would vote "yea," and the Senator from New Jersey would vote "nay."

On this vote, the Senator from Wyoming [Mr. SIMPSON] is paired with the Senator from Alabama [Mr. SPARKMAN]. If present and voting, the Senator from Wyoming would vote "yea," and the Senator from Alabama would vote "nay."

If present and voting the Senator from New York [Mr. JAVITS] would vote "nay."

The result was announced—yeas 26, nays 56, as follows:

So amendment No. 38 was rejected.

Mr. METCALF. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. CHURCH. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. DOMINICK. Mr. President, I call up the amendment identified as No. 34.

The PRESIDING OFFICER. The amendment will be stated.

Mr. DOMINICK. Mr. President, I ask unanimous consent that the amendment may be considered as read, and that it be printed in the RECORD at this point.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The amendment, ordered to be printed in the RECORD, is as follows:

On page 3, line 23, strike out all through line 3 on page 6 and insert in lieu thereof the following:

"(b)(1) The wilderness system shall include all areas within the national forests classified on the effective date of this Act by the Secretary of Agriculture or the Chief of the Forest Service as wilderness, wild, or canoe: *Provided*, That the areas within the national forests classified as primitive may be included in the wilderness system as hereinafter provided. Following enactment of this Act, the Secretary of Agriculture shall, within ten years, review in accordance with paragraph C, section 251.20, of the Code of Federal Regulations, title 36, effective January 1, 1959, the suitability of each primitive area in the national forests for preservation as wilderness and shall report his findings to the President. While being reviewed and until action is taken as provided by this subsection, primitive areas shall be administered so as to preserve their present status and condition. Before the convening of Congress each year, the President shall advise the United States Senate and House of Representatives of his recommendations with respect to the inclusion within the wilderness system, or exclusion therefrom, of each area on which review has been completed in the preceding year, together with maps and definition of boundaries: *Provided*, That the President may, as a part of his recommendations, alter the boundaries existing on the date of this Act for any primitive area to be included in the wilderness system, recommending the exclusion and return to national forest land status of any portions not predominantly of wilderness value, or recommending the addition of any contiguous area of national forest lands predominantly of wilderness value: *Provided further*, That following such exclusions and additions any primitive area recommended to be included in the wilderness system shall not exceed the area classified as primitive on the date of this Act. The recommendation of the President with respect to the inclusion in the wilderness system, or the exclusion therefrom of a primitive area, or portions thereof, shall become effective subject to the provisions of subsection (f) of this section: *Provided*, That if Congress rejects a recommendation of the President and no revised recommendation is made to Congress with respect to that primitive area within two years, the land shall cease to be a primitive area and shall be administered as other national forest lands: *And provided further*, That primitive areas with respect to which recommendations are submitted to Congress on the eighth, ninth, and tenth years of the review period herein provided shall retain their status as primitive areas until the expiration, in respect to each area, of a full session of Congress, two years for resubmission of revised recommendations to Congress by the President, and, if so resubmitted, until the expiration of a full session of Congress thereafter. Recommendations on all primitive areas not previously submitted to the Congress shall be made during the tenth year of the review period. Any primitive area, or portion thereof, on which a recommendation for inclusion in the wilderness system has not become effective within fourteen years following the enactment of this Act shall cease to be a primitive area and shall be administered as other national forest land."

Mr. DOMINICK. Mr. President, I call up this amendment because I believe it is of extreme importance to the pending bill. There are enough Senators on the floor so that I can explain it rather rapidly.

Mr. COTTON. Mr. President, may we have order so we can hear what the Senator is saying?

The PRESIDING OFFICER. The Senate will be in order.

Mr. DOMINICK. Mr. President, the amendment, prepared by my colleague [Mr. ALLOTT] does only one thing. What it does is to change the method by which primitive areas would be included within the wilderness system. As the bill is now written, all areas which are classified as wilderness, wild, canoe, and primitive, are automatically included within the wilderness system. Then the Executive is given 10 years for evaluation and recommendation to determine whether these areas should come out of the wilderness system.

The amendment of my colleague from Colorado shifts this around. What it does is to provide that the primitive areas will remain within their present classification and will be evaluated over a period of 10 years, and that then a recommendation will be made for inclusion of the proper areas within the wilderness system.

This is a holding in status quo of the primitive areas at the present time until evaluation can be made as to the most useful purpose for these particular areas. Once that recommendation has been made, the Secretary would come to Congress and say, "This is the way we think these primitive areas ought to be included or not included within the wilderness system."

His recommendation would be final unless vetoed by Congress.

This is not my colleague's affirmative action amendment. This deals specifically with the primitive areas alone, and it says, in effect, "We will evaluate them before we put them into the wilderness system."

Is there any purpose in this? What is the need of doing it this way?

I assure the Senate that I sat for weeks in the committee hearings during 1961 and 1962, in the other body, while the bill was being discussed in depth. The principal objection of most of the witnesses who came before the committee was with respect to the question of whether or not the primitive areas should be blanketed in immediately or whether they should be evaluated and brought in later. Almost every witness, except members of the Sierra Club, and a few other strong conservation groups, felt that the evaluation should come first and then the primitive areas should be brought in.

This was effected by an amendment in committee in the House in the 87th Congress. It came under sharp attack by some of the conservation groups. It was an amendment which was proposed by more witnesses as being valuable to the passage of the bill than any other amendment that was offered by any group.

This has an impact, I can assure Senators, on the question whether or not a wilderness system will be created by legislation and will be adopted by the other body. If we can get this amendment adopted and a subsequent one which I will offer at a later time, we will have a chance of getting through Congress legislation creating a wilderness system.

I should like to make some points which I believe are very important. The first is with respect to the question of whether the Department of the Interior, as such, would have any objection to this kind of action. During the process of the hearings before the Senate subcommittee I asked the Secretary of the Interior whether he recalled saying he had no objection to this type of amendment. This is fairly important, and I would like to have order in the Senate.

The PRESIDING OFFICER. The Senate will be in order.

Mr. DOMINICK. The Secretary of the Interior indicated that he had never made such a statement. I refer Senators to the hearings before the Subcommittee on Public Lands of the Committee on Interior Affairs in the House of Representatives in the 87th Congress, at page 1170. This is the statement.

The first question is by me to the Secretary of the Interior:

I gather, Mr. Secretary, you would rather put everything—this means all the areas—and then eliminate, rather than start with what we think ought to be in and adding to it as the classification goes on.

Secretary UDALL. No. I thought I made it clear in my colloquy with Congressman RIVERS that I favored the other approach, except for the Forest Service wilderness area. I think this is a very clear-cut case. But I think we ought to start with a guideline and instruction from Congress that we have 10 years to make this review and to recommend what should go in, rather than saying put it in and then let us review to see whether it should come out. I think that is the wrong way to go about it.

Mr. METCALF. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. METCALF. Is that the Secretary of the Interior testifying?

Mr. DOMINICK. This is the Secretary of the Interior, Mr. Udall, testifying.

Mr. METCALF. He was testifying about forest areas?

Mr. DOMINICK. He was testifying about the primitive areas.

Mr. METCALF. He has no jurisdiction over primitive areas; it is the Secretary of Agriculture who has that jurisdiction.

Mr. DOMINICK. I understand. However, the Secretary of the Interior, who has a close connection with the whole wilderness system, and who works very well in most instances with the Secretary of Agriculture, in this particular phase of their operations, specifically said in the hearings, held May 7, 8, 9, 10, and 11, 1962—I do not know which particular day this was touched on—that he favored the approach which was recommended in this particular amendment.

The other day, when he was before the committee, he said, in answer to my question about this testimony, that he did not so testify. Apparently his recollection was in error.

I bring this up because I believe it shows that after analysis of all the testimony which had been given before the other body and in its subcommittee during last year, on consideration of the bill, the Department of the Interior at that time thought the approach which is recommended by this amendment was a better approach than the one that is now in the bill.

I next refer to the recommendations in the report on "Outdoor Recreation for America."

On page 113 of this report, there appears:

> Recommendation 1 to 10: Primitive areas (class V) should be carefully selected and should be managed for the sole and unequivocal purpose for maintaining their primitive characteristics.

Just prior to that, the report states:

> Areas in this class—

Talking about primitive areas—

> are inspirational, esthetic, scientific, and cultural assets of the highest values. They, and they alone, satisfy the longing to leave behind for a time all contact with civilization.

I add, so do wilderness areas.

> Fortunately, they are a resource of which the country still has an abundant supply and which it can afford to preserve from other uses for the benefit of future generations. At the same time, it must be recognized that there are some areas which meet the physical requirements of this class but which for economic and social reasons are more valuable for some other purpose.

Mr. President, I have recited that language and placed it in the RECORD because it seems to me that rather than blanketing in a great area of primitive land, which amounts, according to committee print No. 26, as of August 31, 1962, to 7,852,958 acres—I observe what seems to be a difference in the amount of acreage between that shown in the RECORD and that in the committee print.

Mr. CHURCH. Mr. President, will the Senator yield, so that I may explain the discrepancy?

Mr. DOMINICK. I yield.

Mr. CHURCH. The difference results from the fact that three primitive areas have been designated as wilderness by the Secretary of Agriculture between the time the Senate last considered the bill and the present time. This has caused a reduction in the amount of acreage presently in the primitive areas within the national forests. I think the correct current figure is a little in excess of 6 million acres.

Mr. DOMINICK. I thank the Senator from Idaho for clearing up that point. This means that more acreage has gone into the wilderness area, does it not?

Mr. CHURCH. More acreage has gone into the wilderness area, and a large amount of land has also been restored to ordinary forest status for multiple use. The total extent of the wilderness system has been reduced somewhat by virtue of the surveys which have taken place in the past 2 years.

Mr. DOMINICK. Mr. President, the point I seek to make again is that if the Senate adopts the amendment, it will nevertheless be putting into the wilderness system immediately, and without any review or reevaluation, 8,220,403 acres of land which are now classified as wilderness, wild, or canoe. We will also be saying that primitive areas comprising 6,098,532 acres will stay in that classification while they are being reevaluated during a period of 10 years to determine whether they will be brought within the wilderness system or will be held in regions where the primitive areas are located.

The recommendations of Governors will be obtained, as will the recommendations of the Department of Agriculture. Those recommendations will be submitted to Congress. The recommendations provided in the bill as it is now written will go into effect unless either House of Congress vetoes the recommendations. It seems to me that that would be a logical and proper way to proceed. It is a way which I know would receive almost unanimous approval if the amendment were adopted. If we were to adopt this amendment and one more amendment, I believe there would not be a dissenting vote in this body against the bill.

With respect to the basic theory of whether we should blanket this huge area in immediately, and then try to take it out over a period of 10 years, Senators will recognize the pressure which we would be under to retain such land, because we have been in situations of this kind before. The pressures would be strong to keep the land in. Unless the other method is chosen, we shall simply be saying that we will take in all areas, having a total of more than 14 million acres, and locking them up so that only those people who have the physical capacity and the money either to explore it by foot or by organized pack trip can go in and have the use, availability, and enjoyment of this enormous area.

As I have said before, I believe this would be the logical procedure. The land is not classified at the moment as to its most valuable use. Under the amendment, it would be kept in the same condition in which it now is, and 10 years would be provided for a careful evaluation of each of the areas. Hearings would be held to determine their use in the areas involved, so that Congress could then determine what eventually would be done with the property.

Mr. President, I reserve the remainder of my time.

Mr. CHURCH. Mr. President, the distinguished Senator from Colorado has said that if the present amendment and the next amendment he proposes to offer were adopted, the Senate would approve this legislation by a unanimous vote. I do not agree. If this amendment and the next amendment are adopted, I shall vote against the bill, because I think the two amendments, taken together, would gut the bill utterly.

With respect to the pending amendment, I suggest that if it is adopted, we shall simply undo what we have just done. We have just rejected an amendment which would have left the wilderness system open to unlimited prospecting and unlimited mining for the next 15 years. Why did we reject that amendment? Because we recognized that it is not possible to establish a wilderness system and then not preserve it from violation; the two concepts are in contradiction. We cannot have a wilderness and then open it up, for 15 years, to uncontrolled commercial activity.

The pending amendment is a backdoor approach to accomplish the identical purpose, not during 15 years, but during 10 years. The amendment provides that the primitive areas in the national forests, which the bill incorporates into the wilderness system, shall be subject to a review which will occur over the next 10 years, to redefine the boundaries, to include permanently within the wilderness such parts of those primitive areas as are predominantly wilderness in character, and to exclude from the system those parts which are predominantly of a multiple-use value—whether for mining, lumber, or other commercial use.

The bill provides that the review shall take place during a period of 10 years. Resulting Presidential recommendations will be made, subject to a veto on the part of either the Senate or the House.

Now, the current amendment would leave the primitive areas outside the system until the reviews have taken place. That means that during the period of 10 years, while the reviews were actually being conducted in the field, the gates would be open to uncontrolled prospecting and mining. So the wilderness character of these areas could not be preserved during this 10-year period.

Mr. President, if the bill is a good bill, as I believe it to be; if its enactment would serve the public interest, as I believe it would; if it makes every reasonable allowance for mining activity within the wilderness that is consistent with the principle and purpose of the bill, as I am sure it does; then it is obviously wrong to accept the amendment, and is utterly inconsistent with the action the Senate has just taken.

I therefore urge the Senate to reject the amendment.

Mr. President, if no other Senator wishes to be heard, I yield back the remainder of the time under my control.

Mr. DOMINICK. Mr. President, having reserved the remainder of my time, I wish to make a brief rebuttal.

It does not seem to me that the Senator from Idaho has properly analyzed the amendment. It specifically holds in their present status and condition all primitive areas, while the review is being made. Consequently, there would not be any more wide-open infiltration of the areas—although such infiltration has been intimated by the Senator from Idaho—than there would be now within the primitive areas. As he has said from time to time in the committee, at this time not much is permitted to go on in the primitive areas. So we would not be changing that status at all; but we would be providing adequate time in which to determine whether these areas should or should not be locked up. The evaluation would be made after a hearing held in the area; and the local people, and also the Governor himself, could make statements at the hearing. Then the evaluation would be based on their recommendations; and it would be submitted to the President, and then it would be submitted by the President to Congress. Under the bill as it now stands, in order to overturn that recommendation, whatever it might be, Congress would have to veto the President's recommendation.

So, Mr. President, it seems to me that we have included every possible safeguard to prevent the spoiling of these areas. We simply ask for time in which to ascertain what is in these areas, before they are locked up and before the general public is prevented from having access to them and is prevented from making use of them.

The bill is for the purpose of outdoor recreation; and special funds would be provided for this purpose, because the need for outdoor recreation is so great. Yet we know that historically not more than 2 percent of the people ever go into wilderness areas; and some of these areas may be needed for special purposes. The need will be determined as a result of the surveys, and the determination will be subject to being dealt with by Congress. But it is important that this opportunity be preserved, so that these areas may be dealt with in this way.

Mr. President, I yield back the remainder of the time under my control.

On the question of the adoption of the amendment, I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER (Mr. MCINTYRE in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD (when his name was called). On this vote, I have a pair with the distinguished junior Senator from Texas [Mr. TOWER]. If the Senator from Texas were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

Mr. MONRONEY (when his name was called). On this vote I have a pair with the senior Senator from Colorado [Mr. ALLOTT]. If he were present and voting he would vote "yea." If I were at liberty to vote I would vote "nay." I therefore withhold my vote.

Mr. METCALF (after having voted in the negative). On this vote I have voted "nay." I have a pair with the Senator from Nevada [Mr. CANNON]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I therefore withdraw my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Nevada [Mr. CANNON], the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Ohio [Mr. LAUSCHE], the Senator from Missouri [Mr. LONG], the Senator from Virginia [Mr. ROBERTSON], and the Senator from Alabama [Mr. SPARKMAN] are absent on official business.

On this vote, the Senator from Virginia [Mr. BYRD] is paired with the Senator from Wyoming [Mr. SIMPSON]. If present and voting, the Senator from Virginia would vote "nay" and the Senator from Wyoming would vote "yea."

On this vote, the Senator from Missouri [Mr. LONG] is paired with the Senator from Arizona [Mr. GOLDWATER]. If present and voting, the Senator from Missouri would vote "nay" and the Senator from Arizona would vote "yea."

On this vote, the Senator from Alabama [Mr. SPARKMAN] is paired with the Senator from Oklahoma [Mr. EDMONDSON]. If present and voting, the Senator from Alabama would vote "nay" and the Senator from Oklahoma would vote "yea."

On this vote, the Senator from Virginia [Mr. ROBERTSON] is paired with the Senator from Utah [Mr. BENNETT]. If present and voting, the Senator from Virginia would vote "nay" and the Senator from Utah would vote "yea."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT] is absent because of the death of his mother.

The Senator from Utah [Mr. BENNETT] and the Senator from Wyoming [Mr. SIMPSON] are absent on official business.

I also announce that the Senator from Kentucky [Mr. COOPER], the Senator from Nebraska [Mr. CURTIS], the Senator from New York [Mr. JAVITS], and the Senator from Texas [Mr. TOWER] are necessarily absent.

The Senator from Arizona [Mr. GOLDWATER] is detained on official business.

The respective pairs of the Senator from Colorado [Mr. ALLOTT] and the Senator from Texas [Mr. TOWER] have been previously announced.

On this vote, the Senator from Utah [Mr. BENNETT] is paired with the Senator from Virginia [Mr. ROBERTSON]. If present and voting, the Senator from Utah would vote "yea" and the Senator from Virginia would vote "nay."

On this vote, the Senator from Nebraska [Mr. CURTIS] is paired with the Senator from New York [Mr. JAVITS]. If present and voting, the Senator from Nebraska would vote "yea" and the Senator from New York would vote "nay."

On this vote, the Senator from Arizona [Mr. GOLDWATER] is paired with the Senator from Missouri [Mr. LONG]. If present and voting, the Senator from Arizona would vote "yea" and the Senator from Missouri would vote "nay."

On this vote, the Senator from Wyoming [Mr. SIMPSON] is paired with the Senator from Virginia [Mr. BYRD]. If present and voting, the Senator from Wyoming would vote "yea" and the Senator from Virginia would vote "nay."

The result was announced—yeas 21, nays 61, as follows:

So amendment No. 34 was rejected.

Mr. METCALF. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. CHURCH. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. DOMINICK. Mr. President, I call up amendment 37 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The CHIEF CLERK. On page 17, line 20, it is proposed to strike the words "restrictions and".

Mr. METCALF. Mr. President, during the course of the committee action, when this amendment was offered, I resisted it because I did not know what effect the use of the words "restrictions and" would have on the Taylor Grazing Act, title 43, section 315, and the following. The headnotes in the Taylor Grazing Act provide authority for the Secretary of the Interior to impose restrictions, and down through the various sections of that act there are also provisions for restrictions.

Since that time I have had an opportunity to make some research into this question, and I find that the term "regulation" and the term "restriction" are frequently used as synonymous. For instance, "regulation," according to Webster's Dictionary, means:

> A regulating principle or law; specifically a rule or restriction prescribed and enforced by constituted authority for the sake of order, uniformity, discipline, etc.; as the regulations of a school or society.

"Restriction" means:

> That which restricts; a limitation; a qualification; a regulation which restricts or restrains; as, to make restrictions; new restrictions for hunters.

The use of the term "regulation" in a statute is very comprehensive. *City of*

Madison v. *So. Wisconsin Ry. Co.*, 146 NW., 492,500; 156 Wisconsin 352.

In the case of *Stone* v. *Cray*, 89 N.H. 483, 200 A. 517, the court said: "Restrictions can be embraced in regulations." It was that court that talked about the legislative "language of redundancy and synonyms." And many cases hold that where we indulge in this legislative tautology and say "rules and regulations," "regulate and control," or "regulations and restrictions," the words are synonymous.

The point is made that use of the word "restriction" would permit arbitrary and discriminatory action on the part of the Secretary and of course that is to be avoided. Under the general and accepted meaning of the word "regulation" it gives the Secretary adequate authority to make the regulations that are necessary to carry out the intent of the act; namely, the preservation of the area.

In the course of a short research on this question I found a case in which authorization to regulate sale of liquor carried with it authority to restrict sales in certain areas. Authorization to regulate traffic permitted a restriction of truck and commercial traffic to certain streets, et cetera.

I have come to the conclusion that when one uses the words "restrictions" and "regulations" together they are synonymous, and the cases so hold; and that it is only a matter of redundancy to use an additional word. Therefore, there would be plenty of authority in the hands of the Secretary to impose, if necessary, grazing regulations if the amendment were agreed to.

Lastly, of course, under the provisions of the Constitution, the Congress has authority to take care of the property of the United States under such regulations as it may care to make.

The word "regulations" is good enough for me. I would suggest that the Senator in charge of the bill accept the amendment.

Mr. DOMINICK. I thank the Senator.

Mr. CHURCH. Mr. President, I concur in the remarks and the interpretation made by the Senator from Montana. I am willing to accept the amendment. I suggest a voice vote.

The PRESIDING OFFICER. Do the Senators yield back their remaining time?

Mr. CHURCH. I yield back the remainder of my time.

Mr. DOMINICK. Mr. President, I yield back my remaining time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to amendment No. 37.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. DOMINICK. Mr. President, I call up amendment No. 36 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 17, line 2, it is proposed to strike out the word "President" and substitute in lieu thereof the words "appropriate Secretary."

Mr. DOMINICK. Mr. President, this is a simple amendment both in language and in meaning. If I may have the attention of Senators for a few moments, I think we can dispose of it also by a voice vote.

I strongly urge that the Senator in charge of the bill think carefully about the amendment.

The language as it now prevails in the bill would give to only the President the power to authorize prospecting or mining or the establishment and maintenance of reservoirs, water conservation lines, transmission lines, and other facilities needed in the public interest, and only when he determined that this would better serve the interests of the United States.

This is particularly important in the water development field. That is the point I am trying to make.

What the senior Senator from Colorado [Mr. ALLOTT] has offered, in conjunction with myself, is a provision which would simply substitute the words "appropriate Secretary" for the word "President."

I think we are all aware of the great burdens which fall on the President of the United States. On the other hand, the Secretary of the Interior or the Secretary of Agriculture, as the case may be, is specifically designated by Congress to deal with the problems we shall be facing in respect to this particular provision.

It seems to me only proper tc permit those who are best qualified on this particular subject to make the decision.

I am relatively positive that no President, regardless of who he may be, would make such a decision without a recommendation of the appropriate Secretary. Therefore, why not take some of the burden off the President and put it on the Secretaries who know more about the subject?

I reserve the remainder of my time.

Mr. CHURCH. Mr. President, I yield to the distinguished Senator from New Mexico [Mr. ANDERSON] such time as he may require.

Mr. ANDERSON. Mr. President, this question was discussed in committee. The reason we left the language in as it is in the bill is that there are certain functions which do not relate to a Secretary, appropriate or otherwise. It is all very well to say, "Leave it to the Secretary, and not the President," but what are we to do when the Federal Power Commission is involved? The Federal Power Commission is involved in transmission lines.

While I agree with the Senator from Colorado that the President would take the advice of the appropriate Secretary when the Department of Agriculture and the Department of the Interior were involved, for example, other departments may be involved. I think it is wise to leave in the word "President" rather than say "appropriate Secretary."

I hope the amendment will be defeated, because while we know the Federal Power Commission is one agency that may be involved, it is also true that other agencies may be involved. I would dislike to reach the point where there was no "appropriate Secretary," and no action could be taken.

The Senator from Colorado has correctly pointed out that the President would take the advice of the appropriate Secretary, but I believe the language should remain "the President." I hope the amendment will be defeated.

I suggest that the remainder of the time be yielded back and that there be a voice vote on the amendment.

Mr. CHURCH. Mr. President, I yield back the remainder of my time.

Mr. DOMINICK. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time on the amendment has been yielded back.

The question is on agreeing to amendment No. 36.

The amendment was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. DOMINICK. Mr. President, I suggest the absence of a quorum.

Mr. ANDERSON. Mr. President, I do not think there is any provision as to whether or not the time for the quorum call be taken out of the existing time allotted, but I ask unanimous consent that the time for taking the quorum call be not charged to either side.

Mr. DOMINICK. Mr. President, I withdraw my suggestion of the absence of a quorum temporarily, and yield to the Senator from Iowa [Mr. MILLER].

Mr. MILLER. Mr. President, I send to the desk an amendment and ask to have it stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Iowa will be stated.

The CHIEF CLERK. It is proposed to strike out lines 19 through 25 on page 16, and insert in lieu thereof the following:

> (1) Within the wilderness system the use of aircraft or motorboats where these practices have already become established shall be permitted to continue subject to such regulations as the appropriate Secretary finds necessary. In addition, such measures may be taken as are necessary in the control of fire, insects, and diseases, subject to such regulations as the appropriate Secretary finds necessary.

Mr. MILLER. Mr. President, I believe this amendment merely ties down the language a little more neatly. It conforms with a previously adopted amendment changing the word "restrictions" to "regulations" and also the word "conditions" to "regulations," so the Secretary will actually be issuing regulations.

It also provides the mandatory word "shall" rather than the word "may," under the conditions set forth in the paragraph of the bill.

I have discussed the amendment with the Senator in charge of the bill. I understand there is no objection to it.

Mr. ANDERSON. Mr. President, will the Senator from Iowa give us a moment to take another look at it?

Mr. MILLER. Mr. President, there is no intention to inhibit the effectiveness of the bill, but I believe, on the basis of my experience in working on this particular bill in the previous session, when I had the honor of being a member of the Committee on Interior and Insular Affairs, that it will meet the requirements and desires a little better than the present language.

Mr. CHURCH. Mr. President, we have reviewed the language of the amendment. We see no particular objection to it. The purpose of the original language was to preserve intact the practice, wherever airplanes or motorboats have been used to go into primitive areas, that is, wherever the practice has been established. The Senator from Iowa believes his language makes more definite the intent of the committee. We have no objection to accepting it. We find the language unobjectionable.

Mr. MILLER. Mr. President, I yield back the remainder of my time.

Mr. CHURCH. Mr. President, I yield back the remainder of my time. I suggest that a voice vote be taken on the amendment.

The PRESIDING OFFICER. All time on the amendment has been yielded back.

The question is on agreeing to the amendment of the Senator from Iowa [Mr. MILLER].

The amendment was agreed to.

Mr. DOMINICK. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DOMINICK. What is the present status of the bill?

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. DOMINICK. Mr. President, I suggest the absence of a quorum. Let me say, in conjunction with this request, that I understand the majority leader said that the time taken for a quorum call would not come out of the time of either side.

Mr. ANDERSON. Mr. President, I did not hear the announcement, but I would agree to such an arrangement.

I ask unanimous consent that that be done, if there is any question.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. ANDERSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MCINTYRE in the chair). Without objection, it is so ordered.

Mr. DOMINICK. Mr. President, I call up amendment 32 and ask for the yeas and nays on it.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

> (f) Any recommendation of the President made in accordance with the provisions of this section shall take effect upon the day following the adjournment sine die of the first complete session of the Congress following the date or dates on which such recommendation was received by the United States Senate and the House of Representatives; but only if prior to such adjournment Congress approves a concurrent resolution declaring itself in favor of such recommendation: *Provided,* That, in the case of a recommendation covering two or more of the areas covered or parts thereof.

The PRESIDING OFFICER. Is the request for the yeas and nays sufficiently seconded?

The yeas and nays were ordered.

Mr. DOMINICK. Mr. President, I approach the discussion of the pending amendment with some hesitation, only because I am afraid I cannot do as much justice to it as Senator ALLOTT could do if he were here. It is extremely unfortunate, in my opinion, that he is unable to be with us today. Obviously he is unable to because of a death in his family.

This is probably the most important amendment we will consider in connection with the pending bill. In fact, I am sure it is. This does not involve merely the bill; it involves also the concept of whether Congress will retain affirmative control over the public lands of the United States, or whether it will simply retain the veto power over the exercise of judgment by the Secretaries of the various departments that are involved.

It is worthwhile noting that with respect to almost all phases of activity connected with the Department of Agriculture or with the Department of the Interior, which are involved in this particular bill, before public lands can be classified for a particular purpose, or used in a different way, affirmative action must be taken by Congress.

I brought this up yesterday in the process of the discussion, and I pointed out that with respect to any reclamation project in the western area of the country, we must first authorize the project, after it has been investigated by the Department, and then we appropriate funds for it.

I pointed out that in the case of setting aside of public lands for national parks, Congress determines the degree of land and the amount of land that will be included within national parks, and does it upon the recommendation of the Secretary, and following hearings all the way through.

I pointed out, and I believe it should be repeated today, that in subsection (h) of the pending bill, on page 11, there is this provision:

> ADDITION OR ELIMINATION NOT PROVIDED FOR IN THIS ACT
>
> (h) The addition of any area to, or the elimination of any area from, the wilderness system which is not specifically provided for under the provisions of this Act shall be made only after specific affirmative authorization by law for such addition or elimination.

In the Park System, as in the wilderness bill itself, we have the provision that additions to it and eliminations from it shall be by affirmative authorization.

In connection with reclamation projects, affirmative action is required.

I might say that I do not know of an instance in which Congress does not retain affirmative control, except in two cases; the first is in the Reorganization Act, which is merely a reorganization of the executive branch. It does not involve our basic land policy. The other is in the pending bill as it is now proposed.

The defense for the present situation, that the recommendation of the executive branch becomes final unless Congress vetoes it, is that this is the only way in which we can be sure of getting a vote on every recommendation that is made.

I would say that although this statement has been made, it is begging the basic issue. Obviously, we can get a vote on any subject if we fight for it long enough. We have done that in connection with civil rights legislation, which has been a subject of some concern to this body on many occasions. However, civil rights legislation has come up and has been passed.

We have done it in the House. There are a good many methods by which bills can be brought before the other body for some kind of action. It could be true here. To say that we could not get a vote on these matters, because so and so or such and such a thing would not do something or take certain action, is not dealing with the basic issue. It is finding an expedient and using it in the face of a principle which is the very subject of this amendment. That principle, I repeat, is the question of whether or not Congress will retain its affirmative control over the public lands and the public land policy. What would this involve? What would it mean? It does not mean as much as appears on the surface except with respect to the principle that is involved.

We shall be blanketing in automatically all wilderness, wild, and canoe area—8,220,403 acres. That acreage will be blanketed into the wilderness system regardless of what happens.

Under the bill, we shall be including initially 6,098,532 acres of area classified as primitive. This area will be subjected to review by the Secretary over a period of 10 years. He will submit his recommendations to Congress. Under the bill as it is now written, those recommendations will become final unless either House of Congress vetoes them. Under the provision as proposed in the amendment, if adopted, those recommendations would be made to the committees, and the committees would determine whether action should be taken upon them or whether it should not.

In addition, there is the National Park System, which must be reevaluated under the provisions of the bill. The National Park System comprises 22,560,000 acres, all of which would be subjected to review in connection with the wilderness system to determine which portions ought to go into wilderness and which would remain in national park status. Each of these areas would be automatically taken within the wilderness system or eliminated from it upon the recommendation of the Secretary, unless Congress vetoed the proposal.

It seems to me that Congress ought to retain its control over the National Park

System. We should say that we, as representatives of the people of the country, will determine for ourselves whether a certain portion of this system should be placed within the wilderness system.

The national wildlife refuges comprise 28,554,014 acres. These are public lands that belong to all the people. They should be reviewed by the representatives of the people to determine whether they should be included in the wilderness system, or whether they should be locked up and not used, or whether they should remain in the national wildlife refuges or national parks, where they will be open to the people who use those areas.

I repeat what I have said before: I should like nothing better than to be in a position to vote for a legislative wilderness system. However, I am not willing to do so on the basis of a compromise with the principle involved in the amendment. The principle involved in the amendment is whether Congress will retain control over the National Park System, the national wildlife refuges, the primitive areas, and the wilderness system itself, or whether it will simply dispose of such control and keep only a right of veto. Certainly a right of veto is useful. It is more than we now have; I am willing to admit that. But when we have a proposal under which Congress can regain the necessary power over the public lands of the country which was given to it originally, it seems to me we ought to take what we can put into the law for a fruitful purpose, so that we will have the opportunity to decide, after hearings, which portions of the public lands will be included within which portions of the particular systems concerned.

Mr. JORDAN of Idaho. Mr. President, will the Senator from Colorado yield?

Mr. DOMINICK. I yield to the distinguished Senator from Idaho.

Mr. JORDAN of Idaho. Mr. President, I wish to associate myself with the remarks of the distinguished junior Senator from Colorado. I doubt if there is a Senator who is more in favor of preserving a segment of our country in its natural state, for the enjoyment of present and future generations, than I. I can think of few things more wasteful and thoughtless than to destroy all the primeval areas in our Nation, so that future generations could never see for themselves what this continent was like centuries ago. But there are honest differences of opinion as to the best way to accomplish this purpose.

I wish to speak in support of the pending amendment to the wilderness bill, an amendment which I am privileged to cosponsor with the senior Senator from Colorado [Mr. ALLOTT] and other Senators. I think the amendment is a good one; in fact, I think it is vital to the success of any wilderness bill.

The theory and practice of American constitutional government has been that Congress shall pass measures and the Executive shall have the veto power, with Congress retaining the power to override such a veto by a two-thirds vote. Under the pending bill, as reported by the committee, this process would be reversed, because the Executive would make the recommendations, leaving to Congress the power to veto.

The process established by the committee bill is not in accordance with the usual congressional procedures, but follows the outline set up by the Reorganization Act of 1947, which relates to changes in the executive branch of the Government, not to methods of handling public lands owned by the Federal Government.

Those who claim that the amendment would harm the overall wilderness bill are in a sense indicting our traditional legislative process. In the past, Congress has acted, without any undue hardship, on many pieces of legislation similar to those which would be involved in the approval of future wilderness areas.

The present congressional procedures relative to natural resources development are the time-honored processes. At present, all such actions are taken by affirmative action. Congress must affirmatively act to include within the wilderness system all lands not now designated for specific uses; Congress must take affirmative action to create national parks from forest lands; and Congress must take specific action to authorize reclamation projects which are in the public lands system. I cannot understand why there is any justification for making a congressional procedure for wilderness areas the sole exception to the regular process of dealing with public lands.

The procedure established by the committee bill is based on the outline of the Reorganization Act of 1947. This act grew out of the Hoover report and was passed to give the President more of an opportunity to reorganize the Government according to what he felt was necessary. That is not the same as dealing with public lands. Here we are dealing with the fundamental responsibility over the assets of the United States. These assets belong to all the people.

When Congress delegated this present power to the Secretary of Agriculture, I believe it was negligent of its duties. I hope that today we will take back that power.

If the attention of the whole Congress were focused on each individual area proposed for wilderness by holding congressional hearings, there would be much more assurance that this land would be properly classified for its highest use. I understand that the bill calls for congressional hearings, but only if resolutions have been submitted to disapprove the President's recommendations. If no such resolutions are submitted, no hearings will be held, and the President's recommendations will become law.

The dedication of any area to a single use, whatever the purpose, is premature until it is justified by thorough study. Congressional hearings would certainly afford an opportunity for more of such study. Who knows, at this time, what hidden mineral wealth, for instance, might be found under these lands? Fifty years ago, not only was the need for uranium and its use unknown, but the actual metal itself existed in obscurity. Who is to say what unknown metal will be vital to the survival of this country in future years? How can such ores be found in wilderness areas if such areas cannot be prospected by modern methods?

S. 4 would permanently set aside for exclusive and extremely limited wilderness use some 3 million acres of public lands in Idaho. Much of this acreage has never been objectively evaluated for multiple-use potential. Its mineral potential is virtually unknown. Some of it has not even been surveyed.

I urge the the Senate to approve the amendment, because I believe it is vital to the bill. I believe we should have a wilderness system to preserve some primeval areas of our country. I believe that to do this we must pass a wilderness bill. But I am not willing to vote for a wilderness bill which does not protect the people of the country from the precipitate actions of the Secretary of Agriculture and the Secretary of the Interior. I want a wilderness bill which will restore to us the traditional congressional review and controls which were set aside by earlier congressional action.

I urge Senators to support the amendment offered by the senior Senator from Colorado [Mr. ALLOTT], by myself, and by other Senators.

Mr. DOMINICK. I thank the Senator from Idaho for what I believe is a pertinent and statesmanlike presentation concerning this problem. Does the Senator agree that in this amendment we are dealing with an extraordinarily important concept?

Mr. JORDAN of Idaho. Indeed, I do.

Mr. HRUSKA. Mr. President, will the Senator from Colorado yield?

Mr. DOMINICK. Mr. President, I yield 5 minutes to the Senator from Nebraska.

Mr. HRUSKA. Mr. President, I rise in support of the Allott amendment proposed by the senior Senator from Colorado and cosponsored by 14 other Senators which would require the Congress to act affirmatively upon any recommendations made by the President relating to the inclusion of additional wilderness areas. This amendment merely provides that the Congress shall rightfully perform the duties with which it is charged under the Constitution.

Each of us must take his responsibilities most seriously in performance of his legislative duties. We have been sent here by the people of our individual States to carry on the public business.

I, for one, consider the provision of article IV, section 3, clause 2, of the Constitution overwhelming importance in the consideration of the legal question involved in the situation at hand. That provision grants to the Congress the right and the power to dispose of and make regulations with regard to the public lands belonging to the United States. It does not confer any powers upon the executive branch of the Government or officials representing departments and agencies of the executive.

It is our function to make the laws of this country. The Congress of the

United States should have affirmative control over the manner in which the public lands are administered and developed. The Congress should not delegate such authority to agencies of the Government which are not directly responsible to the will of the people as expressed by their elected representatives.

Under the provisions of the bill, as recommended by the committee, Congress would retain only a small measure of control. If the Congress did not approve of the President's recommendations, it could take action indicating its displeasure. This, of course, is a negative approach to the problem, and does not in any way keep the control of the public lands of the United States where it properly belongs—in the hands of the Congress.

In connection with the bill before us, no sound reason for the abdication of our legislative responsibilities in this area is presented. All too often, we have permitted the departments and the other executive agencies to make legislative regulations or to take other actions which constitute legal action having the full force and effect of legislative enactments by the Congress. We are constantly diminishing the effective control and force of the Congress in those areas. Once such powers have been given, it is rare that they are ever again recaptured by the Congress.

In a search for precedent, we can look to the case of Newhall against Sanger, decided by the Supreme Court of the United States in 1875. The Court held that "the Government holds public lands in trust for the people, to be disposed of so as to promote the settlement and ultimate prosperity of the States in which they are situated."

Thus, we see that Congress is the trustee, and that it is the obligation and the duty of Congress to determine the use of our public lands in such ways that the greatest benefits from those lands accrue to the maximum number of our citizens.

There is no sound, acceptable reason why we should enact legislation which will delegate our obligation to the executive agencies, under a provision which severely limits the amount of control which Congress can exercise. The committee bill would shift the responsibility to such an extent that we could not then properly retain our responsibilities and would function as trustees for the citizens in developing the public lands. I, for one, cannot agree to abdicate this congressional responsibility, which rests upon us under the Constitution.

The voice of the public can always be heard in Congress. I am not satisfied that the voice of the public will be adequately or satisfactorily heard by executive officials. I do not believe that we can say today what will be the most effective use of the public lands for any appreciable time in the future.

I do not believe that executive officials can better predict such future uses. They are in a less favorable position to protect the interests of our citizens in the use of the public lands. Elected officials are closer to the people, and are responsible, and responsive to them.

This Nation became great during the period of westward expansion. The West is still being opened. We may yet find much in the way of new products and new uses for our natural resources, including our timber, our mines, our water, and our power. Many great industries have been built upon the idea of the multiple-use concept of public land. These industries have contributed to a greater gross national product and to a higher standard of living for our country.

I favor the wilderness use of the public lands, but I think that it is only one type of use to which these lands may be put. This use should be balanced with other uses. We can foresee the day when we shall need to make use of untapped natural resources for our expanding population and for its civilian and industrial needs.

It is my opinion that Members of Congress must ever be alert to exercise properly their legislative responsibilities. Unless we are willing to face up to those responsibilities, Congress will come into a period of decline in its proper functions and into disrepute with the public.

In that connection, Mr. President, I may say that in books, in magazine articles, and by commentators generally, there is currently being expressed considerable criticism of the Congress for functioning under outmoded rules and procedures. Certainly those critics who are Members of the Congress should support this amendment, because it will enable the Congress to retain the powers delegated to it under the Constitution. Even if there are outmoded procedures in the Congress, the solution should not be the derogation or the limitation of those powers. In that event, the powers rightfully belonging to Congress would be exercised by others.

So, Mr. President, let us retain and exercise our powers, as envisioned in and granted under the Constitution. Let us not surrender them.

It is my sincere hope that the amendment offered by the Senator from Colorado will be adopted. The control which it seeks to achieve by affirmative action by Congress is necessary and essential to the proper carrying out of congressional responsibilities. The amendment seeks to prevent a clear and repugnant abdication of congressional responsibility.

I am grateful to the Senator from Colorado for allowing this much time to me.

Mr. President, I wish to pay tribute to the junior Senator from Colorado for his lucid and straightforward presentations during debate on this bill. The sad event of the death of Senator ALLOTT's mother made it impossible for him to be here for today's discussion of a measure in which he has an abiding interest and concern.

Senator DOMINICK has been a splendid advocate for his colleague. His sharp, analytical approach has been of great help to all of us here in the chamber. I heartily commend him for an outstanding presentation and suggest that the Senate is indeed fortunate to have men of his ability among its membership.

Mr. DOMINICK. Mr. President, I sincerely thank the Senator from Nebraska for the very, very fine statement he has made. If I may say so, it bears out the recognition dinner which was given him a few days ago in Nebraska, which I had the honor to attend.

Mr. HRUSKA. Mr. President, I am grateful for the attendance there of the Senator from Colorado.

Mr. DOMINICK. Mr. President, I would say to the Senator from Nebraska that in the hearings before our committee there was specific testimony by Mr. Cline, who is a lawyer and is chairman of the Federal Legislative Committee of the Rocky Mountain Oil and Gas Association. On pages 48 and 49 of the hearing record we find that, after quoting clause 2 of section 3, of the Constitution—the part of the Constitution which grants to Congress the power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States, he said:

> What attitude should Congress have in exercising this power? The Supreme Court as early as 1875 in the case of *Newhall* v. *Sanger* held:
>
> "The Government holds public land, in trust for the people, to be disposed of so as to promote the settlement and ultimate prosperity of the States in which they are situated."
>
> In my filed statement there are further cases cited. Thus, under the Constitution, Congress acts as trustee in determining the use of public lands for the greatest benefit of maximum number. This means that the best management of public lands should be determined affirmatively by Congress giving due regard to whatever use or combination of uses offers the greatest good to the greatest number.
>
> Accordingly, we believe that Congress should retain its full authority in order to fulfill its responsibilities as trustee of the public domain. In doing so, it should require the various governmental agencies supporting particular uses to prove which use or uses which will result in the greatest benefit to the maximum number. Such use should not be determined in a proceeding before an executive agency in which the stated presumption is that exclusive wilderness use is the highest use. The justification for any proposed use should be shown to Congress for its decision.

Mr. President, it seems to me this is the basic principle with which we are faced in connection with the amendment. It is the basic principle which is before us in connection with so many other legislative propositions. In all the cases of which I have awareness—including, as I have said, our action on national parks; our additions to the wilderness system, as proposed in this bill; our action on reclamation projects; and our action in regard to almost any phase of the disposition of the public lands—that action has been through affirmative acts of Congress.

Therefore, I cannot see either the justification or the need for shifting these around, so that the Executive will initiate and the Congress will veto. Certainly that would be a far cry from the system under which our Government was created.

Mr. President, I reserve the remainder of the time under my control.

Mr. CHURCH. Mr. President, I have listened with interest to the arguments that have been presented on behalf of this amendment. I must say that I fail to comprehend them; for either the committee thoroughly misunderstands the present status of the law, or, I respectfully suggest, those who support the amendment misunderstand it. The arguments have been varied, but they have all related to one theme. The junior Senator from Colorado has said that the principle behind his amendment is whether Congress should retain control over the public lands. Other arguments have been advanced to the effect that the bill would not protect the people against precipitate actions by the Secretary of Agriculture. The distinguished Senator from Nebraska has even ventured that the bill represents some kind of abdication of congressional responsibility.

Such arguments are utterly incomprehensible to me.

I remind Senators that the amendment deals with primitive areas in the national forests. That is the question at issue. The present law delegates to the Secretary of Agriculture all the authority to create these primitive areas, to determine their boundaries, to add new areas, and to expand existing areas. If there ever was any abdication of congressional responsibility, it occurred years ago when all that power was removed from the Congress and placed in the executive agencies downtown.

The people of Idaho need not be reminded of the facts, for in this year alone the Secretary of Agriculture has established a wilderness area in our State—the Selway-Bitterroot area—which contains more than 1 million acres of public land.

He proposes to establish another wilderness area in the Sawtooth Mountains that will comprise approximately 200,000 acres of land. Does it require any congressional surveillance for him to do that? Is there any requirement in the law that his recommendation must first come to Congress for any kind of review, let alone approval? It does not. He now has the authority to set aside these enormous areas, and to designate them as wilderness, merely by the stroke of his pen.

So, Mr. President, what sense does it make to indict the bill as some kind of abdication of congressional responsibility when years ago all the authority was transferred to the executive agencies?

If we are really interested in restoring congressional responsibility, if we are really interested in talking sense about this bill, I suggest that one of the most powerful arguments that can be made for the measure is that it undertakes to restore to the Congress authority which we long ago delegated away.

What would the bill do? In the first place, it would provide, with respect to the areas that are presently being administered as wilderness—wilderness areas, canoe areas, wild areas, and primitive areas—that they shall comprise the wilderness system.

As for the primitive areas, there will be a review over the next 10 years to determine what portions of the primitive areas will remain in the system. But, as regards any new addition, in years to come, to the wilderness system, the bill specifically provides that not a single new acre may be added to the system without an affirmative act of Congress. This provision completely restores the congressional prerogative with respect to any future additions to the wilderness system.

As to the primitive areas that for 20 years have been administered as wilderness, are now being administered as wilderness, and are made a part of the system subject to review, a veto is provided, so that any Presidential recommendation for permanently including any one of such primitive areas, or any portion of it, in the wilderness system, is subject to the veto of either House of Congress.

The committee has included this kind of provision for a reason. We know that the provisions of the Reorganization Act guarantee that any Member of this body, or the other body, who may object to a given Presidential recommendation, will have an opportunity, if the procedures in the bill are adopted, to bring his objection to a vote in the Senate or the House, as the case may be. The provisions of the Reorganization Act assure each Member of an opportunity to bring his objection to the floor and to have it acted upon.

Is there any Senator at all acquainted with the procedures of Congress who for one minute believes that if this amendment were agreed to, we would not then have the risk of having resolutions for approving Presidential recommendations bottled up in committee so that they would never reach the floor for a vote?

Those who desire to reestablish really effective congressional control are for the provisions of the bill. Adoption of the amendment would water down the restoration of congressional control, for, in many cases, resolutions would be bottled up and never get to the floor.

We strongly urge that the amendment be rejected upon the ground, first, that the most effective way to restore congressional control with respect to those areas that are to be reviewed is through the adoption of the veto procedure.

In that connection, I ask unanimous consent to have a report printed at this point in the Record. The report lists the provisions of Federal law relating to programs or activities which become effective if not disapproved or rejected by Congress within a prescribed time. I make the request in order to make it absolutely clear that the procedures of the bill are not novel, that they are well known to the Congress, and that they are in accordance with well-established practices in the Congress.

Mr. DOMINICK. Mr. President, I should like to ask the Senator from Idaho whether he knows that any of these deal with any public lands proposals.

Mr. CHURCH. The reports that I now ask to have printed appear in the hearings beginning on page 172. I believe the Senator will find, in the transcript of the hearings, exactly what it is I should like to include in the Record.

There being no objection, the report was ordered to be printed in the Record, as follows:

Provisions of Federal Law Relating to Programs or Activities Which Became Effective if Not Disapproved or Rejected by Congress Within a Prescribed Time

(Note.—The following list does not purport to give every such provision, but is, in general, representative of those appearing in the Federal statutes.)

Year 1943. Act of July 7, as amended (44 U.S.C. §§ 369–372): The Administrator of General Services is required to submit to Congress lists and schedules of Government records said to be lacking in preservation value, for examination by a joint congressional committee. If the committee fails to report on any list within 10 days prior to adjournment of the session, the Administrator may empower the agency having custody of such records to dispose of them in accordance with prescribed regulations.

Year 1945. Reorganization Act of December 20 (59 Stat. 616 § 6; not in code): Reorganization plans submitted by the President to Congress were to take effect at the expiration of 60 days of continuous session after submission, unless a concurrent resolution was passed stating that Congress did not favor the plan. (This act has been superseded by the Reorganization Act of 1949.)

Year 1946. Act of August 7 (60 Stat. 898, sec. 6; not in Code): The Secretary of the Navy is required to transmit to Congress proposals to dispose of obsolete naval vessels, and if Congress, after 60 days of continuous session, does not express its disapproval, the transfer of the vessels shall take effect.

The Secretary is also authorized to dispose of captured or condemned ordnance, etc., if Congress after being informed of the proposed disposal fails to disapprove within 30 days.

Year 1947. Act of December 30 (50 App. U.S.C., sec. 1917): Programs for production of foods in non-European foreign countries which are to be carried out by the Commodity Credit Corporation must be submitted to Congress and if not disapproved by concurrent resolution within 60 days, may become effective.

Year 1948. Act of June 25, as amended (28 U.S.C., secs. 2072, 2073, 2074): Rules of civil procedure for district courts, admiralty rules for district courts, and rules for review of decisions of the Tax Court prescribed by the Supreme Court of the United States shall not take effect until the expiration of 90 days after they have been reported to Congress.

Year 1949. Reorganization Act of June 20, as amended (5 U.S.C., sec. 133a–4): Reorganization plans submitted by the President to Congress shall take effect upon the expiration of 60 days of continuous session, after date submitted, unless either House passes a resolution stating its disfavor of the plan.

Year 1956. Small Reclamation Projects Act of August 6, as amended (43 U.S.C., sec. 422 (d)): No appropriation shall be made for financial assistance in the development of reclamation projects, prior to 60 days from the date the Secretary of the Interior submitted the proposed project to Congress, and then only if within the 60 days neither the House nor the Senate Interior and Insular Affairs Committee disapproves the proposed project.

Year 1958. Department of Defense Reorganization Act of August 6, (5 U.S.C., sec. 171a(c)): In order to provide for a more efficient administration of the Department, the Secretary of Defense is authorized to take appropriate steps to provide for the transfer, abolition, or consolidation of functions. However, no function shall be substantially affected until 30 days after the proposed action has been reported to the Armed Services Committees of the Senate and the House of Representatives. If during such 30-day period either committee reports a resolution stating that the proposed action should be rejected, it shall not become effective until 40 days from the date of the resolution, and then only if such resolution has not been passed by the House to which it has been reported.

Year 1959. Act of June 25, as amended (10 U.S.C. § 2662): The Secretary of a military department may not enter into transactions relating to the acquisition, use, or disposal of real property until after the expiration of 30 days from the date upon which a report of the proposed transaction is submitted to the Committees on Armed Services of the Senate and House of Representatives.

Year 1960. Act of June 3 (75 Stat. 157 § 2; not in Code): Act authorizing construction of the San Luis unit of the Central Valley project in California provides that the Secretary of the Interior shall report to Congress upon agreements entered into, and he shall not commence construction thereon for 90 days from the date of his report.

Year 1960. River and Harbor Act of July 14 (74 Stat. 480–503): Under this Act a 60-day period is required to lapse after submission of reports to Congress, before work can be started (if within the period Congress does not disapprove) on such projects as—

(a) Modification of Pascagoula Harbor, Miss. (p. 481);

(b) Construction of sea-wall to protect against tidal waves, etc., Hilo Harbor, How. (p. 483);

(c) Improvement of Missouri River between Sioux City and the Mouth (p. 485);

(d) Construction of flood protection project in Gering and Mitchell Valleys, Nebraska (p. 495); and

(e) Project for flood protection at Sioux Falls, S. D. (p. 495).

Year 1961. Arms Control and Disarmament Act of September 26 (Public Law 87–297 § 47 (b)): Proposals to transfer certain activities or facilities of a Government agency to the United States Arms Control and Disarmament Agency must be submitted by the President to Congress; and if, within the first period of 60 calendar days of regular session following receipt by Congress, neither House has adopted a resolution opposing it, the transfer will be made.

Mr. CHURCH. Mr. President, I ask unanimous consent also to have printed in the RECORD at this point a tabulation of the disposition of reorganization plans under the Reorganization Act of 1949. I do so to show how the veto procedure has been utilized in the past by the Congress.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

Disposition of reorganization plans under Reorganization Act of 1949

	Approved	Rejected
1949	6	2
1950	20	7
1951	1	0
1952	2	3
1953	10	
1954	2	
1955	0	0
1956	0	2
1957	1	0
1958	1	0
1959	0	1

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D.C., May 24, 1961.

To Senate Committee on Interior and Insular Affairs.

From: American Law Division.

Subject: Sundry questions concerning the Reorganization Act of 1949.

(Attention of Mr. Stong.)

I. Which plans have become effective?

A. Reorganization Plans of 1949:

1. No. 2, Labor Department, 14 F.R. 5225, 63. Stat. 1065.

2. No. 3, Post Office Department, 14 F.R. 5225, 63 Stat. 1066.

3. No. 4, Executive Office of the President, 14 F.R. 5227, 63 Stat. 1067.

4. No. 5, Civil Service Commission, 14 F.R. 5227, 63 Stat. 1067.

5. No. 6, Maritime Commission, United States, 14 F.R. 5228, 63 Stat. 1069.

6. No. 7, Public Roads Administration, 14 F.R. 5228, 63 Stat. 1070.

B. Reorganization Plans of 1950:

1. No. 2, Justice Department, 15 F.R. 3173, 64 Stat. 1261.

2. No. 3, Interior Department, 15 F.R. 3174, 64 Stat. 1262.

3. No. 5, Commerce Department, 15 F.R. 3174, 64 Stat. 1263.

4. No. 6, Labor Department, 15 F.R. 3174, 64 Stat. 1263.

5. No. 8, Federal Trade Commission, 15 F.R. 3175, 64 Stat. 1264.

6. No. 9, Federal Power Commission, 15 F.R. 3175, 64 Stat. 1265.

7. No. 10, Securities and Exchange Commission, 15 F.R. 3175, 64 Stat. 1265.

8. No. 13, Civil Aeronautics Board, 15 F.R. 3176, 64 Stat. 1266.

9. No. 14, Labor Standards Enforcement, 15 F.R. 3176, 64 Stat. 1267.

10. No. 15, Alaska and Virgin Islands Public Works, 15 F.R. 3176, 64 Stat. 1267.

11. No. 16, Certain education and health functions, 15 F.R. 3176, 64 Stat. 1268.

12. No. 17, Public works advance planning and other functions, 15 F.R. 3177, 64 Stat. 1269.

13. No. 18, Building and space management functions, 15 F.R. 3177, 64 Stat. 1270.

14. No. 19, Employees' Compensation functions, 15 F.R. 3178, 64 Stat. 1271.

15. No. 20, Statutes at Large and other matters, 15 F.R. 3178, 64 Stat. 1272.

16. No. 21, Maritime Administration and Federal Maritime Board, 15 F.R. 3178, 64 Stat. 1273.

17. No. 22, Federal National Mortgage Association, 15 F.R. 4365, 64 Stat. 1277.

18. No. 23, Loans for factory built houses, 15 F.R. 4365, 64 Stat. 1279.

19. No. 25, National Security Resources Board, 15 F.R. 4565, 64 Stat. 1280.

20. No. 26, Treasury Department, 15 F.R. 4935, 64 Stat. 1280.

C. Reorganization Plans of 1951:

1. No. 1, Reconstruction Finance Organization, 16 F.R. 3690, 65 Stat. 773.

D. Reorganization Plans of 1952:

1. No. 1, Internal Revenue Bureau, 17 F.R. 2243, 66 Stat. 823.

2. No. 5, Government of District of Columbia, 63 Stat. 203.

E. Reorganization Plans of 1953:

1. No. 1, Health, Education, and Welfare Department, 18 F.R. 2053, 67 Stat. 631.

2. No. 2, Agriculture Department, 18 F.R. 3219, 67 Stat. 633.[1]

3. No. 3, Office of Defense Mobilization, 18 F.R. 3375, 67 Stat. 634.

4. No. 4, Justice Department, 18 F.R. 3577, 67 Stat. 636.

5. No. 5, Export-Import Bank of Washington, 18 F.R. 3741, 67 Stat. 637.

6. No. 6, Defense Department, 18 F.R. 3743, 67 Stat. 638.

7. No. 7, Foreign Operations Administration, 18 F.R. 4541, 67 Stat. 639.

8. No. 8, United States Information Agency, 18 F.R. 4542, 67 Stat. 642.

9. No. 9, Council of Economic Advisers, 18 F.R. 4543, 67 Stat. 644.

10. No. 10, Air Carriers, payments to, 18 F.R. 4543, 67 Stat. 644 (Repealed by Public Law 85–726, title XIV, sec. 1401(c), August 23, 1958, 72 Stat. 806).

F. Reorganization Plans of 1954:

1. No. 1, Foreign Claims Settlement Commission, 19 F.R. 3985, 68 Stat. 1279.

2. No. 2, Reconstruction Finance Corporation, liquidation of certain affairs of, 19 F.R. 3986, 68 Stat. 1280.

G. Reorganization Plans of 1955: none.

H. Reorganization Plans of 1956: none.

I. Reorganization Plans of 1957:

1. No. 1, Abolition of the Reconstruction Finance Corporation, 22 F. R. 4633, 71 Stat. 647.

J. Reorganization Plans of 1958:

1. No., Civilian Mobilization, 23 F. R. 4991, 72 Stat. 1797.

K. Reorganization Plans of 1959: none.

(5 U.S.C. § 133z–3. (b) No provision contained in a reorganization plan shall take effect unless the plan is transmitted to the Congress before June 1, 1961. (June 20, 1949, ch. 226, title I, § 5, 63 Stat. 205; Feb. 11, 1953, ch. 3, 67 Stat. 4; Mar. 25, 1955, ch. 16, 69 Stat. 14; Sept. 4, 1957, Pub. L. 85–286, § 1, 71 Stat. 611).

(See Public Law 87–18, April 17, 1961).

II. Which plans were rejected by the Congress?

(5 U.S.C. § 133z–4. (a) Except as may be otherwise provided pursuant to subsection (c) of this section, the provisions of the reorganization plan shall take effect upon the expiration of the first period of sixty calendar days of continuous session of the Congress, following the date on which the plan is transmitted to it; but only if, between the date of transmittal and the expiration of such sixty-day period there has not been passed by either of the two Houses a resolution stating in substance that that House does not favor the reorganization plan).

A. Reorganization Plans of 1949:

1. No. 1, Department of Welfare (S. Res. 147—Disapproving Reorganization Plan No. 1 of 1949.)

Introduced by Mr. Fulbright, Mr. Taft, and Mr. Hunt; referred to the Committee on Expenditures in the Executive Departments (CONGRESSIONAL RECORD, volume 95, part 8, page 10399).

Reported back (S. Rept. 851) (CONGRESSIONAL RECORD, volume 95, part 8, page 10936).

Minority views (S. Rept. 851, pt. 2) (CONGRESSIONAL RECORD, volume 95, part 8, page 11023).

Remarks on (CONGRESSIONAL RECORD, volume 95, part 8, page 11098).

Individual views (S. Rept. 851, pt. 3) (CONGRESSIONAL RECORD, volume 95, part 8, page 11237).

Debated (CONGRESSIONAL RECORD, volume 95, part 9, page 11520).

Passed Senate (CONGRESSIONAL RECORD, volume 95, part 9, page 11561).

2. No. 8, Department of Defense (H.R. 5632 passed in lieu of (CONGRESSIONAL RECORD, volume 95, part 8, page 11288 et seq.).

B. Reorganization Plans of 1950:

1. No. 1, Comptroller of the Currency.

(S. Res. 246—Disapproving Reorganization Plan No. 1 of 1950.

Introduced by Mr. Robertson; referred to the Committee on Expenditures in the Executive Departments (CONGRESSIONAL RECORD, volume 96, part 4, page 4446).

Reported back (S. Rept. 1518) (CONGRESSIONAL RECORD, volume 96, part 5, page 5675).

Debated and passed Senate (CONGRESSIONAL RECORD, volume 96, part 5, page 6891).

2. No. 4, Department of Agriculture.

(S. Res. 263—Disapproving Reorganization Plan No. 4 of 1950.

---

[1] Fountain motion to discharge No. 2 was rejected June 3, 1953, by the House 128 to 261, with 41 not voting.

Introduced by Mr. Holland, Mr. Schoeppel, Mr. Johnston of South Carolina, and Mr. Thye; referred to the Committee on Expenditures in the Executive Departments (Congressional Record, volume 96, part 4, page 5560).

Reported back (H. Rept. 1566) with minority views (Congressional Record, volume 96, part 5, page 7065).

Debated and passed Senate (Congressional Record, volume 96, part 6, page 7225).

3. No. 7, Interstate Commerce Commission (S. Res. 253—Disapproving Reorganization Plan No. 7 of 1950).

Introduced by Mr. Johnson of Colorado; referred to the Committee on Expenditures in the Executive Departments (Congressional Record, volume 96, part 4, page 5058).

Reported back (H. Rept. 1567) with minority views (Congressional Record, volume 96, part 5, page 7065).

Debated and passed Senate (Congressional Record, volume 96, part 6, page 7154).

4. No. 11, Federal Communications Commission (S. Res. 256—Disapproving Reorganization Plan No. 11 of 1950).

Introduced by Mr. Johnson of Colorado; referred to the Committee on Expenditures in the Executive Departments (Congressional Record, volume 96, part 4, page 5058).

Reported adversely (H. Rept. 1564) (Congressional Record, volume 96, part 5, page 7065).

Passed Senate (Congressional Record, volume 96, part 6, page 7173).

5. No. 12, National Labor Relations Board (S. Res. 248—Disapproving Reorganization Plan No. 12 of 1950).

Introduced by Mr. Taft; referred to the Committee on Expenditures in the Executive Departments (Congressional Record, volume 96, part 4, page 4575).

Reported back (S. Rept. 1516) (Congressional Record, volume 96, part 4, page 5560).

Debated (Congressional Record, volume 96, part 4, page 5560; part 5, pages 6792, 6862, 6864).

Passed Senate (Congressional Record, volume 96, part 5, page 6886).

6. No. 24, Reconstruction Finance Corporation (S. Res. 290—Disapproving Reorganization Plan No. 24 of 1950).

Introduced by Mr. Fulbright, referred to the Committee on Expenditures in the Executive Departments (Congressional Record, volume 96, part 6, page 7884).

Reported without recommendation (S. Rept. 1868) (Congressional Record, volume 96, part 7, page 9147).

Debated (Congressional Record, volume 96, part 7, pages 9673, 9680, 9682, 9683, 9688).

Passed Senate (Congressional Record, volume 96, part 7, page 9694).

7. No. 27, Department of Health, Education, and Security.

(H. Res. 647—Disapproving Reorganization Plan No. 27 of 1950.)

Introduced by Mr. Hoffman, of Michigan; referred to the Committee on Expenditures in the Executive Departments (Congressional Record, volume 96, part 6, page 8568).

Reported back (H. Rept. 2320) (Congressional Record, volume 96, part 7, page 9223).

Passed House (Congressional Record, volume 96, part 7, page 9843).

C. 1951—None.

D. Reorganization Plans of 1952:

1. No. 2, Post Office Department. (S. Res. 317—Disapproving Reorganization Plan No. 2 of 1952.)

Introduced by Mr. Johnston of South Carolina, Mr. McKellar, Mr. Neely, Mr. Langer, and Mr. Carlson; referred to the Committee on Government Operations (Congressional Record, volume 98, part 4, page 5140).

Reported back (S. Rept. 1747) (Congressional Record, volume 98, part 6, page 7128).

Minority views debated (S. Rept. 1747, pt. 2) (Congressional Record, volume 98, part 6, pages 7452, 7468).

Passed Senate (Congressional Record, volume 98, part 6, page 7495).

2. No. 3, Bureau of Customs. (S. Res. 331—Disapproving Reorganization Plan No. 3, of 1952.)

Introduced by Mr. George; referred to the Committee on Government Operations (Congressional Record, volume 98, part 5, page 6582).

Reported back (S. Rept. 1748) (Congressional Record, volume 98, part 6, page 7128).

Passed Senate (Congressional Record, volume 98, part 6, page 7508).

3. No. 4, Department of Justice. (S. Res. 330—Disapproving Reorganization Plan No. 4 transmitted to Congress by the President on April 10, 1952.)

Introduced by Mr. McCarran; referred to the Committee on Government Operations (Congressional Record, volume 98, part 5, page 6497).

Reported back (S. Rept. 1749) (Congressional Record, volume 98, part 6, page 7452).

Minority views (S. Rept. 1749, pt. 2) (Congressional Record, volume 98, part 6, page 7452).

Passed Senate (Congressional Record, volume 98, part 6, page 7495).

G. Reorganization Plans of 1955: none.

H. Reorganization Plans of 1956:

1. No. 1, Research and development programs, Department of Defense (H. Res. 534—Disapproving Reorganization Plan No. 1 transmitted to Congress by the President on May 16, 1956).

Introduced by Mr. Vinson; referred to the Committee on Government Operations (Congressional Record, volume 102, part 7, page 10076).

Reported (H. Rept. 2585) (Congressional Record, volume 102, part 9, page 11787).

Passed House (Congressional Record, volume 102, part 9, page 11886).

2. No. 2, Federal Savings and Loan Insurance Corporation (H. Res. 541—Disapproving Reorganization Plan No. 2 transmitted to Congress by the President on May 17, 1956).

Introduced by Mr. Fascell; referred to the Committee on Government Operations (Congressional Record, volume 102, part 8, page 10427).

Reported (H. Rept. 2599) (Congressional Record, volume 102, part 9, page 11788).

Passed House (Congressional Record, volume 102, part 9, page 11886).

I. Reorganization Plans of 1957: none.

J. Reorganization Plans of 1958: none.

K. Reorganization Plans of 1959:

1. No. 1, Transfer of certain functions to the Secretary of Agriculture (H. Res. 295—To disapprove Reorganization Plan No. 1 of 1959)

Introduced by Mr. Smith of Iowa; referred to the Committee on Government Operations (Congressional Record, volume 105, part 8, page 10583).

Reported (H. Rept. 586) (Congressional Record, volume 105, part 9, page 11990).

Debated (Congressional Record, volume 105, part 10, page 12740).

Passed House (Congressional Record, volume 105, part 10, page 12856).

III. Was the discharge procedure set out in 5 United States Code 133z–13 ever invoked?

Congressman Fountain moved to discharge plan No. 2 of 1953 and was defeated 128 to 261 on June 3, 1953.

IV. Examples of legislative veto.

(5 U.S.C. 133z-4). Effective date of reorganization specified in plan.

(a) Except as may be otherwise provided pursuant to subsection (c) of this section, the provisions of the reorganization plan shall take effect upon the expiration of the first period of 60 calendar days of continuous session of the Congress, following the date on which the plan is transmitted to it; but only if, between the date of transmittal and the expiration of such 60-day period there has not been passed by either of the two Houses a resolution stating in substance that the House does not favor the reorganization plan.

Veto: (42 U.S.C. 2153).—Cooperation with other nations. No cooperation with any nation or regional defense organization pursuant to sections 2074 (foreign distribution of special nuclear material; compensation; distribution to agency), 2077 (unauthorized dealings in special nuclear material), 2094 (foreign distribution of source material), 2112 (foreign distribution of byproduct material), 2121 (authority of Commission), 2133 (commercial licenses), 2134 (medical therapy, research, and development licenses; limitation), or 2164 (international cooperation) of this title shall be undertaken until—

(d) Submission to the Congress, the proposed agreement for cooperation, together with the approval and determination of the President, if arranged pursuant to sections 2121(c), 2164(b), or 2164(c) of this title, has been submitted to the Congress and referred to the Joint Committee and a period of 60 days has elapsed while Congress is in session, but any such proposed agreement for cooperation shall not become effective if during such 60-day period the Congress passes a concurrent resolution stating in substance that it does not favor the proposed agreement for cooperation.

(23 U.S.C. 104–(b)(5)). For the Interstate System for the fiscal years 1960 through 1969:

"In the ratio which the estimated cost of completing the Interstate System in each State, as determined and approved in the manner provided in this paragraph, bears to the sum of the estimated cost of completing the Interstate System in all of the States. Each apportionment herein authorized for the fiscal years 1960 through 1969, inclusive, shall be made on a date as far in advance of the beginning of the fiscal year for which authorized as practicable but in no case more than 18 months prior to the beginning of the fiscal year for which authorized. As soon as the standards provided for in subsection (b) of section 109 of this title have been adopted, the Secretary, in cooperation with the State highway departments, shall make a detailed estimate of the cost of completing the Interstate System as then designated, after taking into account all previous apportionments made under this section, based upon such standards and in accordance with rules and regulations adopted by him and applied uniformly to all of the States. The Secretary shall transmit such estimates to the Senate and the House of Representatives within 10 days subsequent to January 2, 1958. Upon approval of such estimate by the Congress by concurrent resolution, the Secretary shall use such approved estimate in making apportionments for the fiscal years ending June 30, 1960, June 30, 1961, and June 30, 1962. The Secretary shall make a revised estimate of the cost of completing the then designated Interstate System, after taking into account all previous apportionments made under this section, in the same manner as stated above, and transmit the same to the Senate and the House of Representatives within 10 days subsequent to January 2, 1962. Upon approval of such estimate by the Congress by concurrent resolution, the Secretary shall use such approved estimate in making apportionments for the fiscal years ending June 30, 1963, June 30, 1964, June 30, 1965, and June 30, 1966. The Secretary shall make a revised estimate of the cost of completing the then designated Interstate System, after taking into account all previous apportionments made under this section, in the same manner as stated above, and transmit the same to the Senate and the House of Representatives within 10 days subsequent to Jan-

> uary 2, 1966, and annually thereafter through and including January 2, 1968. Upon approval of any such estimate by the Congress by concurrent resolution, the Secretary shall use such approved estimate in making apportionments for the fiscal year which begins next following the fiscal year in which such report is transmitted to the Senate and the House of Representatives. Whenever the Secretary, pursuant to this subsection, requests and receives estimates of cost from the State highway departments, he shall furnish copies of such estimates at the same time to the Senate and the House of Representatives. In making the estimates of cost for completing the Interstate System as provided in this paragraph, the cost of completing any mileage designated from the one thousand additional miles authorized by section 108(1) of the Federal-Aid Highway Act of 1956 shall be excluded."

Mr. CHURCH. Mr. President, I should like to add a few words, and then I shall yield to other Senators who, I know, are anxious to speak.

It has been argued on behalf of the amendment that if Congress wishes to authorize a new reclamation project, it must be done by affirmative vote; and that is so.

It has been argued that if Congress wishes to set up a new national park, that it must be done by affirmative vote; and that is so.

It has been argued that this is the normal way in which Congress exercises its power; and that is so.

I merely remind my colleagues that the same is the case in respect to the pending bill. If Congress should wish to establish any new wilderness area or add anything new to the system, it would have to be done by affirmative vote, for the bill so provides.

There really is no substance, I submit, to the arguments made on behalf of this amendment. The present provisions of the bill represent the most effective method for restoring to Congress surveillance over the primitive areas which are to be permanently included in the system, and also would provide us with a full restoration of congressional prerogatives with respect to any new additions to the system.

For these reasons I think the arguments submitted on behalf of the amendment are self-defeating, and I urge that the Senate reject it.

Mr. DOMINICK. Mr. President, I think a few comments should be made in reply to the presentation of the distinguished Senator from Idaho.

As I said at the beginning of my presentation, I recognize that the executive department would have less control over the public lands under the terms of the bill as now written than it has at the present minute. But we are being asked to take a major step. We are asked to create a new system. We are asked to take the public lands, as the right and prerogative of Congress, and to create something new. If we are to do that within this system, we should retain control of what elements will go into it. That is the crux of it.

I should like to point out to the distinguished Senator from Idaho that this deals not only with primitive lands, but also with the national parks and with the wildlife game refuges. For example, on page 6 of the bill it is stated:

> There shall be incorporated into the wilderness system, subject to the provisions of and at the time provided in this section, each portion of each park, monument, or other unit in the national park system which on the effective date of this Act embraces a continuous area of five thousand acres or more without roads.

So we are asked to legislatively set aside portions of this automatically, to include them provided the Secretary so recommends within the 10-year period for review, and provided certain veto powers are not exercised when the recommendation comes to the Congress.

The wildlife refuges are included in that same type of context. They would be included, and therefore they would be modified, and the national park system would be subject to review and recommendation by the Secretary, and we would not have a thing to say about whether the Secretary was correct or not except to veto whatever action he might take.

The difficulty involved in the bill, it seems to me, is that we are asked to reverse what we should be doing in connection with determining what portions of the park system, wildlife refuges, primitive lands, and other areas should remain as they are and what portions should go under the wilderness system. It does not seem to me that we could retain adequate control over this unless we agreed to the amendment, to give Congress the affirmative rights to determine which portion is to go into which system. This is the principle for which we are really fighting.

Mr. President, I reserve the remainder of my time.

Mr. CHURCH. Mr. President, I have only one further remark.

The Senator from Colorado persists in the use of the word "retain." I think the record is clear that what we are attempting to do is restore powers in the Congress which have been hitherto delegated away. The question is not one of retaining congressional power, but adoption of a method by which we shall recapture congressional power.

I wish to make one further observation with respect to the pending amendment. The real mischief of the amendment is that if it were adopted—requiring concurrent affirmative consent of both Houses of the Congress to approve a Presidential recommendation to permanently include a given primitive area in the wilderness system—there would be no guarantee that we could ever get such a resolution to a vote, and we would then face the danger of having no congressional action taken with respect to large primitive areas.

Now the bill provides that if no congressional action is taken within a 10-year period, subject to some extension—with a maximum of 14 years—the whole area then will go out of the wilderness system and will be returned to ordinary forest lands. So the danger of this amendment is that if it should be adopted, not only would it fail to achieve the most effective form of congressional surveillance, but it would present us with the hazard of losing large areas of the wilderness system which ought not to be lost, merely because of the failure to obtain affirmative action by the Congress.

This is why the committee insisted upon the veto procedure, in order to make certain that this kind of loss by default did not occur, in order to assure that an effective kind of congressional review and surveillance of the President's recommendations would take place.

If the Senator from Colorado is willing to do so, Mr. President, I am prepared to yield back the remainder of my time.

Mr. DOMINICK. Mr. President, how much time does the Senator from Colorado have remaining?

The PRESIDING OFFICER. The Senator from Colorado has 1 minute remaining.

Mr. DOMINICK. Mr. President, if I may, I shall use that 1 minute. I do not wish to have the record show or imply that I am trying to do something which would jeopardize the wilderness system or which would say that pertinent portions of other properties should not be put into a wilderness system, out of the parks or wildlife refuges. But I should like to have the right to look at them and to make up my own mind and to decide after hearings whether the recommendation is right or wrong. I think every other Member of the Senate would wish to do the same. This is why I think the amendment is so important.

Mr. President, I yield back the remainder of my time.

Mr. CHURCH. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to amendment No. 32. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BARTLETT (when his name was called). On this vote I have a pair with the Senator from Missouri [Mr. Long]. If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I therefore withhold my vote.

Mr. ANDERSON (after having voted in the negative). Mr. President, on this vote I have a pair with the Senator from Colorado [Mr. Allott]. If he were present and voting, he would vote "yea." If I were permitted to vote, I would vote "nay." I therefore withdraw my vote.

Mr. METCALF (after having voted in the negative). Mr. President, on this vote I have a pair with the Senator from Nevada [Mr. Cannon]. If he were present and voting, he would vote "yea." If I were permitted to vote, I would vote "nay." I therefore withdraw my vote.

Mr. MANSFIELD (after having voted in the negative). Mr. President, on this vote I have a pair with the Senator from Wyoming [Mr. Simpson]. If he were present and voting, he would vote "yea." If I were permitted to vote, I would vote "nay." Therefore, I withdraw my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. Cannon], the Senator from Oklahoma [Mr. Edmondson], the Senator from Ohio [Mr. Lausche], the Senator from Missouri [Mr. Long], the Senator from Oregon [Mr. Morse], and the Senator from Alabama [Mr. Sparkman] are absent on official business.

On this vote, the Senator from Oregon [Mr. Morse] is paired with the Senator from Kentucky [Mr. Cooper]. If present and voting, the Senator from Oregon would vote "nay," and the Senator from Kentucky would vote "yea."

On this vote, the Senator from Alabama [Mr. Sparkman] is paired with the Senator from Utah [Mr. Bennett]. If present and voting, the Senator from Alabama would vote "nay," and the Senator from Utah would vote "yea."

On this vote, the Senator from Oklahoma [Mr. Edmondson] is paired with the Senator from Ohio [Mr. Lausche]. If present and voting, the Senator from Oklahoma would vote "yea," and the Senator from Ohio would vote "nay."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. Allott] is absent because of the death of his mother.

The Senator from Utah [Mr. Bennett] and the Senator from Wyoming [Mr. Simpson] are absent on official business.

The Senator from Kentucky [Mr. Cooper], the Senator from Nebraska [Mr. Curtis], and the Senator from New York [Mr. Javits] are necessarily absent.

The respective pairs of the Senator from Colorado [Mr. Allott] and that of the Senator from Wyoming [Mr. Simpson] have been previously announced.

On this vote, the Senator from Utah [Mr. Bennett] is paired with the Senator from Alabama [Mr. Sparkman]. If present and voting, the Senator from Utah would vote "yea," and the Senator from Alabama would vote "nay."

On this vote, the Senator from Kentucky [Mr. Cooper] is paired with the Senator from Oregon [Mr. Morse]. If present and voting, the Senator from Kentucky would vote "yea," and the Senator from Oregon would vote "nay."

On this vote, the Senator from Nebraska [Mr. Curtis] is paired with the Senator from New York [Mr. Javits]. If present and voting, the Senator from Nebraska would vote "yea," and the Senator from New York would vote "nay."

The result was announced—yeas 35, nays 49, as follows:

So amendment No. 32 was rejected.

Mr. METCALF. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. CHURCH. I move to lay that motion on the table.

The motion to table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. CHURCH. Mr. President, I ask for the yeas and nays on passage of the bill.

The yeas and nays were ordered.

Mr. DOMINICK. I call up amendment No. 35.

The PRESIDING OFFICER. The amendment will be stated.

The Legislative Clerk. On page 10, line 14, it is proposed to strike out the word "thirty" and insert in lieu thereof the word "five."

Mr. DOMINICK. I believe the amendment will be acceptable provided that——

Mr. ANDERSON. If the Senator from Colorado will read the language which the Senator from Idaho is offering as a substitute for his amendment, I believe he will find it to be satisfactory.

Mr. CHURCH. If the Senator from Colorado will permit me to do so, I propose that we substitute, in place of the language contained in the amendment of the Senator from Colorado, the following:

> On page 10, line 19, it is proposed to strike out the period and insert a semicolon, and to add the following:
>
> "*Provided*, That a motion to discharge shall not be in order until the time for the committee to hold a hearing has elapsed."

That language is to be substituted in lieu of the language the Senator from Colorado proposes.

I ask unanimous consent that the language I have read be substituted in place of the language of the amendment offered by the Senator from Colorado.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. CHURCH. Mr. President, I yield back the remainder of my time on the amendment.

Mr. DOMINICK. I yield back the remainder of my time on the amendment.

Mr. ANDERSON. Mr. President, I should like to direct a question to the distinguished Senator from Colorado. In view of the fact that there is a ceremony this afternoon which many Senators are eager to attend, I wonder whether the Senator would be willing to yield back the remainder of his time on the bill, provided we did the thing on this side, so that we could have a final vote on the bill.

Mr. DOMINICK. Yes; except for 2 minutes that I should like to use.

Mr. ANDERSON. I ask unanimous consent that the Senator from Colorado may be allotted 5 minutes to speak on the bill, and that all the remaining time on both sides on the bill be yielded back.

Mr. KUCHEL. Mr. President——

Mr. CHURCH. Mr. President, I ask unanimous consent that 5 minutes be allowed on each side for summation arguments prior to a final vote on the bill.

The PRESIDING OFFICER. Is there objection? The Chair hears none and it is so ordered.

The question is on agreeing to the amendment of the Senator from Idaho, as a substitute for the amendment offered by the Senator from Colorado [Mr. Dominick].

The amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment, as amended.

The amendment, as amended, was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

Mr. DOMINICK. Mr. President, I was informed, just before we reached the agreement as to the limitation of time, that the senior Senator from Connecticut [Mr. Dodd] wishes some time to be yielded to him. After I have made my own comments, I should like to yield to him, even if it is necessary to obtain more time.

The Senate is considering a bill as important, in my opinion, as any that has ever come before it. It is a bill with whose principle I am wholly in sympathy. As I said during the debate yesterday, I have hunted, fished, and explored all my life. I have done so in areas which will be included within the wilderness system. I, myself, have been on many of those lands.

However, I cannot understand how Senators can establish a wilderness system in which Congress will be regaining only some legislative control over the public lands, while leaving all the rest of the control to the executive department. I do not see how Senators can take action which will blanket into a wilderness system lands which have not been classified, which have not been evaluated, and which will thereby become locked up, so that no more than 2 percent of the people can get onto them and use them and enjoy them. By historical record, only that small number of people will use these lands, once they are within the wilderness classification.

Third, it does not seem to me to be correct or right to bulldoze a bill of this kind through the Senate, insisting on wording which will blanket—in this additional property, will change the boundaries of the national parks and the boundaries of wildlife refuges, and will provide that the only thing Congress can do to change the arrangement is to veto a recommendation by an executive officer. In my opinion, that is the wrong way to legislate.

One more point. The bill establishes a principle which, as I have said, is good in its concept of having a wilderness system authorized by legislation. But in its present form, I do not believe the bill will ever pass the other body. I sat in the other body. I saw what the reaction in committee was to a bill of this kind. The reasons given in opposition were the very reasons which I stated in the debate on the principal amendments which were offered. The reaction of the other body was: If there is to be a trustee, Congress is the trustee of the public lands; so, for heaven's sake, let us be the trustee of the public lands and not say that we are simply vetoers of what someone else does.

It is with reluctance that I oppose the bill in its present form. I believe that Congress should retain and regain its control over the public lands. I believe that the bill should have been revised and revamped in order to place that power in the hands of the Senate or the House, and thereby provide for the proper delegation of powers as between the executive department and Congress. I cannot see how the bill can be passed in its present form without being subjected to attack by the people of the country on the ground that we have deliberately given away the responsibility which has been placed upon us by the Constitution.

Therefore, with reluctance, I shall be forced to vote against the passage of the bill.

Mr. President, if I have any time remaining, I yield it to the distinguished Senator from Connecticut.

Mr. ANDERSON. Mr. President, I believe we had an understanding that the Senator from Connecticut would be recognized. I ask unanimous consent that he may be recognized for 2 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Connecticut is recognized for 2 minutes.

Mr. DODD. Mr. President, since I have been a Member of Congress, and long before, I have been greatly interested in the issue of the conservation of our natural resources. I have spoken on the floor of the Senate on this question and have consistently supported conservationist measures.

Though I support the objective of this bill, I oppose its passage because it permanently delegates to the executive branch a constitutional power of the Congress, that of disposing of Federal territory, which is set forth in article IV, section 3, of the Constitution:

> The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to the Prejudice any Claims of the United States, or of any particular State.

This calls for affirmative action by Congress, and has been so interpreted by the courts.

Supporters of this delegation of constitutional power by Congress to the executive branch, defend it on the grounds that the original delegation was made many years ago and that the present bill would at least recapture for the Congress a veto power.

I disagree. I believe we should right the wrong that was done and not make it permanent. I believe we should restore the Constitution in this matter and not seek to permanently legitimize an unconstitutional delegation of power.

This is the time, when we are establishing a permanent, ambitious wilderness program, to set right the proper power of Congress as bestowed upon it by the Constitution.

The proponents of the wilderness bill successfully obscured this basic constitutional issue by providing that Congress could veto future executive proposals for permanently allocating public lands as wilderness areas. This procedure, if extended to other fields, would reverse the role of Congress from that of writing the laws of this Nation, subject to veto by the President, to that of merely having the veto power over laws written by the President. There is a world of difference between these two approaches, and that difference spells the disintegration of congressional power and of our traditional system of checks and balances.

All who have studied the decline and fall of representative governments, all who have observed the process by which parliaments are transformed from bodies which initiate action and make laws to bodies which subserviently ratify the actions of an all-powerful Executive, will share my apprehension over the fact that the Congress of the United States has traveled some distance down this road.

During the period in which I have served in Congress, I have seen proposals to delegate congressional power to the executive branch recur with increasing frequency. I regret to say that I have sometimes voted for such proposals. Each time this issue is before us, a plausible argument can be made for turning over this or that particular congressional power to the Executive, on the ground that such action will make the program in question more effective, better administered, and more coherently planned. And if one regards each of these proposed delegations of power as an isolated issue, he is tempted to support these delegations.

Yet, we must ask ourselves what will happen to the status of Congress if it does not soon turn its face rigidly against any further delegations of legislative power to the executive branch, however small or apparently meaningless? Each of us must answer that question himself, and many will have differing estimates as to what constitutes the danger point.

I believe the danger point has been reached, and I have made a personal decision to resist all future proposals which call for the delegation of one scrap of congressional power or responsibility or prerogative. This issue determined my position on the wilderness bill.

I supported the amendment of the Senator from Colorado [Mr. ALLOTT], which would have restored the affirmative power of Congress to dispose of the lands in question. If that amendment had been adopted, I would have supported the wilderness bill. Since it was defeated, I am voting against the bill.

Much as I wish to support conservation measures, I must oppose this one because the greatest conservation issue before us is the question of conserving the Constitution of the United States.

Mr. CHURCH. Mr. President, I yield 2 minutes to the distinguished Senator from Montana.

Mr. MANSFIELD. Mr. President, in my opinion, the bill upon which we are now about to pass judgment is a good bill. In September 1961 the Senate passed a good wilderness bill by a vote of 78 to 8. I hope that this year we shall again pass the bill by a large vote, because I think that in many respects the bill has been tightened and made better.

I wish to commend especially the distinguished senior Senator from Idaho [Mr. CHURCH], the floor manager of the bill, and the acting majority leader during the course of the debate on it; and also his strong backstops in the persons of the distinguished Senator from New Mexico [Mr. ANDERSON] and my own distinguished colleague from Montana [Mr. METCALF]. Together, they have occupied the seats of leadership and have displayed the traits of leadership.

I also wish to commend the senior Senator from Colorado [Mr. ALLOTT], who, because of the death of his mother on yesterday, is not with us today. He has been a stout proponent of the opposition side; and certainly he has an able colleague in the junior Senator from Colorado [Mr. DOMINICK], who has shown that he has done his homework carefully and thoroughly. He represents a point of view entirely different from that of many of us; nevertheless, he has proceeded with consistency, vigor, understanding, and tolerance to make a good case.

Now it is for the Senate to make the decision.

I wish to state—and I am sure the distinguished minority leader [Mr. DIRKSEN] will join me in this statement—that the debate has been conducted on a high level, and that Senators on both sides are to be complimented for sticking to the facts.

Mr. DIRKSEN. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. Mr. President, I wish to say that the distinguished junior Senator from Colorado [Mr. DOMINICK] has done a superb job in the management of the bill for the minority. I concur in the statement of the majority leader that it is clearly evident that the junior Senator from Colorado has done his homework carefully and well, not only on all the amendments, but also on the background of the bill. So I compliment him on the work he has done, even though we who are in the minority may ultimately fall by the wayside, and the majority may be the winner.

Mrs. NEUBERGER. Mr. President, will the Senator from Idaho yield 2 minutes to me?

Mr. CHURCH. I yield to the Senator from Oregon.

MINING IN THE WILDERNESS

Mrs. NEUBERGER. Mr. President, in the months since the Senate last acted upon legislation to establish a Wilderness Area Preservation System, we have heard many statements to the effect that these primitive domains are amply protected under existing regulations. I disagree with that viewpoint.

My opinion as to the necessity for passage of the wilderness bill has been strengthened by what has occurred in two such areas in my home State of Oregon—in the Three Sisters Wilderness Area and in the Kalmiopsis Wild Area. When the Senate last debated wilderness legislation, these two areas of unique scenic beauty were intact. Today the situation is quite different.

In the Three Sisters Wilderness Area, a California mining company has established a mining claim on 1,460 acres. We have been told that mining in the wilderness is necessary for national defense and security, in that the wilderness hides vast stores of strategic defense materials. But we are told that in Oregon the Three Sisters Wilderness Area must be breached in order to open a supply of pumice. Until this valid mining claim was filed, I had no idea that pumice of the type found in wilderness areas was either of strategic importance or in short supply. The lava mesas of eastern Oregon, I had thought, would give our Nation a perpetual supply of pumice.

Mr. Larry Worstell, recreation and land staff officer for the Willamette National Forest, told a meeting of the Izaak Walton Club, in Eugene, Oreg., on February 26, 1963, that there is nothing in the Federal law to prevent a mining company from working pumice claims in the Three Sisters Wilderness Area. Mr. Worstell told the group that the laws concerning wilderness areas specifically provide that they shall be subject to the same entry for mining purposes as other public lands.

This Forest Service official explained that once the claims are patented, the land in the Three Sisters Wilderness will belong to the mining company, and there would be no controls.

A similar situation has developed in the Kalmiopsis Wild Area of Oregon. The Senate should know that the Kalmiopsis Wild Area was set aside especially to preserve the complex of rare botanical species found there, and not found anywhere else in the world. These species include the Kalmiopsis plant and the Brewer Spruce. Seventeen species of conifers are found there. Also of great interest to recreationists is the Chetco River, the principal drainage system within the wild area. The river is noted for the limpid, almost luminous quality of its water. It is one of the principal fish producers of the coast.

But now that has changed. A placer mining operation has staked a claim on the entire stretch of the Chetco River which passes through this area. Westerners well know what happens to the terrain of a stream when placer operations move through. In the Kalmiopsis Wild Area, the banks and bed of the Chetco have been washed away and pumped through sluices in order to recover gold. The claim extends for 12 miles through this unique and scenic area. Mud and debris threaten the purity of this once clear stream.

These developments give us cause for concern if we are to provide a wilderness legacy for future generations of Americans. We must face the reality that if a miner wished to lop the top off Mount Hood, in Oregon, in order to get to minerals, he could do it. That is what the law says. It is legal. But is it necessary?

As an editorial writer for the Eugene, Oreg., Register-Guard remarked:

> Is America so short of pumice that we have to chew up the spectacular Mesa Rock area in order to get it?

Areas such as Mesa Rock are scarce, indeed, and are becoming scarcer. But pumice is hardly scarce. I urge the enactment of Senate bill 4, so that we can have some safeguards for wilderness, such as Oregon's Three Sisters and Kalmiopsis.

Mr. CHURCH. Mr. President, the Senate is about to vote on the question of the passage of a bill which, if enacted into law, will be regarded as one of the great landmarks in the history of conservation.

If we do not act now to conserve our vanishing wilderness, it will soon be lost forever. The wilderness not only is important to those who love the outdoor life and the sportsmen who hunt and fish there; it is equally needed for nature studies and general scientific inquiry, and for wise watershed and wildlife conservation. Therefore, it has general importance to the entire Nation.

When the previous bill on this subject was dealt with by the Senate, it was passed by a vote of 78 to 8. Scarcely any legislative proposal has been considered for a longer period of time. For 6 years, hearings on this proposed legislation have been held, and thousands of pages of testimony have been taken. Two years ago, the Senate debated the bill at length; and now, once again, the Senate has considered this bill carefully. The committee has given countless hours to a careful appraisal of the bill, which not only provides a sound method for the establishment of a wilderness system, but, far from relinquishing congressional control, also restores a strong measure of congressional prerogative which long ago was delegated to the executive branch.

Therefore, Mr. President, both from the standpoint of upholding the Constitution, and for the sake of advancing the cause of conservation for all our people, those now alive, and those yet unborn, I urge that the bill be passed.

Mr. McGOVERN. Mr. President, will the Senator from New Mexico yield to me to make a brief statement on the bill?

Mr. ANDERSON. I am glad to yield 2 minutes to the Senator.

Mr. McGOVERN. Mr. President, the pending bill to establish a National Wilderness Preservation System is landmark legislation. If the measure is passed, it will represent a historic action on the part of the 88th Congress. As a cosponsor of the bill, I attach a high priority to its enactment, and I am gratified that the Senate leadership has seen fit to schedule it for action so early in the session.

This measure would preserve in our national parks, national forests, and wildlife refuges certain portions of land to be designated as wilderness areas. Such areas would be preserved as nearly as possible in their original primitive condition, uncluttered by manmade installations.

There are several reasons why such a wilderness system is in the public interest.

First of all, as the Outdoor Recreation Resources Review Commission has said:

> Primitive areas satisfy a deep-seated human need occasionally to get far away from the works of man. Prompt and effective action to preserve their unique inspirational, scientific, and cultural values on an adequate scale is essential since once destroyed they can never be restored.

I think each one of us has been enriched at one time or another through our experiences with natural undisturbed areas of the country. Those of use who live in an area such as my home State, South Dakota, with its Black Hills, its comparatively uncluttered open spaces, its lakes and woods, have a special appreciation for the purpose of the wilderness preservation system. As the population of our country grows and as our city areas become more congested, it is all the more imperative that we look to the preservation of great primitive outdoor areas where people can go for recreational and inspirational experience.

It is also important that a portion of our wilderness area be preserved for scientific, conservation, and scenic purposes.

The wilderness bill does not rule out the possibility that mining, grazing, and lumbering interests may necessitate the opening up of some of our wilderness area for commercial exploitation at some future time. It places the responsibility for this decision, however, on the President and the Congress who are in the best position to evaluate the total public interest as over against a special interest consideration.

At a time when all of us are concerned about economy in Government, it is important to recognize that no expenditures of public funds are involved in this legislation. The land is presently owned by the Federal Government and will continue to be administered by the agencies now in charge of these areas. The proposed legislation simply establishes the criteria under which our wilderness areas will be managed so that we can assure their preservation for the cultural, inspirational, recreational, and scientific values that these areas can offer to ourselves and future generations.

Also, as the report of the Senate Interior Committee on this legislation states:

> The Wilderness Preservation System can be established without affecting the economic arrangements of communities, counties, States or business enterprises since the areas are already withdrawn, or because existing private rights and established uses are permitted to continue. There will be no withdrawal of lands from the tax base of counties or communities; no withdrawal of timberlands on which lumbering operations depend, nor any withdrawal of present grazing or mining rights.

It should be further emphasized that this legislation has broad bipartisan support. The Outdoor Recreation Review Commission which recommends its passage was created by President Eisenhower. The bill has the strong backing of the present administration and was passed by the Senate in the last Congress by an overwhelming vote.

I earnestly hope that this important measure will be speedily enacted.

The PRESIDING OFFICER. All available time has been used.

The question is, Shall the bill pass? On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. PEARSON (when his name was called). On this vote I have a pair with the junior Senator from Wyoming [Mr. SIMPSON]. If he were present, he would vote "nay." If I were at liberty to vote, I would vote "yea." I therefore withhold my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Ohio [Mr. LAUSCHE], the Senator from Missouri [Mr. LONG], the Senator from Oregon [Mr. MORSE], the Senator from Alabama [Mr. SPARKMAN], and the Senator from New Jersey [Mr. WILLIAMS] are absent on official business.

I further announce that, if present and voting, the Senator from Nevada [Mr. CANNON], the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Ohio [Mr. LAUSCHE], the Senator from Missouri [Mr. LONG], the Senator from Oregon [Mr. MORSE], the Senator from Alabama [Mr. SPARKMAN], and the Senator from New Jersey [Mr. WILLIAMS] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT] is absent because of the death of his mother.

The Senator from Utah [Mr. BENNETT] and the Senator from Wyoming [Mr. SIMPSON] are absent on official business.

The Senator from Kentucky [Mr. COOPER], the Senator from Nebraska [Mr. CURTIS], the Senator from New York [Mr. JAVITS], and the Senator from Pennsylvania [Mr. SCOTT] are necessarily absent.

The pair of the Senator from Wyoming [Mr. SIMPSON] has been previously announced.

If present and voting, the Senator from Nebraska [Mr. CURTIS], and the Senator from Pennsylvania [Mr. SCOTT] would each vote "yea."

On this vote, the Senator from New York [Mr. JAVITS] is paired with the Senator from Colorado [Mr. ALLOTT]. If present and voting, the Senator from New York would vote "yea" and the Senator from Colorado would vote "nay."

On this vote, the Senator from Kentucky [Mr. COOPER] is paired with the Senator from Utah [Mr. BENNETT]. If present and voting, the Senator from Kentucky would vote "yea" and the Senator from Utah would vote "nay."

The result was announced—yeas 73, nays 12, as follows:

So the bill (S. 4) was passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Wilderness Act".

WILDERNESS SYSTEM ESTABLISHED

Statement of policy

SEC. 2. (a) The Congress recognizes that an increasing population, accompanied by expanding settlement and growing mechanization, is destined to occupy and modify all areas within the United States and its possessions except those that are designated for preservation and protection in their natural condition. It is accordingly declared to be the policy of the Congress of the United States to secure for the American people of present and future generations the benefits of an enduring resource of wilderness. For this purpose there is hereby established a National Wilderness Preservation System to be composed of federally owned areas in the United States and its possessions to be administered for the use and enjoyment of the American people in such manner as will leave them unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of these areas, the preservation of their wilderness character, and for the gathering and dissemination of information regarding their use and enjoyment as wilderness.

Definition of wilderness

(b) A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and its community of life are untrammeled by man, where man himself is a visitor who does not remain. An area of wilderness is further defined to mean in this Act an area of undeveloped Federal land retaining its primeval character and influence, without permanent improvements or human habitation, which is protected and managed so as to preserve its natural conditions and which (1) generally appears to have been affected primarily by the forces of nature, with the imprint of man's work substantially unnoticeable; (2) has outstanding opportunities for solitude or a primitive and unconfined type of recreation; (3) is of sufficient size as to make practicable its preservation and use in an unimpaired condition; and (4) may also contain ecological, geological, or other features of scientific, educational, scenic, or historical value.

NATIONAL WILDERNESS PRESERVATION SYSTEM

Extent of system

SEC. 3. (a) The National Wilderness Preservation System (hereafter referred to in this Act as the wilderness system) shall comprise (subject to existing private rights) such federally owned areas as are established as part of such system under the provisions of this Act.

National forest areas

(b)(1) The wilderness system shall include all areas within the national forests classified on the effective date of this Act by the Secretary of Agriculture or the Chief of the Forest Service as wilderness, wild, primitive, or canoe: *Provided*, That the areas classified as primitive shall be subject to review as hereinafter provided. Following enactment of this Act, the Secretary of Agriculture shall, within ten years, review, in accordance with paragraph C, section 251.20, of the Code of Federal Regulations, title 36, effective January 1, 1959, the suitability of each primitive area in the national forests for preservation as wilderness and shall report his findings to the President. Before the convening of Congress each year, the President shall advise the United States Senate and House of Representatives of his recommendations with respect to the continued inclusion within the wilderness system, or exclusion therefrom, of each area on which review has been completed in the preceding year, together with maps and definition of boundaries: *Provided*, That the President may, as a part of his recommendations, alter the boundaries existing on the date of this Act for any primitive area to be continued in the wilderness system, recommending the exclusion and return to national forest land status of any portions not predominantly of wilderness value, or recommending the addition of any contiguous area of national forest lands predominantly of wilderness value: *Provided further*, That following such exclusions and additions any primitive area recommended to be continued in the wilderness system shall not exceed the area classified as primitive on the date of this Act. The recommendation of the President with respect to the continued inclusion in the wilderness system, or the exclusion therefrom of a primitive area, or portions thereof, shall become effective subject to the provisions of subsection (f) of this section: *Provided*, That if Congress rejects a recommendation of the President and no revised recommendation is made to Congress with respect to that primitive area within two years, the land shall cease to be a part of the wilderness system and shall be administered as other national forest lands: *And provided further*, That, primitive areas with respect to which recommendations are submitted to Congress on the eighth, ninth, and tenth years of the review period herein provided shall retain their status as a part of the wilderness system until the expiration, in respect to each area, of a full session of Congress, two years for resubmission of revised recommendations to Congress by the President, and, if so resubmitted, until the expiration of a full session of Congress thereafter. Recommendations on all primitive areas not previously submitted to the Congress shall be made during the tenth year of the review period. Any primitive area, or portion thereof, on which a recommendation for continued inclusion in the wilderness system has not become effective within fourteen years following the enactment of this Act shall cease to be a part of the wilderness system and shall be administered as other national forest land.

(2) The purposes of this Act are hereby declared to be within and supplemental to but not in interference with the purposes for which national forests are established as set forth in the Act of June 4, 1897 (30 Stat. 11), and the Multiple Use-Sustained Yield Act of June 12, 1960, Public Law 86-517 (74 Stat. 215).

National park system areas

(c)(1) There shall be incorporated into the wilderness system, subject to the provisions of and at the time provided in this section, each portion of each park, monument, or other unit in the national park system which on the effective date of this Act embraces a continuous area of five thousand acres or more without roads. Within ten years after the effective date of this Act the Secretary of the Interior shall review the units of the national park system and shall report his recommendations for the incorporation of each such portion into the wilderness system to the President. Before the convening of Congress each year, the President shall advise the United States Senate and the House of Representatives of his recommendations with respect to the incorporation into the wilderness system of each such portion for which review has been completed in the preceding year, together with maps and definitions of boundaries. The recommendation of the President with respect to each such portion shall become effective subject to the provisions of subsection (f) of this section.

(2) The Secretary of the Interior shall include, as part of his recommendations to the President under the provisions of this subsection, a description of the parts of each park, monument, or other unit submitted which should be reserved for roads, motor trails, buildings, accommodations for visitors, and administrative installations. Such parts shall be determined in accordance with the procedures for rulemaking under section 4 of the Administrative Procedure Act (5 U.S.C. 1003), except that the public notice required under such section shall be at least ninety days prior to the determination proceedings. No designation of an area for roads, motor trails, buildings, accommodations for visitors, or administrative installations shall modify or affect the application to that area of the provisions of the Act approved August 25, 1916, entitled "An Act to establish a National Park Service, and for other purposes" (39 Stat. 535; 16 U.S.C. 1 and following). The accommodations and installations in such designated areas shall be incident to the conservation and use and enjoyment of the scenery and the natural and historical objects and flora and fauna of the park or monument in its natural condition. Further, the inclusion of any area of any park, monument, or other unit of the national park system within the wilderness system pursuant to this Act shall in no manner lower the standards evolved for the use and preservation of such area in accordance with such Act of August 25, 1916, the statutory authority under which the area was created, or any other Act of Congress which might pertain to or affect such area, including, but not limited to, the Act of June 8, 1906 (34 Stat. 225; 16 U.S.C. 432 and following); section 3(2) of the Federal Power Act (16 U.S.C., sec. 796(2)); and the Act of August 21, 1935 (49 Stat. 666; 16 U.S.C., sec. 461 and following).

National wildlife refuges and game ranges

(d) There shall be incorporated into the wilderness system, subject to the provisions of and at the time provided in this section, such portions of the wildlife refuges and game ranges established prior to the effective date of this Act under the jurisdiction of the Secretary of the Interior as he may recommend for such incorporation to the President within ten years following the effective date of this Act. Before the convening of Congress each year the President shall advise the United States Senate and the House of Representatives of his recommendations with respect to the incorporation into the wilderness system of each area recommended for such incorporation by the Secretary of the Interior during the preceding year, together with maps and definitions of boundaries. The recommendation of the President with respect to each area shall become effective subject to the provisions of subsection (f) of this section.

Modification of boundaries

(e) Any proposed minor modification or adjustment of boundaries of any portion of the wilderness system established in accordance with this Act shall be made by the appropriate Secretary after public notice of such proposal by publication in a newspaper having general circulation in the vicinity of such boundaries and public hearing to be held in such vicinity not less than ninety days after such notice if there is sufficient demand during such ninety days for such hearing. The proposed modification or adjustment shall then be recommended with map and description thereof to the President. The President shall advise the United States Senate and the House of Representatives of his recommendations with respect to such modification or adjustment and such recommendations shall become effective subject to the provisions of subsection (f) of this section.

Effective date of President's recommendations

(f) Any recommendation of the President made in accordance with the provisions of this section shall take effect upon the day following the adjournment sine die of the first complete session of the Congress following the date or dates on which such recommendation was received by the United States Senate and the House of Representatives; but only if prior to such adjournment neither the Senate nor the House of Representatives shall have approved a resolution declaring itself opposed to such recommendation: *Provided*, That in the case of a recommendation covering two or more separate areas, such resolution of opposition may be limited to one or more of the areas covered, in which event the balance of the recommendation shall take effect as before provided: *Provided further*, That where a resolution of opposition to any such recommendation has been introduced, a hearing thereon shall be held within thirty days by the committee to which such resolution has been referred. Any such resolution shall be subject to the procedures provided under the provisions of sections 203 through 206 of the Reorganization Act of 1949 (5 U.S.C., secs. 133z-12—133z-15) for a resolution of either House of Congress: *And provided further*, That a motion to discharge the Committee shall not be in order until the time for the Committee to hold a hearing has elapsed.

Effect of public notice of proposed addition to wilderness system

(g) Public notice when given by either the Secretary of the Interior or the Secretary of Agriculture that any area is to be proposed under the provisions of this Act for incorporation as part of the wilderness system shall segregate such area from any or all appropriation under the public land laws to the extent deemed necessary by such Secretary. Such segregation shall terminate (1) upon rejection of such proposal by the President, (2) upon approval by the Senate or the House of Representatives of a resolution opposing the incorporation of such area in the wilderness system, or (3) five years after the date of such notice if the proposal to incorporate such area as part of the wilderness system has not been submitted to both Houses of Congress prior to the expiration of such five years.

Addition or elimination not provided for in this act

(h) The addition of any area to, or the elimination of any area from, the wilderness system which is not specifically provided for under the provisions of this Act shall be made only after specific affirmative authorization by law for such addition or elimination.

Additional requirements with respect to recommendations

(i)(1) The Secretary of Agriculture and the Secretary of the Interior shall, prior to submitting any recommendations to the President with respect to any area's retention in or incorporation into the wilderness system—

(A) give such public notice of the proposed action as they deem appropriate, including publication in the Federal Register and in a newspaper having general circulation in the area or areas in the vicinity of the affected land;

(B) hold a public hearing or hearings at a location or locations convenient to the area affected. The hearings shall be announced through such means as the respective Secretaries involved deem appropriate, including notices in the Federal Register and in newspapers of general circulation in the area: *Provided*, That if the lands involved are located in more than one State, at least one hearing shall be held in each State in which a portion of the land lies;

(C) at least thirty days before the date of a hearing advise the Governor of each State and the county, or in Alaska the borough, governing board of each county, or in Alaska the borough, in which the lands are located, the United States Forest Service, the United States Soil Conservation Service, the Corps of Engineers of the United States Army, the Bureau of Reclamation, the Bureau of Mines, the United States Geological Survey, the Bureau of Sport Fisheries and Wildlife, the Federal Power Commission, the Rural Electrification Administration, and the Federal

Communications Commission, inviting each to set forth its views at the hearing. It shall be the responsibility of each named Federal agency to submit its independent views concerning the designation of an area as "wilderness", giving an analysis of the comparative values that may be involved as between wilderness and that type of development or uses for which the Federal agency has administrative responsibility.

(2) Views submitted to the President under the provisions of (1) of this subsection with respect to any area shall be included with any recommendations to Congress with respect to such area.

State lands surrounded by wilderness system

(j) In any case where State-owned land is completely surrounded by land incorporated into the wilderness system, such State shall be given either (1) such rights as may be necessary to assure adequate access to such State-owned land by such State and its successors in interest, or (2) vacant, unappropriated, and unoccupied Federal land in the same State, equal in value to the surrounded land: *Provided*, That if the State does not reserve mineral rights in the surrounded land conveyed to the United States, the United States need not reserve mineral rights in the land conveyed to the State in exchange.

Acquisition of certain privately owned lands within the wilderness system

SEC. 4. The Secretary of the Interior and the Secretary of Agriculture are each authorized to acquire as part of the wilderness system any privately owned land within any portion of such system under his jurisdiction, subject to the approval of any necessary appropriations by the Congress: *Provided, however*, That nothing in this Act shall be construed to confer a right of condemnation with respect to privately owned land within the boundaries of a wilderness area, or to impair any customary right or privilege heretofore enjoyed by the owners of such land, respecting access to it or to its ordinary use and maintenance.

GIFTS OR BEQUESTS OF LAND

SEC. 5. The Secretary of Agriculture and the Secretary of the interior may each accept gifts or bequests of land for preservation as wilderness, and such land shall on acceptance become part of the wilderness system. Regulations with regard to any such land may be in accordance with such agreements, consistent with the policy of this Act, as are made at the time of such gift, or such conditions, consistent with such policy, as may be included in, and accepted with, such bequest.

USE OF THE WILDERNESS

Other provisions of law

SEC. 6. (a) Nothing in this Act shall be interpreted as interfering with the purposes stated in the establishment of, or pertaining to, any park, monument, or other unit of the national park system, or any national forest, wildlife refuge, game range, or other area involved, except that any agency administering any area within the wilderness system shall be responsible for preserving the wilderness character of the area and shall so administer such area for such other purposes as also to preserve its wilderness character. Except as otherwise provided in this Act, the wilderness system shall be devoted to the public purposes of recreational, scenic, scientific, educational, conservation, and historical use. Subject to the provisions of this Act, all such use shall be in harmony, both in kind and degree, with the wilderness environment and with its preservation.

Prohibition of certain uses

(b) Except as specifically provided for in this Act and subject to any existing private rights, there shall be no commercial enterprise within the wilderness system, no permanent road, nor shall there be any use of motor vehicles, motorized equipment, or motorboats, or landing of aircraft nor any other mechanical transport or delivery of persons or supplies, nor any temporary road, nor any structure or installation, in excess of the minimum required for the administration of the area for the purposes of this Act, including such measures as may be required in emergencies involving the health and safety of persons within such areas.

Special provisions

(c) The following special provisions are hereby made:

(1) Within the wilderness system the use of aircraft or motorboats where these practices have already become established shall be permitted to continue subject to such regulations as the appropriate Secretary finds necessary. In addition, such measures may be taken as are necessary in the control of fire, insects, and diseases, subject to such regulations as the appropriate Secretary finds necessary.

(2) Within national forest and public domain areas included in the wilderness system, (A) the President may, within a specific area and in accordance with such regulations as he may deem desirable, authorize prospecting (including but not limited to exploration for oil and gas), mining (including but not limited to the production of oil and gas), and the establishment and maintenance of reservoirs, water-conservation works, transmission lines, and other facilities needed in the public interest, including the road construction and maintenance essential to development and use thereof, upon his determination that such use or uses in the specific area will better serve the interests of the United States and the people thereof than will its denial; and (B) the grazing of livestock, where established prior to the effective date of this Act with respect to areas established as part of the wilderness system by this Act, or prior to the date of public notice thereof with respect to any area to be recommended for incorporation in the wilderness system, shall be permitted to continue subject to such regulations as are deemed necessary by the Secretary having jurisdiction over such area.

(3) Other provisions of this Act to the contrary notwithstanding, the management of the Boundary Waters Canoe Area, formerly designated as the Superior, Little Indian Sioux, and Caribou roadless areas in the Superior National Forest, Minnesota, shall be in accordance with regulations established by the Secretary of Agriculture in accordance with the general purpose of maintaining, without unnecessary restrictions on other uses, including that of timber, the primitive character of the area, particularly in the vicinity of lakes, streams, and portages: *Provided*, That nothing in this Act shall preclude the continuance within the area of any already established use of motorboats. Nothing in this Act shall modify the restrictions and provisions of the Shipstead-Nolan Act, Public Law 539, Seventy-first Congress, July 10, 1930 (46 Stat. 1020), the Thye-Blatnik Act, Public Law 733, Eightieth Congress, June 22, 1948 (62 Stat. 568), and the Humphrey-Thye-Blatnik-Andresen Act, Public Law 607, Eighty-fourth Congress, June 22, 1956 (70 Stat. 326), as applying to the Superior National Forest or the regulations of the Secretary of Agriculture. Modifications of the Boundary Waters Canoe Area within the Superior National Forest shall be accomplished in the manner provided in section 3(e).

(4) Commercial services may be performed within the wilderness system to the extent necessary for activities which are proper for realizing the recreational or other purposes of the system as established in this Act.

(5) Any existing use or form of appropriation authorized or provided for in the Executive order or legislation establishing any national wildlife refuge or game range existing on the effective date of this Act may be continued under such authorization or provision.

(6) Nothing in this Act shall constitute an express or implied claim or denial on the part of the Federal Government as to exemption from State water laws.

(7) Nothing in this Act shall be construed as affecting the jurisdiction or responsibilities of the several States with respect to wildlife and fish in the national forests.

(8) Nothing in this Act shall be construed to prevent, within national forest and public domain areas included in the wilderness system, any activity, including prospecting, for the purpose of gathering information about mineral or water resources or to prevent the completely subsurface use of such areas, if such activity or subsurface use is carried on, in a manner which is not incompatible with the preservation of the wilderness environment.

RECORDS AND REPORTS

SEC. 7. The Secretary of the Interior and the Secretary of Agriculture shall each maintain available to the public, records of portions of the wilderness system under his jurisdiction, including maps and legal descriptions, copies of regulations governing them, copies of public notices of, and reports submitted to Congress regarding, pending additions, eliminations, or modifications. Within a year following the establishment of any area within the national forests as a part of the wilderness system, the Secretary of Agriculture shall file a map and legal description of such area with the Interior and Insular Affairs Committees of the United States Senate and the House of Representatives, and such descriptions shall have the same force and effect as if included in this Act: *Provided, however*, That correction of clerical and typographical errors in such legal descriptions and maps may be made with the approval of such committees. Within a year following the establishment of any area in the national park system or in a wildlife refuge or range as a part of the wilderness system, the Secretary of the Interior shall file a map and legal description of such area with the Interior and Insular Affairs Committees of the United States Senate and the House of Representatives. Clerical and typographical errors in such legal descriptions and maps may be corrected with the approval of such committees. Copies of maps and legal descriptions of all areas of the wilderness system within their respective jurisdictions shall be kept available for public inspection in the offices of regional foresters, national forest supervisors, forest rangers, offices of the units of the national park system, wildlife refuge, or range.

CONTRIBUTIONS AND GIFTS

SEC. 8. The Secretary of the Interior and the Secretary of Agriculture are each authorized to accept private contributions and gifts to be used to further the purposes of this Act. Any such contributions or gifts shall, for purposes of Federal income, estate, and gift taxes, be considered a contribution or gift to or for the use of the United States for an exclusively public purpose, and may be deducted as such under the provisions of the Internal Revenue Code of 1954, subject to all applicable limitations and restrictions contained therein.

Land use Commissions

SEC. 9. With respect to any State having more than 90 per centum of its total land area owned by the Federal Government on

January 1, 1961, there shall be established for each such State a Presidential Land Use Commission (hereinafter called the Commission). The Commission shall be composed of five persons appointed by the President, not more than three of whom shall be members of the same political party, and at least three of whom shall be residents of the State concerned. The Commission shall advise and consult with the Secretary of the Interior and the Secretary of Agriculture on the current utilization of federally owned land in such State and shall make recommendations to the appropriate Secretary as to how the federally owned land can best be utilized, developed, protected, and preserved. Any recommendations made to the President by the Secretary of Interior or the Secretary of Agriculture and any recomendations made to the Congress by the President pursuant to the provisions of this Act shall be accompanied by the recommendations and reports made with respect thereto by the Commission.

SEC. 10. At the opening of each session of Congress, the Secretaries of Agriculture and Interior shall jointly report to the President for transmission to Congress on the status of the wilderness system, including a list and descriptions of the areas in the system, regulations in effect, and other pertinent information, together with any recommendations they may care to make.

SEC. 11. Nothing in this Act shall be construed as superseding, modifying, repealing, or otherwise affecting the provisions of the Federal Power Act (16 U.S.C. 792–825r).

Mr. MANSFIELD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. CHURCH. Mr. President, I move to lay that motion on the table.

The **PRESIDING OFFICER.** The question is on agreeing to the motion of the Senator from Idaho.

The motion was agreed to.

THE JOURNAL

On request of Mr. MANSFIELD, by unanimous consent, the reading of the Journal of the proceedings of Monday, April 8, 1963, was dispensed with.

TRANSACTION OF ROUTINE BUSINESS

By unanimous consent, the following routine business was transacted:

REPORT ON GOVERNMENT EMPLOYEES TRAINING ACT—MESSAGE FROM THE PRESIDENT

The **PRESIDENT** pro tempore laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on Post Office and Civil Service:

To the Congress of the United States:

As required by section 18(c) of the Government Employees Training Act (Public Law 85-507, approved July 7, 1958), I am transmitting forms supplying information on those employees who, during fiscal year 1962, participated in training in non-Government facilities in courses that were over 120 days in duration and those employees who received training in non-Government facilities as the result of receiving an award or contribution.

JOHN F. KENNEDY.

THE WHITE HOUSE, *April 4, 1963.*

EXECUTIVE COMMUNICATIONS, ETC.

The **PRESIDENT** pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON RESEARCH AND DEVELOPMENT PROCUREMENT ACTION

A letter from the Secretary of the Air Force, transmitting, pursuant to law, a report on research and development procurement action, for the period January 1, 1962, through December 31, 1962 (with an accompanying report); to the Committee on Armed Services.

REGULATIONS FOR PREVENTING COLLISIONS AT SEA

A letter from the Secretary of the Treasury, transmitting a draft of proposed legislation to authorize the President to proclaim regulations for preventing collisions at sea (with accompanying papers); to the Committee on Commerce.

AMENDMENT OF TITLE 14, UNITED STATES CODE, RELATING TO APPOINTMENT, PROMOTION, SEPARATION, AND RETIREMENT OF OFFICERS OF THE COAST GUARD

A letter from the Secretary of the Treasury, transmitting a draft of proposed legislation to amend the provisions of title 14, United States Code, relating to the appointment, promotion, separation, and retirement of officers of the Coast Guard, and for other purposes (with accompanying papers); to the Committee on Commerce.

AMENDMENT OF SECTION 14 OF THE NATURAL GAS ACT

A letter from the Chairman, Federal Power Commission, Washington, D.C., transmitting a draft of proposed legislation to amend section 14 of the Natural Gas Act (with an accompanying paper); to the Committee on Commerce.

DRAFTS OF PROPOSED LEGISLATION RELATING TO THE DISTRICT OF COLUMBIA

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to amend the act of July 8, 1932, relating to the control and possession in the District of Columbia of dangerous weapons, and for other purposes (with an accompanying paper); to the Committee on the District of Columbia.

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to authorize the establishment of a Junior College Division within the District of Columbia Teachers College, and for other purposes (with an accompanying paper); to the Committee on the District of Columbia.

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia (with an accompanying paper); to the Committee on the District of Columbia.

AUDIT REPORT OF NATIONAL SAFETY COUNCIL

A letter from the president, National Safety Council, Chicago, Ill., transmitting, pursuant to law, an audit report of that council, for the year 1962 (with an accompanying report); to the Committee on the Judiciary.

AMENDMENT OF TITLE 38, UNITED STATES CODE, RELATING TO DELEGATION OF CERTAIN AUTHORITY TO THE CHIEF MEDICAL DIRECTOR IN THE DEPARTMENT OF MEDICINE AND SURGERY, VETERANS' ADMINISTRATION

A letter from the Administrator, Veterans' Administration, Washington, D.C., transmitting a draft of proposed legislation to amend title 38 of the United States Code to allow the Administrator of Veterans' Affairs to delegate to the Chief Medical Director in the Department of Medicine and Surgery, authority to act upon the recommendations of the disciplinary boards provided by section 4110 of title 38, United States Code (with an accompanying paper); to the Committee on Labor and Public Welfare.

AMENDMENT OF TITLE 39, UNITED STATES CODE, TO INCREASE THE AREA WITHIN WHICH THE POSTMASTER GENERAL MAY ESTABLISH STATIONS, SUBSTATIONS, OR BRANCHES OF POST OFFICES

A letter from the Postmaster General, transmitting a draft of proposed legislation to amend title 39 of the United States Code to increase the area within which the Postmaster General may establish stations, substations, or branches of post offices, from 10 to 20 miles (with accompanying papers); to the Committee on Post Office and Civil Service.

AMENDMENT OF AUTOMATIC-SEPARATION PROVISIONS OF CIVIL SERVICE RETIREMENT ACT

A letter from the Chairman, U.S. Civil Service Commission, Washington, D.C., transmitting a draft of proposed legislation to amend the automatic-separation provisions of the Civil Service Retirement Act (with an accompanying paper); to the Committee on Post Office and Civil Service.

AMENDMENT OF APPROPRIATIONS FOR ATOMIC ENERGY COMMISSION

A letter from the Chairman, U.S. Atomic Energy Commission, Washington, D.C., transmitting a draft of proposed legislation to amend the appropriations for that Commission (with accompanying papers); to the Joint Committee on Atomic Energy.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the **PRESIDENT** pro tempore:

A joint resolution of the Legislature of the State of Ohio; to the Committee on the Judiciary:

"HOUSE JOINT RESOLUTION 2

"Joint resolution providing for ratification of the proposed amendment to the Constitution of the United States, relative to the qualification of electors

"Whereas both Houses of the 87th Congress of the United States of America, at the 2d session of such Congress, by a constitutional majority of two-thirds of the Members of each House thereof, made a proposition to amend the Constitution of the United States in the following words, to wit:

" 'Joint resolution proposing an amendment to the Constitution of the United States relating to the qualifications of electors

" '*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution only if ratified by the legislatures of three-fourths of the several States within 7 years from the date of its submission by the Congress:

" ' "ARTICLE —

" ' "SECTION 1. The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for Senator or Representative in Congress, shall not be denied or abridged by the United States or any State by reasons of failure to pay any poll tax or other tax.

" ' "SEC. 2. The Congress shall have power to enforce this article by appropriate legislation" ': Therefore be it

"*Resolved by the General Assembly of the State of Ohio,* That the said proposed amendment to the Constitution of the United States be, and the same is hereby ratified; and be it further

"*Resolved,* That the secretary of state of the State of Ohio be, and he hereby is directed, to deliver to the Governor of this State a certified copy of this resolution, and such certified copy shall be forwarded at once by the Governor to the Administrator of General Services, U.S. Government, Washington, D.C., to the President of the Senate of the United States, to the Speaker of the House of Representatives of the United States, and to the Secretary of State of the United States.

"ROGER CLOUD,
"*Speaker of the House of Representatives.*
"JOHN W. BROWN,
"*President of the Senate.*

"Adopted February 27, 1963.

"TED W. BROWN,
"*Secretary of State.*"

Two joint resolutions of the Legislature of the State of Utah; to the Committee on the Judiciary:

"SENATE JOINT RESOLUTION 2

"Joint resolution of the Legislature of the State of Utah to ratify a proposed amendment to the Constitution of the United States

"Whereas the 87th Congress of the United States of America, at its 2d session in both Houses by a constitutional majority of two-thirds thereof, adopted the following proposition to amend the Constitution of the United States of America:

" '*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein)*, That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution only if ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by Congress:

" ' "ARTICLE—

" ' "SECTION 1. The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for Senator or Representative in Congress, shall not be denied or abridged by the United States or any State by reason of failure to pay any poll tax or other tax.

" ' "SEC. 2. The Congress shall have power to enforce this article by appropriate legislation" ': Therefore be it

"*Resolved by the Senate and House of Representatives of the State of Utah,* That the said proposed amendment to the Constitution of the United States of America, be and the same is hereby ratified; and be it further

"*Resolved,* That certified copies of this resolution shall be forwarded by the Governor of Utah to the Administrator of General Services, U.S. Government, Washington, D.C., to the President of the Senate of the United States, and to the Speaker of the House of Representatives of the United States."

"SENATE JOINT RESOLUTION 7

"Joint resolution of the Senate and House of Representatives of the State of Utah memorializing the Congress of the United States to provide legislation designed to preserve to the respective States their power to apportion among their citizens their representation in the various State legislatures

"Whereas the representation enjoyed by the citizens of the State of Utah, as well as by the citizens of the various States of the Union in their respective State legislatures, is best determined by consideration of local importance; and

"Whereas the courts of the United States are construing the Constitution of the United States so broadly as to empower them to intervene in the rights of the respective States to determine the membership of their respective legislatures; and

"Whereas it is the considered opinion of this legislature that the power of determination of problems relating to apportionment of legislative representation is best exercised by the direct representatives of the people of the States: Now, therefore, be it

"*Resolved by the Legislature of the State of Utah,* That it is fitting and proper for the citizens of this State and of their representatives in the Legislature of the State of Utah to determine the membership of their senate and of their house of representatives, and to apportion representation therein among the various portions of the State; and be it further

"*Resolved,* That we believe that this power of legislative determination and apportionment therein is best exercised by the people and the legislatures of the respective States of the Union; and be it further

"*Resolved,* That we respectfully petition the Congress of the United States to take all necessary legislative steps including the possibility of initiating a constitutional amendment to protect and preserve the powers of the various States of the Union to determine the membership of their respective legislatures and the apportionment of representation therein; and be it further

"*Resolved,* That the secretary of state of the State of Utah is hereby authorized and directed to send copies of this memorial to the Senate and to the House of Representatives of the United States and to the Senators and Congressmen representing the State of Utah in the National Congress."

A concurrent resolution of the Legislature of the State of Utah; to the Committee on Interior and Insular Affairs:

"HOUSE CONCURRENT RESOLUTION 4

"Resolution of the Senate and House of Representatives of the Legislature of the State of Utah memorializing the Congress of the United States to maintain the name 'Flaming Gorge Dam and Reservoir' for the dam and reservoir that now bears that name

"Whereas the dam and reservoir which has been constructed on the Green River in northeastern Utah is presently known as the Flaming Gorge Dam and Reservoir; and

"Whereas the proposal has been made before the Congress of the United States to change the name of this dam and reservoir to "O'Mahoney Lake and Recreation Area"; and

"Whereas in view of the location of this dam and reservoir in relationship to the States of Utah and Wyoming, it would seem desirable to retain its present name: Now, therefore, be it

"*Resolved by the Legislature of the State of Utah (the Governor concurring therein)*, That we respectfully urge the Congress of the United States to maintain the presently existing name of the Flaming Gorge Dam and Reservoir as to said dam and reservoir; and be it further

"*Resolved,* That the secretary of state of Utah be, and he hereby is, directed to send copies of this resolution to the Senate and the House of Representatives of the United States, to the Secretary of the Department of the Interior, and to the Senators and Congressmen representing the State of Utah in Congress."

A concurrent resolution of the Legislature of the State of Utah; to the Committee on the Judiciary:

"HOUSE CONCURRENT RESOLUTION 1

"Concurrent resolution of the Senate and House of Representatives of the 35th Legislature of the State of Utah petitioning the Congress of the United States to call a convention for proposing an amendment to the Constitution of the United States, unless Congress shall sooner have submitted such an amendment, to provide for the election of the President and Vice President in a manner fair and just to the people of the United States

"Whereas under the Constitution of the United States presidential and vice presidential electors in the several States are now elected on a statewide basis, each State being entitled to as many electors as it has Senators and Representatives in Congress; and

"Whereas the presidential and vice presidential electors who receive the plurality of the popular vote in a particular State become entitled to cast the total number of electoral votes allocated to the State irrespective of how many votes may have been cast for other elector candidates; and

"Whereas this method of electing the President and Vice President is unfair and unjust in that it does not reflect the minority votes cast; and

"Whereas the need for a change has been recognized by Members of Congress on numerous occasions through the introductions of various proposals for amending the Constitution: Now, therefore, be it

"*Resolved,* That application is hereby made to Congress under article V of the Constitution of the United States for the calling of a convention to propose an article of amendment to the Constitution providing for a fair and just division of the electoral votes within the States in the election of the President and Vice President; and be it further

"*Resolved,* That if and when Congress shall have proposed such an article of amendment this application for a convention shall be deemed withdrawn and shall be no longer of any force and effect; and be it further

"*Resolved,* That the proper officer of this State be and he hereby is directed to transmit copies of this application to the Senate and House of Representatives of the United States, and to the several Members of said bodies representing this State therein; also to transmit copies hereof to the legislatures of all other States of the United States."

A joint resolution of the Legislature of the State of Arizona; to the Committee on Interior and Insular Affairs:

"HOUSE JOINT MEMORIAL 1

"Joint memorial requesting the Congress of the United States to defeat any legislation amending the Enabling Act so as to permit the State of Arizona to sell school and institutional lands granted to the State by the Federal Government without appraisal and public auction

"Whereas the State of Arizona holds in trust title to considerable land granted to the State by the terms of the Enabling Act; and

"Whereas the Federal Government in granting the land to the State of Arizona placed restrictions and conditions effecting the sale, lease, conveyance, or contracts of, or concerning the lands or the use thereof, or the natural products thereof, requiring, among other things, appraisal at true value of the lands prior to sale and sale only at public auction; and

"Whereas the beneficiaries of the trust, the schools and institutions of the State of Arizona, should realize the reasonable value of any lands sold or otherwise disposed of; and

"Whereas the 25th Legislature of Arizona memorialized Congress to pass legislation making certain amendments in said Enabling Act; and

"Whereas it has come to the attention of the 26th Arizona Legislature that if the Enabling Act should be amended as proposed in Senate Joint Memorial 3 of the 25th Arizona Legislature, or in S. 3283, H.R. 11710, or H.R. 11712 of the 87th Congress of the United States, the beneficiaries of the trust, the schools and institutions of the State of Arizona, would not realize the benefits as safeguarded by the Enabling Act as enacted by Congress in 1910: Wherefore your memorialist, the Legislature of the State of Arizona, prays:

"1. That the Congress of the United States take no action which would amend the Enabling Act of the State of Arizona to permit the State of Arizona to sell school and institutional lands granted, in trust, to the State by the Federal Government without appraisal and without public auction.

"2. The secretary of state of the State of Arizona is directed to transmit a copy of this memorial to the President of the Senate, the Speaker of the House of Representatives of the United States and to each member of the Arizona congressional delegation."

A resolution of the House of Representatives of the State of Arizona; to the Committee on Interior and Insular Affairs:

"House Memorial 4

"Memorial requesting the establishment of a national cemetery in Arizona

"The State of Arizona does not have a national cemetery within its borders even though, proportionately, there are more veterans in Arizona than in most States of the United States. The influx of veterans into the State of Arizona is due to the fact that for many years there have been many military installations located in the State. Moreover, thousands of veterans have moved to Arizona to take advantage of the dry, healthful climate.

"A deceased veteran who has expressed a desire to be buried in a national cemetery has to be transported to a distant point in another State for burial.

"Wherefore your memorialist, the Legislature of the State of Arizona, prays:

"1. That the Congress provide for the establishment of a national cemetery in the State or Arizona."

Two joint resolutions of the Legislature of the State of Alaska; to the Committee on Commerce:

"Senate Joint Resolution 10

"Joint resolution relating to the territorial waters of Alaska

"Whereas the fisheries abutting the Alaska coast are of enormous economic value and represent the sole source of livelihood for scores of American nationals; and

"Whereas American nationals have fished for years under carefully planned and stringent conservation regulations imposed to insure maximum sustained yield from the resource; and

"Whereas recent years have seen an increased amount of foreign fishing effort in the waters abutting the Alaska coast; and

"Whereas alien fishermen fish entirely free of conservation restrictions imposed on American citizens; and

"Whereas the U.S. Government, charged with the obligation of protecting American fisheries from foreign encroachment, has taken insufficient action to protect the resource either through assertion of a greater territorial belt of water than 3 miles or application of the so-called base line method already sanctioned for use by the International Court of Justice; and

"Whereas Gov. William A. Egan, of the State of Alaska, has attempted unceasingly to impress upon the U.S. Government the gravity of intrusions by foreign nationals into waters historically considered American and the necessity of establishing a broad claim to waters adjoining the Alaska coast; and

"Whereas the Governor, faced with the complete lack of action on the part of the U.S. Government, has acted courageously in protecting the fisheries of Alaska through State action which circumstances required: Be it

"*Resolved,* That the Legislature of the State of Alaska offers its commendation to Gov. William A. Egan for his past action, and vigorously urges the U.S. Government to act quickly in establishing broad water areas adjoining the Alaska coast as subject solely to U.S. sovereignty; and be it further

"*Resolved,* That copies of this resolution be sent to the Honorable John F. Kennedy, President of the United States; the Honorable Lyndon B. Johnson, Vice President of the United States and President of the Senate; the Honorable Dean Rusk, Secretary of State; the Honorable Stewart L. Udall, Secretary of the Interior; the Honorable John W. McCormack, Speaker of the House; the Honorable William A. Egan, Governor of Alaska; and the members of the Alaska delegation in Congress.

"Passed by the senate March 1, 1963.
"Frank Peratrovich,
"*President of the Senate.*
"Attest:
"Evelyn K. Stevenson,
"*Secretary of the Senate.*
"Passed by the house March 28, 1963.
"Bruce Kendall,
"*Speaker of the House.*
"Attest:
"Patricia R. Slack,
"*Chief Clerk of the House.*
"William A. Egan,
"*Governor of Alaska.*"

"Senate Joint Resolution 21

"Joint resolution relating to the construction of modern stern-ramp trawlers for experimental commercial fishing and research

"Whereas the high-seas fish resources of the United States are being ravaged by fleets of modern trawlers operated by foreign nations; and

"Whereas the fishing fleets of the United States have never received the attention and encouragement necessary to permit our fishermen to compete successfully with the vast, efficient and modern foreign fleets; and

"Whereas construction by the Federal Government of two stern-ramp trawlers would make available American vessels which could be used for exploratory and scientific investigations of the fisheries resources of the high seas: Be it

"*Resolved,* That the Congress is urgently requested to act favorably on S. 744, the proposed Fishing Vessel Development Act of 1963, as introduced by Senator Warren G. Magnuson, for himself and Senators E. L. Bartlett, Theodore Kennedy, and Leverett Saltonstall; and be it further

"*Resolved,* That copies of this resolution be sent to the Honorable Lyndon B. Johnson, Vice President of the United States and President of the Senate; the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable Warren G. Magnuson, chairman, Senate Committee on Commerce; the Honorable Herbert Bonner, chairman, House Committee on Merchant Marine and Fisheries; and the members of the Alaska delegation in Congress.

"Passed by the Senate February 26, 1963.
"Frank Peratrovich,
"*President of the Senate.*
"Attest:
"Evelyn K. Stevenson,
"*Secretary of the Senate.*
"Passed by the House March 29, 1963.
"Bruce Kendall,
"*Speaker of the House.*
"Attest:
"Patricia R. Slack,
"*Chief Clerk of the House.*
"William A. Egan,
"*Governor of Alaska.*"

A resolution of the Senate of the State of Alaska; to the Committee on Finance:

"Senate Resolution 53

"Resolution relating to congressional action on H.R. 4901 which provides for a flat annual installment rate by employers repaying Federal loans made to the State for its unemployment compensation program

"Whereas Alaska, under territorial administration and then as a State, accepted loans under the Temporary Unemployment Compensation Act of 1958 and under the Reed Act for carrying out its unemployment compensation program; and

"Whereas these Federal loans were not repaid when due, causing certain provisions of the aforementioned acts to become operable which started repayment by employers of the loans in annual installment payments which increase each year; and

"Whereas the State is attempting to maintain a favorable climate toward business to encourage greater investment to aid its economic growth and to reduce the amount of unemployment; and

"Whereas the sum paid per employee under the installment payment provisions now in effect grows larger each year thus causing a financial handicap to present employers and discouraging future investors and potential employers from establishing businesses in the State; and

"Whereas a bill (H.R. 4901) has been introduced in Congress to alleviate the hardship now placed on employers by establishing a continuing flat rate of installment payment of the unemployment compensation loans, thus relieving in part the burdensome features of the existing law: Be it

"*Resolved,* That Congress is urged to give speedy passage to H.R. 4901; and be it further

"*Resolved,* That copies of this resolution be sent to the Honorable Lyndon B. Johnson, Vice President of the United States and President of the Senate; the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable Harry F. Byrd, chairman, Senate Finance Committee; the Honorable Wilbur Mills, chairman, House Ways and Means Committee; and the Alaska delegation in Congress.

"Passed by the Senate March 29, 1963.
"Frank Peratrovich,
"*President of the Senate.*
"Attest:
"Evelyn K. Stevenson,
"*Secretary of the Senate.*"

A resolution of the Senate of the State of Alaska; to the Committee on Interior and Insular Affairs:

"Senate Resolution 56

"Resolution relating to encouraging Congress to take favorable action upon a request by the director of the Bureau of Mines for funds to carry on a mineral resource study

"Whereas there is an urgent need for resource development in the Nation, and especially in Alaska; and

"Whereas studies of the kind necessary to determine the amount and the nature of

Alaska's resources have never been made; and

"Whereas a step-up in the studies of Alaska's resources is necessary because of the planned construction of the Rampart Canyon Dam on the Yukon River, which has created a demand for knowledge of resources in the area of the hydroelectric plant; and

"Whereas Marling Ankeny, Director of the Federal Bureau of Mines, has asked that funds be made available for these mineral resource studies which will begin July 1, 1963: be it

"*Resolved*, That Congress is respectfully urged to take favorable action on the Bureau's request so that the full resource potential of Alaska may be developed; and be it further

"*Resolved*, That copies of this resolution be sent to the Honorable John F. Kennedy, President of the United States, the Honorable Lyndon B. Johnson, Vice President of the United States and President of the Senate; the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable Clarence Cannon, chairman, House Committee on Appropriations; the Honorable Carl Hayden, chairman, Senate Committee on Appropriations; the Honorable Marling Ankeny, Director, Bureau of Mines; and to the members of the Alaska delegation in Congress.

"Passed by the Senate March 30, 1963.

"Frank Peratrovich,
"*President of the Senate.*

"Attest.

"Evelyn K. Stevenson,
"*Secretary of the Senate.*"

A concurrent resolution of the Legislature of the State of Hawaii; to the Committee on the Judiciary:

"Senate Concurrent Resolution 4

"Concurrent resolution relating to the elimination of monopolistic and restrictive practices in the drug industry

"Whereas the American public spends approximately $2½ billion each year for prescription drugs and medicines; and

"Whereas the Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary, of which Senator Estes Kefauver is chairman, found during hearings on the drug industry's role in price administration that patent practices and pricing and marketing methods of large drug manufacturers have resulted in excessively high prices of some drugs and medicines to consumers; and

"Whereas in the words of Senator Kefauver: 'The time has arrived for action by the Congress to reduce the excessive and unwarranted charges upon those who are least able to afford them—the Nations' sick and afflicted'; and

"Whereas it appears that prescription drug and medicine prices might be significantly lowered by amending Federal patent and antitrust laws to assure greater competition among the members of the drug industry: Now, therefore, be it

"*Resolved by the Senate of the Second Legislature of the State of Hawaii, general session of 1963 (the House of Representatives concurring)*, That the Congress of the United States be and it is hereby requested to study the necessity of amending the Patent Act and the Sherman Antitrust Act to eliminate any monopolistic and economically restrictive practice which might be found to exist in the drug industry to the end of stimulating competitive pricing policies resulting in reasonable charges to consumers for prescription drugs and medicines, without, however, unduly curbing the research activities of the drug industry; and be it further

"*Resolved*, That copies of the concurrent resolution be sent to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, to the Secretary of Health, Education, and Welfare, to Senator Estes Kefauver, of the State of Tennessee, and to the Senators and Representatives to Congress from the State of Hawaii."

A concurrent resolution of the Legislature of the State of Hawaii; to the Committee on Labor and Public Welfare:

"House Concurrent Resolution 9

"Whereas labor conditions detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers still exist in the United States and its possessions; and

"Whereas inferior labor conditions, including low wages, constitute an unfair method of competition and interfere with the orderly and fair marketing of goods; and

"Whereas the sugar industry in the State of Hawaii pays the highest wages in domestic sugar production in the United States and its possessions and provides sugar workers a standard of living comparable to workers covered under the Fair Labor Standards Act of 1938, as amended; and

"Whereas the sugar industry in the State of Hawaii must compete with producers and processors of sugar in other areas whose employees labor for wages as low as 60 cents per hour and whose conditions of employment otherwise are, under American standards, substandard; and

"Whereas fairness and justice demand that all workers in the United States and its possessions, whether industrial or agricultural, be entitled to enjoy a standard of living compatible with the American way of life; and

"Whereas fairness and justice to the people and sugar industry of Hawaii require that minimum wage levels be set for sugar workers in the United States and its possessions so that competition among the different sugar producing areas shall be on fair and equitable terms: Now, therefore, be it

"*Resolved by the House of Representatives of the Second Legislature, State of Hawaii, regular session of 1963 (the Senate concurring)*, That the Congress of the United States be and it is hereby respectfully requested to amend all Federal laws granting subsidies to any industry or agricultural pursuit, in which individuals are gainfully employed, to require compliance with the Fair Labor Standards Act of 1938, as amended, and as may be further amended from time to time, as a condition of the payment of any such subsidy: *Provided, however*, That the Administrator of the Wage and Hour Division shall be authorized to determine temporary exclusions from the Fair Labor Standards Act of 1938, as amended; and be it further

"*Resolved*, That the Congress of the United States be and it is hereby respectfully requested to amend the Sugar Act of 1948, as amended, to provide:

"1. That payment to all persons employed on a sugar farm of wages not less than the minimum wage as set by the Fair Labor Standards Act of 1938, as amended, and as may further be amended from time to time, shall be a condition of payment to the producer: *Provided, however*, That the Secretary of Agriculture shall be authorized to hold hearings to determine temporary exclusions and amounts of payments to be authorized for producers so excluded temporarily.

"2. That there shall be no reduction in the base rate of payments of 80 cents per 100 pounds of sugar for any sugar farm which pays to all persons employed thereon wages at rates not less than the minimum wage established by the Fair Labor Standards Act of 1938, as amended, and as may be further amended from time to time, irrespective of production; and be it further

"*Resolved*, That duly authenticated copies of this concurrent resolution be forwarded to the President of the Senate and the Speaker of the House of Representatives, to the Secretary of Labor, to the Secretary of Agriculture, and to the Hawaii delegation to the Congress of the United States.

"Elmer F. Cravalho,
"'*Speaker, House of Representatives.*
"Shigeto Kanemoto,
"*Clerk, House of Representatives.*
"Nelson K. Doi,
"*President of the Senate.*
"Seichi Hirai,
"*Clerk of the Senate.*"

A concurrent resolution of the Legislature of the State of Hawaii; to the Committee on Post Office and Civil Service:

"Senate Concurrent Resolution 18

"Concurrent resolution requesting the Congress to act favorably on a bill for an act making the pay of the Federal workers at Pearl Harbor Naval Base comparable to that of Federal workers doing the same work in San Francisco Bay area

"Whereas the naval base at Pearl Harbor has historically and is presently playing a key and vital role in our national defense; and

"Whereas it is most important that the morale and well-being of the several thousand Federal employees at Pearl Harbor Naval Base maintain their working efficiency at a top level during the present critical world situation; and

"Whereas for many years blue collar workers in certain ratings at the Pearl Harbor Naval Base have been paid lower wages than their counterparts in the San Francisco Bay area; and

"Whereas a bill has been jointly introduced by the two Senators of the State of Hawaii, the Honorable Hiram L. Fong and the Honorable Daniel K. Inouye, whereby these discrepancies in wages would be eliminated and the pay for similar jobs would be made comparable to each other; and

"Whereas the immediate correction of the inequities in wages on a regional basis within these United States is urgently warranted on moral and legal grounds; Now, therefore, be it

"*Resolved by the Senate of the Second Legislature of the State of Hawaii, general session of 1963 (the House of Representatives concurring)*, That the Congress of the United States be and is hereby respectfully requested to act favorably, with reasonable expedition, on the bill introduced by the said Senator Hiram L. Fong and Senator Daniel K. Inouye, making the wages of the Federal workers at Pearl Harbor Naval Base comparable to that of Federal workers doing the same kind and level of work in the San Francisco Bay area; and be it further

"*Resolved*, That duly certified copies of this concurrent resolution be sent to the Honorable Lyndon B. Johnson, President of the U.S. Senate; the Honorable John W. McCormack, Speaker of the U.S. House of Representatives; the Honorable Hiram L. Fong and the Honorable Daniel K. Inouye, U.S. Senators from the State of Hawaii; and to the Honorable Thomas P. Gill and the Honorable Spark M. Matsunaga, U.S. Representatives from the State of Hawaii."

By Mr. GOLDWATER:

A resolution of the House of Representatives of the State of Arizona; to the Committee on Banking and Currency:

"House Memorial 1

"Memorial urging the Congress of the United States to authorize the immediate cessation of printing of all $1 silver certificates which do not bear the inscription 'In God We Trust'

"*To the Congress of the United States:*

"Your memorialist respectfully represents:

"Whereas Public Law 140, enacted by the 84th Congress, and approved by the President of the United States on July 11, 1955, provided that all U.S. currency shall bear the inscription 'In God We Trust.' The intent of the U.S. Congress is clear and this law is hereby quoted below: '*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That at such time as new dies for the printing of currency are adopted in connection with the current program of the Treasury Department to increase the capacity of presses utilized by the Bureau of Engraving and Printing, the dies shall bear, at such place or places thereon as the Secretary of the Treasury may determine to be appropriate, the inscription "In God We Trust," and thereafter this inscription shall appear on all U.S. currency and coins.

"'Approved July 11, 1955.'

"Whereas 8 years have elapsed since the enactment of this law by the Congress of the United States; and

"Whereas as recently as the fiscal year 1962, the Bureau of Engraving and Printing delivered 193,960,000 silver certificates, series 1935 G, without the inscription; and

"Whereas it appears that the use of currency without the inscription, 'In God We Trust,' gives aid and comfort to those nations which pursue the atheistic Communist ideology;

"Wherefore your memorialist, the House of Representatives of the State of Arizona, prays:

"That the Congress of the United States authorize the appropriate officials and agencies of the Federal Government to order the cessation of printing of all $1 silver certificates which do not bear the inscription 'In God We Trust.'

"Adopted by the house on February 8, 1963, by the following vote: 73 ayes, 2 nays, 5 not voting.

"Approved by the Governor, February 8, 1963.

"Filed in the office of the secretary of state, February 8, 1963."

(The PRESIDENT pro tempore laid before the Senate a concurrent resolution of the House of Representatives of the State of Arizona, identical with the foregoing, which was referred to the Committee on Banking and Currency.)

A resolution of the House of Representatives of the State of Arizona; to the Committee on Finance:

"House Memorial 3

"Memorial relating to Federal taxation and recommending that the Federal excise tax on women's handbags be abolished

"*To the Congress of the United States:*

"Your memorialist respectfully represents: The Federal Government is currently levying a 10-percent excise tax on the purchase of women's handbags. This tax purports to apply only to luxuries and not to necessities. It is a well-known fact that a handbag is no longer a luxury but is, instead, a necessity.

"Wherefore your memorialist, the House of Representatives of the State of Arizona, prays:

"That the Congress give favorable consideration to the subject of abolishing the tax on women's handbags.

"Adopted by the house March 26, 1963, by the following vote: 64 ayes, 4 nays, 12 not voting.

"Approved by the Governor, March 26, 1963.

"Filed in the office of the secretary of state, March 28, 1963."

(The PRESIDENT pro tempore laid before the Senate a concurrent resolution of the House of Representatives of the State of Arizona, identical with the foregoing, which was referred to the Committee on Finance.)

By Mr. PELL:

A resolution of the House of Representatives of the State of Rhode Island; to the Committee on Finance:

"House Resolution 1745

"Resolution memorializing Congress, asking that favorable consideration to legislation providing benefits to the aged, ill, and disabled veterans of World War I in the form of pensions or any other means which provide relief so vitally needed

"Whereas many hundreds of thousands of our Nation's finest citizens served the cause of democracy during the period of World War I; and

"Whereas a large number of these veterans have now reached the age and circumstances in which they are no longer self-supporting, as well as suffering illnesses and infirmities aggravated by this honorable service to their country; and

"Whereas through no fault of their own, they have largely become a class of forgotten men, many of whom are close to the grave: Now, therefore, be it

"*Resolved*, That the members of the House of Representatives of the State of Rhode Island recognize the predicament of these veterans of World War I and petition the Congress of the United States to give favorable consideration to H.R. 2332 (World War I Pension Act) providing benefits to the aged, ill, and disabled veterans of World War I in the form of pensions or any other means which will provide relief so vitally needed; and be it further

"*Resolved*, That the recording clerk of this house of representatives is hereby authorized and directed to transmit duly certified copies of this resolution to the President of the United States, to the Director of the U.S. Veterans' Administration, to the Director of the U.S. Bureau of the Budget, to the chairman of the House Committee on Veterans' Affairs, and to the Senators and Representatives from Rhode Island in the Congress of the United States."

RESOLUTION OF RHODE ISLAND GENERAL ASSEMBLY

Mr. PASTORE. Mr. President, I send to the desk a certified copy of resolution S. 478 passed by the General Assembly of the State of Rhode Island and Providence Plantations memorializing Congress to enact legislation to amend the immigration and nationality laws.

This legislation was introduced in the U.S. Senate by my colleague, the junior Senator from Rhode Island [Mr. Pell]. I ask that this resolution be appropriately referred.

There being no objection, the resolution was referred to the Committee on the Judiciary, as follows:

Whereas the birth, growth, strength, and defense of the United States has stemmed from the combination of skills and cultures of people from many nations; and

Whereas many people from nations all over the world seek entrance to this great Nation in the hope that they may apply their skills and add their cultures to this free society; and

Whereas the present immigration laws are archaic and arbitrary and are not in keeping with the American philosophy of the equality of man; and

Whereas S. 751, a bill to amend the immigration and nationality laws, introduced by Senator Claiborne Pell, grants more equality to all deserving potential immigrants and proportionately and categorically presents a fair system of immigration; and

Whereas the provisions providing for pioneer immigrants will strengthen the immigration system and enrich the American economic system; and

Whereas this bill which is in keeping with the principles advocated by Jefferson and Lincoln, strengthens the democratic cause around the world and leaves the United States in a better light since it will grant a fair share and equal rights immigration law that is in line with the true principles of a free society: Now, therefore, be it

Resolved, That the general assembly place itself on record as respectfully requesting the Congress of the United States to enact into law S. 751, an act in amendment of the immigration and nationality laws (the Pell Act); and be it further

Resolved, That the secretary of state prepare certified copies of this resolution and send them to the Speaker of the House of Representatives and the President of the Senate in the U.S. Congress, the majority and minority leaders of both Houses, the chairman of the Committee on Immigration and the members of the Rhode Island delegation in the Congress.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. CHURCH, from the Committee on Interior and Insular Affairs, with amendments:

S. 22. A bill to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve (Rept. No. 118).

By Mr. BIBLE, from the Committee on Interior and Insular Affairs, without amendment:

H.R. 277. An act to amend the act of April 22, 1960, relative to the transfer of certain public lands to the Colorado River Commission of Nevada (Rept. No. 120); and

H.R. 1544. An act to authorize David H. Forman and Julia Forman to bring suit against the United States to determine title to certain lands in Maricopa County, Ariz. (Rept. No. 121).

By Mr. BIBLE, from the Committee on Interior and Insular Affairs, with amendments:

S. 873. A bill to direct the Secretary of the Interior to convey certain public lands in the State of Nevada to the county of Lincoln, State of Nevada (Rept. No. 119).

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, without amendment:

S. 1007. A bill to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal hydroelectric plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes (Rept. No. 122).

By Mr. GRUENING, from the Committee on Interior and Insular Affairs, without amendment:

S. 247. A bill to authorize survey and establishment of a townsite for the Juneau Indian village in Alaska (Rept. No. 124);

S. 394. A bill to validate the homestead entries of Leo F. Reeves (Rept. No. 125);

H.R. 2291. An act regarding a homestead entry of Lewis S. Cass (Rept. No. 126); and

H.R. 2294. An act to authorize the Secretary of the Interior to convey certain land situated in the vicinity of Unalakleet, Alaska, to Mrs. William E. Beltz (Rept. No. 127).

By Mr. RUSSELL, from the Committee on Armed Services, with an amendment:

H.R. 2440. An act to authorize appropriations during fiscal year 1964 for procurement, research, development, test, and evaluation of aircraft, missiles, and naval vessels for the Armed Forces, and for other purposes (Rept. No. 123).

REPORT ENTITLED "TRADING WITH THE ENEMY ACT"—REPORT OF A COMMITTEE — SUPPLEMENTAL VIEWS (S. REPT. NO. 128)

Mr. JOHNSTON. Mr. President, from the Committee on the Judiciary, I ask unanimous consent to submit a report entitled "Trading With the Enemy Act," pursuant to Senate Resolution 268, 87th Congress, 2d session, as extended, together with the supplemental views of the Senator from New York [Mr. Keating].

I ask unanimous consent that this report, together with the supplemental views, be printed.

The PRESIDENT pro tempore. The report will be received and printed, as requested by the Senator from South Carolina.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MANSFIELD (for himself and Mr. Metcalf):

S. 1282. A bill to permit a State to increase the mileage of its Federal-aid primary system when provision is made for the completion and maintenance of 75 percent thereof; to the Committee on Public Works.

(See the remarks of Mr. Mansfield when he introduced the above bill, which appear under a separate heading.)

By Mr. HART (for himself, Mr. Burdick, Mr. Clark, Mr. Douglas, Mr. Engle, Mr. Gruening, Mr. Hartke, Mr. Humphrey, Mr. Inouye, Mr. Long of Missouri, Mr. McCarthy, Mr. McIntyre, Mr. McNamara, Mr. Nelson, Mrs. Neuberger, Mr. Randolph, Mr. Ribicoff, and Mr. Williams of New Jersey):

S. 1283. A bill to enforce constitutional rights and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. Hart when he introduced the above bill, which appear under a separate heading.)

By Mr. SMATHERS:

S. 1284. A bill to authorize Dr. Alonzo F. Brand, Medical Director, U.S. Public Health Service, retired, to accept and wear the decoration tendered him by the Government of Thailand; to the Committee on Foreign Relations.

By Mr. McCARTHY:

S. 1285. A bill to amend the Internal Revenue Code of 1954 to provide an exemption from the highway use tax in the case of certain trucks and other vehicles which are used primarily for hauling unprocessed farm and forest products from their places of production to market or mill; and

S. 1286. A bill to provide for the abatement of certain penalties and interest otherwise payable with respect to the highway use tax in the case of certain motor vehicles used primarily for hauling unprocessed farm and forest products from their place of production to market or mill; to the Committee on Finance.

S. 1287. A bill for the relief of John Joseph (also known as Hanna Georges Youssef); to the Committee on the Judiciary.

By Mr. McCARTHY (for himself and Mr. Humphrey):

S. 1288. A bill to amend the Internal Revenue Code of 1954 to specify the treatment processes considered as mining in the case of granite used or sold for use as dimension stone; to the Committee on Finance.

By Mr. PASTORE (for himself and Mr. Pell):

S. 1289. A bill to eliminate the population limitation as it affects the eligibility of communities in redevelopment areas for certain benefits under title I of the Housing Act of 1949, and title II of the housing amendments of 1955; to the Committee on Banking and Currency.

By Mr. McCLELLAN:

S. 1290. A bill to establish a uniform national policy concerning proprietary rights in inventions made through the expenditure of public funds, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. McClellan when he introduced the above bill, which appear under a separate heading.)

By Mr. MAGNUSON (by request):

S. 1291. A bill to authorize the Secretary of Commerce to employ aliens in a scientific or technical capacity; and

S. 1292. A bill to repeal section 1(8) of the Interstate Commerce Act, commonly known as the commodities clause; to the Committee on Commerce.

(See the remarks of Mr. Magnuson when he introduced the above bills, which appear under separate headings.)

By Mr. McINTYRE:

S. 1293. A bill for the relief of Theofilos Bougias; to the Committee on the Judiciary.

By Mr. McCARTHY:

S. 1294. A bill to amend title II of the Social Security Act to eliminate the restriction on the period during which an application for a determination of disability is granted full retroactivity, and for other purposes; to the Committee on Finance.

By Mr. JOHNSTON (by request):

S. 1295. A bill to amend section 64(a)(2) of the Bankruptcy Act; to the Committee on the Judiciary.

(See the remarks of Mr. Johnston when he introduced the above bill, which appear under a separate heading.)

By Mr. McGEE:

S. 1296. A bill for the relief of Leonard F. Rizzuto; to the Committee on the Judiciary.

By Mr. KEFAUVER:

S. 1297. A bill to provide for compulsory licensing of prescription drug patents; to the Committee on the Judiciary.

(See the remarks of Mr. Kefauver when he introduced the above bill, which appear under a separate heading.)

By Mr. McGEE:

S. 1298. A bill to provide for certain highway and bridge construction as part of the Flaming Gorge Dam and Reservoir project in the State of Utah; to the Committee on Interior and Insular Affairs.

By Mr. McGEE (for himself and Mr. Simpson):

S. 1299. A bill to defer certain operation and maintenance charges of the Eden Valley Irrigation and Drainage District; to the Committee on Interior and Insular Affairs.

By Mr. WILLIAMS of New Jersey:

S. 1300. A bill to convey Ellis Island to Ellis Island for Higher Education, Inc.; to the Committee on Government Operations.

(See the remarks of Mr. Williams, of New Jersey when he introduced the above bill, which appear under a separate heading.)

By Mr. MAGNUSON (for himself, Mr. Clark, and Mr. Hart):

S. 1301. A bill to provide for a separate session of Congress each year for the consideration of appropriation bills, to establish the calendar year as the fiscal year of the Government, and for other purposes; to the Committee on the Judiciary.

By Mr. McNAMARA (for himself and Mr. Hart):

S.J. Res. 68. Joint resolution to provide for the designation of the first full week in May of each year as "National Employ the Older Worker Week"; to the Committee on the Judiciary.

(See the remarks of Mr. McNamara when he introduced the above joint resolution, which appear under a separate heading.)

CONCURRENT RESOLUTION ADDITIONAL COPIES OF REPORT AND HEARINGS ON "STATE DEPARTMENT SECURITY"

Mr. EASTLAND submitted the following concurrent resolution (S. Con. Res. 37); which was referred to the Committee on Rules and Administration:

Resolved by the Senate (*the House of Representatives concurring*), That there be printed for the use of the Senate Committee on the Judiciary eight thousand additional copies of the report (committee print) of its Internal Security Subcommittee of the Eighty-seventh Congress, second session, entitled "State Department Security"; five thousand copies each of part 1 (the William Wieland case), part 2 (the Office of Security), part 3 (the new passport regulations), part 4 (testimony of Elmer Hipsley, Otto Otepka, John Leahy, Roger Jones, Scott McLeod, Andreas Lowenfeld), and part 5 (testimony of William Wieland) of the subcommittee's hearings of the Eighty-seventh Congress on "State Department Security"; and five thousand additional copies of part 13 of the subcommittee's hearings of the Eighty-seventh Congress on "Communist Threat to the United States Through the Caribbean."

FEDERAL-AID PRIMARY HIGHWAYS

Mr. MANSFIELD. Mr. President, my able colleague, the junior Senator from Montana [Mr. Metcalf], and I have sent to the desk a bill which would amend the Federal-Aid Highway Act. If enacted this proposal would permit a State to increase the mileage of its Federal-aid primary system when provision is made for the completion and maintenance of 75 percent thereof.

Under existing highway regulations a State must complete construction and maintenance on 90 percent of its existing primary mileage before any additional primary mileage can be allocated to the State. This limitation is extremely difficult in most States, particularly in States such as Montana, where distances and limited financing create a number of problems in the primary program. There are, however, a number of instances in the State where bringing certain roads and highways under the primary program would be of tremendous benefit in developing improved travel. This is especially true in eastern Montana. At the present time it has been impossible to obtain any additional primary mileage for these meritorious projects.

The amendment Senator Metcalf and I have introduced would relax the situation somewhat. This proposal was endorsed by the Montana State Legislature in its recent session. I ask unanimous consent to have printed at the conclusion of my remarks in the Congressional Record the text of Senate Joint Memorial 6.

The PRESIDING OFFICER (Mr. Nelson in the chair). The bill will be received and appropriately referred; and, without objection, the joint memorial will be printed in the Record.

The bill (S. 1282) to permit a State to increase the mileage of its Federal-aid primary system when provision is made for the completion and maintenance of 75 percent thereof, introduced by Mr. MANSFIELD (for himself and Mr. METCALF), was received, read twice by its title, and referred to the Committee on Public Works.

The joint memorial presented by Mr. MANSFIELD is as follows:

SENATE JOINT MEMORIAL 6

Joint memorial of the Senate and House of Representatives of the State of Montana, to the Montana congressional delegation, to the U.S. Secretary of Commerce and to the Federal Bureau of Public Roads Administrator, urging that necessary steps be taken to introduce legislation to amend a Federal law relating to highways, to permit a State to build additional primary system mileage when 75 percent of a State's primary system is completed and maintained, instead of 90 percent as presently required

Whereas section 103 of title 23 of the United States Code Annotated requires that the primary highway system shall not exceed 7 percent of the total highway mileage of a State; and

Whereas when 90 percent of the primary system of a State is completed and maintained, said State may increase its primary mileage to 8 percent of the total State mileage; and

Whereas the State of Montana has not reached the required 90 percent but needs an increase in primary road mileage because of the large area to be served by highways in Montana; and

Whereas an increase in primary mileage would correct existing inequities in various counties; and

Whereas many Montana counties would have greatly increased travel if the proper primary highway mileage were available; and

Whereas when primary highways were designated in past years, many Montana areas which had a minor volume of traffic now have enough traffic to warrant primary highway designation; and

Whereas an increase in primary highway mileage would greatly benefit the State of Montana: Now, therefore, be it

Resolved by the Senate and House of Representatives of the State of Montana, That necessary steps be taken by the Montana congressional delegation, in cooperation with Federal officials to introduce legislation to amend section 103 of title 23 of the United States Code Annotated, relating to highways, to permit a State to have additional primary highway system mileage when 75 percent of said State's primary highway system is completed and maintained instead of 90 percent which is presently required; and be it further

Resolved, That the secretary of state be instructed to send copies of this memorial to the Honorable Michael J. Mansfield and Lee Metcalf, Senators from the State of Montana; to the Honorable Arnold H. Olsen and James F. Battin, Congressmen from the State of Montana; to Luther H. Hodges, U.S. Secretary of Commerce; and to Rex M. Whitton, Federal Bureau of Public Roads Administrator.

PROTECTION OF THE RIGHT TO VOTE

Mr. HART. Mr. President, on behalf of the Senator from North Dakota [Mr. BURDICK], the Senator from Pennsylvania [Mr. CLARK], the Senator from Illinois [Mr. DOUGLAS], the Senator from California [Mr. ENGLE], the Senator from Alaska [Mr. GRUENING], the Senator from Indiana [Mr. HARTKE], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Hawaii [Mr. INOUYE], the Senator from Missouri [Mr. LONG], the Senator from Minnesota [Mr. MCCARTHY], the Senator from New Hampshire [Mr. MCINTYRE], the Senator from Michigan [Mr. MCNAMARA], the Senator from Wisconsin [Mr. NELSON], the Senator from Oregon [Mrs. NEUBERGER], the Senator from West Virginia [Mr. RANDOLPH], the Senator from Connecticut [Mr. RIBICOFF], the Senator from New Jersey [Mr. WILLIAMS], and myself, I introduce, for appropriate reference, a bill carrying out the recommendations of the President to strengthen the protection of the right to vote. These recommendations were outlined by the President in his historic February 28 message to the Congress on civil rights.

This administration, with great diligence, has sought to protect the constitutional rights of citizens seeking to register and vote. In no comparable period of our history has so vigorous an effort been made to see that this very keystone of our democracy is secure. Yet insidious and complex devices to frustrate citizens of this Nation in exercising their right of franchise hampers the functioning of this basic element of our governmental system.

Under this administration, the Department of Justice has brought 22 suits against voting discrimination and 4 suits involving incidents of intimidation of potential voters. Under the previous administration, over a period of 8 years, the Department of Justice brought a total of 10 suits, 6 involving discrimination in voting and 4 involving intimidation of voters.

But the President, in his message, made quite clear the need for additional legislation if we are to insure to all Americans their right to vote. He stated:

> Experience has shown, however, that these highly useful acts of the 85th and 86th Congresses suffer from two major defects. One is the usual long and difficult delay which occurs between the filing of a lawsuit and its ultimate conclusion. In one recent case, for example, 19 months elapsed between the filing of the suit and the judgment of the court. In another, an action brought in July 1961 has not yet come to trial. The legal maxim, "Justice delayed is justice denied," is dramatically applicable in these cases.

Many of these cases illustrate the difficulties faced by an administration anxious to protect voting rights. Among the examples of the delays in these cases are the following:

United States against Raines, Terrell County, Ga., filed September 4, 1958; decree entered September 13, 1960.

United States against Alabama, Macon County, Ala., filed February 5, 1959; injunction issued March 17, 1961.

United States against Majors, Dallas County, Ala., filed April 1961; tried May 1962.

United States against Lucky, Ouachita Parish, La., filed January 1, 1961; not yet tried.

United States against Ramsey, Clarke County, Miss., filed July 1961; tried December 1962.

United States against Daniel, Jefferson Davis County, Miss., filed August 3, 1961; tried October 1962.

United States against Wood, Walthall County, Miss., filed August 1961; presently being tried.

United States against Ward, Madison Parish, La., filed October 1961; tried December 1962; no relief to date.

United States against Dogan, Tallahatchie County, Miss., filed November 17, 1961; segment of suit involving discrimination in registration not yet tried.

United States against Duke, Panola County, Miss., filed October 1961; tried March 1963; no relief to date.

The voting bill we introduce today includes four main provisions:

First. The appointment of temporary voting referees.

Second. Expedition of handling suits brought under Federal civil rights statutes.

Third. Requirement for application of uniform standards and procedures to applicants seeking to register.

Fourth. Establishment of a presumption that those seeking to vote who have a sixth grade education possess sufficient literacy to vote in Federal elections.

There is little doubt that this legislation would go far toward ending ugly racial incidents such as the recent one at Greenwood, Miss., where 19 Negroes were arrested during a registration campaign.

The President, at his press conference, pointed out that if the provision of this bill providing for temporary voting referees had been law, those seeking today to register in Greenwood, Miss., would have already gone before a court-appointed referee and many would be duly registered.

It is a shame that special legislation of this kind is necessary to win people their essential constitutional right. But clearly legislation is necessary, and I believe that Congress has no moral alternative but to pass it as swiftly as possible.

The most urgent part of this proposal is the provision for the appointment of temporary referees to carry out registration in these problem counties. All qualified citizens of these counties have the right to vote today, today, and also had this right yesterday. There is no excuse for putting off the full exercise of the right to vote—even for the lengthy period of litigation. Clearly the assurance that temporary relief can be obtained early in a voting case would be a most important step forward.

As always, the enactment of civil rights legislation is a lengthy task. Therefore, we are hopeful that there will be expeditious scheduling of committee consideration of this bill.

Mr. President, I ask that the text of the bill, together with the letter of transmittal from the Attorney General, be printed at this point in my remarks. I also ask that that portion of the President's civil rights message containing the recommendations on voting rights be printed in the RECORD.

Mr. President, I ask further that the bill lie on the table until the end of business on Thursday, April 11, for any additional Senators who might wish to join in sponsorship.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill, letter, and portion of the President's message referred to will be printed in the RECORD, and the bill will lie on the desk, as requested by the Senator from Michigan.

The bill (S. 1283) to enforce constitutional rights and for other purposes, introduced by Mr. HART (for himself and other Senators), was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The Voting Rights Act of 1963."

SEC. 2. Section 2004 of the Revised Statutes (42 U.S.C. 1971), as amended by section 131 of the Civil Rights Act of 1957 (71 Stat. 637) and as further amended by section 601 of the Civil Rights Act of 1960 (74 Stat. 90) is further amended as follows:

(a) Insert "1" after "(a)" in subsection (a) and add at the end of subsection (a) the following new paragraphs:

"(2) No person acting under color of law shall

"(A) in determining whether any individual is qualified under State law to vote in any Federal election apply any standard, practice or procedure different from the standards, practices or procedures applied to individuals similarly situated who have been found by State officials to be qualified to vote.

"(B) deny the right of any individual to vote in any Federal election because of an error or omission of such individual on any record or paper relating to any application, registration, payment of poll tax, or other act requisite to voting, if such error or omission is not material in determining whether such individual is qualified under State law to vote in such election; or

"(C) employ any literacy test as a qualification for voting in any Federal election unless (i) such test is administered to each individual wholly in writing and (ii) a certified copy of the test and of the answers given by the individual is furnished to him within twenty-five days of the submission of his written request made within the period of time during which records and papers are required to be retained and preserved pursuant to title III of the Act of May 6, 1960 (74 Stat. 88).

"(3) For purposes of this subsection

"(A) the term 'vote' shall have the same meaning as in subsection (e) of this section;

"(B) the words 'Federal election' shall have the same meaning as in subsection (f) of this section; and

"(C) the phrase 'literacy test' includes any test of the ability to read, write, understand, or interpret any matter."

(b) Insert immediately following the period at the end of the first sentence of subsection (c) the following new sentence: "If in any such proceeding literacy is a relevant fact it shall be presumed that any person who has not been adjudged an incompetent and who has completed the sixth grade in a school accredited by any State or Territory or the District of Columbia where instruction is carried on predominantly in the English language, possesses sufficient literacy, comprehension, and intelligence to vote in any Federal election as defined in subsection (f) of this section."

(c) Add the following subsection "(f)" and designate the present subsection "(f)" as subsection "(g)":

"(f) Whenever in any proceeding instituted pursuant to subsection (c) the complaint requests a finding of a pattern or practice pursuant to subsection (e), and such complaint, or a motion filed within twenty days after the effective date of this Act in the case of any proceeding which is pending before a district court on such effective date, (1) is signed by the Attorney General (or in his absence the Acting Attorney General), and (2) alleges that in the affected area fewer than fifteen percent of the total number of voting age persons of the same race as the persons alleged in the complaint to have been discriminated against are registered (or otherwise recorded as qualified to vote), any person resident within the affected area who is of the same race as the persons alleged to have been discriminated against shall be entitled, upon his application therefor, to an order declaring him qualified to vote, upon proof that at any election or elections (1) he is qualified under State law to vote, and (2) he has since the filing of the proceeding under subsection (c) been (A) deprived of or denied under color of law the opportunity to register to vote or otherwise to qualify to vote, or (B) found not qualified to vote by any person acting under color of law. Such order shall be effective as to any Federal or State election held within the longest period for which such applicant could have been registered or otherwise qualified under State law at which the applicant's qualifications would under State law entitle him to vote; provided that in the event it is determined upon final disposition of the proceeding, including any review, that no pattern or practice of deprivation of any right secured by subsection (a) exists, the order shall thereafter no longer qualify the applicant to vote in any subsequent election.

"Notwithstanding any inconsistent provision of State law or the action of any State officer or court, an applicant so declared qualified to vote shall be permitted to vote as provided herein. The Attorney General shall cause to be transmitted certified copies of any order declaring a person qualified to vote to the appropriate election officers. The refusal by any such officer with notice of such order to permit any person so qualified to vote to vote at an appropriate election shall constitute contempt of court.

"An application for an order pursuant to this subsection shall be heard within ten days, and the execution of any order disposing of such application shall not be stayed if the effect of such stay would be to delay the effectiveness of the order beyond the date of any election at which the applicant would otherwise be enabled to vote.

"The court may appoint one or more persons, to be known as temporary voting referees, to receive applications pursuant to this subsection and to take evidence and report to the court findings as to whether at any election or elections (1) any applicant entitled under this subsection to apply for an order declaring him qualified to vote is qualified under State law to vote, and (2) he has since the filing of the proceeding under subsection (c) been (A) deprived of or denied under color of law the opportunity to register to vote or otherwise to qualify to vote, or (B) found not qualified to vote by any person acting under color of law. The procedure for processing applications under this subsection and for the entry of orders shall be the same as that provided for in the fourth and fifth paragraphs of subsection (e).

"In appointing a temporary voting referee the court shall make its selection from a panel provided by the Judicial Conference of the circuit. Any temporary voting referee shall be a resident and a qualified voter of the State in which he is to serve. He shall subscribe to the oath of office required by Revised Statutes, section 1757 (5 U.S.C. 16) and shall to the extent not inconsistent herewith have all the powers conferred upon a master by Rule 53(c) of the Federal Rules of Civil Procedure. The compensation to be allowed any persons appointed by the district court pursuant to this subsection shall be fixed by the court and shall be payable by the United States. In the event that the district court shall appoint a retired officer or employee of the United States to serve as a temporary voting referee, such officer or employee shall continue to receive, in addition to any compensation for services rendered pursuant to this subsection, all retirement benefits to which he may otherwise be entitled.

"The court or temporary voting referee shall entertain applications and the court shall issue orders pursuant to this subsection until final disposition of the proceeding under subsection (c), including any review, or until the finding of a pattern or practice pursuant to subsection (e), whichever shall first occur. Applications pursuant to this subsection shall be determined expeditiously, and this subsection shall in no way be construed as a limitation upon the existing powers of the court.

"When used in this subsection, the words 'Federal election' shall mean any general, special, or primary election held solely or in part for the purpose of electing or selecting any candidate for the office of President, Vice President, presidential elector, Member of the Senate, or Member of the House of Representatives; the words 'State election' shall mean any other general, special, or primary election held solely or in part for the purpose of electing or selecting any candidate for public office; the words 'affected area' shall mean that county, parish or similar subdivision of the State in which the laws of the State relating to voting are or have been administered by a person who is a defendant in the proceeding instituted under subsection (c) on the date the original complaint is filed; and the words 'voting age persons' shall mean those persons who meet the age requirements of State law for voting."

(d) Add the following subsection "(h)":

"(h) In any civil action brought in any district court of the United States under Section 2004 of the Revised Statutes, as amended, and Title III of the Act of May 6, 1960 (74 Stat. 88), wherein the United States is plaintiff, it shall be the duty of the chief judge of the district (or in his absence, the acting chief judge) in which the case is pending immediately to designate a judge in such district to hear and determine the case. In the event that no judge in the district is available to hear and determine the case, the chief judge of the district, or the acting chief judge, as the case may be, shall certify this fact to the chief judge of the circuit (or in his absence, the acting chief judge) who shall then designate a district or circuit judge of the circuit to hear and determine the case.

"It shall be the duty of the judge designated pursuant to this section to assign the case for hearing at the earliest practicable date and to cause the case to be in every way expedited."

SEC. 3. If any provision of this Act is held invalid, the remainder of this Act shall not be affected thereby.

The letter and portion of the President's message presented by Mr. HART are as follows:

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., April 2, 1963.

The VICE PRESIDENT,
U.S. Senate,
Washington, D.C.

DEAR MR. VICE PRESIDENT: It is my privilege to transmit for your consideration and appropriate reference the text of a draft bill including four of the civil rights proposals recommended by the President and discussed in some detail in his message of February 28, 1963.

The bill includes:

1. A provision for temporary and interim relief, including the appointment of temporary voting referees, in certain circumstances while voting suits are proceeding through the Federal courts.

2. A provision to expedite voting suits brought under the Federal civil rights statutes.

3. A provision to require the application of uniform standards, practices and procedures to all applicants seeking to register and to vote in Federal elections; to prohibit the disqualification of any applicant because of immaterial errors or omissions; and to require any literacy test given to an applicant for voting in a Federal election to be administered in writing.

4. A provision to establish a presumption in voting suits brought pursuant to subsection (c) of 42 U.S.C. 1971 that any person who has completed the sixth grade in an accredited school where instruction is predominantly in the English language possesses sufficient literacy to vote in any Federal election.

This bill is designed to remedy two major defects which experience has shown exist in the Civil Rights Acts of 1957 and 1960. While these acts have proven a useful tool in the protection of voting rights, a considerable period of time, measurable in terms of years, frequently elapses between the filing of a lawsuit and its ultimate conclusion. The result is that with respect to specific elections occurring during that period, the right to vote is lost forever. This bill, therefore, would accelerate the enjoyment of voting rights previously recognized by the Constitution and laws of this country, but too long denied to a substantial segment of our population.

Second, this bill would explicitly prohibit the application of arbitrary and discriminatory standards in determining the qualifications of persons seeking to register and to vote in Federal elections. As the President stated in his message, no one can rightfully contend that any voting registrar should be permitted to deny the vote to any qualified citizen through discriminatory administration of qualifying tests, or upon the basis of minor errors in filling out a complicated form which seeks only information. Yet the experience of this Department has been that such arbitrary and discriminatory practices play a major role in the deprivation of the right of otherwise qualified citizens to vote.

The need for legislation to correct this administrative abuse and to alleviate the delay now experienced by many of our fellow citizens in the enjoyment of their right to vote cannot be overemphasized. The Department therefore urges that Congress give prompt and favorable consideration to this bill.

The Bureau of the Budget has advised that this legislation is in accord with the program of the President.

Sincerely,

ROBERT KENNEDY,
Attorney General.

I. THE RIGHT TO VOTE

The right to vote in a free American election is the most powerful and precious right in the world—and it must not be denied on the grounds of race or color. It is a potent key to achieving other rights of citizenship. For American history—both recent and past—clearly reveals that the power of the ballot has enabled those who achieve it to win other achievements as well, to gain a full voice in the affairs of their State and Nation, and to see their interests represented in the governmental bodies which affect their future. In a free society, those with the power to govern are necessarily responsive to those with the right to vote.

In enacting the 1957 and 1960 Civil Rights Acts, Congress provided the Department of Justice with basic tools for protecting the right to vote—and this administration has not hesitated to use those tools. Legal action is brought only after voluntary efforts fail; and, in scores of instances, local officials, at the request of the Department of Justice, have voluntarily made voting records available or abandoned discriminatory registration, discriminatory voting practices, or segregated balloting. Where voluntary local compliance has not been forthcoming, the Department of Justice has approximately quadrupled the previous level of its legal effort—investigating coercion, inspecting records, initiating lawsuits, enjoining intimidation, and taking whatever followup action is necessary to forbid further interference or discrimination. As a result, thousands of Negro citizens are registering and voting for the first time—many of them in counties where no Negro had ever voted before. The Department of Justice will continue to take whatever action is required to secure the right to vote for all Americans.

Experience has shown, however, that these highly useful acts of the 85th and 86th Congresses suffer from two major defects. One is the usual long and difficult delay which occurs between the filing of a lawsuit and its ultimate conclusion. In one recent case, for example, 19 months elapsed between the filing of the suit and the judgment of the court. In another, an action brought in July 1961 has not yet come to trial. The legal maxim, "Justice delayed is justice denied," is dramatically applicable in these cases.

Too often those who attempt to assert their constitutional rights are intimidated. Prospective registrants are fired. Registration workers are arrested. In some instances, churches in which registration meetings are held have been burned. In one case where Negro tenant farmers chose to exercise their right to vote, it was necessary for the Justice Department to seek injunctions to halt their eviction and for the Department of Agriculture to help feed them from surplus stocks. Under these circumstances, continued delay in the granting of the franchise—particularly in counties where there is mass racial disfranchisement—permits the intent of the Congress to be openly flouted.

Federal executive action in such cases—no matter how speedy and how drastic—can never fully correct such abuses of power. It is necessary instead to free the forces of our democratic system within these areas by promptly insuring the franchise to all citizens, making it possible for their elected officials to be truly responsive to all their constituents.

The second and somewhat overlapping gap in these statutes is their failure to deal specifically with the most common forms of abuse of discretion on the part of local election officials who do not treat all applicants uniformly.

Objections were raised last year to the proposed literacy test bill, which attempted to speed up the enforcement of the right to vote by removing one important area of discretion from registration officials who used that discretion to exclude Negroes. Preventing that bill from coming to a vote did not make any less real the prevalence in many counties of the use of literacy and other voter qualification tests to discriminate against prospective Negro voters, contrary to the requirements of the 14th and 15th amendments, and adding to the delays and difficulties encountered in securing the franchise for those denied it.

An indication of the magnitude of the overall problem, as well as the need for speedy action, is a recent five-State survey disclosing over 200 counties in which fewer than 15 percent of the Negroes of voting age are registered to vote. This cannot continue. I am, therefore, recommending legislation to deal with this problem of judicial delay and administrative abuse in four ways:

First, to provide for interim relief while voting suits are proceeding through the courts in areas of demonstrated need, temporary Federal voting referees should be appointed to determine the qualifications of applicants for registration and voting during the pendency of a law-suit in any county in which fewer than 15 percent of the eligible number of persons of any race claimed to be discriminated against are registered to vote. Existing Federal law provides for the appointment of voting referees to receive and act upon applications for voting registration upon a court finding that a pattern or practice of discrimination exists. But to prevent a successful case from becoming an empty victory, insofar as the particular election is concerned, the proposed legislation would provide that, within these prescribed limits, temporary voting referees would be appointed to serve from the inception to the conclusion of the Federal voting suit, applying, however, only State law and State regulations. As officers of the court, their decisions would be subject to court scrutiny and review.

Second, voting suits brought under the Federal civil rights statutes should be accorded expedited treatment in the Federal courts, just as in many State courts election suits are given preference on the dockets on the sensible premise that, unless the right to vote can be exercised at a specific election, it is, to the extent of that election, lost forever.

Third, the law should specifically prohibit the application of different tests, standards, practices, or procedures for different applicants seeking to register and vote in Federal election. Under present law, the courts can ultimately deal with the various forms of racial discrimination practiced by local registrars. But the task of litigation, and the time consumed in preparation and proof, should be lightened in every possible fashion. No one can rightfully contend that any voting registrar should be permitted to deny the vote to any qualified citizen, anywhere in this country, through discriminatory administration of qualifying tests, or upon the basis of minor errors in filling out a complicated form which seeks only information. Yet the Civil Rights Commission, and the cases brought by the Department of Justice, have compiled one discouraging example after another of obstacles placed in the path of Negroes seeking to register to vote at the same time that other applicants experience no difficulty whatsoever. Qualified Negroes, including those with college degrees, have been denied registration for their inability to give a reasonable interpretation of the Constitution. They have been required to complete their applications with unreasonable precision, or to secure registered voters to vouch for their identity, or to defer to white persons who want to register ahead of them, or they are otherwise subjected to exasperating delays. Yet uniformity of treatment is required by the dictates of both the Constitution and fair play; and this proposed statute, therefore, seeks to spell out that principle to ease the difficulties and delays of litigation. Limiting the proposal to voting qualifications in elections for Federal offices alone will clearly eliminate any constitutional conflict.

Fourth, completion of the sixth grade should, with respect to Federal elections, constitute a presumption that the applicant is literate. Literacy tests pose especially difficult problems in determining voter qualification. The essentially subjective judgment involved in each individual case, the difficulty of challenging that judgment, have made literacy tests one of the cruelest and most abused of all voter qualification tests. The incidence of such abuse can be eliminated, or at least drastically curtailed, by the proposed legislation providing that proof of completion of the sixth grade constitutes a presumption that the applicant is literate.

Finally, the 87th Congress—after 20 years of effort—passed and referred to the States for ratification a constitutional amendment to prohibit the levying of poll taxes as a condition to voting. Already 13 States have ratified the proposed amendment and in 3 more one body of the legislature has acted. I urge every State legislature to take prompt action on this matter and to outlaw the poll tax—which has too long been an outmoded and arbitrary bar to voting participation by minority groups and others—as the 24th amendment to the Constitution. This measure received bipartisan sponsorship and endorsement in the Congress, and I shall continue to work with Governors and legislative leaders of both parties in securing adoption of the anti-poll-tax amendment.

PATENT POLICY

Mr. McCLELLAN. Mr. President, I introduce, for appropriate reference, a bill to establish a uniform national policy concerning proprietary rights in inventions made through the expenditure of public funds.

The Subcommittee on Patents, Trademarks, and Copyrights of the Committee on the Judiciary has been engaged for some time in a study of the patent policies and practices of the various Government departments and agencies. The subcommittee has given particular attention to determining what disposition shall be made of patent rights in inventions arising from Government-financed research and development contracts. The need for a determination by the Congress as to this Government's patent policy is made clear by the fact that during the present fiscal year it is estimated that the Federal Government will obligate $14.7 billion for research and development. Government agencies conducting research in related areas have different patent policies. The general policy relating to disposition of such patent rights should be made by the Congress and not left to the discretion of each Government department.

A number of bills have been introduced on this subject. These have ranged from almost total ownership of patent rights by the Government to bills which would almost totally exclude the Government from such ownership. The Patents Subcommittee, during the 87th Congress, held extensive hearings for the purpose of receiving testimony from all individuals and groups who could make a useful contribution. The record of these hearings has been carefully studied and additional proposals have been explored by the subcommittee.

While this subject will require further study and possibly additional hearings, I have concluded that the most appropriate legislation would be a bill which would provide general guidelines to be observed by Government departments in disposing of patent rights. I am also of the view that no informed judgment can be made as to the disposition of patent rights at the time when the contract is negotiated and that such determination should be deferred until the inventions are actually disclosed.

The bill which I have introduced today, in my opinion, constitutes a reasonable solution to a complex question—a question which should be resolved. While the bill reflects what I believe is a sound approach to this matter, I do not pretend that it is perfect. I therefore invite those who are interested in this subject to communicate to the subcommittee their views as to this bill and any suggestions which they have for amendments. After reviewing the entire situation, the subcommittee will decide whether additional hearings are required.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1290) to establish a uniform national policy concerning proprietary rights in inventions made through the expenditure of public funds, and for other purposes, introduced by Mr. McClellan, was received, read twice by its title, and referred to the Committee on the Judiciary.

AUTHORIZATION FOR SECRETARY OF COMMERCE TO EMPLOY ALIENS IN A SCIENTIFIC OR TECHNICAL CAPACITY

Mr. MAGNUSON. Mr. President, by request, I introduce, for appropriate reference, a bill to authorize the Secretary of Commerce to employ aliens in a scientific or technical capacity. I ask unanimous consent that a letter from the Secretary of Commerce, together with a statement of purpose and need for the proposed legislation, be printed in the Record.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter and statement will be printed in the Record.

The bill (S. 1291) to authorize the Secretary of Commerce to employ aliens in a scientific or technical capacity, introduced by Mr. Magnuson, by request, was received, read twice by its title, and referred to the Committee on Commerce.

The letter and statement presented by Mr. Magnuson are as follows:

The Secretary of Commerce,
Washington, D.C., March 13, 1963.

Hon. Lyndon B. Johnson,
President of the Senate,
U.S. Senate, Washington, D.C.

Dear Mr. President: There are attached four copies of a proposed bill "To authorize the Secretary of Commerce to employ aliens in a scientific or technical capacity."

There are also attached four copies of a statement of purpose and need for the proposed bill.

We are advised by the Bureau of the Budget that it would interpose no objection to the submission of this proposed legislation.

Sincerely yours,

Luther H. Hodges,
Secretary of Commerce.

Statement of Purpose and Need

The proposed legislation will provide authority for the Department of Commerce to employ noncitizens in scientific or technical work. Authority, similar to that here sought, was granted by the Congress recently to the National Aeronautics and Space Administration. Congress has exempted the Department of Defense from the prohibitions against employment of noncitizens. The Departments of State and Agriculture, the Immigration and Naturalization Service, and the Public Health Service have also been given authority by Congress to employ noncitizens for certain necessary purposes.

On various occasions, agencies of this Department engaged in scientific and technical work of critical national importance have found that the only persons qualified and available to undertake these projects could not be hired because, as noncitizens, they were ineligible for employment by the Government.

The proposed legislation would enable the Department to make the best possible use of available scientific manpower. Any employment under the proposed legislation would, of course, continue to be subject to a prior determination that no qualified U.S. citizen is available for the particular position. The legislation provides adequate authority for investigation to determine the suitability and security status of aliens who may be employed thereunder. The Department of course has even more stringent security standards for aliens than it has for citizen applicants for comparable positions.

While the problems created by the prohibition on the hiring of aliens are present in several of the bureaus of the Department of Commerce, those problems are particularly severe at the National Bureau of Standards.

In certain areas of research now important in the technical program of the National Bureau of Standards, the availability of U.S. citizens with adequate specific training is extremely limited. Two factors have contributed to this situation. In the first place, the well-recognized general shortage of scientists and engineers in the United States has definitely restricted the Bureau's ability to fill important research positions. Secondly, some important Bureau research programs are in areas of the physical sciences that have not in recent years been fashionable or attractive to American students and scientists. In such fields, the training of new research scientists in American universities has been limited and the suppy of new research personnel has therefore continued to decline.

The following examples will illustrate the problems:

1. A number of our most important national programs are increasingly in need of precise data on atomic properties that can be obtained only through an intensive program in atomic spectroscopy. Such information is essential for example, in interpreting the astrophysical data obtained by space vehicles and other astronomical observatories, in measuring the energy and understanding the flow of energy in plasmas such as those involved in thermonuclear fusion research, and in understanding the physical processes involved in rocket propulsion. Programs such as these require information on the precise value of the spectral wavelengths of the radiated energy of the atoms of each of the elements and precise measurements of the rates with which atoms radiate or absorb energy.

The analysis of atomic spectra occupied the majority of the effort of academic physicists during the late 1920's and early 1930's, but most of the physicists trained in atomic spectroscopy during the early 1930's shifted their research interests to nuclear physics later in the decade. Through this change in interest and the retirement of previously active spectroscopists, great laboratories which once made major contributions to the field have drastically reduced their work in atomic spectroscopy. Thus, the recently increased demand for an enormous quantity of precise data falls primarily upon the National Bureau of Standards just at a time when American universities have been producing very few trained personnel in this field.

Although disappearing from American universities, spectroscopy is still an active field of study and research interest abroad. Major institutions are producing qualified atomic spectroscopists in Sweden, Israel, Great Britain, the Netherlands, Spain, and Belgium. While the nationals of some of these countries may be employed by the National Bureau of Standards under the present statutory authorization, it is desirable to extend the authorization to all such countries so that the Bureau may recruit the best-qualified research personnel for its particular programs.

2. A similar situation exists with respect to applied mathematics. In a number of relatively "unfashionable" branches of mathematics, the general shortage of trained mathematicians is aggravated by the lack of interest on the part of American students. Numerical analysis, for example, which involves the use of numerical techniques for the solution of problems of physics, chemistry, and engineering is a relatively new mathematical field in the United States. It has, however, become an important field in recent years because of the availability of powerful computers and the applicability of numerical analysis to extremely difficult problems in science and technology. One of the most valuable sources of trained personnel in this field of mathematics is Switzerland but the National Bureau of Standards is, under the present statute, precluded from the employment of Swiss nationals.

3. The neutron measurement field is another area in which the Bureau could obtain important assistance from Swiss scientists. Many segments of Government and industry look to the National Bureau of Standards for basic information on neutron cross sections and neutron polarization. Such data are of great importance in radiation shielding problems vital to defense and in reactor development. The Bureau has experienced great difficulty in recruiting competent scientists in this increasingly important field. The Bureau is aware of at least two Swiss nationals who are highly qualified for this work and probably would be interested in coming to the National Bureau of Standards if suitable authority was available for their employment.

REPEAL OF SECTION 1(8) OF INTERSTATE COMMERCE ACT

Mr. MAGNUSON. Mr. President, by request, I introduce for appropriate reference, a bill which would repeal section 1(8) of the Interstate Commerce Act, known as the commodities clause.

This bill is introduced at the request of the Transportation Association of America, and I ask unanimous consent that a letter from that association as well as a statement of justification prepared by that association be included in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter and statement of justification will be printed in the RECORD.

The bill (S. 1292) to repeal section 1(8) of the Interstate Commerce Act, commonly known as the commodities clause, was received, read twice by its title, and referred to the Committee on Commerce.

The letter and statement of justification presented by Mr. MAGNUSON are as follow:

TRANSPORTATION ASSOCIATION
OF AMERICA,
Washington, D.C., March 15, 1963.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Commerce Committee,
U.S. Senate, Washington, D.C.

DEAR CHAIRMAN MAGNUSON: You will recall that during the last Congress, you introduced a bill, S. 734, to repeal section 1(8) of the Interstate Commerce Act, commonly known as the commodities clause. This clause presently restricts a railroad from transporting in interstate commerce commodities—other than lumber and the manufactured products thereof—which it owns, produces, or in which it has any interest, except commodities used in its business as a common carrier. A photocopy of your statement on the floor of the Senate when introducing this bill is enclosed, as taken from the CONGRESSIONAL RECORD of January 31, 1961.

Since the conditions justifying such legislation are just as valid today as at the time of introduction of this bill, we are hopeful that you will again consent to introduce such a bill. If agreeable, you could use approximately the same statement as given on January 31, 1961, or you might consider remarks along the lines of the enclosed statement. Also enclosed is a copy of the actual language of the bill, which you can note is quite simple.

As you undoubtedly are well aware, the President, in his transportation message of 1962, recommended that this clause be repealed. He stated further:

"The need for this provision, which goes back to the days of oppressive railroad monopoly, has largely passed; and its current effect is to handicap the railroads in competing with other modes of transportation. The antitrust laws can insure protection against the possible abuse by a railroad of its dual status as shipper and carrier."

Since this recommendation is thus part of the President's transport program, we hope that you will include any bill calling for repeal of the commodities clause with the administration's omnibus bill when you schedule the latter for hearings in the coming months. TAA would, of course, like to present testimony in support of repeal of the commodities clause.

Sincerely,

HAROLD F. HAMMOND,
President.

STATEMENT OF JUSTIFICATION

It is recommended that section 1(8) of the Interstate Commerce Act, commonly known as the commodities clause be repealed.

The clause, as it now stands, reads as follows:

"(8) From and after May 1, 1908, it shall be unlawful for any railroad company to transport from any State, territory, or the District of Columbia, to any other State, territory, or the District of Columbia, or to any foreign country, any article or commodity, other than timber and the manufactured products thereof, manufactured, mined or produced by it, or under its authority or which it may own in whole or in part, or in which it may have any interest, direct or indirect, except such articles or commodities as may be necessary and intended for its use in the conduct of its business as a common carrier."

Thus, the commodities clause presently restricts a railroad company from transporting in interstate commerce commodities which it owns (other than timber and the manufactured products thereof), produces, or in which it has any interest, except commodities which may be used in its business as a common carrier.

Since the passage of the clause—over 50 years ago—other acts have been enacted to provide for the regulation of other modes of transportation. None of these acts contain a provision similar to the commodities clause.

Competition between the various types of transport has developed since that time to a point of great intensity. This highly competitive condition in today's transportation field has made this clause an unnecessary and outmoded form of regulation that unfairly burdens the railroads.

The history of the commodities clause indicates that abuses at which it was originally directed would be reached by the antitrust laws or by the Interstate Commerce Commission's control over discrimination and railroad service. Since the clause first became effective, the jurisdiction of the ICC has greatly increased and the Commission now has the power to correct and prevent discrimination and preferential treatment.

The railroads presently occupy no monopoly position in the transport industry; in fact, their relative share of both total freight and passenger traffic has steadily declined since World War II. They are faced with intense competition from thousands of other carriers—both regulated and unregulated—and none of them is prevented from engaging in other nontransport fields by a commodities clause. Nonrail carriers are continuing to expand into many types of nontransport business operations.

Many of the largest and most prosperous corporations in the United States carry their own commodities in their own barges, ships, and trucks. It is estimated that at least one half of the total truck ton-mileage is moved by shippers' privately owned or leased equipment. If the commodities clause were applied in reverse, other industries would be prohibited from performing their own transportation services.

The President, in his transportation message of 1962, specifically called for repeal of the commodities clause. He stated: "The need for this provision, which goes back to the days of oppressive railroad monopoly, has largely passed; and its current effect is to handicap the railroads in competing with other modes of transportation. The antitrust laws can insure protection against the possible abuse by a railroad of its dual status as shipper and carrier."

Therefore, in order to relieve the railroads of an outdated regulation and to help "provide fair and impartial regulation," as called for in the declaration of national transportation policy in the Interstate Commerce Act, section 1(8) of the act should be repealed.

AMENDMENT OF SECTION 64(a)(2) OF THE BANKRUPTCY ACT

Mr. JOHNSTON. Mr. President, I introduce for appropriate reference, a bill to amend section 64(a)(2) of the Bankruptcy Act and ask that it lie over for 3 days for the benefit of those who want to cosponsor this important legislation.

I ask unanimous consent that the accompanying explanation of the bill also be printed immedately following the draft of the bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and explanation will be printed in the RECORD, and the bill will lie on the desk as requested by the Senator from South Carolina.

The bill (S. 1295) to amend section 64(a)(2) of the Bankruptcy Act, introduced by Mr. JOHNSTON, by request, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That clause (2) of subsection (a) of section 64 of the Bankruptcy Act, as amended, is further amended by inserting therein, immediately after the semicolon at the end thereof, the following: "and, further, for the purpose of establishing priority under this clause and for computation of the maximum claim to which priority can be given, payments due to any fund or plan established for the purpose of providing employee benefits, which are based upon hours worked or wages paid, shall, if such payments would qualify as deductible from the employer's gross income under the provisions of the Internal Revenue Code, be deemed to be wages assigned to the fund or plan by the individual employees upon whose service or wages such payments are based;".

The explanation presented by Mr. JOHNSTON is as follows:

EXPLANATION OF DRAFT BILL TO AMEND SECTION 64(a)(2) OF THE BANKRUPTCY ACT

The draft bill would amend section 64(a)(2) of the Bankruptcy Act to place employer payments owing to an employee benefit plan or fund, which are based on hours worked or wages paid, in the same priority class as cash wages. This is done by providing that such payments shall be deemed to be "wages" assigned to the plan by the employee.

More than a century ago Congress established the firm principle of public policy that the wages of workers who face financial need because of their employer's bankruptcy should have some measure of protection. To provide such protection, the Federal bankruptcy law was amended in 1841 to give a certain amount of cash wages owed employees a degree of priority with respect to the assets available. Since that time these provisions have been extended and improved at various times. Under existing law, however, an employee benefit plan is treated as a general creditor, and as such must compete with other general creditors for any remaining assets, without regard to the amounts such creditors may have been paid prior to the time the employer finally became bankrupt.

The draft bill recognizes the desirability—in fact, the basic equity—of providing a similar priority for payments which an employer has promised his employees he would make on their behalf to maintain a fund which furnishes health and welfare benefits in which they may share. Such payments are to an ever-increasing extent being considered as a form of additional compensation to the employees.

The concept of wages has broadened considerably in the last several decades, particularly with respect to employee benefit plans providing pensions, health insurance, disability insurance, life insurance, and similar benefits. When wages were first accorded a degree of priority in Federal bankruptcy law, these employee benefit plans were nonexistent. Even as late as 1938, when the present order of priority for wages was established in the Bankruptcy Act, they were relatively unknown.

However, the rapid increase in the coverage of two types of employee benefits—hospital insurance and pensions—indicates their increasing importance to wage and salary workers. Since 1940, the first year for which reasonably complete data are available, the number of persons provided hospital expense protection by employee benefit plans has increased from about 10 million to over 100 million persons. The magnitude of this development is further underscored when considered in terms of the tremendous sums of money involved. Almost $60 billion is now invested in all types of welfare and pension plans, and this amount is increasing annually by some $5 billion. Employee benefit plans are clearly an integral part of our Nation's wage structure.

The humanitarian considerations involved also present compelling reasons for amending the act as proposed in the draft bill. The existence of a wage priority in bankruptcy proceedings is intended to provide a protective cushion for workers who depend upon wages for their support, and who face immediate financial needs because of a loss of wages resulting from their employer's bankruptcy. This need frequently results not only from the loss of regular wage payments, but also from the possible loss of protection of benefit plans into which a portion of the employees' wages may have been placed in reserve over a period of many years. It is when an employer's business fails that his employees or their families may well most urgently need the protection these plans normally provide.

Further, at a time when an employer's business is facing bankruptcy, he is perhaps most likely to apply his available funds to the more pressing demands of his ordinary creditors and to fail in his obligation to contribute to a plan such as this bill is designed to protect.

The proposed legislation will also operate to help employees in the very situation where bankruptcies are most likely to occur, i.e., the small, marginal type of employer. The large, stable, and established employers do not usually become bankrupt. The garment and construction industries are leading examples of this type of small employer. Individuals in these industries are constantly buying a few capital items and starting their own business, with a few employees. Many of them fail, even in times of reasonably good business conditions. The proposed legislation would help the employees of this type of enterprise, which by its very nature is unstable.

In sum, the draft bill would establish, for the first time, a priority in bankruptcy proceedings for payments due pension or welfare funds based on hours worked or wages paid. Such a priority will enable the Bankruptcy Act to give effect under present economic conditions to the sound principle of public policy that the wages of workers who face financial need because of their employer's bankruptcy should be protected.

COMPULSORY LICENSING OF PRESCRIPTION DRUG PATENTS

Mr. KEFAUVER. Mr. President, one of the important accomplishments of the last Congress was the passage of Public Law 87-781 relating to drugs, which has come to be referred to as the Kefauver-Harris drug law. Reflecting the thalidomide tragedy, references to this omnibus statute have often stressed its safety features, which, though important, represent only one of its three major objectives. In addition to improving the safety of drugs, the law is designed to improve the quality and lessen the quantity of advertising and promotional material directed to physicians. And, in its original form, it was intended to bring about lower prices of all types of drugs, an objective which has been accomplished only in part. Prices of patented drugs, which represent about 60 percent of all prescriptions, were to be reduced through compulsory licensing under carefully specified conditions. Prices of nonpatented drugs were to be lowered as a result of a stimulus to prescribing by generic name which, it was anticipated, would result from a number of the bill's provisions.

The savings which are possible under generic-name prescribing can be illustrated with a few examples which can be provided by a contrast of the prices charged by McKesson & Robbins for generic-name products with the prices of the major drug companies for their trademark versions of the same products. McKesson's price for the nervous system stimulant, dextro-amphetamine sulfate, is only one-fifteenth that of the most widely selling trade-name make of a large drug company, to wit, Smith Kline & French's Dexedrine. Both digitoxin, used in heart cases, and isoniazid, used in the treatment of tuberculosis, are sold by McKesson at about half the prices charged by large manufacturers for their trade-name products.

As finally enacted, the compulsory licensing provision was not incorporated, although on a rollcall vote it received the support of 28 Senators. All of the provisions designed to promote generic-name prescribing, however, were retained. Indeed, short of requiring by statute that all prescriptions be written in terms of a drug's generic name, there is little that the Congress could have done to promote generic-name prescribing that it did not do.

LOWER PRICES FOR NONPATENTED DRUGS

Specifically, the new law sought to overcome each of the three principal barriers to generic-name prescribing which have existed in the past. The first obstacle has been the apprehension by physicians that if they prescribe by generic names, their patients will not receive a drug of adequate and acceptable quality. Their position, reiterated time and again, is that they have confidence in the trade-name products of the large companies. Despite the disclosure by the Antitrust and Monopoly Subcommittee that most prescription drugs are produced in bulk form by only one or in most cases no more than three companies and that all other companies, large and small, necessarily obtain their supplies from these few sources, there has thus far been no discernible trend toward generic-name prescribing. It is hoped that such a trend will develop as physicians become aware of the provisions in the new law designed to assure that any drug sold in the United States will be of fully adequate and acceptable quality, regardless of whether it is prescribed by generic or trade name and regardless of whether it is supplied by a large or a small company. Insofar as prescription drugs are concerned, these provisions greatly extend the powers of the Food and Drug Administration to inspect drug plants; they require that all drug plants establish recognized quality manufacturing controls; and they provide that all drug establishments be registered with the Food and Drug Administration and be inspected at least every 2 years.

A second obstacle was the hiding, masking, and camouflaging of the generic name, a practice based on the elemental reasoning that a physician could not prescribe by generic name if he did not know what it was. During one of our hearings, the head of the Pharmaceutical Manufacturers Association, Dr. Smith, was handed an advertisement that had been sent to physicians and was asked to locate the generic name. That he was unable to do so is understandable in view of the fact that it was printed in microscopic type alongside the stem of one of the letters of the trade name printed in very large type. In order to be sure that physicians are constantly made aware of a drug's generic name, the new law provides that in all advertisements, labels, and labeling, wherever the trade name is shown, it shall be followed by the generic name in type at least half as large as that used for the trade name.

I wish to emphasize the word "wherever." Wherever the trade name is shown, whether on the label, in advertisements, in labeling, such as brochures, the generic name must be printed in type at least one-half as large as that used for the trade name.

The final obstacle has been the practice by the drug companies in making their generic names so long and complex that they cannot be remembered, spelled, pronounced, or written. The new law gives to the Secretary of Health, Education, and Welfare the authority to designate generic names which are to be simple and useful. He can use this authority under two conditions; first, when he is requested to do so by the compiler of an official compendium, such as the "United States Pharmacopeia," and second, upon review of generic names which under the law he is required to make.

Thus, since physicians should be able to have confidence in the quality of all prescription drugs, since the generic names will constantly be brought to their attention, and since the generic names themselves will tend to become simpler and more useful, there should take place a pronounced and continuing increase in generic-name prescribing.

May I point out that since the time our hearings started, almost 4 years ago, there has been a marked increase in the buying of drugs by generic name, principally by institutional buyers. The Military Medical Supply Agency of the U.S. Government—MMSA—constantly buys drugs by generic name, saving the taxpayers millions of dollars. Incidentally, those are the drugs Senators get when they go to Walter Reed Hospital or Bethesda Naval Hospital, or when they call Dr. Calver's office. The same is true of the Veterans' Administration.

In addition, many States have saved large sums of money through buying drugs by generic name.

The distinguished Senator from Connecticut [Mr. RIBICOFF], when he was Governor of Connecticut, inaugurated a program of this kind, which has saved the State of Connecticut substantial sums in the purchase of drugs. Also, hospitals, by the use of formularies, have been buying drugs by generic name.

All of this goes to show that the widespread apprehension that drugs prescribed by generic names might not be as safe or as efficacious as trade name drugs does not have a solid foundation. It has certainly not been borne out by actions of the Federal Government and State governments. But whatever basis existed for that apprehension should now be eliminated by the new safeguards which should assure all physicians that drugs manufactured by any company, large or small, are going to meet acceptable standards.

THE HIGH PRICES OF PATENTED DRUGS

But these reforms, important as they are, will have little effect on the prices of patented drugs, which, I again want to stress, constitute the majority of all prescriptions. For these products the customer will pay the same price regardless of whether the prescription is written in terms of its trade name or its generic name. It is in this area that new legislation is called for.

Let me emphasize that the prescription drug industry is a big industry, exceeding in size $3 billion a year at the manufacturers' level. It is larger than that, of course, when we include the retail markup. Plus the amount paid for therapeutic devices, the amount spent on drugs amounts each year to more than the American people pay to physicians for treatment.

As we all know, a private monopoly anywhere, in any industrial field, usually means arbitrarily high prices unrelated either to costs of production or to reasonable profits. Monopoly in the field of prescription drugs is, quite conspicuously, no exception. Last August, in proposing legislation to correct this unfortunate situation, I presented some specific case examples. I want to present some of them again today, because, in the stress of discussing the important legislation that was passed, the significance of monopoly pricing in drugs may not have been fully understood.

Let me emphasize again that these cases are not exceptions; they represent the ordinary, everyday, garden variety of pricing practices in the ethical drug field. Take, for example, prednisone, which is a cortical steroid widely used in the treatment of arthritis.

The cost for this drug is illustrated by a chart in the back of the Chamber, the chart to the right.

Many elderly people, living on pensions, take this drug regularly every day of their lives. Usually they have to take three tablets daily; if the doctor prescribes Meticorten, the brand name of Schering Corp., which is the leading seller of the drug, it costs them 30 cents a tablet, or a daily maintenance cost of $1. Many retirement pensions are around $60 a month; so Senators can see that $30 per month for prednisone takes a big chunk out of their monthly allotments.

During the hearings of the Subcommittee on Antitrust and Monopoly, evidence was presented showing that Schering's costs of producing 1,000 tablets of Meticorten, tableted and bottled, were roughly $13. Against a price to the druggist of $170, this represents a markup of 1,208 percent. As the term customarily implies, the "production costs" which I am referring to in this discussion exclude distribution costs, profit, and that portion of profit taken by taxes. Schering was offering this material to the Military Medical Supply Agency, the purchasing agency for the U.S. Armed Forces, for about $18. In England, Schering's price for Meticorten is less than one-half of the price in this country; the retail druggist there pays $75 as against $170 here.

In England the druggist pays about $75 a thousand, or 7½ cents each, as against $170, or 17 cents a tablet, here. And the cost to the patient in that country and throughout Europe is substantially less than it is here.

These figures are depicted in the chart in the rear of the Chamber. This is an important drug, taken by many elderly persons suffering from arthritis.

McKesson & Robbin's factory cost is $8.99 a thousand. The bid price to the Military Medical Supply Agency, which would include, of course, a substantial profit, is $17.97 a thousand. Schering's price to the foreign druggist, in England, is $75.30 a thousand. The price to the druggist in the United States is $170 a thousand. The druggist's price to the patient is about $270 a thousand.

Breaking this down in terms of costs per tablet, the production cost is a little less than 0.9 cent. The bid to the MMSA is 1.8 cents a tablet. The price to the druggist in England is 7.5 cents per tablet. The price to the druggist in the United States is 17 cents a tablet.

I am glad to yield to the Senator from Illinois.

Mr. DOUGLAS. I was going to ask a question about the price to the ultimate consumer. The Senator has covered the point.

Mr. KEFAUVER. The price to the ultimate consumer is around 27 cents a tablet. Sometimes it is a little higher, and sometimes a little less, depending on where it is purchased.

Though primarily a wholesale concern, indeed the largest in the country, McKesson & Robbins have long been engaged in drug manufacturing. No one, to my knowledge, doubts the quality of their products. They are manufacturers comparable to the very best. Their cost of $9 per 1,000 includes the cost of purchasing the finished material, plus the expenses of tableting and bottling. Using this cost as a base for calculation, Schering's markup is 1,789 percent.

There are, however, two items included in our cost estimates that are excluded from McKesson's actual costs, which would explain part of the difference between the two figures: First, a profit on the tableting and bottling operations; and second, an allowance for research costs. Speaking of research costs, the subcommittee found that expenditures by the major drug companies on research averaged only 6.3 percent of their total sales dollar for drugs, as compared to 24.8 percent for selling, distribution, and advertising expenses, and 25.8 percent for profit—of which, of course, about half went to taxes.

If Senators think this is phenomenal, let us take a look at reserpine, another important drug used as a hypotensive. Reserpine is not a new drug; the crude material, rauwolfia, has been used for centuries in India and other countries for the treatment of physical and mental disorders.

It is a plant, the root of which has been used as a tranquilizer in India for hundreds of years. Reserpine is a more refined version of this older drug, and the patent on it is held by C.I.B.A., a Swiss company, which markets the product under the name Serpasil. Our estimate of C.I.B.A.'s production cost per 1,000 tablets was $2.48. The drug is sold abroad to druggists for $10.50; in this country the druggist has to pay $39.50. On the U.S. price this represents a markup of almost 1,500 percent.

The subcommittee was greatly surprised to learn that C.I.B.A. was offering reserpine to the MMSA for 52 cents per 1,000 tablets.

In the normal course of business they would not be offering it for this price unless they expected to make a profit. In a word, it was offering 1,000 tablets to this buyer for the same price it was offering 13 tablets to the druggists. This did not look so surprising, however, when McKesson & Robbins informed the subcommittee that its cost, in purchasing this material in the open market, was about 63 cents per 1,000 tablets. Using this cost as a base, the markup of C.I.B.A.'s product is truly phenomenal—about 6,170 percent.

I could continue indefinitely with this type of cost-price comparison on drugs, but I will present only two more. One of the most revolutionary developments in drug research is the oral antidiabetic, tolbutamide, which was invented by the German firm, Hoechst. Upjohn is the exclusive licensee of Hoechst in this country, and under our system of patent protection no other company is allowed to sell the drug in this country. Here the situation is very different from the two drugs previously discussed. In the case of prednisone, there has been a patent interference in progress in the Patent Office for several years. A patent interference occurs when two or more parties claim priority of invention and the Patent Office must reach a decision on which claimant is entitled to the patent. Since no patent has yet been issued, any company is free to market prednisone. I might add that the two contesting parties are Schering and the Syntex Corp., formerly an independent Mexican company but now owned by Allen & Co., an investment house.

The kind of competition which has occurred in the marketing of prednisone will not happen on any new products developed by Syntex, for this company is now party to a contract with Eli Lilly & Co., under which all of its new drug inventions will be offered to Lilly on an exclusive basis, with Syntex retaining the right to sell in final packaged form only. Thus bulk sales to small drug companies—where real price competition exists—can no longer take place because all new products will be exclusively handled by Lilly and Syntex. The situation regarding reserpine is also unusual. Despite the patent issued to C.I.B.A., this company has chosen to make available the finished bulk material to other companies rather than exploit the full monopoly potential granted by the patent. It is generally believed that this decision was made because C.I.B.A. did not feel that it had a strong patent and it could not control the marketing of the unpatentable root material, rauwolfia.

In the case of tolbutamide, the monopoly held by Upjohn in this country is complete. It is the sole seller of this product to retail druggists in the United States. The subcommittee's estimate of Upjohn's costs for this drug, based on Upjohn's purchases of the finished bulk material from a Hoechst manufacturing subsidiary in Rhode Island, was $13 for 1,000 tablets, bottled and packaged. The price to the druggist is $83.40, and the same general level of prices has prevailed in sales to the MMSA. Yet in Germany, where the Hoechst Co. has had to recoup the costs of its research work, the price is $37. It should be noted that, in this case, Upjohn is the beneficiary of the pioneer work done abroad. It incurred no costs for research in the discovery of the drug; its research costs were the necessary operating expenses of underwriting the clinical testing of the new material in this country before the Food and Drug Administration permitted tolbutamide to be marketed. The main argument in defense of these high markups that I have been presenting is that the money is needed for research. Here the costs for research were incurred by a foreign company which sells the product at less than half the U.S. price in its own country.

Another example is Thorazine, a potent tranquilizer. The price of the drug in France, where the research and development was conducted by Rhone-Poulenc, is 51 cents. The French firm owns the patent but has licensed Smith Kline & French, in Philadelphia, to market it in this country, where it is sold for $3.03, or roughly 6 times the price in the country where the research was conducted and the drug was developed.

One final example I wish to present: tetracycline, the widest-selling broad-spectrum antibiotic now sold throughout the world. This product is subject to strict patent control, with the Pfizer Co. holding the product patent. Suits have been instituted by the antitrust agencies charging conspiracy and fraud in securing the patent. The subcommittee's estimate of the factory cost for this product was $2.88 per 100. Again we were too high; documents subpenaed from Bristol, 1 of the 3 manufacturers in the United States, showed actual costs were $1.67 per hundred. Yet tetracycline is currently sold to retail druggists for around $26, a markup of over 1,450 percent.

On sales to the Military Medical Supply Agency the companies offered tetracycline first for $11, then $17, then $19, and then $17. It was not until the MMSA determined to go abroad to purchase tetracycline on a competitive basis that the dam broke. Pfizer then precipitately came down to a price of $6, but was underbid by a small American firm as well as by foreign companies which have won awards with bids, including transportation and customs, ranging from $2.08 to $3.

In terms of cost per tablet the actual manufacturing cost to Bristol for making a tablet of tetracycline, including the share of the company's total research expenses is 1.6 cents a tablet. The drug has been sold to MMSA for 3 cents a tablet. Yet, the price to the druggist is 26 cents a tablet. When the druggist sells the tablet to the patient or the sick person, the price is usually over 40 cents a tablet.

By any test, I think the prices on this and other drugs I have been talking about, and many others which could be discussed, are unreasonable, unconscionable and intolerable. Such prices are an unfair imposition upon the sick people of the United States.

THE TREATMENT OF DRUG PATENTS

The traditional American method of reducing excessive profits is by the injection of competition, which in the drug industry can readily be done through compulsory licensing. The patenting of drugs is handled in four different ways by the countries of the world. At one extreme are the United States, Belgium, and Panama, which grant unrestricted patent protection to both products and processes. Because of their unique properties of preserving and protecting the public health, virtually all other countries restrict in one way or another the patent protection accorded to drugs. At the opposite extreme from the United States is Italy, which grants neither product nor process patents. A third group of countries, such as Great Britain, grant product as well as process patents, but provide for compulsory licensing, which is often supplemented by direct price control.

In the fourth group, which includes the major European countries, the method historically followed is that exemplified by West Germany, which does not grant patents on drug products per se, but does grant them on drug processes, with the protection extending to the product as long as it is manufactured by that process; that is, the patent protection on the product disappears upon the discovery of an alternative process of manufacture. Mr. P. H. Federico, Examiner in Chief of the Patent Office, acknowledged that the manufacture of drugs is "particularly susceptible" to the development of alternative processes. The conceptual bases of the European system are: First, the long-held moral belief that no one should have the right to withhold from the public products which relieve suffering and may spell the difference between life and death; and second, the assumption that the granting of process patents would stimulate the discovery of alternative and cheaper methods of protection, which, because of the absence of product patents per se, would result in lower prices to consumers.

It is ironic that in the case of tolbutamide in Germany and reserpine in Switzerland, the companies which pioneered these inventions possess in their home countries only patents on processes of manufacture. Their licensees in this country, however, who contributed nothing to the basic discovery, are free to obtain under our laws not only process patents but product protection, as well. In the United States, at present, even if a company develops a superior process or a more economic method of manufacture, it is barred from making use of this invention because of the product protection that is accorded. In the case of tolbutamide, for example, any German company may use its own process to manufacture this important drug in competition with Hoechst; and the lower prices in that country indicate that this is a real incentive which has resulted in stimulating invention and has brought other manufacturers into the market in competition with Hoechst.

It seems to me that we in this country must face up to the fact that the health of the American people takes precedence over the unbridled exercise of monopoly power under product patents in drugs. For the last several years the stocks of the major drug companies have been a pet of Wall Street investors, and for good reason. In the ethical drug industry the rate of return on investment, after taxes, is higher than that of any other industry. Since 1957 it has averaged around 20 percent as compared with 10 percent for all manufacturing. The net profit on sales has also averaged about double that for all manufacturing. I am deeply gratified personally that the Congress enacted the drug legislation that was passed last October. But in all honesty I must say that there is still unfinished business which remains to be done. The immediate and urgent need is for drug prices to be brought down to reasonable levels. I believe that much could be accomplished in this direction if the modest proposal I am introducing today is passed.

A 500-PERCENT MARKUP SHOULD BE ENOUGH

Specifically, my bill, which I am introducing, and which is identical to the amendment voted on by the Senate—CONGRESSIONAL RECORD, volume 108, part 13, page 17415—requires compulsory licensing only for those drugs whose prices are clearly excessive, and as a rough measure of what constitutes a clearly excessive price I have taken the figure of 500 percent. Surely, a price which is more than five times the cost of production, including an appropriate allowance for research, is excessive. A markup of this magnitude should certainly be sufficient to cover all necessary distribution costs and still provide a more than reasonable profit.

Moreover, compulsory licensing will not be required until after 3 years following the issuance of the patent. Since it usually takes at least 2 years for the Patent Office to process a patent application, this will give the applicant in most cases an effective monopoly of 5 years or more, which in the case of most drugs is more than sufficient to recoup any research expenses incurred in developing the drug.

After compulsory licensing is required, the patent owner will continue to receive a fair royalty from sales by the licensees, which will be limited, incidentally, to sales in finished or packaged form. On such sales the licensee will pay a royalty of up to 8 percent. This is a generous royalty provision. In virtually all of the licensing contracts submitted by the drug companies and published in the record of the subcommittee hearings, the royalties charged were well under 8 percent. For example, on tetracycline, one of the most profitable patent monopolies in the history of the drug industry, Pfizer, who obtained the product patent, has charged 3½ percent royalty to its two licensees, American Cyanamid and Bristol. American Cyanamid, which holds important process patents on this antibiotic, has been charging its licensees, Pfizer and Bristol, a 5 percent royalty. On benzathine penicillin, another important patent monopoly in the antibiotics field, the royalty charged is 2½ percent on the drug for human and veterinary use, and 1 percent used in animal feeds. On prednisone and reserpine the royalties on sales in this country are 6 percent.

In the Senate debate on this provision last year, the Senator from Rhode Island [Mr. PASTORE] put his finger on the crux of the matter, when, in referring to high prices in this country, as compared to prices in the countries where certain drugs were developed, he stated "It is immoral."—CONGRESSIONAL RECORD, volume 108, part 13, pages 17413–17414.

What is at issue here is, indeed, a matter of fundamental morality. Since our first disclosures of these fantastic markups, more than 3 years ago, there have been a number of price reductions in prescription drugs; but they have been few in number and limited in extent. What the heads of the drug companies cannot seem to understand is that it is simply immoral to continue to gouge the American people for a product which spells the difference between sickness and health and, indeed, life and death. Since they refuse to recognize this fundamental fact, it is the duty and obligation of the Congress to act.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1297) to provide for compulsory licensing of prescription drug patents, introduced by Mr. KEFAUVER, was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article from the New York Times of April 7. The article makes the point that thus far the provisions of the Kefauver-Harris Drug Act have certainly not hurt the drug companies since their profits have continued to rise. And it goes on to note that in their annual reports the drug companies are modulating their criticism of the new law. Let me read the final paragraph of the article:

> Comments on the Drug Amendments of 1962 are much milder—now that the amendments have become law and the pharmaceutical companies must live with them—than they were when the companies were trying to tone them down or head them off during the last Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DRUG COMPANIES ADD TO EARNINGS—THEY STILL VOICE DOUBTS ON VALUE OF CHANGES IN ACT

Annual reports of major drug companies are appearing with remarkable uniformity in two respects: They disclose higher earnings for 1962, and they express misgivings over the redtape in the Kefauver-Harris amendments to the Food, Drug, and Cosmetic Act.

The American Home Products Corp.'s sales increased to $543,875,476, from $503,057,847 in 1961. The $40 million sales gain increased net earnings by 6 percent to $53,448,000 from $50,763,000.

The American Cyanamid Co. was even more successful in increasing gross and bringing it down to net. Sales rose 7 percent, to $649,211,240 from $603,958,772 in 1961. Net gained 20 percent, to $59,320,702 from $49,353,505.

Sales of Merck & Co., Inc., also set a record, rising to $240,521,000 from $228,578,000. Net of $29,244,000 was 8 percent higher than 1961's $27,191,000, but a little short of 1959's peak.

Charles Pfizer & Co., Inc., showed its 13th increase in sales, going to $383,573,179 from $332,470,550. Net rose to $36,493,572 from $32,663,562. In both cases 1961 results were restated because of acquisitions during 1962.

The Upjohn Co. reported a slight sales increase, to $173,181,000 from $169,229,000 for 1961, and earnings of $23,255,000, compared with $22,756,000 for 1961. Products containing the antibiotic tetracycline, it was explained, declined during the year and narrowed margins on this important product.

PARKE, DAVIS SALES DECLINE

One exception to the parade of gainers was Parke, Davis & Co., whose sales fell to $181,707,805 from $184,304,365. Earnings were more seriously affected, dropping to $19,074,140 from $22,326,327. This was blamed in major part on sales of the antibiotic Chloromycetin in markets outside the United States under its generic name of chloramphenicol. Sales of such pharmaceuticals under generic names was one of the principal aims of the Kefauver-Harris amendments in their original form.

Sterling Drug Co. and Smith, Kline & French Laboratories are among the larger drug companies which have not formally reported 1962 results. Smith, Kline & French has disclosed that sales were $180,165,000, compared with $161,161,726, and earnings $30,527,600 compared with $27,072,865. J. M. Hiebert, president and chairman of Sterling Drug, has estimated that earnings rose to $3.10 a share on the 7,961,712 shares outstanding, from $2.95 a share in 1961.

Comments on the drug amendments of 1962 are much milder—now that the amendments have become law and the pharmaceutical companies must live with them—than they were when the companies were trying to tone them down or head them off during the last Congress.

Mr. KEFAUVER. Mr. President, I also ask unanimous consent to have printed in the RECORD an excellent article entitled "New Drug Law Can Save Dollars." The article, written by Sidney Margolius, was published in the Machinist for March 14, 1963, and in other papers. In the article, he stresses the savings that are available in nonpatented drugs if people can get their physicians to prescribe drugs by their generic names.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW DRUG LAW CAN SAVE DOLLARS

(By Sidney Margolius)

The recently enacted Kefauver-Harris drug regulations have been hailed as providing additional safety against hazardous effects. But experts who have studied the new law tell this department that the public does not yet realize the potential savings in buying medicines also made available by this law, if consumers and doctors understand all its provisions.

This is a moneysaving law, as well as a safety law, even though all the provisions Senator KEFAUVER had sought to reduce high prices of medicines were not granted by Congress.

The big financial benefit in the new law is that doctors and pharmacists no longer have to worry about the safety of nonbrand-name drugs. As you know, the same medicine sold under its generic or common name, often costs half or less the price charged under a brand name.

As just one of the many examples found by the Senate Antitrust Subcommittee, McKesson & Robbins, a large drug wholesaler, charged pharmacists only 2.1 cents a pill for prednisone, an arthritis medicine, under its generic name. But major manufacturers charged pharmacists 17 cents for prednisone sold under their patented brand names. Thus, the public paid about 3 cents a pill under the common name but 28 cents under the brand name.

But the problem up to now has been to get the doctors to prescribe by generic name rather than by advertised brand names. Many doctors and pharmacists have felt safer with the branded products of the large drug manufacturers. They felt quite sincerely in most cases, that there is closer quality control of brand-name drugs. They were afraid that the Food and Drug Administration had neither the power nor sufficient staff to check all the smaller makers and distributors of non-brand-name drugs.

But under the new law, doctors and pharmacists have greater assurance than ever before that the quality of non-brand-name medicines will be reliable. For one thing, the Food and Drug Administration now has more power than it had sought even, to inspect drug factories and control the manufacture of drugs to assure their safety, identity and purity.

The new law also requires that each drug factory and repackager must be registered with the FDA and must be inspected by FDA at least once every 2 years.

Not only does FDA now have more power to assure satisfactory quality of medicines, whether sold under generic or brand name, but it now also has more money to employ the necessary technical staff.

Thus, the fear of inferior quality is no longer a valid reason for buying a brand-name drug instead of its much lower priced generic equivalent. In fact, it never was a wholly valid reason. As Harry Abramson, of Celo Laboratories, a wholesale drug cooperative, has pointed out, many manufacturers sell drug compounds under advertised names, then turn around and sell the same products under their generic names to other distributors at a fraction of the name-brand price.

You yourself may have to call your doctor's attention to the valuable quality-control provisions of the new law. You can't depend on the American Medical Association or the Pharmaceutical Manufacturers Association to educate the doctors in prescribing lower cost medicines.

Another encouragement to your doctor in prescribing by generic name, is that the new law provides that all advertising and labeling tell the generic name of the medicine as well as the brand name, and in type at least half as large as that used for the brand name. Moreover, the FDA is authorized to provide a generic name for a drug if the manufacturer doesn't and—very importantly—can require that a generic name be simple and easy enough for doctors to use. Sometimes manufacturers have given drugs long, complicated generic names, and doctors have found it simpler to write out the shorter easy-to-use brand names.

Among other provisions which will help reduce drug costs as well as improve safety, are those relating to advertising. There has been evidence that advertising to doctors sometimes exaggerated the effectiveness of specific medicines, or omitted important vital information about side effects. Now advertising to doctors must carry a statement of the possible side effects and the proven efficacy of a drug.

Experts we consulted estimate that the new controls potentially can do about half the necessary job of reducing drug prices to more reasonable levels. One important Kefauver proposal that could further cut prices was omitted by Congress, for one reason because the administration did not back it. This was the proposal that manufacturers be required to license others to produce their patented drugs. This requirement would encourage price competition, while assuring the company originating a new drug that it still will collect handsome royalties from the other manufacturers.

That provision is what Senator KEFAUVER will seek in the current session of Congress if he can get sufficient public support to get the bill past those Senators who had opposed any drug controls at all until the thalidomide scandal erupted.

CONVEYANCE OF ELLIS ISLAND TO ELLIS ISLAND FOR HIGHER EDUCATION, INC.

Mr. WILLIAMS of New Jersey. Mr. President, since 1955 when the property was declared to be surplus to the needs of the Federal Government, Ellis Island has been the subject of renewed public attention. For those of us in Congress who share a deep concern for the fate of the island, this strong continuing expression of public interest has been gratifying, indeed.

After the property was declared surplus, the future of Ellis Island soon became a matter in which the Federal Government was involved as departments and agencies fulfilled their statutory responsibilities as provided for by the Federal Property and Administrative Services Act of 1949. When it was apparent that the direction of public policy in regard to Ellis Island was still unclear, Congress entered the picture to provide an independent review of the situation. Under the able leadership of the junior Senator from Maine, the Senate Subcommittee on Intergovernmental Relations of the Senate Government Operations Committee has engaged in an investigation of the appropriateness of special guidelines to insure that the future use of Ellis Island will be consistent with the prescriptions of public interest.

It was within this context, that last year I introduced S. 2596, a bill to convey Ellis Island to Ellis Island for Higher Education, Inc. It was my feeling that the proposal sponsored by this group could best retain the symbolic meaning of the island for it would preserve the existing property and facilities and convert them into a most positive public use by making an important contribution to higher education. After a close investigation of the competing plans as explored by the subcommittee's hearings I have retained my conviction that a conveyance to Ellis Island for Higher Education, Inc., makes eminently good sense.

In practical terms, the establishment of a 4-year liberal arts college on Ellis Island has strong appeal. The island, its location, and historical buildings, are all adaptable to the uses of the program. In addition to the facilities that will house this academic institution, provisions have been made to establish a permanent museum to commemorate the island's symbolic past.

This program shares the support of a distinguished group of academicians as the following list of academic advisers will testify: James Case, Jr., Mark Van Doren, Eric F. Goldman, Oscar Handlin, Seymour Harris, Hans Kohn, Max Lerner, Isidor Lubin, Leopold Damrosch Mannes, Margaret Mead, Clinton Rossiter, Meyer Schapino, Ordway Tead, and Lionel Trilling.

I am also happy to report that New Jersey and New York Congressmen have joined me in support of this proposal by introducing companion legislation in the House of Representatives.

The text of the following letter I have received from Dean Harry J. Carman, who is a member of the board of directors of Ellis Island for Higher Education, Inc., is perhaps the most informative description of the operation and goals of this fine program:

ELLIS ISLAND FOR HIGHER
EDUCATION, INC.,
New York, N.Y., September 21, 1962.

Senator HARRISON WILLIAMS,
Senate Office Building, Washington, D.C.

DEAR SENATOR WILLIAMS: Here is a brief description of our proposal and the support it has received.

Ellis Island for Higher Education, Inc., was organized more than 2 years ago to try to accomplish a double purpose: to put a valuable historic facility to constructive public use and to make a significant contribution in the present educational crisis. The past 2 years has seen the development of a detailed plan that would convert the island to a liberal arts college of a thousand students along with a museum devoted to its history.

The museum would supplement the immigration museum planned for nearby Liberty Island. The college would help to provide for the urgent need for more facilities that all estimates agree will be doubled in 10 years and will be felt especially heavily in the metropolitan area. Even more importantly, it would provide a fresh approach to the problems of higher education which, with Ellis Island's unique location and circumstances, might have significant effect more generally.

What is the college to be like? Its goal is the traditional one, to provide a first-rate liberal education for its students. Its means are more unconventional and are adapted to the specific problems that challenge our colleges in the 1960's. Intensive work in small groups, close student-faculty contact, and independent study are among the many academic aims of the curriculum. A well-paid and not overburdened faculty is another goal. More remarkable is the fact that we have found the means of achieving all this, while cutting the annual operating costs to such an extent that the new college will be self-sufficient from the outset. In other words we hope to balance annual expenses solely with income derived from students fees and thus free the college from dependence upon annual fund raising and endowments. Tuition would be the same as that of comparable institutions and all revenue beyond these fees would be devoted to a substantial scholarship program.

It is important to emphasize that this proposal is more than a pious hope. The plan has been worked out in the most thorough detail by a large committee that includes some of America's most distinguished scholars and educators. It embodies proposals long advocated by knowledgeable administrators. And it has won the enthusiastic support of the academy community. McGeorge Bundy (then dean of Harvard) writing in the Sunday Times, called it an ideal college; Newsweek, a college of the future; and so on. The offices of education in New York and New Jersey, as well as Washington have endorsed the plan in principle and encouraged its preparation. The new college aims high but the plan is as concrete, practical, and detailed as it has been possible to make it.

Among the primary considerations in planning, was the need to fit the new college to the existing facilities. A team of architects and engineers, Charles Tilton, Inc., of New York City, armed with the specifications of the new institution, spent weeks on Ellis Island examining everything in detail and drafting elaborate floor plans that would provide a blueprint for the new college. They found that all the buildings were usable and that, more importantly, their conversion was practical and economical. The estimated costs, in a systematic breakdown, show that the buildings can become a college for only $6 million, a remarkably low figure indeed. Cafeteria, dormitories, classrooms, gymnasium, campus, playing fields, in short, all the needs of the college can be met with the already existing facilities, only minimally modified. With furnishings and equipment, a 250,000-volume library and all the additional requirements of the college satisfied, the total cost will still come to less than $10 million. Here is an opportunity that is rare indeed, particularly in our crowded metropolitan area, to begin a new college for a fraction of what it would otherwise cost.

With a plan thoroughly accomplished and the support of the academic world, it is not surprising that support has been forthcoming from all corners. Since the first announcement of the plan, the press has responded not only with remarkably thorough news coverage but with strong and forthright editorial comment. The New York Times, and Journal-American, various New Jersey newspapers, the Washington Post, even the Bristol Herald-Courier in Tennessee-Virginia, have all endorsed the plan as the best and most appropriate solution for Ellis Island's disposal. Correspondence has arrived from all over the country, including inquiries from many professors interested in working in the new institution. Businessmen have begun to give support. Mr. Edward Booher, president of McGraw-Hill Book Co., and Mr. David Finn, president of Ruder & Finn, have joined the board of directors. Mrs. Albert List recently contributed to the operating expenses of the committee. Other individuals like Louis Schweitzer, Frederick Richmond, Jennie Grossinger, Donald Rugoff, etc., have promised to help. Several foundations, most recently, the William C. Whitney Foundation, have shown strong interest. And in Congress, the response has been equally gratifying. In addition to having bills introduced, we have received pledges of support from Senators CLARK and DOUGLAS and Congressmen LINDSAY, RYAN, FARBSTEIN, STRATTON, HALPERN, BRADEMAS, and many others.

We are confident that of the many public-spirited proposals that have been suggested so far, we can demonstrate that ours is the most appropriate, the most practical, and the most welcome to the community. All we need now is the opportunity to put it into effect.

Sincerely yours,

HARRY J. CARMAN.

The **PRESIDING OFFICER**. The bill will be received and appropriately referred.

The bill (S. 1300) to convey Ellis Island to Ellis Island for Higher Education, Inc., introduced by Mr. WILLIAMS of New Jersey, was received, read twice by its title, and referred to the Committee on Government Operations.

NATIONAL EMPLOY THE OLDER WORKER WEEK

Mr. McNAMARA. Mr. President, one of the serious problems that has been under investigation by our Senate Special Committee on Aging is that of discrimination in employment because of age.

Our committee's hearings and studies have shown us how widespread this discrimination is—and even more distressing is the fact that it can begin to haunt an individual as early as age 45 or even before.

As automation or mergers displace workers in the 45 and 65 age group from their regular jobs, these persons find it increasingly difficult to obtain new employment.

In the recent recession, for example, persons in this age group had the greatest duration of unemployment of those under 65.

A report of our committee describes the situation in considerable detail.

Mr. President, this situation is not only injurious to the dignity and self-respect of older workers, as well as the very livelihood of themselves and their families, but it also deprives the country of one of its most valuable resources, the skill and experience of the mature person.

Fortunately, we also found in our hearings that a great deal of new attention was being given this problem.

State and local levels of government are initiating efforts to end this discrimination, with six States having enacted laws to prevent it.

Taking a leading role in these efforts is the American Legion, which has designated this week as Employ the Older Worker Week.

I am happy to salute the Legion for its work in calling attention to the problem, and I believe its campaign deserves the recognition and support of the Federal Government.

For that reason, I introduce, for appropriate reference, a joint resolution which would designate the first week in May of each year as National Employ the Older Worker Week.

I am joined in sponsorship of the joint resolution by my colleague, the junior Senator from Michigan [Mr. HART].

Passage of the joint resolution would give this worthy program the status, stability, and recognition that it deserves.

I send the joint resolution to the desk and ask unanimous consent that the text be printed in the RECORD as part of my remarks.

The **PRESIDING OFFICER**. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 68) to provide for the designation of the first full week in May of each year as National Employ the Older Worker Week, introduced by Mr. McNAMARA (for himself and Mr. HART), was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Whereas the Nation is witnessing the emergence of patterns of discrimination in employment against properly qualified persons because of their age; and

Whereas such age discrimination is contrary to American traditions of equal opportunity for men and women who are willing and able to work; and

Whereas bias against jobseekers as young as forty-five and sometimes younger, because they are deemed too old, deprives the national economy of important sources of experienced workers, increases the burden upon public welfare resources, and imposes on older persons a sense of humiliation and loss of faith in the free enterprise system; and

Whereas local, State, and National organizations, and employers and labor organizations should be encouraged voluntarily to take all possible and proper measures to eliminate discrimination in employment against properly qualified persons because of their age: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation designating the first full week in May of each year, beginning with the year 1963, as "National Employ the Older Worker Week," and calling upon employer and employee organizations, other organizations officially concerned with employment, and upon the people of the United States, in general, to observe such week with appropriate ceremonies, activities, and programs designed to bring about the elimination of discrimination in employment because of age.

YOUTH EMPLOYMENT ACT—AMENDMENTS

Mr. PROUTY submitted amendments, intended to be proposed by him, to the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs, which were ordered to lie on the table and to be printed.

Mr. PROUTY also submitted an amendment, in the nature of a substitute, intended to be proposed by him, to Senate bill 1, supra, which was ordered to lie on the table and to be printed.

Mr. INOUYE submitted an amendment, intended to be proposed by him, to Senate bill 1, supra, which was ordered to lie on the table and to be printed.

Mr. WILLIAMS of New Jersey submitted amendments, intended to be proposed by him, to Senate bill 1, supra, which were ordered to lie on the table and to be printed.

AMENDMENT OF FEDERAL DEPOSIT INSURANCE ACT, RELATING TO THE MAXIMUM AMOUNT OF INSURANCE PROVIDED THEREUNDER—ADDITIONAL COSPONSOR OF BILL

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that, at the next printing of the bill (S. 106) to amend the Federal Deposit Insurance Act and title IV of the National Housing Act, relating to the insurance of savings and loan accounts with respect to the maximum amount of insurance which may be provided thereunder, the name of Senator Dominick be added as a cosponsor.

THE PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF INTERNAL REVENUE CODE OF 1954, RELATING TO GAIN FROM SALE OF HIS RESIDENCE BY A TAXPAYER WHO HAS ATTAINED THE AGE OF 60—ADDITIONAL COSPONSOR OF BILL

Mr. KEATING. Mr. President, I ask unanimous consent that, at the next printing of the bill (S. 316) to amend the Internal Revenue Code of 1954 so as to exclude from gross income gain realized from the sale of his principal residence by a taxpayer who has attained the age of 60 years, my name may be added as a cosponsor. This bill was introduced by the distinguished minority leader [Mr. Dirksen] on January 18, 1963.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF BILLS

Mr. GRUENING. Mr. President, I ask unanimous consent that the name of the senior Senator from Nevada [Mr. Bible] be added as an additional cosponsor of S. 1273, a bill to establish in the Department of the Interior a Gold Procurement and Sales Agency, and for other purposes, and S. 1279, a bill to amend title 30, United States Code, relating to the exploration program for discovery of new minerals, and for other purposes, at the next printing of the bills.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROUTY. Mr. President, on behalf of the Senator from Pennsylvania [Mr. Scott], I ask unanimous consent that the name of Senator Randolph be added to the names of sponsors of S. 1231 at the next printing. Also, that the name of Senator Miller be added to the names of sponsors of S. 720, at its next printing.

The PRESIDING OFFICER. Without objection, it is so ordered.

JOINT UNITED STATES-MEXICAN COMMISSION ON FLOW OF CERTAIN DRUGS—ADDITIONAL COSPONSOR OF JOINT RESOLUTION

Mr. DODD. Mr. President, I ask unanimous consent that the name of the distinguished senior Senator from New York [Mr. Javits] be added as a cosponsor to the resolution (S.J. Res. 65) I introduced on March 28, 1963, to request the President to negotiate with the Mexican Government for the purpose of setting up a joint United States-Mexican Commission to investigate the flow of marihuana, narcotic drugs, and dangerous drugs between the United States and Mexico.

The PRESIDING OFFICER. Without objection, it is so ordered.

OPENING OF HEARINGS ON S. 5, THE COLD WAR GI BILL

Mr. YARBOROUGH. Mr. President, this morning the Subcommittee on Veterans' Affairs begins public hearings on the GI bill, Senate bill No. 5, which extends to veterans of post-Korean service readjustment benefits similar to those afforded Korean veterans under the Veterans' Readjustment Assistance Act of 1952, popularly known as the Korean GI bill of rights.

I am happy to note that two members of this subcommittee, Senator Burdick and I, are cosponsors of the cold war bill which is the subject of these hearings. The 37 other Senators who have joined us in introducing S. 5, which has as its primary purpose the establishment of a balanced program of readjustment assistance for post-Korean veterans, are: Senators Humphrey, Sparkman, Morse, Neuberger, Hill, Kefauver, Smith, Byrd of West Virginia, Gruening, Hartke, Eastland, Long of Missouri, Bible, Randolph, Williams of New Jersey, Douglas, Pell, Bartlett, Inouye, McGee, McGovern, McCarthy, Fulbright, Cannon, Moss, Pastore, Nelson, Fong, Johnston, Hart, Clark, Dodd, Young of Ohio, Metcalf, Magnuson, Bayh, and Edmondson. Senator Bayh will be the first witness for the bill.

The provisions of S. 5 are virtually identical with those of a similar bill introduced in the 87th Congress, 1st session, with the exception of the vocational rehabilitation for service-connected disabled veterans provisions of that bill, which became public law last session.

A cold war GI bill I introduced in 1959 passed the Senate in the 86th Congress by a vote of 57 to 31. The cold war bill of the 87th Congress was sponsored by me with 36 other Senators and was favorably reported by the Committee on Labor and Public Welfare. This year the need to enact this legislation is greater than ever before. The proposed legislation has always enjoyed broad public support. The requests for its passage are vast in number.

Each year a large number of American youth embark upon 2, 3, or more years of service in our Military Establishment. They do so, and the country needs them to do so, because foreign powers continue to threaten the security of this Nation and the free world.

The basic eligibility period of the bill extends from January 31, 1955, the officially declared termination date for establishing eligibility under the Korean GI bill, to July 1, 1963.

Applicable throughout the bill is a requirement that a veteran, to qualify for assistance, must have been discharged under conditions other than dishonorable.

Two major types of readjustment assistance, patterned closely after the forms of assistance provided under the GI bills for veterans of World War II and the Korean conflict, would be available to post-Korean veterans under the provisions of S. 5. These are: first, education and vocational training assistance; and second, guaranteed and direct loan assistance for the purchase of homes, including homes on farms, and farmlands, livestock, machinery, and so forth, to be used in farming operations conducted by the veterans.

When this legislation was considered in the 86th Congress, there were about 687,000 cold war veterans. Two years ago there were 1,380,000 cold war veterans and today, there must be well over 2 million. By 1973, there will be more than 4 million cold war veterans. These figures alone show, I believe, the great magnitude of the loss we will sustain if we do not take action to keep the minds, hands, and skills of these young Americans within our arsenal of human resources.

We dare not, as custodians of the public trust, as the guardians of the future of this Republic, ignore the positive good or the positive harm that will flow from our decision as to whether these young men should be afforded educational opportunity similar to that which a grateful, free nation gave to their fathers and elder brothers who served before them.

This Subcommittee on Veterans' Affairs has looked deeply into this question over the past 4 years. So far as I am concerned, justice, equity, humanitarianism, the need of military defense, cold dollars and cents, public judgment—every conceivable consideration—demands an affirmative answer on the question at issue. America will be made stronger, immeasurably stronger, by the passage of this bill.

Mr. President, I ask unanimous consent to have printed, at this point in the Record, a letter from the Library of Congress dated April 4, 1963, addressed to me, written by Mr. Charles H. Donnelly, senior specialist in national defense, and his former letters to me of March 10, 1961, and March 13, 1959, all containing data on the numbers and percentages of men serving in the Military Establishment before they pass the age of 26.

It will be noted that the percentage of men aged 26 who will have entered active military service will be 45 percent on June 30, 1963, down to 42 percent on June 30, 1964, and 40 percent on June 30, 1965—thus a constantly declining percentage of our young men serve, but with increasing disadvantage to themselves.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D.C., April 4, 1963.

Hon. RALPH YARBOROUGH,
Chairman, Subcommittee on Veterans Affairs of the Senate Committee on Labor and Public Welfare, U.S. Senate, Washington, D.C.

DEAR SENATOR YARBOROUGH: The subject is the probability of men having to render substantial military service before they pass the age of 26 when, practically speaking, they are no longer likely to be drafted.

Reference is made to (1) my letter on the same subject addressed to you on March 10, 1961, which appears on pages 207–209 of the hearings of your subcommittee during the first session of the 87th Congress on readjustment insurance to post-Korean conflict veterans; and (2) your letter of March 25, 1963, requesting that the projections in reference (1) be brought up to date.

"Substantial military service," for the purposes of this letter, is defined as active duty of 2 years or longer in the active armed services of the United States. This excludes active duty training periods of 6 months or less for members of Reserve or National Guard components, as well as weekly drills and summer camps.

Since there is no intention of reflecting in any way on the merits of the Reserve Forces Act or on the motive of those who avail themselves of its provisions, the term "substantial military service" is used to differentiate between those whose military service causes an important interruption in their civilian careers contrasted to others who through rejection, exemption or deferment, or who serve under the provisions of the Reserve Forces Act, do not experience major interruptions in their education or careers.

It is assumed that, through fiscal year 1965:

1. Inductions will continue to be made in the sequence established in Executive Order No. 10659, February 15, 1956, as amended in Executive Order No. 11098, March 14, 1963, as follows:

(a) Delinquents who have attained the age of 19 years, in order of their dates of birth with the oldest first.

(b) Volunteers for induction who have not reached 26, in the sequence in which they volunteer.

(c) Nonvolunteers who have attained the age of 19 years and have not attained the age of 26 years in the order of their dates of birth with the oldest being selected first.

(d) Nonvolunteers who have reached the age of 26, in the order of their dates of birth with the youngest first.

(e) Nonvolunteers who have atained 18 years and 6 months but not 19, in the order of their dates of birth with the oldest first.

2. In the classification of registrants and granting of deferments, the degree of liberality of selective service boards will remain about as at present.

3. The average aggregate active military strength of the armed services will be approximately 2,700,000.

4. Reenlistment rates and extensions by Reserve officers on active duty will continue at approximately the current level.

The present induction sequence differs from that previously in effect in that fathers, 19 through 25, are now classified as 3A (dependency deferment).

As of June 30, 1962, table 1 shows that, of a total estimated male population of 1,110,000 of age 26 at their nearest birthday, approximately 530,000 (48 percent) had seen active military service. By "active military service" is meant that they were enlisted, drafted, or called to extended active duty. In the last case, some were ROTC graduates called to extended active duty after leaving college; others were Reserve and National Guard personnel called into active service during the Berlin crisis.

Table 2 gives projections of the percentage of men in the age 26 class who will have entered military service up to June 30, 1965, if currently programed active service strengths are maintained:

TABLE 2.—*Projections: men, age 26, who will have entered military service*

[In percent]

June 30—	Total	Entered active service	Entered Reserve service only [1]
1963	57	45	12
1964	54	42	12
1965	53	40	13

[1] Includes active duty for training.

Source: Office of Assistant Secretary of Defense (Manpower).

In table 2, the projections of those who will have entered active service (third column) relate to those who normally serve 2 or more years. If another situation like the Berlin crisis arose, reservists called to active service would be included in this column. However, the above percentages do not anticipate such a contingency.

The figure in table 2 of 45 percent of those reaching age 26 by June 30, 1963, who will have experienced active military service (mostly for 2 or more years) compares favorably with the figure of 46 percent predicted in my letter of March 10, 1961, especially in light of the Berlin situation, the effects of which had not been anticipated in the earlier studies.

It is believed that the percentages in table 2 will be substantially accurate provided that the assumptions made above hold true and the status of our economy remains fairly stable. Of course, any significant change in the international situation or a major change in the U.S. economy could have a marked effect upon the predictions above.

Sincerely,
CHARLES H. DONNELLY,
Senior Specialist in National Defense.

TABLE 1.—*Military service status of male population, ages 18½ to 27½, as of June 1962*

NUMBER (THOUSANDS)

	18½ to 19½	19½ to 20½	20½ to 21½	21½ to 22½	22½ to 23½	23½ to 24½	24½ to 25½	25½ to 26½	26½ to 27½
Total male population	1,460	1,410	1,300	1,220	1,170	1,160	1,130	1,110	1,100
Entered military service	300	390	390	420	510	610	640	640	640

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D.C., March 10, 1961.

Hon. RALPH YARBOROUGH,
Chairman, Subcommittee on Veterans' Affairs of the Senate Committee on Labor and Public Welfare, New Senate Office Building, Washington, D.C.
(Attention Mr. Frederick R. Blackwell, Counsel).

DEAR SIR: The subject of this letter is the probability of men having to render substantial military service before they pass the age of 26 when, practically speaking, they are no longer likely to be drafted.

Reference is made (1) to my letter of May 13, 1959, on the same subject which appears on pages 373–376 of the hearings of your subcommittee during the first session of the 86th Congress on educational and other readjustment assistance for post-Korean veterans; and (2) to your request of February 3, 1961, to bring the findings in the May 13, 1959, letter up to date.

In the 1959 letter, "substantial military service" was defined as active duty of 2 years or longer in the active armed services of the United States, thus excluding terms of 6 months or less of active duty in Reserve or National Guard components, as well as weekly drills and summer camps.

Since there is no intention to reflect in any way upon the merits of the Reserve Forces Act or the motives of those who avail themselves of its provisions, the explanation of "substantial military service" in the letter of May 13, 1959, is repeated:

"What is sought is a clear differentiation between those who are experiencing a real interruption in their civilian careers contrasted to others who through rejection, exemption, or deferment, or by serving under the provisions of the Reserve Forces Act manage to keep from major interruptions in their education or careers."

The assumptions made 2 years ago have been checked with officials of the Department of Defense and the Selective Service System and are considered to be still valid.

It is assumed that, through fiscal year 1963—

1. Inductions will continue to be made in the order provided for in Executive Order No. 10659, February 15, 1956, which establishes this sequence:

(a) Delinquents who have attained the age of 19 years, in order of their dates of birth with the oldest first.

(b) Volunteers for induction who have not reached 26, in sequence in which they volunteer.

(c) Nonvolunteers who have attained 19 but not 26 and do not have a child or children with whom they maintain a bona fide family relationship in their homes, in the order of their dates of birth with the oldest first.

(d) Nonvolunteers who have attained 19 but not 26 and have a child or children with whom they maintain a bona fide family relationship in their homes, in the order of their dates of birth with the oldest first.

(e) Nonvolunteers who have reached 26, in the order of their dates of birth with the youngest first.

(f) Nonvolunteers who have attained 18 years and 6 months but not 19, in the order of their dates of birth with the oldest first.

2. In classifying registrants and granting deferments, the selective service boards will continue their present degree of liberality.

3. The average aggregate active strength of the armed services will be continued at slightly over 2.5 million.

4. Enlistment and reenlistment rates will continue at approximately the average of the last 2 years.

The predictions made in the letter of May 13, 1959, were based upon projections of manpower requirements for the active armed services for fiscal years 1959 through 1963 and the estimated military service status of men aged 19 to 26 years, as June 30, 1958, and June 30, 1963. These projections had been made in a study of military manpower requirements and supply made by officials from the Department of Defense, Department of Labor and Selective Service System.

Officials of the Department of Defense and the Selective Service System state that no further projections have been made since 1959 and that they have no plans to make further studies of this nature at this time. At the same time these officials have stated that the 1959 projections have been borne out as to accuracy. The following letter from the Office of the Assistant Secretary of Defense (Manpower) substantiates this:

"March 7, 1961.

"Dear Mr. Donnelly: This is in reply to your letter of March 3 in which you requested to be advised as to the continued accuracy of the projections appearing in the publication 'The Military Service Outlook,' which was made available to you in May 1959 in connection with a study for the Senate Subcommittee on Veterans' Affairs.

"Despite the lapse of about 2 years since the development of the projections, the estimates in this booklet continue to be substantially unchanged. The study assumed a continuation of military active duty strengths of slightly over 2.5 million personnel. This compares with an actual strength of 2,503,000 on January 31, 1961. Inductions were projected at an average rate of 90,000 per year during the period fiscal year 1960 to fiscal year 1963. Actual inductions in fiscal year 1960 totaled 90,300. From the standpoint of manpower supply, there have similarly been no significant changes in either population estimates or selective service deferment policies, relevant to our study.

"It is our judgment, therefore, that the projections of the military service outlook for men aged 19 to 26 years through fiscal year 1963, as published, continue to be substantially accurate at the present time.

"Sincerely yours,

"Harold Wool,

"Chief, Plans and Analysis Division."

CONCLUSIONS

Since no further projections of military manpower requirements or of estimated military service status of men aged 19 to 26 years are available, and in light of the accuracy with which the 1959 projections have been realized to date, the conclusions in my letter of May 13, 1959, are considered to be still valid.

It should be realized that a number of things could happen which might affect the validity of the assumptions, the accuracy of the projections, and the soundness of the conclusions. Business booms and depressions affect reenlistment rates; when jobs are scarce, men are more likely to reenlist and this reduces the number of replacements necessary from civil life. The converse is true when times are good. The international situation affects the maintained manpower strength of the armed services and also the reenlistment rate. And any shifts in the prestige and popularity of military service as a career will have a bearing on reenlistments.

With the foregoing caveat, it appears likely that as of June 30, 1963, only 530,000 of an estimated 1,150,000 males reaching age 26 will have entered military service for 2 years or longer, which is 46 percent or less than 5 out of every 10. If we deduct an estimated 340,000 unfit from the 1,150,000 total, the percentage rises to a little over 65 percent. Furthermore, it appears that the trend toward fewer substantial interruptions in civilian careers due to military service will continue until something occurs to change one or more of the assumptions, particularly the aggregate active strength of the armed services or the reenlistment rates.

Very truly yours,

Charles H. Donnelly,

Senior Specialist in National Defense.

The Library of Congress,
Legislative Reference Service,
Washington, D.C., May 13, 1959.

Hon. Ralph Yarborough,
Chairman, Subcommittee on Veterans' Affairs of the Senate Committee on Labor and Public Welfare, New Senate Office Building, Washington, D.C.

Dear Sir: The subject of this letter is the probability of men having to render substantial military service before they pass the age of 26 when, practically speaking, they are no longer likely to be drafted. In this connection, the term "substantial" is defined as active duty of 2 years or longer in the active armed services of the United States; service in the Reserve or National Guard components involving active duty training of 6 months or less and weekly drills and summer camps for a number of years is excluded from this definition.

In making this definition, the use of the term "substantial" is in no way intended to reflect upon the merits of the Reserve Forces Act or the motives of those who avail themselves of its provisions. What is sought is a clear differentiation between those who are experiencing a real interruption in their civilian careers contrasted to others who through rejection, exemption, or deferment, or by serving under provisions of the Reserve Forces Act manage to keep from major interruptions in their education or careers.

For a number of years the Department of Defense, Department of Labor, and Selective Service System have collaborated in studying military manpower requirements and supply. This study has been projected to include fiscal year 1963 and, using their experience data and estimates, it is possible to arrive at some reasonable judgment as to the chances a young man faces of having to engage in a period of active military service of 2 or more years.

At the outset, it should be recognized that any predictions will be only as good as the assumptions and data upon which they are based; also, that these predictions are very vulnerable to the effects of such variables as business booms and depressions, changing public attitudes and political situations, legislation effecting the attractiveness of military careers, and the international situation.

It is assumed that, through fiscal year 1963:

1. Inductions will continue to be made in this order:

(a) Volunteers for induction.

(b) Registrants who have been delinquent under the law.

(c) Nonfathers, ages 19–25 (oldest going first).

(d) Fathers, 19–25 years.

(e) Registrants, ages 26–35, whose liability has been extended.

(f) Registrants, between ages 18½–19 (who can only be inducted, under the law, if no older men are available for induction).

2. The degree of liberality of Selective Service Boards in classifying registrants and granting deferments will remain about as at present.

3. The average aggregate active strength of the armed services will be continued at slightly over 2½ million.

4. Enlistment rates will continue about as at present.

In arriving at our predictions, it is helpful to compare the actual and projected manpower requirements over a period of years (table 1) with estimates of the military service status of eligible males during that period (tables 2 and 3). From these figures one may arrive at reasonably accurate estimates, provided that the assumptions remain valid and the population estimates (which are based on unpublished estimates and projections of the Bureau of the Census) are borne out.

Table 1.—*Projected military manpower requirements from civil life, by source, fiscal years 1959–63 (fiscal year 1958, actual)*

[Thousands]

	1958	1959	1960	1961	1962	1963
Total, Active and Reserve Forces	630	620	610	610	610	590
From manpower pool [1]	530	520	500	500	500	500

Dependency	10	10	10	20	20	30	40	50
Students and others [2]	320	230	170	120	90	50	40	30
Unfit	390	370	340	310	260	240	240	240

[1] Less than 5,000.

[2] Also includes small number in exempt groups (ministers, divinity students, aliens, sole surviving sons).

Note.—Detail does not necessarily add to group totals due to rounding.

Table 3.—*Estimated military service status of men aged 19 to 26 years, June 30, 1963*

[Thousands]

	Age, nearest birthday							
	19	20	21	22	23	24	25	26
Male population	1,430	1,480	1,430	1,290	1,220	1,200	1,190	1,150
Entered military service	240	310	350	400	450	550	610	630
Active Forces	180	250	280	310	350	440	500	530
Reserve Forces	60	70	70	90	100	110	110	100
Nonfather manpower pool	270	320	300	210	160	60	30	(1)
Fathers other than unfit [1, 2]	20	50	90	120	130	150	140	140
Students and other deferrable groups other than unfit [3]	430	310	220	130	80	50	40	40
Unfit	470	490	470	430	400	390	370	340

[1] Less than 5,000.

[2] Includes fathers in class I-A or in III-A, dependency, and small number of nonfathers eligible for dependency deferments.

[3] Also includes small number in exempt groups (ministers, divinity students, aliens, sole surviving sons).

Note.—Detail does not necessarily add to group totals due to rounding.

When examining table 2 it will be noted that the ratio of unfit to total male population is substantially higher among the 19- to 22-year-olds than with 23- to 26-year-olds. This is due to the recent upgrading of physicial and mental standards for inductees (permitted under Public Law 85-564) rather than to any substantive difference in actual physical and mental fitness between the different age groups. Because of the desire of many young men to get their military requirements out of the way before they go to college or start a career, a substantial number between ages 17 and 19 either enlist or volunteer for early induction. For example, at the end of fiscal year 1958 an estimated 510,000 19- and 20-year-olds had entered the Active Forces. Of these, 48,000 either had enlisted or volunteered for early induction. In the case of the older age groups (note the last two columns of table 2) many were inducted during the latter years of the Korean war when they were around age 20.

Since the percentage of unfit will depend largely on the standards existing at the time of induction and the largest percentage of those entering service is in the younger age groups, the impact of the introduction of higher standards for induction has been understandably heavier against the younger age groups.

CONCLUSIONS

In table 2 it is noted that the Department of Defense estimates that, as of June 30, 1958, there were 1,100,000 males aged 26 of whom 750,000 had seen substantial military service. In other words, about 68 percent or less than 7 out of 10 had served (or were in process of serving) for 2 years or longer. Of those physically, mentally, and morally qualified—860,000—87 percent entered service for 2 years or longer).

From the Defense estimate in table 3, it is apparent that only 530,000 of the 1,150,000 males reaching age 26 will have entered military service for 2 years or longer. This is 46 percent—less than 5 out of every 10. (Deducting the 340,000 unqualified for physical, mental, or moral reasons, between 65 and 66 percent of the 810,000 qualified can expect to serve for 2 years or longer.) Another way of stating the estimate of service for all males aged 26 in 1963 is that one-third more of those who reach age 26 by June 30, 1963, can expect to escape substantial military service as compared to those who reached age 26 by June 30, 1958.

As a matter of interest, at the end of fiscal year 1963 the projected total of the male population for ages 19 to 26 is about 10,300,000. Of this total, according to the estimates of the Department of Defense, 2,840,000 will have entered military service for a period of 2 years or longer, a little over 27 percent. While the figure for the 26-year-olds alone is 46 percent, it should be pointed out that many of the younger age groups will be brought into service after fiscal year 1963, provided that the draft is still in effect.

As long as the international situation permits us to keep our Armed Forces near the 2½ million level, the population continues to increase, and the recent improvement in enlistment and reenlistment rates holds, it appears likely that the percentage of those who will experience no substantial interruption in the civilian careers because of military service will increase, year by year.

Very truly yours,

Charles H. Donnelly,
Senior Specialist in National Defense.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the Record, as follows:

By Mr. HUMPHREY:

Excerpts from address delivered by him at a conference sponsored by the Northwestern University Bio-Medical Engineering Research Center, Chicago, Ill., on March 29, 1963.

By Mr. CASE:

Article entitled "To Move Congress Out of Its Ruts," written by Senator Humphrey and published in the New York Times magazine of April 7, 1963, relating to proposed reforms in congressional procedures; also an article on the same subject from the New York Times of April 7, 1963.

Editorial entitled "Confusion in Space," published in the New York Times of April 7, 1963; also a recent statement issued by his office concerning his inquiry to Air Force Secretary Zuckert, with regard to alleged duplication of facilities by NASA.

WINSTON CHURCHILL

Mr. MANSFIELD. Mr. President, in the midst of legislative debate last Tuesday, the Senate paused for a moment to vote U.S. citizenship for an Englishman. The occasion was duly noted by several of our colleagues and all wished the recipient well. However, the demands of duty pressed upon us, and shortly we were compelled to return to the consideration of our business.

Too often these moments go by here without warning and without time for savored meditation. But these past few days of spring have been warm and sunny, conducive to meditation, and their pleasantness disturbed my resting memories of a time some 20 years ago, a time C. P. Snow has called, "the beautiful, shining, desperate summer of 1940."

It was after Dunkirk, and the final fall of France with its accompanying bitter disappointments was only 3 weeks away.

The stubborn resistance of civilization seemed narrowing down to that small island in the North Atlantic; but the voice of that resistance growled out across the airwaves that England would never surrender. We remember those words clearly:

> We shall defend our island, whatever the cost may be. We shall fight on the beaches, we shall fight on the landing grounds, we shall fight in the fields and in the streets, we shall fight in the hills; we shall never surrender, and even if, which I do not for a moment believe, this island or a large part of it were subjugated and starving, then our empire beyond the seas * * * would carry

> on the struggle, until, in God's good time, the New World, with all its power and might, steps forth to the rescue and the liberation of the Old.

With pride, Winston Churchill addressed his own people, and with patience the people of a sister nation across the Atlantic. It was clear to him that the medieval darkness which was then gathering on the Continent threatened not just the west of Europe, but all of Western civilization. It had been clear to him all along.

Two years before, on October 16, 1938, while the visionaries and the defeatists still believed that Germany had satisfied its last territorial claims and that war could be avoided by giving to the Fuhrer what he otherwise would take by force, Mr. Churchill addressed the people of America:

> I avail myself with relief of the opportunity of speaking to the people of the United States. I do not know how long such liberties will be allowed. The stations of uncensored expression are closing down; the lights are going out; but there is still time for those to whom freedom and parliamentary government mean something, to consult together. Let me, then, speak in truth and earnestness while time remains.

Mr. Churchill restated the development of the philosophy common to our two nations:

> As we look back over the long story of the nations, we must see * * * their glory has been founded upon the spirit of resistance to tyranny and injustice. Since the dawn of the Christian Era a certain way of life has slowly been shaping itself among the Western peoples, and certain standards of conduct and government have come to be esteemed. After many miseries and prolonged confusion, there arose into the broad light of day the conception of the right of the individual; his right to be consulted in the government of his country; his right to invoke the law even against the state itself.

Mr. Churchill would not be forced by the fate that threatened his island to compromise reality with expediency. He pointed out then in precise terms the similarity of principle that rules all totalitarian states though his words might have offended a possible ally:

> Like the Communists, the Nazis tolerate no opinion but their own. Like the Communists, they feed on hatred. Like the Communists, they must seek from time to time, and always at shorter intervals, a new target, a new prize, a new victim. The dictator, in all his pride, is held in the grip of his party machine. He can go forward: he cannot go back. He must blood his hounds and show them sport, or else, like Actaeon of old, be devoured by them. All-strong without, he is all-weak within.

Mr. Churchill had spoken to us long before that summer of 1940 and patiently warned us of the events which were later to forcefully eject us from the deceptive security of our retirement.

But that was still before us in the summer of 1940. Then England stood alone and the stillness of the fragrant Dover evenings was broken by wave after wave of German planes heavy with bombs for the British heartland. We and the world held our breath awaiting the inevitable, for the island to be engulfed by the irresistible Nazi blitzkreig.

The English survived that summer, "God's good time" soon came, and the United States entered the war. After an undisturbed and generous youth, history decreed that the time had come for our Nation to take up the burden which the rest of the free world was no longer strong enough to carry. We still bear the heavy part of those burdens and there is not, and will not soon be, opportunity to set them down.

Such are the affairs of men that the years find our old enemies now our stanchest allies, and some among those allies have become our present adversaries. Governments change, friendships change, and the temptation sometimes is to ask why the battles have been fought, where lies the sense to all the bloody sacrifice?

I know of no more compelling proof that our real enemy is not other nations, or other peoples, but tyranny, which rises like a weed in lands that are not tended, to choke off the dignity of man. The struggle since the beginning of history has been, in larger terms, not so much the struggle of nations as a struggle between that dignity and those who deny man's dignity. That war has grown in scope and in intensity until today the world is divided into two great parts, representing those two opposing beliefs.

Some say democracy is outmoded, a thought of the past, and that other "modern" philosophies will rule in times to come. The statement contains its own lie, for tyranny has been the overriding fate of man since his forgotten beginnings. Indeed it is the concept of dignity and freedom that is new, that has been slowly nurtured in the breasts of men, and that has grown stronger in spite of repeated assaults by man's dark lawless past. Our conflict today is but the latest, perhaps the final great battle between tyranny and dignity, and I ask which of those two concepts is new to the history of men.

I hear it said that loss of empire has deprived England of its place among great nations of the world. I believe this is not true and will never be so. For it was England that served as mankind's school of freedom. It was there that our concepts of responsibility and right were painstakingly developed and it is to England that America will forever owe its greatest debt.

That which we have desired to bestow on one of her great statesmen is intended not only as the gift of our highest honor to him, but also as recognition of the debt we owe to the proud nation that he led.

Mr. KEFAUVER. Mr. President, as one of the original cosponsors of Senate Joint Resolution 5, conferring U.S. honorary citizenship upon the Honorable Winston Churchill, I wish to associate myself wholeheartedly with the remarks of the distinguished majority leader, the Senator from Montana [Mr. MANSFIELD], on the occasion of the signing of this resolution by the President today.

I wish it were within the power of this body to go beyond that and confer upon Mr. Churchill the title, "Honorary Citizen of the World," because, Mr. President, that is truly the title he deserves. He deserves it because the fight he has carried on for the good and decent life for his people is of the kind that all human beings, in their heart, believe in and admire.

Who can ever forget his sonorous voice as he rallied the people of his beloved, sceptered isles against the hated Hitler hordes? Who can ever forget the pledge which he made on behalf of his beleaguered people: to fight the invader on the beaches, in the streets or wherever he might appear?

Who can forget the redoubtable figure of this marvelous man, smiling through the blood, sweat, and tears of his nation's agony, puffing on his familiar cigar and holding aloft two fingers in a promise of victory that, God willing, did come true?

And who can forget the omniscience of this man as he stood in the quiet of a hall at the University of Zurich after the tumult of war had died away, and described his vision of a United States of Europe, a vision that now lies so near the grasp of those of us who believe in a united community of Atlantic nations, dedicated to the peace and freedom and dignity of all men of good will?

Mr. President, the world will long remember this man, Winston Churchill, whom we honor with our simple tribute today. He is one of those of whom it can truly be said, "He is a great man."

SENATOR ANDERSON TO BE HONORED BY CONSERVATION ORGANIZATIONS

Mr. MANSFIELD. Mr. President, it has come to my attention that our able colleague, the senior Senator from New Mexico [Mr. ANDERSON] will be honored at a testimonial dinner for his many outstanding contributions in the field of conservation and natural resource development.

I am very pleased to know that Senator ANDERSON will be so honored. Those of us here in the Senate are well aware of his interest and many accomplishments in the areas of conservation. The major conservation groups are to be complimented in selecting our colleague for this award which will be presented on Monday, May 20.

Mr. President, I ask unanimous consent to have printed at the conclusion of my remarks in the CONGRESSIONAL RECORD the text of a news release pertaining to the testimonial dinner.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

CONSERVATION AWARD TO SENATOR ANDERSON

> National recognition for outstanding contributions to the conservation of America's natural resources will be accorded the Honorable CLINTON P. ANDERSON, U.S. Senator from New Mexico, at a testimonial dinner given in his honor by 12 of the Nation's foremost conservation organizations on Monday, May 20, at Washington's Statler Hilton Hotel.

Secretary of the Interior Stewart L. Udall and Secretary of Agriculture Orville L. Freeman, Members of Congress, and other ranking Government officials will attend the dinner, which will be open to all who wish to pay tribute to Senator Anderson's long and vigorous career as an advocate of a balanced conservation program for national forests, parks, wildlife refuges, water, and other resources. The sponsoring groups will present Senator Anderson with a national award of recognition.

In announcing the dinner, Committee Chairman C. R. Gutermuth, secretary of the North American Wildlife Foundation, stated: "In staging this National Conservation Testimonial Dinner in honor of Senator Anderson, 12 of the leading national conservation organizations in America have combined their efforts to recognize a man who has fearlessly and selflessly acted in the best interests of the Nation in matters concerning natural resources. I believe that the scope of the interests represented in the list of sponsoring organizations is testimony in itself to Senator Anderson's place of esteem among the conservationists of America."

The dinner is being sponsored jointly by the American Conservation Association; American Forestry Association; Conservation Foundation; Izaak Walton League of America; National Audubon Society; National Parks Association; National Wildlife Federation; North American Wildlife Foundation; Sierra Club; Sport Fishing Institute; Wilderness Society; and the Wildlife Management Institute.

Tickets and further information on the dinner can be obtained from the steering committee at 709 Wire Building, Washington 5, D.C., phone DI. 7-1774.

THE 50TH ANNIVERSARY OF THE ROCKEFELLER FOUNDATION

Mr. MANSFIELD. Mr. President, for half a century the Rockefeller Foundation has been a major factor in the improvement of the human lot and the enrichment of the human experience. Its great constructive work in public health, medicine, education, international relations, and in the arts has profoundly influenced the fabric of life as it is lived today in this Nation and throughout the world. Over the years, it has channeled the potentials of enlightenment into the service of humanity.

The sum of $763 million which the foundation has disbursed during the past five decades may appear staggering. Yet it is but a small fraction of the total which has flowed for similar purposes from governments, international agencies and other sources and it does not really explain the great effectiveness of the foundation. Rather, the key lies in the basic approach which has been taken from its inception. There has been consistent recognition that even as human needs are not static, even as they vary in time and in place, the response to them can be neither static nor stylized. For 50 years the foundation has applied, within this approach, a systematic and perceptive priming of action of many kinds to meet ever-changing needs.

Mr. President, the board of trustees of the Rockefeller Foundation has issued a statement on the occasion of the 50th anniversary of its establishment. I ask unanimous consent that this brief statement of an extraordinary private achievement which forms a unique part of the history of the first half of the 20th century, be included in the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Statement by the Board of Trustees on the 50th Anniversary of the Rockefeller Foundation 1913–63

The Rockefeller Foundation has now completed 50 years of activity in promoting the well-being of mankind throughout the world.

As we look back at the record of those who preceded us, we note with pride the achievements that have flowed from the foundation's 50-year history. During this period the foundation has spent over $763 million—far more than its total income. This sum by itself could have accomplished relatively little. The real accomplishments have been brought about by the inspired and dedicated efforts of thousands of talented and learned men and women who needed financial support at critical moments in their determined endeavor to improve the lot of their fellow men. To these servants of human welfare we pay respectful tribute.

We note with further respect and admiration the contributions of the dedicated corps of officers who have implemented so ably the purposes of the foundation, and of our predecessor trustees—among them such noted public figures as John D. Rockefeller, Jr., Charles Evans Hughes, Owen D. Young, John Foster Dulles, John W. Davis, Simon Flexner, Raymond B. Fosdick, Dean Rusk, Robert A. Lovett, Henry Allen Moe, and John J. McCloy; and such distinguished educators as Eliot, of Harvard; Angell, of Yale; Dodds, of Princeton; Compton, of M.I.T.; Sproul, of California; Wilbur, of Stanford; and Hopkins, of Dartmouth.

In 1913 the foundation's first trustees decided to focus all efforts and resources on what John D. Rockefeller once called "a search for cause, an attempt to cure evils at their source." It was a time when life expectancy in this country was restricted to 52 years, compared with 70 years today; when 1 out of every 10 children died in the first year of life, compared with 1 in 40 today. Here was a place to start, for surely mankind could not move on toward creating a better life without physical well-being.

During those early years dedicated scientists on the foundation's staff sought out major infectious diseases—malaria, hookworm, and yellow fever—all over the world. Out of this persistent work, patterns for the improvement of public health began to emerge and, for the first time in history, protection against major diseases could be given to millions of human beings.

One aspect of this systematic approach to the whole problem of public health was the establishment by the foundation of public health schools—the first at the Johns Hopkins University, followed by similar undertakings here and in 21 countries all over the world. Governments and private organizations have now entered this field with greatly expanded resources. The foundation itself moved on to advance the general improvement of medical education, and with this concentrated effort went the encouragement of research in the belief that persistent probing for new knowledge must move hand in hand with education.

Combining its interest in public health and the medical and biological sciences, the foundation has also turned its attention to human nutrition, especially to the problem of increasing the world's food production. The foundation has just completed 20 years of work in Mexico in close cooperation with Mexican leaders, scientists, and agricultural producers. The deficit position of Mexico with respect to its basic crops has been corrected. Lessons learned and techniques evolved are now being applied to other areas of the world with comparable problems.

Meanwhile, the search for causes of disease, poverty, malnutrition, ignorance, and despair revealed pressing needs for new knowledge about man himself as a part of his whole environment. For the needs of mankind merely begin, and do not end, with physical well-being and an adequate diet—vital as these may be. Among the great ends and the great achievements of man are those that grow from inspirations of his intellect and his spirit. In the middle of its second decade, therefore, the foundation began its long and intensive support of work in the social sciences—economics, sociology, political science—and its increasingly broad interest in the humanities and the arts. In the natural sciences the foundation moved into the support of pioneering research in physics, chemistry, and biology, and then into biophysics, biochemistry, and disciplines such as genetics, physiology, and microbiology.

The Rockefeller Foundation's 50-year record has helped demonstrate the role of a private foundation in meeting contemporary human need. A private foundation can take initiative; it can pioneer; and, by mustering available knowledge and human competence, it can identify causes and experiment with solutions. It can move without the political complications created when governments are involved with other governments. It can encourage cooperative effort across national and political boundaries. It can bring a high order of individuality and diversity of viewpoint into the field of human betterment. It can provide a decentralization of social initiative and responsibility. And it can enlist the interest and support of vigorous, enterprising, and public-spirited benefactors.

The Rockefeller Foundation has been a catalyst, undertaking operations of its own only when there was no existing organization ready to act. It has considered itself primarily a cooperating enterprise in situations both in the United States and abroad where people were ready to help themselves and needed aid, not only in funds, but also in developing their potentials for research and scholarship.

The foundation has always looked to the eventual assumption of total responsibility by local institutions and individuals, thus making continuing effort eventually self-sustaining. One way of achieving this has been through the financing of some 16,000 fellowships, which have enabled promising men and women to improve their professional knowledge and aptitudes. Twenty-eight fellows eventually won Nobel Prizes for their contributions to human welfare; an additional 68 Nobel laureates have received other forms of foundation assistance.

Where institutions exist for research, education, and training in fields of foundation interest, they have been aided by direct grants. In rare instances where such institutions have not existed, grants have been made toward their establishment. Because the foundation believes that it is difficult for one generation to foresee the needs of the next, grants have never been tied to rigid purposes. Once grants have been made, after careful exploration, to responsible groups or institutions, the foundation has never sought to direct or control the work supported. It has not assumed a permanent share of the expenses of any institution, because it does not want to influence the policy of recipients or detract from their responsibilities or their independence.

Whether acting as an operating institution or a grantmaking institution, however, the foundation's characteristic procedure has been to identify the cause of the particular problem, to find realistic ways of dealing with it, to aid others as they carry out this effort, and then to move on to other opportunities in response to changing human needs.

Large new resources are becoming available on many academic and scientific fronts in the United States and elsewhere as worldwide attention is being given to the well-being of mankind. Public funds are being used in areas where 50 years ago almost nothing was being done, except the pioneering efforts of a small number of private foundations. In 1913 expenditures for social welfare by Federal, State, and local governments were less than $1 billion, compared with more than $55 billion today. And yet, despite these increased resources, the immensity of problems inhibiting "the well-being of mankind throughout the world" still dwarfs the forces involved—public and private.

We face the future in a world startlingly different from that in which the Rockefeller Foundation was founded 50 years ago. It is a complex and intimately interdependent world, exploding in revolutionary change as man struggles to improve his conditions of life in many physical and social environments. Meanwhile, the great new force of a rapidly expanding population increasingly magnifies such problems as food supply, conservation of natural resources, urbanization, public health, education, the use of leisure, and world peace and security.

The opportunities for effective work toward the well-being of mankind through the systematic dispensing of private resources are today enormous. For in attacking the momentous problems he faces, civilized man has at hand means that were unavailable 50 years ago—a great improvement and broadening of education; a vast storehouse of new scientific knowledge and techniques for applying this knowledge; and a general awakening among the peoples of the earth to the fact that man can improve himself and his environment if he has the will and patient determination to do so.

As it begins its second half-century, the Rockefeller Foundation adds to these new means for human advancement an experienced faith in the validity and the vitality of the philanthropic idea. Those whose devotion to the betterment of mankind gave the foundation its first half-century of success have established, it seems to us, that private wealth can be responsibly and effectively expended by private institutions devoted solely to the public good.

To perform this urgent task with increasing effectiveness will be the continued aim of this foundation.

THE ROCKEFELLER FOUNDATION BOARD OF TRUSTEES

Barry Bingham, editor and publisher, the Courier-Journal and the Louisville Times.

Lloyd D. Brace, chairman of the board, First National Bank of Boston.

Detlev W. Bronk, president, the Rockefeller Institute.

Ralph J. Bunche, Under Secretary for Special Political Affairs, United Nations.

Lowell T. Coggeshall, vice president, University of Chicago.

John S. Dickey, president, Dartmouth College.

Orvil E. Dryfoos, president and publisher, the New York Times.

Lee A. Dubridge, president, California Institute of Technology.

Lord Franks of Headington, provost, Worcester College, Oxford University.

Clifford M. Hardin, chancellor, University of Nebraska.

J. George Harrar, president, the Rockefeller Foundation.

Theodore M. Hesburgh, president, University of Notre Dame.

Arthur A. Houghton, Jr., president, Steuben Glass.

Clark Kerr, president, University of California.

John R. Kimberly, chairman of the board, Kimberly-Clark Corp.

John D. Rockefeller 3d, chairman of the board, the Rockefeller Foundation.

Frank Stanton, president, Columbia Broadcasting System.

Henry P. Van Dusen, president, Union Theological Seminary.

W. Barry Wood, Jr., director, Department of Microbiology, the Johns Hopkins University.

George D. Woods, president, International Bank for Reconstruction and Development.

ALLIANCE FOR PROGRESS—CURRENT ECONOMIC SITUATION IN MEXICO

Mr. MANSFIELD, Mr. President, in the New York Times, April 8, there appears an article by Ben A. Franklin on the state of the Alliance for Progress, and another by Paul P. Kennedy on the current economic situation in Mexico. I commend these articles to the attention of the Senate. The one emphasizes the realism of the U.S. approach to the Alliance under the able leadership of Teodoro Moscoso who refuses to substitute words for deeds but works stubbornly and with optimism to bring about the kind of situation in which the concept of the Alliance can contribute to the well-being of the Americas. The second article notes the revival of the Mexican economy, particularly in the wake of President Kennedy's visit last June. This friendly and highly successful undertaking apparently had the effect of contributing to business confidence which, in turn, has reflected itself in investment, in trade, and in a new economic buoyancy.

This development is of immense importance, not only to the Mexican people but to this Nation and the hemisphere as a whole. The pattern of the evolving Alliance for Progress depends heavily on what transpires in Mexico. Its economic achievements not only can keynote developments elsewhere in Latin America but will enable Mexico to make a major contribution to progress in other American Republics. I ask unanimous consent that these articles be included in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 8, 1963]

ALLIANCE HOPES TO END ITS SIESTA—MOSCOSO OPTIMISTIC DESPITE PROGRAM'S HESITANT START—DIRECTOR SAYS UNITED STATES IS READY TO MOVE IF LATINS ARE

(By Ben A. Franklin)

WASHINGTON.—Nobody in the Kennedy administration has a firmer reputation for candor than Teodoro Moscoso.

The energetic, self-critical optimist, increasingly criticized, directs the Alliance for Progress from a large, sunny office on the sixth floor of the State Department Building.

Mr. Moscoso predicted recently that the Alliance would end its 20-month siesta in 1963. But he quickly qualified his forecast.

"We are ready to move," Mr. Moscoso said, emphasizing the "we." "But there is no sense in fooling ourselves, no sense in saying that we are ready to finance the plan of a certain country that requires 80 percent local resources, when there are no local resources.

"This isn't the same as going out and doing the usual kind of Government job, where you control all the elements and you just get it done."

Mr. Moscoso does not control all the elements of the Alliance. After a year and a half, he remains one of the few administration officials whose early hopes and aspirations for more than superfical progress in Latin America have not been dashed.

In the nearly 2 years that the Alliance has operated, about $1,500 million has been committed to Latin countries. Much of this money remains undisbursed for lack of ordinary progress in planning, in clearing the technical and political underbrush for specific projects, and in satisfying the prudent requirements of the Alliance Charter for reforms.

Accordingly, there has been a depressing lag between the Alliance's high aspirations and its results, even its prospects for results.

The United States is still willing to help—more willing, if anything—but its willingness exceeds the hemispheric ability to move ahead.

The distressing fact is that most observers here see little hope that real remedies for the political detachment of the Alliance—its removal from the political realities of Latin America and its consequent "professorial approach"—can be found soon.

The great political and social goals are far from realization. As a disillusioned Latin authority put it recently:

"There is hardly anything in the Alliance record to date that could not have been done, and probably would not have been done, if the Alliance had never existed."

Mr. Moscoso cannot—and would not—admit publicly that his job is hopeless, but his critical faculties do not seem to have been dulled by rationalization.

"The United States," he is fond of saying, "is only a junior partner in the Alliance," implying that much criticism of the program's lag belongs south of the border.

Not everyone understands or agrees with this explanation, however. There is mounting pressure for action, for good news, but little is in sight.

Mr. Moscoso's forecast is full of hope, but circumscribed by ifs. The high points of his projection barely rise above the foothills of adversity and struggle. In making it, he did not look into the astrologer's glass, but at the philosopher's stone.

"In 1963," he said, "we will be turning around. We will have two or three of our big national programs moving. We will begin getting benefits from the demonstration effect. There will be more appreciation of what we are doing."

The national programs are the heart and backbone of the Alliance. Without them, the program is vulnerable to the skeptics' charge that everything the Alliance stands for can be done as well under the less flamboyant foreign aid.

MOST PROJECTS LOCAL

But the usual foreign aid project, which deals with a dam or railroad, and program, which covers large areas such as public health and education, are often local. They are desirable, but confined in scope.

The national programs of the Alliance are designed to bring countries into the 20th century by raising per capita income, wiping out illiteracy, stretching life expectancy and providing homes, farms and jobs for millions.

By "demonstration effect," Mr. Moscoso said, he means that when the first of the dramatic national programs takes hold and begins to yield returns in terms of national progress, more Latin governments and citizens will begin to see the virtue of the Alliance program and its insistence on sweeping financial, fiscal and social reforms.

Of the six countries that have submitted long-range national development plans to the Alliance's panel of nine wise men, only two—Chile and Columbia—have even tentative prospects of making preparatory headway this year.

The plans of both countries have been delayed, at the brink of final approval, by lack of boldness and imagination, by technicians conducting business as usual, and an almost total lack of grassroots support for the difficult domestic reforms needed to make the plans work.

Mr. Moscoso said that Chile had made good progress, Colombia was doing well, and Mexico, Venezuela, and Brazil were hastening reforms and merging them into prospective long-range Alliance plans.

But none of the national plans is actually underway. In addition to Chile and Colombia, the other countries that have submitted development plans are Venezuela, Mexico, Bolivia, and Honduras.

To accelerate planning a necessary phase of Alliance activity that notably lacks a demonstration effect, Mr. Moscoso said, the Alliance staff has begun to stress the usefulness of shorter-range plans.

Of the development plans submitted to date, Chile's, Colombia's, Bolovia's, and Venezuela's are for the full 10-year span of Alliance operations. Mexico's 2-year plan took less time to prepare and, accordingly, will take less time to get into operation.

Mr. Moscoso believes that is a hopeful trend. He indicated that future Alliance proposals might be for a series of successive, shorter periods, embracing the 10-year development period in stages. The succeeding steps of Mexico's plan, for example, are to be formulated while the first stage is being applied.

MARKED—NOT CELEBRATED

Eight months ago, Mr. Moscoso decided that the Alliance's first birthday would be marked, not celebrated. This was done in deference to the unspectacular record up to then.

"In the Indianapolis 500-mile auto race they don't celebrate for anyone at the end of the first lap," he explained.

The omitted opportunity to emblazon the Alliance's anniversary did much to reinforce his standing as a bureaucrat who talks plainly and acts as he speaks. But it was probably a shrewd public relations decision as well. A celebration would have been met with derision in Latin America, even had it been swallowed here.

Regarding the worth and eventual outcome of the Alliance, the Director has no doubts. He has faith. He believes that the Alliance can and must succeed. This attitude has cost him the admiration of some less faithful officials.

He seems chastened only by the enormity of the job he believes the Alliance must do. It is a bigger job, he believes than the transformation of postwar Europe wrought by the Marshall plan, which had its share of criticism.

The comparison is worth noting because Mr. Moscoso makes it often. The Marshall plan, in the 3 years from 1948 to 1951, injected $12,500 million into European economies wrecked by war.

The Alliance calls for foreign investment of $20 billion in 10 years in Latin America. The difference, Mr. Moscoso says, is not only a 40 percent increase in dollars—the Latin American countries are to add $80 billion if they can.

"In Europe we dealt with recovering countries, we were rebuilding countries," he declared the other day. "Now we are dealing with developing countries, not recovering countries. Many of them are starting from the bottom, with nothing to rebuild."

[From the New York Times, Apr. 8, 1963]

MEXICO DISPLAYS SIGNS OF REVIVAL—KENNEDY'S VISIT IS CREDITED WITH A ROLE IN UPTURN

(By Paul P. Kennedy)

MEXICO CITY.—This country, in the spring of 1963, is qualifiedly optimistic after two less than satisfactory economic years.

The sluggish economy of the early months of 1962, highlighted by scant confidence of both domestic and foreign private investment, began showing signs of revival in late summer. The economy continued on a raggedly rising pattern through the remainder of the year.

It is estimated that when final returns are in, the year will have ended with a grand national product growth of between 4 and 4.5 percent. This, while not as much as was hoped and planned for when the year began, was still proudly hailed after a disappointing 3.5-percent increase in 1961.

Several factors are considered to have contributed to the warmly welcomed turn in late summer. One most frequently mentioned was the visit to Mexico on June 29 of President and Mrs. Kennedy. The visit was considered an outstanding success from the standpoint of public reception. But so far as the economy was concerned, the chief beneficial result was psychological. It appeared to provide the beginning of a certain reestablishment of confidence in the country and its administration after many inferior months.

The waning confidence was attributed to confusion over Mexico's position with respect to Cuba during 1960, 1961, and the early part of 1962. There was also much uncertainty over the administration's position on labor, business management, and investment security.

Some of these doubts and uncertainties have not been entirely dispelled even now. Enough were met head on, however, in the latter part of 1962 to revive the economy and to speed foreign investment, which had been virtually dormant. Confidence, observers say, was inspired by the meeting of President Adolfo López Mateos of Mexico and President Kennedy.

The flow of confidence grew additionally in October, when Mexico concluded a definition of its position on Cuba. It made its stand plain against the latter's possession of offensive missile weaponry. From the earliest months of 1960, this country's attitude toward the regime of Premier Fidel Castro had been left in doubt, so far as the business community was concerned.

An additional influence in the growth of the national product was a growing favorable balance of trade. This was reflected particularly in a comparison of two 12-month periods: October 1960 to September 1961, and October 1961 to September 1962. Exports in the first 12-month period amounted to, roughly, $1,570 million, as against $1,730 million in the succeeding 12-month period, or a gain of $160 million.

Imports during the 1960-61 period totaled $1,690 million, as against $1,717 million in the 1961-62 period, or a decline of $27 million. Tourism in the first 12-month period brought dollar revenue of $692 million, as against income in the 1961-62 period of $755 million. This amounted to a net gain from the three items of $196 million for the 1961-62 period.

Exports in September 1962 fell to $80 million from $86 million in August, but they exceeded the total for September 1961, by $28 million for a net gain of $22,600,000. Imports for September 1962 were $91,300,000 against $97,400,000 in August, but they were still $1,700,000 ahead of September 1962, thus yielding a net gain for these two items of $20,900,000 for the month. It appears certain that when final returns for the final quarter of 1962 are adjusted, probably in February, the proportion of gain in the balance of trade for goods and services will remain the same, although quite possibly the magnitude will have depreciated.

The third significant factor in the grand national product increment has been spending in the public sector. This spending in 1962 was 18 percent higher in actual disbursement than in 1861. It has been widely agreed that the gross benefits of this factor are open to question. A high level of Government spending could be of short-lived benefit unless it were accompanied by the full cooperation of private enterprise and became self-sustaining.

In conjunction with its economic planning, the Government has called for a 5-percent national product growth from 1961 to 1965. The failure of 1961 to come nearer than 1½ points of goal, called for 5.4 in the remaining years. A failure of 1962 to reach the latter goal will advance the ante to a rather difficult point, considering that each year the growth becomes more complicated.

PUBLIC SPENDING RISING

It appears certain that public spending will be greater in 1963 than in the past year. In the autumn of last year manifold negotiations were underway for contracts scheduled to begin this year. Loans for some of these projects were completed in the later months of 1962 but still have not been drawn on.

On the drawing board for this year are a number of highway and irrigation projects for which funds have been assured. The highways are largely feeder roads from areas scheduled to become agricultural production centers with the help of new irrigation projects.

There are qualified estimates by observers here that foreign exchange reserves will have reached more than $400 million for the year when computations have been completed. The more optimistic estimates place this figure between $410 and $420 million. In any case there is universal assurance that the 1962 primary reserves will considerably outdo the $390 million of 1961.

In secondary or standby reserves, the country finished 1962 with $345 million, or $45 million better than it had during a large part of the year. It started the year with the following standby loans: Export-Import Bank $90 million; International Monetary Fund, $180 million, and U.S. Treasury, $75 million. Before the year was half over, it drew down $45 million from the Monetary Fund. It paid this back long before the year was over, however.

There was some pressure on the peso during 1962. This took place at the classic period here for pressure on monetary stability—during the Easter holidays. It was considered, however, that the pressure last year on the peso was the lightest and easiest disposed of in any recent year.

During 1962 President López Mateos asserted repeatedly that the peso's value would be preserved. He made this emphatic in his "Informe" of September 1, the annual presentation of Mexico's equivalent of the state of the Union address of the United States. The Mexican President on that occasion declared, "We have had a solid currency since the beginning of this administration, and we will maintain the stability of the peso. We will maintain the practice of not resorting to inflationary financing or resources."

SOCIAL SECURITY BENEFITS

Mr. MANSFIELD. Mr. President, I have just received from the Social Security Administration a tabulation showing the number and monthly amount of benefits paid as of the end of December of 1962 to old-age, survivors, and disability insurance recipients. By that date, 18.1 million persons in the Nation were receiving monthly benefits. This represents an annual increase of some 1,450,000 for the last 3 years, and reflects the changes contained in the 1960 and 1961 amendments to the Social Security Act. The changes were made necessary by greater need on the part of all recipients, especially those retired persons over 65 and dependent children under 18.

Mr. President, these figures indicate that dependent children, the elderly, and the disabled in my own State of Montana totaled 68,404 persons in 1962. They received benefits amounting to slightly more than $4.5 million a month. The bulk of the funds went to some 38,026 elderly persons in retirement benefits. Also, 10,428 dependent children benefited from the program. I want to point out that these moneys are not grants from the Federal Government. Rather they are benefits earned by workers who have paid into the old-age, survivors, and disability insurance program over the years. They are earned returns on insurance premiums, if you will. Mr. President, I ask that the table containing the information on payments to Montana be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Number and amount (dollars) of monthly benefits in current-payment status as of Dec. 31, 1962, by type of benefit and beneficiary's State and county of residence, old-age, survivors, and disability insurance

[Residence based on post office or place name in benefit check address. Benefits under the old-age and survivors insurance (OASI) parts of the old-age, survivors, and disability insurance program are payable from the OASI trust fund to old-age-insurance (retired-worker) beneficiaries and their dependents and to survivors of deceased workers. Benefits under the disability insurance (DI) part of the program are payable from the DI trust fund to disability-insurance (disabled-worker) beneficiaries and their dependents]

Mr. MANSFIELD. Mr. President, I think it would be appropriate at this time to discuss the scope of the old-age, survivors and disability insurance program throughout the Nation. The Social Security Administration statistics show that seven-tenths of all beneficiaries—or 12.7 million—were retired workers and their dependents. Nearly a fourth of the total—or 4.1 million—were survivors of deceased workers. Disabled worker beneficiaries and their dependents numbered 1.3 million and made up 7 percent of the total. Because of recent changes in the Social Security Act, about 89 percent of the persons reaching age 65 this year will be eligible for benefits. In families with children under 18, if the father should die, the mother and children in about 9 out of 10 families would be eligible for monthly survivor benefits.

Mr. President, I ask unanimous consent that two additional tables, showing the breakdown of OASI benefits to all of the 50 States, be printed in the RECORD at this point.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Amount of benefit payments in calendar year 1962, by State, old-age, survivors, and disability insurance

[In thousands]

Beneficiary's State of residence [1]	Total	OASI [2]						DI [2]		
		Total	Monthly benefits [3]				Lump-sum death payments [4]	Monthly benefits [3]

---

[1] Based on benefit check address.

[2] Benefits under the old-age and survivors insurance (OASI) parts of the old-age, survivors, and disability insurance program are payable from the OASI trust fund to old-age (retired-worker) beneficiaries and their dependents and to survivors of deceased workers. Benefits under the disability insurance (DI) part of the program are payable from the DI trust fund to disability (disabled-worker) beneficiaries and their dependents.

[3] Distribution by type of benefit and by State estimated. Supplementary benefits are paid to wives or dependent husbands aged 62 or over, wives under age 62 with child beneficiaries in their care, children under age 18, and disabled sons and daughters aged 18 or over (whose disability began before age 18) of old-age or disability insurance beneficiaries. Survivor benefits are paid to widows or dependent widowers aged 62 or over, children under age 18, disabled sons and daughters aged 18 or over whose disability began before age 18, widows or divorced wives with child beneficiaries in their care, and dependent parents aged 62 or over of deceased insured workers.

[4] Distribution by State based on 10-percent sample.

[5] Less than $500.

Number and amount (dollars) of monthly benefits [1] in current-payment status at end of December 1962, by type of benefit and by State, old-age, survivors, and disability insurance

EXPROPRIATION OF FOREIGN ENTERPRISES AND THE CLAY REPORT

Mr. MANSFIELD. Mr. President, my attention has been directed to an extremely interesting article which appeared in the April 1 edition of Barrons. The lead article discusses the proposed expropriation of American investments abroad, the effect it is having here at home and recommendations made in the Clay report.

While the article specifically mentioned the copper industry which is of great importance to Montana it is a situation which can be associated with a number of instances where American firms have expanded their operations to foreign lands. I highly recommend this brief analysis and ask that the text of this article be printed at the conclusion of my remarks in the Congressional Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Shift in Copper—Anaconda and Kennecott Add a Footnote to the Clay Report

To the Broadway stage last month came a musical remake of "Tovarich," a comedy about White Russians living in exile in Paris, which was written by Jacques Deval and Robert E. Sherwood a quarter century ago. Handsomely mounted and performed with rare style, the production is a personal triumph for Miss Vivien Leigh, whose artistry and charm, all the critics agreed, have diminished not a whit since "Gone With the Wind." The passing years, however, have been less kind to the playwrights, whose talents evidently failed to include a working knowledge of either capitalism or communism. Big business is portrayed as a gang of monopolists with evil designs on the mineral wealth of the Soviet people—in the musical version, a tuneful tribute to the virtues of a small cartel, sung with gusto by the greedy rich, rings down the curtain on the first act. Moreover, the plot—which deals with the Kremlin's efforts to retrieve a hoard of gold held in trust for the Czar by the refugees—is resolved in fairly simple-minded fashion. In order to keep their nation's oilfields out of the clutches of foreign plutocrats, the exiled nobility, anti-Bolshevik but Russian patriots above all, hand over the bullion to the commissars.

In the make-believe world of the theater, especially in the radical thirties, this might have looked like a happy ending. Unfortunately for the authors, however, real life has refused to follow the script. Wherever the state, in the development of national resources, has ousted private capital, the results for all concerned have generally proved anything but happy. The tragedy of socialism has been played to the bitter end by diverse casts of characters in many varied settings: Cuban sugar, Mexican and Iranian oil, Bolivian tin. Moreover, while few observers show much awareness of the fact, a rerun of the same dreary plot is also shaping up in Chilean copper. Trouble already has befallen shareholders of Kennecott Copper Corp., which recently cut its quarterly dividend. Sooner or later, if events follow their customary sequence, users of the red metal, as well as the impoverished Chileans, are apt to pay a heavy price. Statism may give its misguided followers a fleeting illusion of progress; it never delivers the goods.

Barron's, of course, has been saying so for a long time. Last week, the Committee to Strengthen the Security of the Free World, under the chairmanship of Gen. Lucius D. Clay, repeated the message. "We must be clear as to the kind of economic systems we attempt to foster and assist," said the Clay report. "We believe the United States should not aid a foreign government in projects establishing government-owned industrial and commercial enterprise which compete with private endeavors. The observation of countless instances of politically operated, heavily subsidized and carefully protected inefficient state enterprises in less developed countries makes us gravely doubt the value of such undertakings in the economic lives of these nations." With a hard eye on the Alliance for Progress, the Clay Committee stressed the importance of monetary stability, as well as incentives to savings and investment.

General Clay and his colleagues might or might not have had Chile specifically in mind. However, that unhappy Andean land could certainly profit from their wisdom. For in recent years the country's economic affairs have gone from bad to worse. Some of its difficulties have come from outside forces—in 1960 earthquakes and tidal waves inflicted on Chile one of the worst natural disasters in its history. In the main, however, its woes have been manmade. Despite occasional gestures toward stable money, the government has pursued policies which raised the cost of living by 26 percent in 1962 alone. Inflation has weighed heaviest on foreign (i.e., American) mining interests, notably Anaconda and Kennecott, which have suffered endless labor unrest, discriminatory rates of exchange and confiscatory taxation. Last year, for example, Kennecott had to turn over to the Chilean Government more than 80 percent of the pretax profits of its rich Braden mine.

In consequence, Kennecott's earnings on its Chilean operations have plummeted. In 1960 Braden supplied $23.6 million, or roughly 30 percent, of the parent company's aftertax net. In 1962, in striking contrast, its contribution plunged to an estimated $7 million, or roughly 10 percent of the total. The drastic decline in the return on their Chilean properties has led both Kennecott and Anaconda to revise their investment programs. Thus in 1961 Anaconda slashed its capital outlays in Chile by nearly half; despite an increase last year, Chile's share dropped from 28 percent of the total to less than 20 percent. Kennecott, in turn, has made what appears to be a fundamental shift in its blueprint for the future. The company recently disclosed that it has abandoned plans to sink $200 million into Braden. Instead, it will make a heavy investment designed to step up the capacity of its mines in Utah.

Kennecott's announcement pointed up a curious byproduct of the mounting turmoil abroad—a growing concentration upon resources in the United States. Several major producers, notably Inspiration, which recently opened its big new Christmas mine, and Magma, have always stuck close to home. Lately, however, they have been joined by others. Peripatetic American Smelting & Refining began operating its Mission mine, near Tucson, in mid-1961. Six weeks ago Anaconda signed an agreement with the Banner Mining Co. to explore the latter's properties in Pima County, Ariz., a move which aims at the eventual production of 40,000 tons of copper annually. Kennecott's ambitious expansion of its Utah division, scheduled for completion in 1967, will cost $100 million and boost output by 100,000 tons per year.

Far from declining, as such authoritative sources as the Paley Commission once forecast, domestic production of copper is on the rise. Favorable for some, the news is nothing for the United States as a whole to cheer about. For it means that capital has been diverted into less productive channels: whereas a ton of Chilean soil yields Kennecott nearly 40 pounds of copper, its Utah deposits are less than half as rich. If producers are forced to rely on poorer grades of ore, the shift inevitably will show up in prices, thereby burdening all consumers of the raw material. For Chile, which derives the bulk of its foreign exchange and over two-thirds of total government revenues from the export of copper, a decline in output would be far worse. Recent official policies have been damaging enough—the country has slipped to third rank among the world's producers. If pursued further—and the man who many think will be the next President is calling for outright expropriation of the mines—they could easily lead to disaster.

While less diverting than Tovarich (and clearly unpalatable to the spiritual heirs of the late Mr. Sherwood), the Clay report, we submit, makes far more sense. Let it accordingly have the last word. "Agitation for the expropriation of foreign enterprises and for nationalization of private productive ventures is hardly conducive to the mobilization of private local and foreign capital investment and is destructive of rapid economic progress. Latin America must be encouraged to see its essential choice between totalitarian, inefficient, state-controlled economies and societies on the one hand, and an economically and politically freer system on the other, realizing that a society must begin to accumulate wealth before it can provide an improved standard of living for its members."

TRADING POTATOES ON NEW YORK MERCANTILE EXCHANGE

Mrs. SMITH. Mr. President, I have received a very interesting letter from Mrs. Floyd J. Kierstead, of Presque Isle, the wife of a potato farmer in Maine, in opposition to trading of potatoes on the New York Mercantile Exchange.

I ask unanimous consent that her letter be placed in the body of the Record at this point.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Presque Isle, Maine,
March 27, 1963.

Senator Margaret Chase Smith,
Washington, D.C.

Dear Senator Smith: Many farmers in Aroostook have been very disturbed by the letters made public recently by you; received from those who oppose the Muskie-McIntire bills to eliminate trading on the Mercantile Exchange on Maine potatoes. I am not surprised that Dr. Philip Turner, general manager of the Aroostook Federation of Farmers, and Jack Roth, president of Beaver Brook Farms, Inc.—both of Caribou, Maine—both oppose this bill and neither would you be surprised if you knew all the details. Mr. Roth stated it was "good for the small farmer and he has 160 growers he deals with" etc., etc.—and also Dr. Turner stated that "many farmers would have been unable to farm last year, without the help of the Exchange" etc. etc. Both these men—and probably 90 percent of those who have contacted you—are only speaking from their end of the deal. To be sure, many farmers were financed by these outfits, to produce a crop of potatoes, to make money for their creditors, as thousands of barrels were contracted for $1.75 to $2 per barrel and some lower, even. Now this means the farmer worked the whole year just for the chance to stay on his farm etc., because he'd absolutely have to have $2.50 per barrel to produce his barrel of spuds he contracted for $1.75 and by the time he racked them and took the cut, etc., he averaged less than $1.50 per barrel but the contractor made sure he paid only for the No. 1 hauled to him, besides he made money—and a good profit—from the fertilizer he sold the farmer and the spray materiel, etc., etc. But where does the farmer stand? A big loss, year after year until right now 95 percent of the farms are in debt, to the limit. We know. Only a few years ago we were free of debt and had small savings but now its all gone, everything. Everything, through no fault of ours—only because we raise potatoes for every Tom, Dick, and Harry to make a good profit from. Two years ago, we had to finance under FHA and this spring the Federal Land Bank plans to slap a foreclosure on, because of 2 years delinquent taxes. This week the price of potatoes dropped from $2.15 to $1.50 a barrel when we had hoped, by now, to be getting at least $3 for these beautiful seed potatoes and we could have avoided that foreclosure. Last spring there were 30 foreclosures in Fort Fairfield alone (by Federal land bank). (No hearsay—the Fort Fairfield FHA manager told me himself.)

Last spring our next door neighbor walked off the farm that had been in that family for 70 years. They were young folk, college graduates who wanted to farm where his father had made a good living for his family and had sent four children through college (losing one (lieutenant) in the Korean war). This can be duplicated hundreds of times in our farm families. We are in a desperate condition. The consumer has no pity for us, and I don't blame them, when they pay $5.50–$6 per barrel for the same potatoes we get $1.50 for, right here in our county, where we grow them. There is too big a spread between the producer and consumer; and each one makes a profit, all but the producer, who's at the mercy of everyone. No one labors so hard and such long hours as we do, and so many are sick at heart, after 6 years of unheard of low prices. It is much worse than the depression years, as one could squeeze a dollar in those days, but production costs are so high. How embarrassing to present a check for produce sold, to the FHA and ask for enough from it, to pay the light bill, gas bill, groceries, and so forth, after being so independent all these years.

We are 60 years old and had supposed these years would be our best ones, after all the hard work, the saving, the long hours of waiting when we could take things easier, and so forth. Most farmers' wives work at some job, but because of a brain injury, at birth, to our only child, 38 year ago, she is retarded and only because we love her so much, have all these years been bearable—but I am unable to follow my profession of teaching because of this.

I'm sorry to have written such a long letter, but I feel we must, outlaw the trading on the Mercantile on Maine potatoes. They have us bound and there is no hope for us, if they continue this damaging practice. In three different referendums the farmers have voted it out by 93 percent, but it still is here.

Please do all you can to help us get rid of it. Maine is the only State that allows it and potatoes are the only agricultural product not getting a subsidy, and the potato industry is the hardest hit financially, of all the agricultural products. The diversion program was not enough to make a dent in the situation, and helped very little. High-paid officials aren't helping us any, nor the processing plants.

Congratulations to you on your courage to speak out with convictions on many issues and let them know there are still people in Government who stand for the right and not afraid to say so.

My apologies for such a lengthy letter.

Sincerely,

Mrs. Floyd J. Kierstead.

P.S. As you must know—Maine is the only State allowing trading of potatoes on Mercantile Exchange. This week the price dropped from $2 per barrel to $1.75 because on Monday the Mercantile plunged 13 cents. Then on Thursday the price dropped from $1.75 to $1.50 because the Mercantile took another plunge of 13 cents. I noticed the price in the stores remained the same—49 cents per bushel.

ON LIVING TOGETHER

Mr. STENNIS. Mr. President, the Evening Star published in Washington, D.C., in its issue for Monday, April 8, 1963, carried an editorial entitled "On Living Together."

Mr. President, this editorial has to do with recent events at Greenwood, Miss., and on the broader subject of racial relations among the people who live in the Deep South.

The author of the editorial has a clear understanding, great tolerance, and a very practical approach and viewpoint upon this matter. This is one of the best editorials I have ever read written outside of the immediate area in question. I commend the editorial writer and the Evening Star highly. It is only through better understanding and a consideration of the practical points involved that we avoid trouble and make progress.

I wish to give this publication to my colleagues as well as to the people of the United States; therefore, I ask unanimous consent that the editorial may be printed in the body of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

On Living Together

The legal "truce" which has been arranged in the clash over registering Negro voters in two Mississippi counties strikes us as being a rational settlement of what looks very much like a phony issue.

Several days ago the Justice Department asked a Federal judge in Greenwood, Miss., to issue a temporary restraining order barring any interference with registration of Negro voters. The judge declined to issue such an emergency order, and set Thursday of last week as the day for a hearing in which the Mississippi officials could be heard. Somewhere along the line a closer look apparently was taken, the so-called truce was arranged, and the court hearing was put off until October.

We doubt that it will ever be held. For the indications, or at least those available in press reports, do not suggest that there has been any concerted plan or effort to prevent Negroes from registering as voters in Greenwood or Leflore Counties.

Not having been born yesterday, we do not think that the white people in those counties, heavily outnumbered by Negroes, would like to encourage Negro voting. The fact is, however, that the Associated Press has reported day after day that the local authorities in the two counties were permitting Negro registration by individuals and in small groups. What the police were breaking up were marches on the registration places by large groups of Negroes—some of whom possibly were eligible voters and many of whom certainly were not. After all, the risk of incitement to race riot in Mississippi is something that cannot be ignored.

Why the Department of Justice at first jumped eagerly into this situation, and then backed off, we do not know. If the real purpose was to help insure the right of qualified Negroes to register as voters, that was both necessary and proper. If, on the other hand, the purpose was to grab some of the headlines from such as Negro comedian Dick Gregory, the action of the Justice Department was wrong and unworthy.

At one meeting in Greenwood, a Negro preacher from Texas said that mass demonstrations were unwise. "We've got to live together," he stated, "and all the fault is not in the white man." An audience of some 350 Negroes called him an "Uncle Tom" and shouted him down.

In modern vocabulary, "Uncle Tom" has become a term of opprobrium. It suggests that any Negro who is not actively fighting the white man is betraying his own race. We suspect, however, that in time it will be shown that the preacher in this instance, the Reverend W. R. Fairley, was right. For when the last demonstration is over, when the Justice Department has made its last gesture, when all Negroes who went to register and who are qualified have been registered, the truth of the Reverend Mr. Fairley's statement will remain, "We've got to live together."

APPOINTMENT OF STUDENTS TO SUMMER FEDERAL JOBS

Mr. CARLSON. Mr. President, I want to commend the Chairman and the members of the Civil Service Commission for their very prompt and definite action in regard to the appointment of students to summer Federal jobs.

There were many positive evidences that the appointments of students to summer jobs were to be made on the basis of political patronage.

The order issued to the heads of executive departments and agencies of our Government not only contains quotations from the civil service rules in regard to this, but also contains statements on the part of the Commission which completely prohibit the clearing of jobs for students through the Democratic National Committee or the White House.

I ask unanimous consent that the order issued by the U.S. Civil Service Commission of April 5 and also a column written by Jerry Kluttz, which appeared in the Washington Post this morning, be printed in the Record.

There being no objection, the order and column were ordered to be printed in the Record, as follows:

U.S. Civil Service Commission,
Washington, D.C., April 5, 1963.

To the heads of executive departments and agencies:

Recent press reports alleging that political clearance is necessary for summer employment in civil service positions in the Washington metropolitan area indicate serious misunderstanding about this program. The image of the Federal service can be gravely damaged and future quality staffing can be jeopardized unless all doubt as to the integrity of merit system operations is dispelled. We must make sure that no steps are taken to defeat the President's expressed intention "to protect fully the civil service merit system."

Political clearance in filling competitive civil service positions is clearly illegal, as shown by the following quotations from the civil service rules:

"Sec. 04.2. Prohibition against racial, political, or religious discrimination: No person employed in the executive branch of the Federal Government who has authority to take or recommend any personnel action with respect to any person who is an employee in the competitive service or any eligible or applicant for a position in the competitive service shall make any inquiry concerning the race, political affiliation, or religious beliefs of any such employee, eligible, or applicant. All disclosures concerning such matters shall be ignored, except as to such membership in political parties or organizations as constitutes by law a disqualification for Government employment. No discrimination shall be exercised, threatened, or promised by any person in the executive branch of the Federal Government against or in favor of any employee in the competitive service, or any eligible or applicant for a position in the competitive service because of his race, political affiliation or religious beliefs, except as may be authorized or required by law.

"SEC. 05.4. Enforcement authority of the Commission: (a) Whenever the Commission finds that any person has been appointed to or is holding a position in violation of the Civil Service Act, rules or regulations, or that any officer or employee in the executive branch has violated this order or any of the laws, rules, or regulations administered by the Commission, it is authorized, after giving due notice and opportunity for explanation to the officer or employee and the agency concerned, to certify the facts to the proper appointing officer with specific instructions as to discipline or dismissal or other corrective actions.

"(e) If the appointing officer fails to carry out the instructions of the Commission issued under * * * this rule, the Commission shall certify the facts to the head of the agency concerned. If the head of the agency fails to carry out the instructions of the Commission within 10 days after receipt thereof, the Commission shall certify the facts to the Comptroller General of the United States, and shall furnish a copy of such certification to the head of the agency concerned; and thereafter no payment shall be made of the salary or wages accruing to the employee concerned."

To assure compliance with the above provisions, the Commission has found it necessary to take the following steps:

1. Suspend the use of the following appointment authorities for any intermittent or limited temporary employment in the Washington metropolitan area between the dates of May 1, 1963, and October 1, 1963:

(a) Section 6.101(s) of schedule A, covering temporary or intermittent employment of students and teachers to assist in scientific, professional, or technical work.

(b) The delegated authority to make temporary limited appointments outside of regular competitive procedures when total employment will not exceed 700 hours.

(c) Any other special authority (such as that contained on a CSC Form 303 or equivalent), which may be construed as authorizing summer employment.

2. Direct the making of special inspections during the next few months to insure that any summer appointments are made (a) without political clearances, and (b) in compliance with these instructions. This includes the investigation of complaints charging political clearance for summer employment.

3. Direct that corrective action be taken as required by appropriate laws, rules, and regulations if violations are established.

The suspended appointment authorities may be restored on an agency-by-agency basis when the Commission receives a satisfactory certification and assurance from the agency head that their use will be in accord with these instructions. Such restoration is effective only on notification by the Commission that the agency head's statement is acceptable, and such notification must be cited on appointment documents. Unless these authorities are restored, the agency must use the appropriate competitive register.

Such an agency statement shall include:

1. A certification by the head of the agency that summer appointments will be made in accordance with these instructions.

2. A copy of the agency's appointment plan and the agency head's instructions and explanation of any other steps taken to insure that all responsible appointing, reviewing, or recommending officials are informed of the agency's appointment plan, the fact that political clearance is illegal and will not be tolerated, and any other applicable laws and rules.

For your information, the Commission is currently developing plans for nationwide competitive examining for summer positions, to be effective in 1964.

By direction of the Commission:

Sincerely yours,

JOHN W. MACY, Jr.,
Chairman.

CIVIL SERVICE MOVES TO BAR POLITICS FROM SUMMER JOBS FOR STUDENTS

(By Jerry Kluttz)

The Civil Service Commission yesterday acted to prevent the White House and Federal agencies from appointing students to summer Federal jobs here on the basis of political pull.

It withdrew from all agencies authority to make the temporary appointments and the power won't be restored unless the Commission is convinced that the appointments are made without political clearances and in full compliance with the law and its rules.

The tough antipolitical interference order was a departure for the agency, which generally contents itself with issuing warnings to prevent undermining of the merit system and its laws and rules by either agencies or individuals.

"We must make sure," the Civil Service Commission announced, "that no steps are taken to defeat the President's expressed intention to 'protect fully the Civil Service merit system.'" It further explained:

"Recent press reports alleging that political clearance is necessary for summer employment in civil service positions in the Washington Metropolitan Area indicate serious misunderstandings about this program. The image of the Federal service can be gravely damaged and future quality staffing can be jeopardized unless all doubt as to the integrity of merit system operations is dispelled."

The Civil Service Commission then informed agency heads in a special bulletin that political clearance in filling competitive jobs "is clearly illegal" and it quoted the appropriate rule and the sweeping authority it has to enforce it. To assure compliance with the rules, the Civil Service Commission concluded, it was necessary for it to suspend all agency authorizations to make temporary appointments in the Washington area between next May 1 and October 1.

The Commission also directed its staff to make special inspections during the summer months to make sure that summer appointments comply with its rules and the law.

The Civil Service Commission will restore the hiring authority on an agency-by-agency basis but only after the agency head certifies that he and his staff fully understand the civil service laws and rules and will carry them out.

Chairman John W. Macy also announced that the Civil Service Commission is developing plans for a nationwide competitive exam that would be used to fill summer jobs in 1964. This would be the first time for such a test and it would discourage both nepotism and partisan political considerations.

The Civil Service Commission official commented: "We were sorry to have to do it but we were placed in an impossible situation where our honor and virtue and the integrity of the system was at stake."

The White House repeatedly assured the Civil Service Commission that it had no plans to require a political test for summer Federal jobholders. But Dorothy Davies of the White House sent agencies data sheets that asked for the names, addresses and other information on applicants. The significant question on the form in the Civil Service Commission's eyes was "By Whom Recommended?"

College Democrats were advised to have Members of Congress send their completed form 57's, job application forms, to Mr. Davies along with recommendations from the Members. James Hunt was assigned by the Democratic National Committee to advise student applicants on how to get jobs.

Agency officials also advised the Civil Service Commission that they were being told that the jobs were to be filled on a political basis despite the Civil Service Commission and the laws.

The hard-hitting Civil Service Commission directive will have the effect of canceling commitments made to hundreds of students who were promised jobs here this summer. The Civil Service Commission stressed that agencies must use appropriate competitive registers to fill their summer jobs unless their hiring authority is restored.

Incidentally, the order will have the effect of improving job prospects of students who have passed the student aid, trainee, Federal service entrance, typing and other competitive tests. Most of the summer hiring will be from these registers.

Federal agencies last year hired nearly 10,000 students for temporary summer jobs and a recent Civil Service Commission survey indicates they plan to hire about 6,000 this summer.

But the controversy over summer jobs and cuts by Congress in agency budgets have combined to lower estimates to around 3,000.

VOCATIONAL TRAINING

Mr. KEATING. Mr. President, all of us have been concerned about the high rate of unemployment in this land of plenty. Latest figures just released by the Department of Labor show that 4½ million Americans were unemployed in March. This group represents 5.6 percent of our work force.

Startling as these figures are, they are comforting next to the statistics on unemployed young people. Teenagers between 16 and 19 have an unemployment rate of 14.5 percent. This is almost three times the national average. Most of the young people in this group are seeking work for the first time, and many of them have left high school without a diploma.

One of the primary reasons for their frustration is that they have not been trained in marketable skills. In our academically oriented school systems, we have concentrated heavily on the 20 percent of American children who will graduate from college, and have neglected the vast majority who must find jobs while they are still in their teens. Vocational education has become the stepchild of the school system. Only 4.5 percent of total secondary school budgets is allocated to vocational training in spite of the fact that the great majority of our children need it. Marketable skills—secretarial and business training, mechanics, appliance repair training—are neglected to the detriment of the whole national economy.

Providing the best possible education for our nuclear scientists, teachers and professional people is indeed commendable. Retraining the unemployed is necessary and useful medicine for a sick economy. But pretraining—that is, education in vocational skills before our children enter the labor market—would be a vaccine against economic ills.

Planning is needed to insure training for the jobs which do exist. Students who do not plan to go on to college should not be marking time in school, or dropping out because they have lost interest in academic subjects. They should, instead, be equipped to perform the jobs our Nation needs, and to become contributing members of our society.

In this connection, Edward T. Chase has written an excellent article which appears in this month's Harper's magazine. I ask unanimous consent, Mr. President, that this article be printed in the Record. I know it will prove valuable reading for every Member of the Senate who is concerned not only specifically with the legislation which is soon to come before this body but also with the long-term future of our Nation.

There being no objection, the article was ordered to be printed in the Record, as follows:

Learning To Be Unemployable

(Edward T. Chase)

The biggest failure of American education is not its inability to produce more scientists than Russia. It is the way in which it is turning millions of young people into unemployables. This fact is as little understood as it is shocking. Because of it, job-hunting youths face a grimmer prospect in the 1960s than their elders did in 1933 at the depth of the Great Depression, when the unemployment figure stood at a record 24.9 percent.

Already today, in many cities, unemployment among youths equals, and is often double or triple this depression rate. And the outlook is worsening. In the closing days of 1962, while general unemployment remained at a fixed level, the number of young people out of work leaped upward by 100,000. And another 100,000 increase was recorded in the first figures on unemployment for 1963.

This menacing situation is a direct consequence of the gross imbalance in our educational system. Its attention has been overwhelmingly concentrated on the 20 percent of students who go through college. The vocational future of the other 80 percent has been either ignored or sabotaged by an archaic system of job training. It is a system that produces unneeded farmers, cabinetmakers, and weavers, while the demand is rising for business-machine repairmen, chefs, auto mechanics, and electrical servicemen—to mention only a few of the skills in short supply.

A self-serving lobby of vocational educationists perpetuates this training in moribund trades; at the same time it has intensified the youth unemployment crisis by tightening the standards of admission to vocational schools. In the academic high schools, on the other hand, there is, in the main, not even the semblance of preparation for work. Ninety percent of all U.S. schools offer no training for jobs in industry; 95 percent offer none in selling or merchandising although there are now more job opportunities in these fields than in production; only about 18 percent of high school students in urban areas are getting any sort of preparation for work. Indeed, the Federal Government spends 10 times as much on the national school lunch program as on vocational education—which commands only 4 percent of all current expenditures on public education.

For years this national scandal has been swept under the rug. There is, however, now some hope that the shortcomings of our job-training efforts will be aired—and even that steps will be taken to remedy them. For our archaic vocational education system has suddenly become the vital tool in a massive national effort to train unemployed people for new jobs under the Manpower Development and Training Act passed by Congress at the last session. It is in our long-ignored vocational schools—in afternoon and evening classes—that men and women who may have been out of work for months will, it is hoped, be taught trades that will make them self-supporting. Large sums of Federal money will be poured into this program. And in the process local school boards, employers, and many other Americans who have never worried about what went on inside vocational schools will be brought face to face with their inadequacy.

Fortunately this is happening at a time when we are beginning to understand the nature of the so-called structural unemployment of which the youth unemployment crisis is a part. This understanding has dawned very slowly. Only a year ago the prevailing view among Washington policymakers, including the Council of Economic Advisers, was that there was no unemployment problem which could not be cured by a rise in our economic growth rate.

We now know that this is not the case. Economic growth, to be sure, is important, but it is no panacea for the kind of unemployment that at present confronts so many Americans.[1] For this is a two-sided problem. There is, on the one hand, the demand side—the availability of job openings. And then there is the supply side—the availability of people capable of filling those openings. To date the two sides have not matched, because the unemployed people did not have the right skills or were not located in the right places. The number of job openings fluctuates with the business cycle; they were relatively plentiful, for instance, at peak periods such as 1948, 1953, 1957, and May 1960. But in these same periods 2 or 3 million Americans were out of work. Among them is the group of hard-core unemployed (out of work 15 weeks or more) who will not find work even in a boom year. This is a standing army of 1,153,000 today. They will not be helped by manipulations of monetary or fiscal policy. For these people lack skills—often even the elementary ability to read and write—which most jobs require. Dire as is the plight of these adult "unemployables," the more terrifying fact is that we are adding to their numbers each year many thousands of boys and girls who drop out of high school—or graduate—without a marketable vocation or trade.

The need to halt this wasteful neglect becomes increasingly urgent as the demand for unskilled workers continues to shrink.[2] Unskilled jobs today account for only 5 percent of all U.S. employment. In the 1960's on the average some 2.5 million jobs will be eliminated annually by automation. Most dismaying is the yearly loss of a quarter of a million "entry" jobs, the kind whereby youth matriculate into the work world. Simultaneously there will be a spectacular explosion of young men and women from 14 to 25 years old into the labor force—50 percent more of them than in the 1950's. But few of them will find work unless we take emergency steps to prepare them for the kind of jobs that will need doing. Difficult though this may seem, it is by no means impossible, for a good deal of precise information is available as to the technological and occupational changes that lie ahead.

Projections provided by the Division of Manpower and Employment Statistics of the U.S. Department of Labor show, for instance, that we will need 50,000 new carpenters annually in the 1960's, 5,000 new toolmakers and diemakers and appliance servicemen, and 10,000 new plumbers. We will also need many times the current supply of technicians—aids to engineers, guards, drycleaners, policemen, and waiters. We will need more stenographers and secretaries but fewer typists (more copying will be done by duplicating machines). Similarly there will be a decline—due to technological and social changes—in the demand for refrigerator mechanics, lithographers, machinists, cashiers, paperhangers, and telephone linemen.

Projections like these should, one would think, be a matter of vital concern to the people who run our vocational-education system. But if you visit almost any vocational school, you will find its program incredibly irrelevant to the facts of work in the 1960's. To understand why this is so, one must pause for a brief look at the little-known history of vocational education—or "vo-ed" as it is known in the shorthand of the educationists.

BLUE-COLLAR PEDAGOGS

Keystone of our vocational-education system—unaltered to this day though other laws have supplemented it—is the Smith-Hughes Act, which Woodrow Wilson signed in 1917. At that time, about a third of all American workers were farmers and the accent was heavily on training for agriculture. It still is—even though only one-eighteenth of our labor force now works on the farm (and often not in full-time jobs). Today, as in 1917, nearly half of the annual $7 million of Federal money provided under this basic legislation (it is given to the States in perpetuity on a dollar-for-dollar basis) goes to farm training. This law and its supplements are very precise about just what this means. States cannot be reimbursed for training in such things as food processing, marketing, maintenance of farm machinery, or irrigation—all fields that now employ more rural people than actual farming does.

Across the country a third of all vocational-education funds—Federal, State, and local combined—are still spent on training farmers, although at present only 1 young applicant in 10 can hope to find a job on a farm when he leaves school. Even New York City is the beneficiary—if that's the word—of farm-teaching funds. The city maintains and is expanding a farm school in Flushing, a semisuburban area half an hour by subway from Times Square.

The official headquarters of the "vo-ed" world are in Washington, D.C. on the fourth floor of 1010 Vermont Avenue, NW. This is the modest base of the American Vocational Association and, more importantly, the lair of M. D. Mobley. He runs the AVA as its executive secretary and is (correctly) reputed to be Washington's most successful lobbyist. "M.D." (short for Mayor Dennis), as he is known to Senators and other influential types, belongs to the educational breed called "vo-ags." They are teachers of agriculture, champions of the Smith-Hughes Act and of the continuing dominance of farming in vocational education. The "vo-ags" are the biggest single force within the American Vocational Association, a body which a prominent member of President Kennedy's Committee on Youth Employment described to me recently as "the greatest obstacle in American education."

---

[1] We need at least a 5-percent growth rate just to stand still. Since 1946 it has taken between 3 and 5 percent fewer persons annually to produce the gross national product. So to keep the same number of people employed, we have to expand our overall product by this same 3 to 4 percent each year. But the population of the labor force also expands, between 1.2 and 1.5 percent yearly. Hence the need for the roughly 5-percent expansion.

[2] The unskilled still dominate Western Europe's labor force, largely because of the relatively sluggish rate of technological change. A third of Italians are still farmers, a fourth of the French. The "economic miracle" of Western Europe and Japan has obscured the fact that a U.S. factory worker produces three times as much in an hour as a European, seven times as much as a Japanese. One American miner produces as much as seven European miners; one American steelworker doubles the output of a Japanese. The United States is the only Nation with more white-collar than blue-collar jobs and more people in service-producing than in goods-producing industries.

M.D. is a Georgian (as were both sponsors of the Smith-Hughes Act). When you meet him he is instantly identifiable as your true friend, and a born conciliator blessed with an uncritical mind that blandly ignores the anachronisms in our vocational-education system. Back in 1919, M.D. was the only boy in his rural Georgia county to graduate from high school. He then went on to take a degree in agriculture at the University of Georgia and later taught poultry farming. He was named "Man of the Year" in 1940 by the magazine Progressive Farmer.

This barnyard background is belied by M.D.'s current sartorial splendor. He sports an expensive watch with an ornate silver and gold wristband, bejeweled ring, tiepin, and cuff links and has an overall polish, accented by an F.D.R.-type cigarette holder, which presumably would render the average bumpkin speechless. Nonetheless, he is the darling of the vo-ags and their undeviating protector. "There's not a thing wrong with vo-ed legislation," he told me earnestly.

Clearly his constituents agree with this dictum. At their national convention last December in Milwaukee the AVA enthusiastically resolved to "vigorously oppose any effort to repeal or modify those provisions of the Smith-Hughes Act which earmark funds for agricultural education. * * *." The convention went on to applaud the establishment at Ohio State University of "a center for advanced study and research" in vocational education. The specialty of this pioneering center? Farm teaching.

M.D., in the course of our talk, made it plain that nothing in recent years has so irked him as the 1962 farm report of the Committee for Economic Development which called for a deemphasis of farm training in vocational education. Prodded by M.D. the House Committee on Agriculture subjected the CED to hearings that can fairly be described as inquisitorial. One must go back to McCarthy days to find a rival to this hearing for sheer yahooism. It was the uproar over the CED report that moved the AVA convention to its anxious support of an unmodified Smith-Hughes Act.

This anxiety, M.D. said, in a pungent evocation of his farming past, is due to the fact that vo-ed "always gets the last tit on the sow." By this he means that vocational training gets a small slice of the overall educational budget. This is true. But it is also a fact that M.D. is consulted on the writing of all Federal educational legislation. And quite apart from the gifted Mr. Mobley, the vo-ags are a potent group. Unlike city vo-ed teachers, they enjoy high status in their home territories. Many of them have degrees from A and M colleges and often are the best science and math teachers in rural schools, which have few college-trained teachers. Since their own salaries depend on Federal appropriations, many of them make it their business to maintain close contact with their Congressmen and any other groups likely to influence vocational education. In 1961, for example, a Presidential panel was set up to review and reevaluate vocational-education laws "with a view toward their modernization." Although technological change was obviously the most important item on the agenda, the panel report urges that "the vocational agriculture program under Federal reimbursement should be broadened."

"A pure sop to the vo-ags," one Washington expert called this recommendation. Nor, alas, are the vo-ags the only doughty diehards within vo-ed. Their equally militant allies are the home economics teachers. Under the Smith-Hughes Act, while nearly one-half of the annual Federal grant goes into teaching Adam to delve (or its equivalent), 20 percent is allocated to teaching Eve to spin. To be sure, home economics has progressed a bit beyond spinning and weaving. But most of the courses consist of disorganized, mediocre instruction in skills that have little relevance to the age of supermarkets.

Dr. Chester E. Swanson, Director of the Presidential Panel, when I talked to him in Washington not long ago, called the present stress on home economics absurd. Most enlightened educators agree with him. Yet for years home economics has enrolled the largest number of students in the federally reimbursed vocational-education program. Indeed, some home economists are now urging that boys too should devote part of the school day to "the homemaking arts." Admiral Rickover should really have a talk with these ladies.

HARDY THOUGH MORIBUND

Vo-ed, as it is practiced today, is not only fantastically biased in favor of farming and home economics. It also teaches skills and uses equipment which are often hopelessly obsolete—even in such categories as "trade and industrial education." Dr. Swanson recalled, for instance, that in the 1940's when he became a school official in Allentown, Pa., cabinetmaking was the rage. On investigating he discovered there had been no jobs for cabinetmakers in Allentown for years. However, teachers of this trade had tenure and expensive equipment. He was up against a stone wall when he tried to reduce the staff and beef up more pertinent parts of the vo-ed curriculum.

In addition, Federal money goes to training in certain specified occupations. The broadest category is "trade and industrial education," which includes the needle trades, carpentry, drafting, firemen, and similar traditional fields. Other categories are "distributive occupations," meaning selling and retailing, practical nursing, and fishing. Since 1958 the training of a few technicans has been supported under the National Defense Education Act, but it is due to lapse this year.

The limitation of Federal aid to rigid occupational categories is a great mistake. One result is that no Federal funds are available for instruction in typing, filing, stenography, and other officework, a field employing 10 million people. Similarly the many service jobs which are ideal fields for less gifted students are too avant-garde to receive Federal vo-ed support.

But even if freed from these straitjackets, vo-ed as now constituted cannot prepare students for real jobs. So archaic is most of the training given in vocational schools that unions in the printing, plumbing, food, and other trades refuse to give credit for it. Graduates of vocational schools must start from scratch on apprenticeships often running from 3 to 5 years.

Small wonder that a penetrating survey by the Taconic Foundation (published last year) concluded that "it is extremely questionable and certainly has never been demonstrated whether the training absorbed by vocational high school graduates is useful to them in getting employment and advancing on the job."

In part this dismal record reflects the extreme difficulty of recruiting competent vo-ed teachers (apart from the vo-ags and homemade pie bakers). City vocational high schools have come to be increasingly thought of as dumping grounds for morons and delinquents—between a third and two-thirds of whom vanish before graduating. Most vo-ed teachers are at the bottom of the pedagogic hierarchy. Often they are not even allowed to join the regular teachers' associations. Lacking prestige in a society that esteems the white-collar professions, the blue-collar teachers became identified over the years with the dropouts and washouts—the school failures.

Some years ago, the vo-ed lobby began to worry about this stigma, which, they foresaw, might jeopardize their future slice of the school tax pie. The solution they chose was not the difficult but socially vital one—of reshaping their programs to meet the needs of the majority of students. Instead they began to upgrade their clientele by tightening admissions standards. The less promising were shunted off into the general curriculum of academic high schools to pass the time and learn virtually nothing.

Curiously, there has been almost no public outcry against this antisocial policy. Instead, for example, the latest report of the State education department on the New York City schools smugly and typically observes that admissions to programs of skilled trade education should be limited to those students who, on the basis of interest, aptitude, and ability give promise of succeeding.

What then is to happen to the less promising—to the 1 million jobless out-of-school youth whose ranks will swell to 1,325,000 by next year? Even if some kind of Youth Conservation Corps succeeds in Congress, it will at first serve only 15,000 boys. And what is to become of the millions of adults who, because of the pace of technology and automation, must expect to work at a half-dozen different kinds of jobs in a lifetime? These questions are unanswerable in vo-ed's anachronistic terms. But some new answers will have to be found if the new manpower retraining program is to come close to its objective which is, in essence, the rehabilitation of our hard-core unemployed. As never before in its sheltered history, vo-ed is in the limelight.

A NEW CATALYST

The Manpower Development and Training Act program is a special separate project designed specifically for the out-of-school jobless. It provides that $435 million be spent in the first 3 years to cover both the cost of instruction and an allowance to the trainees equivalent to unemployment insurance. Some 400,000 men and women, it is expected, will be enrolled. Training is not confined to the traditional occupational categories but a given course of instruction will be undertaken only if jobs requiring that particular skill are known to exist. This is a wise provision, as has been demonstrated in past retraining efforts under the Area Redevelopment Act and in programs sponsored by some of the States and by industry.

Although the Manpower Development and Training Act program is separately financed and is carried on after school hours, it is, as a practical matter, dependent on the vo-ed teachers and the facilities of existing vocational schools. This is why one worried Federal official recently said to me: "The vo-ed boys will make us or break us, and its even Steven it may be the latter."

What may also make or break the program is geography. The present appropriation does not include funds for relocating retrained workers in areas where they can find jobs utilizing their new skills. This is a piece of incalculable foolishness, for labor mobility is crucial today when new industries are burgeoning and old ones vanishing all over the country with unprecedented suddenness. But even if funds for relocation were provided, workers themselves know little or nothing about what jobs are plentiful in other sections of the country or even about future prospects in their own communities.

The logical source of this vital information is the U.S. Employment Service. Unfortunately, its absorption with handing out unemployment-insurance checks has overshadowed what should be its main business—finding jobs or advising workers on how to go about getting them, and its information is largely confined to local or intrastate use, with little attempt at national coordination. There is, for instance, practically no way for an unemployed miner in Pennsylvania to find out what job he might qualify for in Oregon (assuming he could pay his way out there). With notable exceptions, for example in Arizona, Wisconsin, and New York, USES's 1,900 local offices are spectacularly unequipped to deal with technological change and, as a key Presidential adviser on employment described them to me, are "cesspools of mediocrity."

Clearly the U.S. Employment Service must be invigorated if the Manpower Development and Training Act program is to come even close to its goal. A step in the right direction would be the mandatory listing of job vacancies. Industry, also, should help the Government to make a realistic job-outlook study. This calls for candor about impending automation and resulting unemployment. Testimony before the House Subcommittee on Unemployment and the Impact of Automation showed that many companies refuse to make such information public for fear of tipping their hand to competitors. In the months ahead it will become increasingly clear that the present Manpower Development and Training Act program cannot possibly vanquish the problem of hard-core unemployment, including the problem of unemployable youth. It is, nonetheless, a valuable program and not merely because thousands of workers will in fact be retrained for new jobs. The experience gained will, I hope, bestir Americans to get to the bottom of our manpower problem.

So far this has not happened.

For example, not long ago in a small northeastern city I visited a vocational high school whose facilities are being used to retrain the unemployed under Manpower Development and Training Act. This class was for would-be auto mechanics. The pupils looked older and shabbier and half were Negroes. But otherwise they appeared to be not too different from the daytime students. The teacher started out by describing the school's superior parking facilities, apparently on the assumption that in our affluent age even the jobless have cars. He then went on to explain that if any student failed to progress satisfactorily he would be dropped. Subsequently I discovered that some of the students had dropped out of this same school when they were teen-agers. I also learned that a number of applicants for the class had been turned down because they could not meet the entrance requirements.

Now I am not suggesting that anyone can become an auto mechanic. What is evident, however, is that we cannot turn our backs on those who do not immediately qualify for training in this or any other skilled or semiskilled occupation. The one fresh note sounded by the Presidential panel under Dr. Swanson was a call for a federally aided program for "high school youth with academic, socioeconomic, or other handicaps that prevent them from succeeding in the regular vocational education program." This recommendation deserves top priority. For we know, from actual experience, that such handicaps can often be overcome—though not by the classic techniques of vo-ed as it exists today.

A WORKABLE FORMULA

The chief "handicap" of unemployable young people and adults today is not necessarily lack of intelligence. Often it is lack of functional literacy (ability to read at the fifth-grade level). In Chicago a substantial number of relief clients have been able to find work after receiving basic instruction in reading and writing at evening and summer classes sponsored by the city welfare department. Elsewhere it has been found that young people brought up in city slums who drop out of schools geared to middle-class children are not necessarily stupid. And often they are extremely responsive to realistic job training, linked with actual work experience.

This can be accomplished in several ways. About 5 percent of our colleges now offer what are known as cooperative or work-study education programs. Similar programs exist in academic high schools, chiefly in the business-education departments for girls. Often one job is shared by two trainees, one of whom works for part of the year while the other is at school; on graduating, almost all the trainees get jobs with the companies involved. But except for sales training and in new locally devised schemes, such programs are the exception in vo-ed. Instead, the Federal reimbursement formula requires that students' time be divided concurrently and equally between "practical" (shop) and "related" (academic) classwork—a ritual often unworkable for the many students who can't be taught in classrooms. Frustrated, they drop out. Labor Secretary Wirtz aptly calls them "pushouts."

What is most urgent is that business and labor unions alter their stance in the new age of technological unemployment. The business system is, after all, on trial more than any other institution. It must bear part of the novel social costs arising from technological change with a new resourcefulness and awareness of changing social needs. As a basic starting point, management and the unions must expand apprenticeship programs. Instead of expanding, they have grown steadily smaller (231,000 apprentices in 1950, 166,000 in 1960). Labor must also end its racial discrimination in apprenticeships and abandon its old myopic view that by obstructing entry into the trade—entry being the very thing most necessary for our floating unemployed youth—it will be possible to guarantee jobs for insiders. One of the important breakthroughs of the past year was by New York Local 3 of the International Brotherhood of Electrical Workers. It enrolled 200 Negroes and Puerto Ricans in its 1,000-man training program. Far more unions should be moving in this direction.

Furthermore, business must develop programs for retraining both its own employees and youth in or just out of school. This was the chief lesson which emerged from a National Committee on Employment of Youth conference which I attended recently. Several businessmen observed smugly that a high school diploma is becoming meaningless because their companies' employment standards are so high. "These young graduates can't even qualify for our company training," said a banker. A school superintendent, Mary E. Meade, leaped to her feet. A large, wonderfully plain, almost Victorian figure of the no-nonsense breed, she is in charge of New York City's minute but highly successful work-study project. This program, financed by the Ford Foundation, enables some high-school students to get work experience in municipal government jobs. Miss Meade suggested that maybe business should alter its attitude toward the young and join with the schools in preparing them for useful work. This is still a novel idea although, to be sure, in a few places—all too few—business is beginning to assume some responsibility for training and retraining at least its own workers. The most exciting venture is the new plan developed by the Kaiser Steel Corp. and the United Steelworkers of America. Each worker displaced by automation is placed in a pool, where his wages continue, and he is then either given a new job or is retrained for one within the company. He is not abandoned; he is the company's responsibility until he retires—unless the company suffers grave loss of business or actually folds.

Those who are fainthearted about the possibilities of solving our worsening manpower problems through vocational education and retraining should acquaint themselves with what has been accomplished in rehabilitating the physically disabled—the maimed and paralyzed. In 1961 more than 100,000 disabled people entered gainful employment as a result of the State-Federal program which cost $17 million. Before retraining they had been earning $47 million a year; now they are earning $205 million, and the Federal Government will collect $10 in income taxes for each dollar invested in rehabilitation.

This is wonderful. But the best therapy is always preventive. So far as manpower is concerned, the place to start is with the transformation of our system of vocational education.

ALLENTOWN TO DENVER

The immediate change required is to end the absurd overemphasis on farming and home economics. We need to launch a program of practical training for real jobs in a vast national effort. By way of a start, we might well make sure that every urban high school has an automechanics shop, in the hope of turning out the 40,000 new mechanics we must produce every year to maintain the present meager ratio of one mechanic to every 87 vehicles. Another basic requirement is a continuing, up-to-date inventory of jobs and skills in demand in every section of the country. To make this inventory a useful practical tool the U.S. Employment Service will have to take on new functions.

To do this will cost money. M. D. Mobley is dead right about our national parsimony toward vocational education, however, cockeyed he may be on farm training. We will have to spend at least the $400 million a year recommended by the Presidential Panel on vocational education. In addition, we need many more vocational schools, especially the so-called area schools, large enough to be well equipped, and they should be open the year around, free to anyone who needs to acquire a skill. The schools must be supplied, not only with skilled teachers and modern equipment, but also with sufficient guidance counselers to help students make a wise choice of vocation. Less than 1 percent of Federal funds is spent on guidance; the ratio of counselors to students is an impossible 1 to 500; 15-year-old youngsters are forced to make career choices unassisted. I heard a boy who had left school address a prospective employer "Hey, Mac" and respond under questioning that his ambition is to be a nuclear physicist.

In a few isolated spots, there is convincing evidence that vocational training really can work. In Allentown, for instance, local industries cooperate closely with the schools in an outstanding vocational program. Milwaukee, which puts more money into "vo-ed" than any other city its size, has a model central vocational school. Cincinnati has dealt with the dropout problem by establishing 14 vocational training centers throughout the city. Denver's Griffith Opportunity School is a celebrated skill center offering free instruction to students of any age.

In these cities, vocational education has, for various reasons, become a matter of major local concern and is vigorously supported by the community. Such sporadic local achievements are widely and justly publicized. But this acclaim is unfortunate if it diverts attention from the central fact, namely this: Unless interest in vocational education is awakened on a massive national scale, the United States will lose a crucial lap in "the race between education and catastrophe"—in H. G. Wells' annually more apt definition of history.

Unemployment is both a prime cause and a symptom of the country's alarming economic torpor. Recent economic studies, stemming from the work of Arthur Burns of the National Bureau of Economic Research and from the University of Chicago's Milton Friedman, demonstrate that investment in education rivals investment in physical capital (factories, machinery) in stimulating economic growth. Walter Heller, chairman of the Council of Economic Advisers, has said that such investment in "human capital" has accounted for half of our economic growth in the 20th century.

Now this hardly seems too difficult a concept for the American people or even Congress to grasp and to act upon. But maybe homelier considerations can be more compelling: the fact, for example, that the loss in production in the United States caused by unemployment in 1962 was greater than the loss caused by the strikes in the last 35 years; or that, to the average man, the loss of only 1 year's income due to unemployment is more than the total cost of 12 years of education through high school. However one may dramatize the issue, the essential point is that education, employment, and economic growth are inextricably linked. Today rational education must include training pertinent for the 80 percent of all young Americans who enter the labor market without college degrees. To ignore their vocational training is a reverse twist on the Eskimos' fabled custom of pushing their unproductive senior citizens onto the icepack. That practice at least has a certain economic logic. Our system is managing to be at once inhumane and economically suicidal.

HOW THE KREMLIN CAPTURED CUBA

Mr. MUNDT. Mr. President, I should like to call to the attention of all those who may not have yet heard about it a remarkable and highly readable book on Cuba called "The Great Deception," by James Monahan, a Reader's Digest senior editor, and Kenneth O. Gilmore, an associate editor. I urge all those who want a gripping, up-to-date and authoritative account of exactly how the Kremlin took over Cuba to read this book which has recently been published by Farrar, Straus & Co. The significant fact about "The Great Deception" is that it covers, as does no other book, the Communist deception in Cuba from the day Castro took power on January 1, 1959, up through last fall's missile crisis and its aftermath. Innumerable items in this publication will be both fascinating and eye opening to anyone who reads it. For example, there is a frightening look at how the Communists seized control of the labor unions in Cuba.

Another portion provides a chilling account of the Bay of Pigs invasion disaster through the eyes of those inside Cuba. This reveals that the underground tragically knew less about the invasion plan than Castro and his Communist agents. There is also a vast amount of unpublished and dramatic material on the Castro Communist effort to infect and take over Latin America through propaganda, infiltration, and subversion, all of which will convince many that our efforts today to cut off this activity from the Cuban base will be next to impossible until that base is eliminated. Moreover, the book lays out the full picture of the Soviet miltiary intrusion in Cuba which actually began in late 1960 and built up to Moscow's implantation of troops and missiles.

A key reason for the superb quality of this book lies in the fact that for nearly a year Monahan and Gilmore headed a Reader's Digest task force which made an in-depth study of the Sovietization of Castro's Cuba. Hundreds of Cubans, many still living in the police state, were interviewed at length; their personal stories were tape recorded, and later analyzed and checked out to establish absolute authenticity.

It is for this reason, perhaps, that reaction to the book by leading free Cubans has been so laudatory. And, of course, those Cubans who lost their country to Soviet imperialism are best qualified to judge the accuracy and quality of a book describing their tragedy.

Allow me, therefore, to present some comments by outstanding Cubans in exile that have been received by the publishers of the book.

Manuel Artime, civilian leader of the valient Cuban invasion brigade who just last December was released from Castro's prison, has said:

> As one who lived through some of the key phases of the Kremlin's takeover of Cuba, I can attest that "The Great Deception" is one of the best accounts yet written on Communist Cuba.

Dr. Jose Miro Cardona, who heads the Revolutionary Council of Cuba:

> "The Great Deception" is an example of the tragedy of Cuba, which is the tragedy of America. This book aids effectively in understanding this through the expository force of the facts which it relates, and the clear and precise form in which they are presented. I thank the authors, as a Cuban, for the intensity with which they have felt the drama of my country; and I hope, as a Spanish-American, that the book will be read carefully by the Government and people of the United States in order that they will understand the true nature and extent of the danger which this holds for the liberty of our hemisphere.

Dr. Oscar de la Vega Torres, Secretary-General, Teachers Revolutionary Directorate—in exile:

> I would like everyone—from the President to the most humble functionary—in this country to read carefully "The Great Deception," especially the chapter "Darkness Descends" where there is expressed clearly and precisely, as never before, the great harm that communism is inflicting on the minds of Cuban children and youth. Let no one forget that it is these young people—sick with hatred against our democratic principles—who, if we do not act in time, will prevent reintegration of the people into the American community and contaminate it with the poison they have received.

Jose Antonio Gonzalez-Lanuza, Students Revolutionary Directorate of Cuba:

> After carefully reading this book on the process of communization that Cuba is suffering today, I wish to express my sincere congratulations for the objectivity and quality of this work.
>
> "The Great Deception" is, to our way of thinking, the best compilation published to date in the United States on the facts about the conversion of Cuba into a satellite of Moscow.
>
> What stands out are the variety of the sources of authoritative information collected by the authors, as well as the clear, impartial exposition of events. told in such a way as to give the North American reader a magnificent panoramic vision of what has occurred in our country during the last 4 years.
>
> In the name of the Students Revolutionary Directorate and myself, I offer sincere congratulations for the work accomplished.

Vicente Rubiera Reito, secretary general, Federation of Cuban Telephone Workers in Exile:

> As a Cuban labor leader, Democrat and worker, I would like to take this opportunity to make clear my gratitude for the service rendered the cause of liberty by "The Great Deception"—a true and exclusive account of the process by which the Communist Party and the U.S.S.R. are penetrating the American Continent.
>
> It is the most exact, most realistic expose of how they operate, set in motion and carry Communists to power. It is the best work in behalf of democracy, the liberation of Cuba and the defense of the continent.

Dra. Ana Tomeu de Miller, secretary general of Cuban Feminine Crusade:

> "The Great Deception" is a magnificent exposition of how international communism used tactics of deceit and lies to seize Cuba and convert it into an isle of hell, Russian colony and springboard for the expansion of Soviet imperialism in the American Continent.

ANTI-COMMUNIST FREEDOM FIGHTERS

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed at this point in the Record an editorial entitled "Fighting the Wrong Side," published in the Oakland, Calif., Tribune of April 3, 1963, dealing with the effort of the administration to restrain anti-Communist freedom fighters who are attempting to harass Fidel Castro and establish a strong Cuban underground.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

[From the Oakland (Calif.) Tribune, Apr. 3, 1963]

Fighting the Wrong Side

The administration has cracked down hard on anti-Communist freedom fighters who are attempting to harass Fidel Castro and establish a strong Cuban underground.

Not content with merely insuring that no raiding parties leave from U.S. territory, the administration has solicited help from Great Britain as well, so that a good portion of the Caribbean Sea is being combed for anti-Communist war parties.

The reason given by the State Department for this "blockade of the blockaders" is that the U.S. Government accrues the blame for the raids in the eyes of the world, and is therefore assumed to be committing warlike acts.

Thus, once again, the siren song of manufactured world opinion has been heeded by this Nation's pussyfooting diplomats, to the detriment of the free world. For years, the Soviets have built up a global network of sympathizers and "neutralists" who will quack and bleat with alarm every time the United States shows some signs of resisting the advance of global communism.

In recent months, when the anti-Castro resistance has begun to score some real damage against the Cuban regime, world opinion naturally began to chant that the raids were instigated by the U.S. Government.

And now, to its shame, the administration has capitulated to that opinion when it should simply be laughing it off with a declaration that the raids are not sanctioned by the U.S. Government.

The trouble with heeding this kind of world opinion is that it will continue to denounce U.S. "aggression" even if the Coast Guard and the Federal Bureau of Investigation manage to halt all anti-Castro activity altogether. No matter what the Government does, it can't win against a propaganda machine created by the Soviets. If the United States is going to be berated no matter what it does, then the logical thing is to ignore the clamor and do exactly what will be in the best interest and security of this Nation.

It is a matter of great importance to establish a virile underground in Cuba. The activities of anti-Castro freedom fighters serve not only to drain Castro's strength but to fan the flame of resistance of the captive Cuban people.

The vengeance taken against the anti-Castro Cubans is so severe that one is compelled to wonder whether world opinion is really the reason for it. It looks like the administration is actually as interested in preserving the Castro regime as it is in encouraging its overthrow.

AUTOMATION

Mr. BOGGS. Mr. President, the problems, challenges, and opportunities of automation in industry continue to expand. At the same time, however, "automation" is still a new word in our national vocabulary, and often a misunderstood word. There can be no misunderstanding, though, about the great changes automation is making in our country and the need to understand and cope with them.

Because of the tremendous impact of automation, and the swiftness with which the changes are taking place, I have called for a White House conference on automation in a bill introduced earlier in this session. Such a conference is necessary, I am convinced, to focus attention on advances in technology and the effects of these advances upon all of us.

Automation also has a bearing on the need for an enlarged and more active program of vocational education, which would come about if another bill I have introduced, S. 1222, is enacted.

An article which helps explain automation appeared in the April 17, 1963, issue of the New York Times magazine. It is by Victor R. Fuchs of the staff of the National Bureau of Economic Research. He is also a consultant to the Ford Foundation. Because of the timeliness of this article I commend its reading to my colleagues and ask unanimous consent that the article be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

FALLACIES AND FACTS ABOUT AUTOMATION

(By Victor R. Fuchs)

Once or twice in a generation a single word captures the attention, imagination and concern of the American people. In the past, the mere mention of such words as "abolition," "prohibition" or "unionization" was enough to strike the sparks of controversy and to epitomize the problems and the promise of complex forces at work in our society.

Today the word is "automation." Originally coined to describe the automatic handling of parts between successive stages of production, automation was later defined as the use of machinery to control machinery. In popular discussion, however, the word has come to mean any kind of technological change, particularly where nonhuman effort is substituted for human labor.

The heat and intensity of the arguments surrounding automation suggest its importance, but amidst the uproar it is often difficult to determine just what the facts and the issues are. For some, automation poses the threat of permanent unemployment, the necessity of undergoing retraining or the possibility of having to uproot home and family to seek employment in a strange community. Others stress the benefits of automation—low costs, new products and the maintenance of world economic leadership for the United States.

The current debate over automation tends to be dominated by the "alarmists"—those who can only see the warehouses filling up with goods and the streets filling up with unemployed—and the "do-nothing" school who find automation an unmixed blessing. This debate is marked by exaggeration, illogical reasoning, and other fallacies. A close look at some of these fallacies may help to provide a basis for constructive attack on the problem, and permit us to enjoy more fully the benefits of technological change.

These are the principal fallacies indulged in by the "alarmist" school:

(1) The rate at which labor is being displaced by technological change is more rapid now than in the past.

This particular fallacy lies at the heart of the "alarmist" position. It is the fundamental premise; the rest is elaboration. Everyone has read or heard about the "increasing rate of technological change." The words come so readily that it seems almost pedantic to question their accuracy. But the fact is that there is no economic evidence to support this premise.

Isolated examples of rapid change abound, but they always have. Recall, for example, the printing press, the cotton gin and the substitution of the typewriter for feathered quills. The question is not whether examples of large-scale displacements of labor can be found in particular firms or industries, but whether the overall impact on the economy is greater now than in the past.

If technological innovations were replacing labor at an increasing rate, one would expect to find evidence of this in the output obtained per man-hour of labor. The figures show no such trend.

For the period 1947–60 output per manhour in the private sector of the economy grew at an annual rate of 3 percent. This is a slightly higher rate than the average for the entire 20th century but it is not an unprecedented rate for the United States, and it is far below the pace achieved in Japan, Russia and several West European countries.

Moreover, there is no evidence that the rate is increasing. On the contrary, the figures show an average annual gain of 3.5 percent for the period 1947–54, slowing down to 2.6 percent in the 1954–60 period. Finally, there is little prospect that we are on the threshold of a sharply increased rate in the future; we may have difficulty maintaining the pace of the last 15 years.

One obvious problem is that fewer and fewer of our people are employed in sectors where labor-saving change has been easiest, such as agriculture. Each year more Americans are employed in the service industries, where productivity growth has been slowest. Because of these shifts in employment, we will actually have to achieve an increased rate of productivity growth sector by sector simply in order to maintain the same overall rate of increase. A recent pathbreaking study by Edward F. Denison, "The Sources of Economic Growth in the United States," shows that it will be difficult to achieve this increase.

(2) Automation makes it possible to produce more goods and services than we can possibly use.

This fallacy gets its widest circulation in the well-appointed living room after an excellent dinner that includes an appropriate wine. The hi-fi is usually playing softly in the background, and the conversation is mixed with references to vacations abroad, sports cars, and college admissions. If one were to approach a family of average means with arguments about a surfeit of goods, they would doubt your sanity or your motives. And they would be right.

Most of the talk about our having the ability to produce more goods and services than we need or want, now or in the foreseeable future, is nonsense. It is based either on medieval notions about discriminatory consumption standards for various classes of the population or on a wild overestimation of the productive capacity of the economy.

We need more rapid growth, not less. Consider the demands for helping to raise the living standards of the underdeveloped two-thirds of the world. Consider the problem of removing the deep pockets of poverty that still exist in our rural areas and urban slums. Finally, consider the simple fact that to bring the average American family up to the level of living currently enjoyed in the more prosperous suburbs surrounding New York City would require 25 to 30 years of very rapid growth at full employment.

To argue, as some do, that the problem is primarily one of distribution, is completely in error. If income were divided absolutely equally in the United States, each family would have about $7,000 per year—an income that falls far short of producing satiety.

Another gross exaggeration is the claim that 30 percent or more of potential output is lost through unemployment. This is based on the observation that certain industries have 30 percent idle capacity, but this is a false guide to production possibilities for the economy as a whole. One might just as well argue that there is no unemployment problem because some industries are working overtime.

Marxian dogma aside, it makes little sense to say that the man who produces an automobile is doing productive work but the man who keeps it in good running order is not, or that the modern farmer is very productive but the research scientists and the farm extension agents who advise him are not.

Not all of the exaggeration and illogic can be found on the alarmist side. A smaller but equally vociferous group sings the praises of automation in arguments that do not stand up well under inspection. This group voices three major "do-nothing" fallacies:

(1) Automation automatically creates at least as many new jobs as it eliminates.

The key word here is "automatically." Of course, it is possible for automation to create new jobs. It does this principally in two ways. First, there are the jobs created to build, install, and service the new machinery. At fixed levels of output, however, this can never require as much labor as that displaced or it would not pay to introudce the new machinery. Whether output will increase or not will depend upon prices, income, and other factors.

Second, technological change may also create employment by making possible new industries and products, and by contributing to the expansion of the economy. Automation typically results not only in a cheaper and better way of doing what was done before, but also in the possibility of doing and producing new things.

Thus, the job-creating potential of automation is present, but there is nothing automatic about it. It depends upon many things—price policies, wage policies, investment policies, and the maintenance of a high level of effective demand in the economy.

(2) Automation always results in more interesting jobs, requiring greater skill and training.

If this is meant to apply to the specific factory or office situation it is incorrect. Prof. James Bright of Harvard and others who have looked at particular examples of the introduction of superior machinery report that the effects of automation vary greatly.

Sometimes the jobs that are eliminated required considerable training and experience, and they are replaced with jobs that are relatively simple and easy to learn. The displaced worker who must seek employment in some other industry or occupation will frequently find himself forced to accept work demanding far less skill and experience than his old job required. Automation usually has a cost, and the displaced worker pays it.

If one takes a national and longrun view of automation, it is clear that skill and educational requirements will be upgraded. Similarly, technological unemployment tends to disappear in the long run. The fallacy lies in the failure to realize that what is true in the long run need not be true in the short, and what is true in general is not true in some specific cases.

(3) Any problem created by automation can be solved by the individual firm concerned or by local government.

Efforts by individual firms, unions and local governments to deal with the problems created by automation are to be commended. We should not, however, blindly put our trust in them simply out of fear or dislike of the Federal Government. Some Federal activities are warranted on economic grounds, and might obviate the necessity for the Government to assume a much larger role.

For example, a program to make the State employment services more responsive to national needs and leadership would help our labor markets function more effectively, but there is strong opposition to such a program.

(4) "Conventional" jobs that represent truly "productive" work are disappearing.

If one defines "conventional" jobs as those that exist at present, and if one limits "productive" work to the production of commodities on farms and in factories then this statement is true—but rather meaningless. Of course, technological change will result in changes in the type of work required. It always has. One hundred years ago most Americans worked on farms. Today fewer than 10 percent do.

Each generation has its own ideas about what is a "conventional" job. Today jet pilots and TV repairmen fall into that category, but 20 years ago they were not only unconventional but unknown. Moreover, not all of the fields of expanding employment opportunity are new ones. Teaching and nursing, for example, are old and "conventional" and job opportunities are growing rapidly.

The notion that some kinds of work are productive and others are not can be traced to a Marxian fallacy (inherited from Adam Smith) that attempts to distinguish between the production of commodities and of services. To this day, the U.S.S.R. refuses to include the services of doctors, teachers, and similar workers in its gross national product, although in other contexts the value of these services is extolled.

Similarly, Federal aid to education is blocked, although underinvestment in education in low income States is economically wasteful and a prime cause of unemployment. Even such obvious programs as retraining are opposed or hampered by requirements that limit training to local job opportunities.

Given the fact that automation does pose some problems, that our national economy is highly complex and the parts are intimately related, and given the inability of State and local governments to deal adequately with many of the social and economic difficulties now before them, it is reasonable to conclude that the Federal Government must play an important and positive role.

What should this role consist of? First and foremost, the economy must be kept operating at a high level so that output can expand and workers displaced by technological change can seek jobs in a buoyant economy. Second, the costs of change should be distributed fairly throughout the economy. Third, strenuous efforts should be made to facilitate reemployment of displaced workers.

In the short run, this means support of retraining and relocation programs, a vastly expanded employment service and the removal of artificial barriers to employment such as racial prejudice. In the long run, it calls for a large-scale shoring up of our educational system, a revolutionary improvement in our approach to vocational education and technical training, and the development of attitudes and institutions appropriate to the concept of education as a lifelong process—not one that terminates with a "dropout" or a diploma.

To sum up: Automation does pose problems. These problems are not unprecedented, either in kind or in degree. But, solutions will not come automatically.

We should not fear automation or try to retard it. On the contrary, we should welcome it, and try to accelerate it. Automation is the key to a higher standard of living at home and to increasing our ability to help less fortunate peoples abroad. There is no need to panic, or to give up our competitive free-market system for some vague and unspecified controls.

There is need to face the problems with coolness, sympathy, intelligence, and determination. A do-nothing attitude is unwise and unjust. The greatest danger is not that technological change will come too quickly, but that our institutions will adapt too slowly to the problems and the promise of automation.

The ultimate scarce resource is manpower. At the present time about 6 percent of our labor force is unemployed. Some 2 or 3 percent more would probably seek work if it were available, while short workweeks for those currently employed represent perhaps an additional 2 or 3 percent of involuntary unemployment. One must subtract, however, about 3 percent for frictional unemployment—that which is built into a dynamic economy—this being about the minimum level consistent with efficiency and the right of workers to change jobs whenever they wish. On balance, the removal of all involuntary unemployment would raise labor input by 7 or 8 percent.

Some increase in output requires no additional labor—it needs only increased demand—but even allowing for this, it is difficult to see how a total increase of more than 10 to 15 percent could be achieved solely by eliminating involuntary unemployment. Such an increase would be welcome, but would leave most of us far short of affluence.

(3) Automation will result in mass unemployment because there will not be enough purchasing power to buy the increased output.

This is a more sophisticated version of the "overproduction" fallacy. It is not factually false, but it is illogical. It is based on a circular argument that runs as follows: no purchasing power equals unsold goods equals unemployment equals no purchasing power.

This could happen. Indeed, it did happen in the 1930's. But it is incorrect to argue that it must happen. Whether it does or not will depend primarily on whether we are able to manage our monetary and financial affairs in a sensible manner. Our tools of monetary and fiscal policy are admittedly imperfect, but most economists are prepared to bet that they are not so imperfect that we need suffer mass unemployment because of a shortage of purchasing power.

THE NUCLEAR TEST-BAN NEGOTIATIONS

Mr. DODD. Mr. President, as my colleagues are aware, I have had a public exchange of statements on the subject of the nuclear test-ban negotiations with Mr. Adrian Fisher, Deputy Director of the Arms Control and Disarmament Agency.

On March 4 Mr. Fisher issued a communication to the press in reply to a letter which I had written to the editor of the Washington Post and which was printed in their edition of March 1.

On March 7 the Post consented to print a communication from me replying to Mr. Fisher's presentation.

These two items were entered into the CONGRESSIONAL RECORD on March 7.

On March 21 Mr. Fisher sent me a personal letter, pursuing the discussion further, and attempting to persuade me of the validity of our present position in the test-ban negotiations. At the conclusion of his letter, Mr. Fisher asked that I insert it into the CONGRESSIONAL RECORD. I told him over the phone, after receiving his letter, that I would be happy to do so.

I felt that Mr. Fisher made an exceedingly careful and thoughtful presentation in his communication of March 21, and that it deserved a careful and detailed reply. The drafting of this reply, which runs 20 typewritten pages, required a good deal of time; and it is because of this, that my reply to Mr. Fisher was not delivered until this afternoon.

Mr. President, I ask unanimous consent to insert into the RECORD, at the conclusion of my remarks, both Mr. Fisher's letter of March 21, and my reply to Mr. Fisher of today's date. Despite the length of this exchange of correspondence, I hope my colleagues will take the trouble to read it. There are some subjects that one can deal with adequately in a few pages. But the problem of the nuclear test-ban negotiations is so complex and many sided that one can only deal with it properly by going into it in detail.

I should like to point out, Mr. President, that Mr. Fisher and I are friends of many years' standing. I strongly supported the establishment of the Agency of which he is now Deputy Director, and I do not believe the Agency could have found a more competent man for this very important position. On the issue of the test ban negotiations we disagree; but, as I stated in my letter to him, I hope that the mutual respect that has characterized our exchange of views at least serves to demonstrate that honest men, sharing the same values and goals, can nevertheless differ sharply over the means to be used in striving after their common objectives.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. ARMS CONTROL
AND DISARMAMENT AGENCY,
Washington, March 14, 1963.

The Honorable THOMAS J. DODD,
U.S. Senate.

DEAR SENATOR DODD: I certainly appreciated the kind personal references to me in your communication of March 7 to the Washington Post and assure you that they are reciprocated. I agree with you that it is important that the merits of the nuclear test ban issue be the subject of intensive public discussion. I have studied your communication carefully and find that there are some things in it with which I disagree and, as a result, I would like to carry the dialog one step further in putting before you the considerations which have led the national security advisers to the President to the view that a nuclear test-ban treaty, of the type now under consideration, is in the interest of the national security of the United States.

As I read your letter there are basically three reasons why you believe the United States should not sign a test-ban treaty: (1) because you believe we have lost our lead in nuclear weapons; (2) because you believe such a treaty, in your judgment, would prevent us from dramatically strengthening the security and peace of the free world by decisive new discoveries resulting from continued testing; and (3) because, in your judgment, the proposed U.S. treaty does not provide a system of inspection which gives reasonable assurance that the Soviets are not cheating.

The first two of these three arguments are not directed against the position which the United States now has on the table at Geneva but are rather directed against any comprehensive treaty banning nuclear weapons tests which might be negotiated. All of them overlook the risks implicit in continued testing by both sides of the nuclear arms race.

First, the United States has not lost its lead either in nuclear weapons or in our strategic military posture which includes nuclear weapons as one of its elements. The current nuclear arsenal of the United States is larger and more diversified and more sophisticated than that of the Soviet Union. We have produced nuclear weapons in large quantities and have developed the necessary nuclear warheads for all of the U.S. long-range missiles and tactical weapons. It is true, however, as the President has stated many times, that the continuation of the arms race is giving the United States less, rather than more, security. This is not because our lead in nuclear superiority has been lost to the Soviet Union, but because the longer the race goes on, of which unlimited testing is a part, the more the nuclear forces of the United States and U.S.S.R. will tend to equal each other. An illustration of this fact is that it is generally recognized that the United States would have been better off, in its nuclear position, had the efforts made during the Eisenhower administration to obtain a nuclear test ban been successful. Moreover, the technology developed by unlimited testing may not remain a possession of either the United States or the Soviet Union unless an agreement is reached to curtail testing. Unless an agreement is reached to curtail testing sooner or later this technology will become available to many other countries.

Second, the security and peace of the United States and the free world would be strengthened more by an effective test-ban treaty than by continued testing to develop and produce new advances in nuclear weapons.

There is no question that further nuclear testing can and would bring advancements to the total U.S. stockpile of nuclear weapons. Continued testing, however, would also bring advancements to the Soviet stockpile. Any agreement to turn down the arms race, whether in the field of nuclear testing or otherwise, will be open to the argument that it precludes some field of weapons development which might otherwise be open to us. This is a factor which certainly must be taken into account. Any such agreement should be entered into only if, in the light of our current weapons posture and the restraints which will be placed on the Soviet Union, such an agreement will be, on balance, in the interests of our national security. The present U.S. position was recommended to the President not only by the Arms Control and Disarmament Agency but also by the Department of State, the Department of Defense, and the Atomic Energy Commission as meeting these criteria. In the deliberations which led up to this position, consideration was given to both the effects of this position on the development of the AICBM and the pure fusion weapon.

With respect to the AICBM, the most important problems relate to the development of a system which can handle the problem of separating actual warheads from penetration aids. This is the key problem needing solution. We now have warheads available for an AICBM without further testing. So far as the constraints on the Soviet Union are concerned, development by them of important new data on nuclear effects as they influence AICBM systems could not be accomplished without an extremely high probability of detection.

With respect to the pure fusion bomb, it should be pointed out that the development of such weapon is by no means certain. Moreover, as you know, we have already made significant advances in the direction of tactical weapons with a smaller fission as compared with fusion component. There is, therefore, a real question as to the utility of a pure fusion bomb over weapons already available. We must gage the difference between a pure fusion weapon and weapons now available not only from the risk of fallout, or of damaged property, but from the risk of escalation. Frankly, I don't think a possible reaction to the tactical use of nuclear weapons by us would be very much different whether it were a matter of our developing and using pure fusion weapons or an enhanced radiation weapon of a type now available. I believe that, if such pure fusion weapons were developed, their primary significance would be in providing a cheaper substitute for the explosive component of our very large stockpile of fission weapons. However, considering the very large numbers of nuclear weapons that would be available to both the United States and the Soviet Union in the time period when such a device might become available, its existence would not appear to constitute a great advantage to either side. Such a weapon would be of greater significance to other countries that do not as yet have a nuclear capability. For this reason, an inhibition to the development of fusion weapons would be to our net advantage.

Third, the treaty which the United States is prepared to negotiate does provide adequate assurance that the Soviet Union could not conduct a significant test series without our knowledge. Perhaps earlier descriptions of the U.S. position which you have read have not been sufficiently clear or detailed. Your statement that, "for 16 years the Soviets have rejected this principle (i.e., adequate onsite inspection and control) and we now yield to them by saying that our reliance is on a system of outside monitoring and that the token inspection inside the Soviet Union is only supplemental and unimportant," does not describe our present position. We are, in fact, emphasizing the necessity of an adequate number of properly conducted inspections and at no time has anyone said that these inspections were supplemental or unimportant. We have proposed an outside monitoring system since the technical facts based on the actual operation of our existing intelligence detection system indicates that such a system would have almost the same detection capability as a system located inside the Soviet Union according to the original Geneva specifications and might in practice actually be more effective since it would be fully under our own control and could be put into operation immediately upon treaty signature instead of requiring 2 to 4 years to build.

Further, in challenging the effectiveness of our proposed detection system you rest your argument primarily on the assertion that "it is now possible for the Soviets to test secretly in outer space and to test large weapons underground without any possibility of detection." With regard to testing in outer space, there are several detection techniques that can detect from the surface of the earth nuclear explosions out to the distance of the moon and other satellite-based systems are within the state-of-the-art that could detect explosions at distances of hundreds of millions of miles (beyond the distance of the sun). With regard to the possibility of testing large weapons underground, I assume that you are referring to the possibility of testing in very large underground cavities. Continued examination over the past few years of this technique indicates that such underground cavities would be extremely difficult and costly to build. In attempting to undertake a project of this extent, a potential violator would run a serious risk of being detected by nonseismic means long before he even reached the point of testing. I believe that you have not given sufficient consideration to the vast technical problems and large expenditures that a violator would face in attempting to conduct a significant series of tests in outer space or in underground cavities in a manner calculated to avoid detection. In view of the many uncertainties involved in these complex methods of evasion, a violator could never be sure that his attempts at clandestine testing, no matter how elaborately conceived, would not be discovered by a national detection system whose total capabilities the violator would not know in detail.

Your letter contains an extract from Mr. Foster's testimony before the Special Preparedness Subcommittee of the Senate Armed Services Committee which you believe points to a contrary view. In the extract which you quote Mr. Foster was recapitulating his reply to a question directed to the contribution of stations on Soviet soil to the problem of identifying an event as an earthquake, a contribution which, although noticeable, could not be called a breakthrough. His testimony, as a whole, as well as the recent testimony of both Government and private witnesses before the Joint Committee on Atomic Energy, supports the conclusion that there have been improvements in our verification capability, both caused by an improved capability for long-distance detection and identification of underground events which could be caused by nuclear explosions or earthquakes, and a better assessment of the number of underground events in the Soviet Union.

You refer to the requirement of Soviet approval of a budget and to the appointment of an executive officer as an illustration of a Communist veto which could prevent onsite inspections. These are provisions which have been in the U.S. position for almost 3 years, but under the proposal now under consideration, the primary emphasis is being placed on onsite inspections of the U.S.S.R. by United States and United Kingdom personnel, and vice versa. Under these circumstances, Soviet refusals to agree on an executive officer or on an adequate budget could not frustrate the conduct of onsite inspections.

The advantages and risks involved in a test ban have been weighed by the President and his key advisers in the national security area on a number of occasions since the negotiations began in 1958. Each time the conclusion has been that the advantages outweighed the risks.

I would hope that the arguments I have presented to you as to why a test-ban treaty is in the U.S. interest and that the position proposed by the United States provides reasonable assurance against cheating would persuade you to give further consideration to this question and that you would withhold judgment on a treaty pending the outcome of the negotiations.

Despite the rather lengthy list of disagreements discussed above, I appreciate the tone in which your letter was written. I would also appreciate if you could put this letter in the record.

With kindest personal regards,

Sincerely,

Adrian S. Fisher.

U.S. Senate,
Committee on Aeronautical
and Space Sciences,
March 29, 1963.

Mr. Adrian S. Fisher,
Deputy Director, Arms Control and Disarmament Agency, Washington, D.C.

Dear Mr. Fisher: I am grateful to you for the considerate attention you have given my several communications on the subject of the nuclear test ban. I believe that our exchange of letters has served to give the public a better understanding of the issues involved; and because of this I welcome your proposal that your detailed letter of March 14 be inserted into the Congressional Record. In doing so, however, I am taking the liberty of replying to several of your more important contentions.

In your second paragraph you construe my position as meaning that "the United States should not sign a test-ban treaty." I do not see how you could have read this interpretation into my several statements, because I have repeatedly made it clear that I do favor a properly safeguarded test-ban treaty and that, despite all the difficulties, I strongly support the quest for limitations on the arms race.

Indeed, it is precisely because I believe that we must strive for realistic disarmament, that I am opposed to the test-ban treaty now under discussion.

It is my belief that the draft treaties we have recently proposed do not provide us with adequate safeguards against the possibility of Soviet cheating. I know that you differ with this estimate; but the irrefutable fact remains that the many concessions we have made at Geneva have resulted in widespread misgivings, both in Congress and among the American people; and these misgivings have unfortunately had the effect of undermining confidence in the prospect of legitimate disarmament.

This is an issue on which the broadest public unity ought, ideally, to prevail. Instead, there is grave and widespread disunity. I deplore this disunity; but I believe it can be overcome, or reduced, if we are prepared to insist on increased safeguards for a test ban treaty.

Surely there is room for honest differences as to what constitutes adequate safeguards; and, surely, we should be able to conduct this discussion without one side charging that the other side is opposed to any kind of test-ban treaty or, conversely, without charges of a sellout by the second side against the first side.

In my speech of this February 21, while I urged a frank reassessment of our status, I also warned against the abandonment of the test-ban negotiations. I said that the original Geneva formula, although it was unsatisfactory in many ways, at least called for a significant measure of opening up on the part of the Soviets and that it might have led, and may yet lead, to an acceptable treaty.

In my speech of May 10, 1960, in which I first addressed myself to the test-ban negotiations, I called for a unilateral cessation of all tests that contaminate the atmosphere, even in the absence of a treaty. I still believe that the national interest and the interest of world peace would be served if, recognizing the difficulty of achieving a treaty, we committed ourselves to the suspension of all such tests—with the understanding, of course, that we would be free to resume such tests if the Soviets failed to observe a corresponding moratorium, and that every effort would be made to keep our facilities in a state of readiness, so that there would not again be a time lag of almost 1 year while the facilities and personnel essential for the conduct of atmospheric tests were reassembled and readied.

I take this stand because I consider it essential that we take every possible initiative to reduce the dangers that may result to the human race from continuing atmospheric fallout. I do so despite very serious misgivings about the ability of a democratic state to keep testing facilities in readiness while it is adhering to a moratorium on testing. President Kennedy dealt with this matter frankly in the following statement made on March 2, 1962:

"But in actual practice, particularly in a society of free choice, we cannot keep top-flight scientists concentrating on the preparation of an experiment which may or may not take place on an uncertain date in the future. Nor can large technical laboratories be kept fully alert on standby basis waiting for some other nation to break an agreement. This is not merely difficult or inconvenient—we have explored this alternative thoroughly, and found it impossible of execution."

The differing conclusions we arrive at stem, I believe, from three principal sources: (1) Conflicting evaluations of what constitutes the major threat to our national security; (2) conflicting estimates of Soviet intentions; (3) radically different estimates of the potentialities of nuclear technology.

On the first point, if I understand your position correctly, you apparently consider the proliferation of nuclear weapons—the menace of the so-called "*n*th nation"—to be the prime source of danger. I am concerned with this matter, and I believe that we must strive to prevent the spread of nuclear weapons. But this in my opinion is a minor danger compared with the mortal danger to our national security if the Soviets should ever achieve nuclear superiority over us. It is, moreover, a danger that belongs to a period 10 or 20 years in the future, while the peril posed by Soviet communism belongs to today. Instead of permitting ourselves to become obsessed with the hypothetical danger posed by a hypothetical "*n*th" nation in decades to come, we would do well to concentrate on the real, immediate, and desperately urgent problems posed by the existence of Soviet imperialism.

In your letter you argue that "the longer the nuclear race goes on, the more the nuclear forces of the United States and U.S.S.R. will tend to equal each other." You state further that "it is generally recognized that the United States would have been better off in its nuclear position had the efforts made during the Eisenhower administration to obtain a nuclear test ban been successful."

I believe that this statement may accurately be described as the premise for your entire argument. I differ with this premise on several counts.

I do not believe that nuclear technology has reached the ultimate point of its development, or that it has leveled off. I believe that this technology, which is still in its infancy, will witness many more revolutionary advances.

I do not believe that Soviet technology was bound to catch up with ours, or is bound to catch up with ours in these areas where we still lead, simply because of the fact that both sides engage in testing. On the contrary, I believe that we had the scientific brains and the resources to maintain our lead in all phases of nuclear technology if we had made a serious effort to do so.

If the Soviets have now pulled even with us in strategic weapons technology, it is not because we continued to test or because there was no test-ban treaty. On the contrary, it was because we suspended our test program for more than 3 years, under the terms of a moratorium which gave the Soviets all the advantages of a test-ban treaty, so far as our side was concerned, without any of the disadvantages or inhibitions of a monitoring apparatus or onsite inspections.

Obviously, if the Soviets continue to run as fast as they can, while we stop running for years on end and then dawdle along at a fraction of capacity when we resume running, the Soviets are not only bound to catch up with us but will ultimately surpass us.

In the light of the known record, I simply cannot understand how the relative progress scored by the Soviets in nuclear technology can be blamed on the failure to achieve a test-ban treaty, or how it can be used to justify the hypothesis that the continuation of the race in nuclear technology was bound, in any case, to result in an evening out between ourselves and the Soviets.

I also believe that the moratorium was a mistake from the standpoint of achieving an acceptable treaty on nuclear testing. I believe that the Soviets would have had far more reason to come to terms if we had demonstrated our determination to maintain and even extend our lead in nuclear technology, so long as there was no formal treaty Conversely, I believe that by largely inactivating our own technology we deprived ourselves of our most effective weapon in the test-ban negotiations and removed any incentive the Kremlin may have had to come to terms.

My previous statement concerning Soviet superiority was not intended to apply to the entire weapons spectrum, but referred specifically to large-yield strategic warheads. I note that while you do not challenge my contention that the Soviets have at least pulled even with us in strategic weapons technology, you contend that we retain a significant across-the-board lead. That we enjoyed a clear-cut lead in 1958, before the moratorium went into effect, is no doubt true; but I frankly doubt that any broad spectrum lead exists today.

Perhaps the most sobering appraisal of the relative positions of the United States and the Soviet Union has been expressed by Dr. Edward Teller, who, I assume, has full access to the facts. Teller states:

"Who is ahead? I truly don't know. But I can go a little further. Nobody else knows—at least not in our country. True we can observe their explosions to a limited degree. But to judge their progress in the way we are able to judge them is like judging a restaurant by smelling the smoke from the kitchen. This is not a complete or reliable or scientific evaluation, and we cannot and should not let the fate of our Nation and of the free world depend upon guesses, based on such scant information. They (the Soviets) have conducted more nuclear tests recently than we. They have had many more big thermonuclear explosions than we. They are not fools. Through these repeated tests they are finding out more information. On the basis of any valid, commonsense arguments, they should be ahead of us today. It is my guess, and it is only a guess, that today the Russians are ahead of us in nuclear weapons."

That the Soviets have at least pulled even with us in strategic technology has, I believe, been demonstrated by our analyses of their massive series of atmospheric tests.

In the very large yield areas, that is, tens of megatons, we are very clearly behind by virtue of the fact that we have neglected to do any testing in this region. In the yield area which ranges from about one megaton up to several megatons—that is, the range which encompasses most of our strategic missiles, such as Atlas, Titan, and Minuteman—we have a statement from Dr. Hans Bethe, chairman of the panel which evaluates Soviet tests, that the Kremlin in its several recent test series, placed very great emphasis on warheads of this magnitude. As Teller suggests, the Soviets may very well be ahead of us in these yields; the sad truth is that we really do not have the technical ability to judge.

We have much less ability to evaulate Soviet progress in the low yield range, which embraces air defense weapons as well as tactical weapons. Conducted underground, most of these tests would defy detection, let alone analysis. As for the neutron bomb, since it produces no significant radioactive debris, it could probably be tested, if required, in the atmosphere and still deny any hope of assessment by us.

While you contend that we still retain an impressive lead over the Soviets, it is interesting to note that the responsible Soviet atuhorities have spoken in considerable detail of the lead they now enjoy over the United States in nuclear weapons. Let me quote, as an example a statement from the recent Soviet book, "Military Strategy," put out by Marshall Sokolovskii, former chief of the general staff, and 14 other senior Soviet officers:

"In the 1960's nuclear weapons were supplied already to all branches of the Soviet armed forces—strategic missile forces, ground forces, air forces, the navy and air defense forces. Along with this, our armed forces received nuclear warheads with yields from several tons to tens of millions of tons. Considering that thermonuclear weapons were created in the Soviet Union earlier than in the United States—and most important of all—that the United States of America does not possess super-powerful thermonuclear warheads of several tens of millions of tons which the U.S.S.R. has, we consider that our superiority over the Western bloc in nuclear weapons is indisputable."

Perhaps this statement is exaggerated at certain points, but it is always a safe maxim to overestimate one's enemy rather than underestimate him. I believe the Disarmament Agency is putting itself in a posture that invites criticism when, with no tangible proof to back up its assertion, it assures the American people that our lead is secure and all is well.

You say that I "overlooked the risks implicit in continued testing by both sides." I do not overlook this risk. As I have pointed out, it is precisely because I recognize it that I believe we must strive for a realistic test-ban treaty. But whereas you seem to think that there is only a risk that the Soviets would endeavor to cheat, I take it as a certainty that the Soviet Government, which is publicly committed to our destruction, which has violated more than a thousand treaties and agreements in its brief lifespan of 45 years, and which has time and time again displayed a monumental contempt for world public opinion, will cheat if there is something to be gained from cheating, and if the chances of verification are nonexistent or marginal.

This is why I believe that a test-ban treaty must incorporate far more rigorous safeguards against cheating than our present position at Geneva calls for.

I believe that a test ban treaty can safely be extended to cover all those areas where we can, with today's technology, maintain an effective monitoring system. On the other hand, I also believe, as I have stated several times, that we would be endangering the national security if we extended the treaty to cover areas where monitoring is clearly impossible or where there is no serious chance of detection and verification.

The recent testimony before the Joint Committee on Atomic Energy offered little encouragement about our current ability to detect small underground tests, or larger underground tests conducted in a cavity, or tests in outer space.

As you no doubt know, Dr. Carl F. Romney, Assistant Technical Director of the Air Force Technical Applications Center (who is generally recognized as one of our top seismologists), estimated that, even without decoupling, a series of underground tests conducted in alluvial soil below the level of 3 kilotons would probably escape detection.

This testimony took on added significance in the light of a statement by Dr. Jack Ruina, Director of the Advanced Research Projects Agency, that half our underground tests have been below 3½-kiloton level, and of a statement by Gen. A. W. Betts, Director of the Division of Military Applications, Atomic Energy Commission, that at this level tests could be conducted which had application to large-yield strategic weapons as well as to small tactical weapons.

You told me in your letter that space detection presents no serious problem and that "satellite-based systems are within the state-of-the-art that could detect explosions at distances of hundreds of millions of miles."

On the day that we have demonstrated our ability to verify tests in outer space up to a distance of several hundred million miles, I shall be willing to support a ban or moratorium on all such tests. But I note that, in his testimony before the Senate Preparedness Subcommittee last September, Mr. Paul H. Nitze, Assistant Secretary of Defense for International Security Affairs, admitted frankly that we have no present capability to detect tests in outer space.

I note further that Dr. A. W. Schardt, Deputy Director of the Nuclear Test Detection Office, Advanced Research Projects Agency, in his recent testimony before the Joint Committee on Atomic Energy, made it clear that the capabilities of which he was talking were all in the future. In reply to a question about our present capability to detect tests in outer space, he replied, "We do not have a satellite up, and I would say our present capability is zero."

Finally, I note that Dr. Schardt was careful not to claim any foolproof ability for the projected space system. He pointed out that tests might be very much more difficult to detect: (1) if they were shielded by large metalized space balloons; (2) if they were conducted on the other side of the moon, and; (3) if they were made to coincide with solar flares.

While tests in outer space are completely feasible with today's technology, the art of verification in outer space is still on the drawing boards and it may take many years to emerge as an operating system. For this reason I am opposed to the inclusion of outer space in a test-ban treaty at this juncture.

In your letter, you repeat the statement that "an inhibition to the development of fusion weapons"; that is, the neutron bomb—"would be to our net advantage." Your generalized statements about our detection capabilities for small underground tests are considerably more optimistic than those of Dr. Romney. But even if underground tests of 1 kiloton could be detected and verified—and I know of no one who has gone beyond this claim—I still fail to understand your reasoning when you say that a comprehensive test-ban treaty, incorporating no threshold of detection, would inhibit the Russians from developing the neutron bomb.

The neutron bomb, as I understand it, is conceived as a weapon ranging from a yield of 1 ton, or even lower, to 1 kiloton. In my speech of February 21, I quoted from a statement by a Soviet Red Army colonel, describing the tactical implications of a neutron bomb equivalent to 40 tons of TNT.

I should therefore like to ask, first, whether you seriously believe that we have any ability at all to detect tests at a 40- or 50-ton level, or whether you believe that such a capability lies just beyond the horizon. My own understanding from the recent testimony before the Joint Committee on Atomic Energy is that, while there are only some hundreds of large earthquakes each year, there are many thousands of small earthquakes which resemble subkiloton yields; and, when you go low enough on the earthquake scale, there are so many minor events that an ultrasensitive seismograph would record them as almost a continuous rumble.

In short, unless there should be some revolutionary breakthrough in the science of detection, the chances that we will be able to detect a neutron bomb test, or series of tests, of 50 or 100 tons magnitude, or even more, are precisely nil. When Dr. Romney, in his recent appearance, was asked about the possibility of detecting a 100-ton underground test, he was frank in stating that this was "out of the question."

The second question I should like to ask is, whether you believe that the men of the Kremlin, knowing that our chances of detecting such tests were zero, would refrain from conducting such tests out of considerations of honor.

On the one hand, you argue that a test ban agreement on the terms now under discussion would be to our advantage because it would inhibit Soviet development of such a weapon; from this, one would conclude that the neutron bomb would be a weapon of serious significance. On the other hand, you argue that our tactical nuclear weapons arsenal is already so highly developed that it would not seriously affect our position if the Soviets did succeed in achieving the neutron bomb. This is a rare instance of two arguments which contradict each other and each of which, separately, is demonstrably false.

I have already explained why a comprehensive test-ban treaty could not, by any stretch of the imagination, inhibit the Russians from developing the neutron bomb. Let me now deal with the other part of your statement.

I am aware that there are a number of people who share your estimate that the neutron bomb would have no revolutionary advantage over some of the tactical nuclear weapons now in our arsenal. I am also aware that, before we got the H-bomb, there were some scientists, including several who have held key positions as advisers on the test ban, who argued that the H-bomb would not have the revolutionary implications claimed by its proponents, that there was nothing an H-bomb could do that couldn't be done just as well by a beefed-up A-bomb.

You say that it is not at all certain that the neutron bomb can be made. But the entire past experience of nuclear technology has been that those things that are theoretically feasible, ultimately turn out to be feasible in practice. I know of no exceptions to this rule.

I consider it of some significance that the scientists, who today dispute or question the scientific feasibility of the neutron bomb, include those: (1) Who expressed negative opinions concerning the feasibility and the advisability of making the H-bomb; (2) who have advised us into our present disastrous posture in the test-ban negotiations; and (3) who have had no serious experience with the developmental work that has already been done in this area.

I also consider it of some significance that the scientists who have been concerned with the development of the neutron bomb and who have firsthand knowledge of the project, have been reluctant, because of the excessive secrecy which surrounds the project, to discuss its feasibility publicly. I have reason for believing, however, that your reservations concerning the feasibility of the neutron bomb does not accurately reflect the opinion of these scientists. Perhaps it would be helpful to the American people in assessing this matter if the cloak of secrecy were lifted so that the scientists who are associated with the project and believe in it, could be heard.

I think you will agree that there are some highly competent scientists and military men who have gone on record with an evaluation diametrically opposed to your own. They believe that the neutron bomb would have revolutionary implications because of its numerous advantages over the tactical fission weapons on which we now rely. The pure fusion weapon would be far cheaper to produce in quantity; it would be much more effective than fission weapons; it would do little damage to our allies' urban centers; and, of great importance, it would virtually eliminate widespread fallout. On the one hand, this would enable our troops to follow up on a tactical nuclear barrage without delay and without danger to themselves. On the other hand, the absence of significant fallout would reduce the political opposition of our allies to the use of tactical nuclear weapons and, to this extent, would make the resort to such weapons far more plausible.

You contend that the neutron bomb would not have any critical advantages over the fission-fusion weapons which we already have in our development program. This development has been known to me for some time, but I have hesitated to refer to it, because of its classification. I am delighted that you have chosen to bring the existence of our fission-fusion weapons into public discussion, since it enables us to discuss the entire problem more frankly.

I find it difficult to understand the processes by which you arrived at the conclusion that the major difference between the pure fusion weapon, or neutron bomb, and the fission-fusion weapons we possess today, is essentially one of cost. Actually, the pure fusion weapon would have numerous advantages. It could be tailored in far lower, more discriminating yields. It would be considerably lighter and, therefore, more versatile and effective.

In terms of nuclear costs, it would be cheaper by a factor of 10- to 100-fold, or even more, than fission weapons or fission-fusion weapons.

You imply that we have an adequate supply of plutonium and of tactical nuclear weapons. I feel that this estimate can only be explained in terms of the official rejection of the possibility of limited nuclear warfare, which I criticized at length in my Senate statement of February 21. As you may recall, I argued at that time that the advent of the neutron bomb would make tactical nuclear warfare far more plausible, and that we had to face up to this prospect realistically.

Having said this much about the superiority of the neutron bomb, I nevertheless wish to express the hope that top priority will be accorded to the fission-fusion weapon you describe, as an interim system, until the neutron bomb becomes available. I should be grateful if you could inform me whether production requirements for this weapon have actually been established by the Department of Defense.

If it ever comes to limited nuclear war, tactical weapons may be needed in the many thousands. As you are aware, the Joint Chiefs of Staff have several times urged the expansion of our plutonium production, so that our tactical weapons might be produced in larger quantity. The production of a pure fusion weapon would liberate our Armed Forces from this limitation, and make tactical weapons available in quantities adequate for any contingency—at only a small fraction of the cost of our current tactical weapons.

You challenge my assertion that the development of an effective antimissile missile is also tied in with the problem of underground testing, specifically as it relates to the neutron bomb development. I am, of course, aware that the missile and radar components of an antimissile system can be tested even under the conditions of a test ban treaty.

I am also aware that perhaps the single most important problem relating to the antimissile missile has to do with the development of a system capable of separating actual warheads from penetration aids. If the enemy should carry this offensive technique one stage further, and employ penetration aids in the form of multiple warheads, our currently envisioned antimissile capabilities would be completely inadequate. The technological possibility of multiple warhead attacks, in fact, constitutes one of the most formidable obstacles to the effective defense of our industrial and urban areas.

It is precisely from the standpoint of overcoming this obstacle, that the pure fusion, neutron bomb-type of warhead would be of key importance. In the first place, it is generally accepted that this warhead would have a far more effective kill capability than a conventional nuclear warhead. In the second place, and most important of all, the extremely low cost of the pure fusion warhead would make it possible to develop an antimissile defense system quantitatively capable of dealing with saturation raids even by multiple warhead missiles.

You question my statement that even quite large tests could be conducted underground without fear of detection. I do not know why it is that the proponents of the present test ban treaty persist in belittling the "big hole" theory with the tortured argument that it would be extremely expensive and extremely time consuming to create a 500-foot spherical cavity such as Dr. Latter postulated in presenting the big-hole theory. Dr. Latter's 500-foot cavity, according to his calculations, would reduce the seismic impact of an underground shot by a factor of 300, so that a 300-kiloton shot would register as 1 kiloton. In downgrading the possibility that the Soviets may use the big hole technique for purposes of cheating, your letter ignores the fact that a much smaller hole would still result in a substantial reduction of the seismic impact of an underground test.

I have been informed by people who are competent in the field that at the 20-kiloton level, and even lower, tests can be conducted that have application to our largest multimegaton weapons. If the Soviets were to excavate a hole big enough to reduce the seismic impact of such a shot by a factor of only 30, 20 kilotons would produce a seismic signal of less than 1 kiloton. This low signal would probably not even be detectable, let alone verifiable. Yet, this level of decoupling would involve a cavity of relatively modest size, which would be cheaply and easily constructed.

I would also point out for the record that the recent testimony established that a substantial reduction could be achieved in cavities that are elliptical or flattened rather than spherical. Such cavities are much more easily engineered, and for that matter, are frequently found in nature.

Your letter makes obscure reference to the possibility of detection by nonseismic means, by which I assume you mean conventional intelligence operations. There is always a mathematical possibility that some conscience-stricken Soviet scientist may decide to cooperate with American intelligence in reporting a Soviet test ban violation. But on the basis of our intelligence record to date, I do not think that we can attach any serious weight to this possibility. I would remind you that our intelligence community had no advance knowledge of the Soviet A-bomb, no advance knowledge of her H-bomb, no advance knowledge of sputnik, and no knowledge of the emplacement of Soviet missiles in Cuba until they were photographed in position on their concrete emplacements. It is worthwhile recalling, in this connection, that the Soviets denied point blank that nuclear missiles had been installed in Cuba until we produced the irrefutable photographic evidence.

In recapitulating this record, I do not mean to criticize our intelligence community. I simply wish to make the point that intelligence operations in a closed totalitarian society are incredibly difficult and that the Soviets have been consistently successful in concealing from us even the most massive technological and logistic operations.

It has repeatedly been stated that so long as there is a chance of detection and verification, this would serve as a deterrent to any Soviet treaty violation. I believe the American people are entitled to a precise statement, or at least to an approximate estimate, of what is meant by "a chance." If it means one chance in two, or one chance in five, most people would agree that such a probability factor would act as a deterrent. But if "a chance" means 1 chance in 1,000 or 1 chance in 100,000, it clearly would not constitute a deterrent to a determined and aggressive cheater; nor would it command the confidence of the American people.

I propose to examine some of the problems connected with detection and verification because, as I see it, there are so many improbabilities at so many different points in the entire process, that 1 chance in 1,000 would, if anything, be an optimistic estimate.

Your letter completely ignores the tremendous difficulties that monitors would inevitably encounter, first, in endeavoring to locate the site of a suspected explosion with some precision, and, second, in obtaining concrete proof, or verification.

Mr. Ruina testified that, whereas before the Gnome underground test, it was felt that we could locate the precise origin of seismic events within a radius of some 10 kilometers, the Gnome event surprised the community of scientists working in this field by producing a 30-kilometer error in the calculation of point of origin. Such an error would mean that an inspection team would have to cover more than 3,000 square kilometers or 1,000 square miles to verify one event. In the light of the Gnome experience I find it difficult to understand why we have now offered to confine any given on-site inspection to an area of 500 square miles. But 500 square miles, so it seems to me, would still be a tremendously large area to inspect.

It was also estimated in the recent hearings that it would require a minimum of 2 weeks after the detection of a suspected seismic event before an inspection team could be assembled, the matter could be processed, and a team flown into the area in question.

It was also estimated that, apart from their normal logistical supplies, the team would require 100 to 200 tons of drilling equipment, which, in remote areas, would have to be moved from point to point by air, as one drilling after another failed to produce the evidence for which we were looking. I think it pertinent, in this connection, to recall some of the testimony presented to the Joint Committee on Atomic Energy in its hearings of April 1960.

Dr. C. E. Violet, of the Lawrence Radiation Laboratory, estimated the probability of locating radioactive debris from a 1.7 kiloton underground test at 1 in 100,000.

Dr. Richard Foose, of Stanford Research Institute, offered little grounds for encouragement. Dr. Foose estimated that, provided the area of suspicion could be cut down to 500 feet in radius, it would require only 63 drill holes in triangular grid patterns to insure a 100-percent complete search. The drilling of 63 holes, it was pointed out, would involve a total footage of 75,600 feet, or the equivalent of 3 Mount Everests, and would require 1,008 man-days of drilling. Dr. Violet did, however, point out that if one were willing to settle for a 1 in 20, or 1 in 10, chance of verification, fewer holes would be necessary.

In the light of all this, I cannot help wondering whether we have faced up realistically to the stupendous problems involved in achieving verification.

Much has been said about the techniques that have been evolved for surface observation; but, in small type, it is admitted that most of these techniques would be thrown into a cocked hat if the Soviets chose to make surface observation difficult by conducting their tests in their northern areas under cover of the long Arctic night, or if they conducted them under shallow waters, or deep underground.

In reply to a question I have put to Advanced Research Projects Agency, I have been informed that it would require weeks to disassemble a drilling rig after a first failure, transport it to another point, reassemble it, and drill to a depth of 10,000 feet.

Under these circumstances, how many holes can we realistically expect to drill in each on-site inspection and what probability of verification would this number of drillings actually give us?

There is a simple mathematical fact which has not been given the consideration I feel it deserves.

Before it can be certified that a test has taken place, there are four separate hurdles that have to be crossed: (1) Detection, (2) identification, (3) location, and (4) verification. There is a probability factor attached to each one of these hurdles; and all of these probability factors have to be compounded in order to calculate the chances of final verification.

No one has seriously attempted to calculate these probabilities. But from everything I have read, I would be surprised if the final probability figures were any better than 1 in 1,000.

Finally, there are political factors that enter into the equation of detection and verification which, I believe, have not been given sufficient consideration.

If a comprehensive test-ban treaty calling for five, six, or seven on-site inspections annually, is ever signed, I can conceive of the Russians permitting us to squander half of our inspections during the first half of the year on genuine seismic events; and, after it had been established that these seismic events had been caused by genuine earthquakes, I am sure that there would be no dearth of innocent people who will construe this as proof that we were wrong to distrust the Russians.

I can even conceive of the Russians permitting us to conduct an on-site inspection in an area where an underground test had actually taken place, confident that the odds were more than 1,000 to 1 in their favor.

But if the inspection team ever decided to erect a drill rig in the vicinity of a clandestine underground test, I simply cannot conceive of the Russians permitting the team to complete its operation and come up with a radio-active core for presentation to the bar of world opinion.

If past behavior is any indication of future behavior, the Kremlin at this juncture would probably order the inspectors out of the country on the grounds that they had been engaging in espionage, charge that it had incontrovertible evidence that the United States had engaged in clandestine testing, and, if we objected strenuously enough, abrogate the treaty on its own initiative rather than waiting for us to do so.

We have been told that if we catch the Soviets cheating, or if they refuse to cooperate in an onsite inspection, or if they themselves abrogate the treaty, we would consider ourselves free to resume testing. All of this has been said in a manner which strongly implies that there is nothing to be lost. But I find small consolation in the prospect that we will be free to resume testing if the Soviets violate the rules. By inactivating our nuclear technology during the recent ill-fated moratorium, the Soviets were able to wipe out an estimated 3- to 4-year lead in strategic weapons technology. If they could similarly inactivate our technology for another 3 to 4 years under the terms of a test ban agreement, we might one day discover that the Soviets had been cheating all along; and we might simultaneously discover that they had forged ahead of us in nuclear technology in several critical respects. It will be an ominous day for the free world if such a situation should ever arise. Our own resumption of testing might come too late to do any good.

Specifically, I should like to urge again:

1. That we return to the original Geneva formula for a monitoring network, which called for 20 stations in the Soviet Union, manned by non-Soviet nationals.

2. That tests in outer space and underground tests below the threshold of detection be exempted from the treaty, with the provision that these exemptions be narrowed as improved methods of detection are devised.

3. That we withdraw our offer to accord the Soviets a veto over the budget of the control organization.

4. That we return to the position we held for almost 2 years on the question of onsite inspection—that is, that we have the right to inspect any seismic events above the level of 5 kilotons that cannot clearly be identified as earthquakes, and 20 percent of the seismic events below this level which have been recorded but cannot be clearly identified.

5. That if the Soviets reject these terms, we let them know in advance that we will instruct our laboratories to push full steam ahead at every point of nuclear weapons technology.

6. That if the Soviets refuse to accept a realistic test ban agreement which would give both sides assurances against the possibility of cheating, we challenge them to join us in a moratorium on all tests that contaminate the atmosphere.

7. That, if the Soviets refuse to consent to such a moratorium, we commit ourselves before the world to conduct no such tests so long as the Soviets abstain from them.

In your closing paragraphs you expressed the hope that I would withhold judgment on the treaty, pending the outcome of negotiations. I assure you that I shall at all times give the most careful consideration to the information developed by the Arms Control and Disarmament Agency in support of its position in the test ban negotiations. I also want to assure you that I have not spoken out lightly against the draft treaty we are currently discussing at Geneva. On the contrary, I have given the matter much study and thought and I have spoken only because I felt conscience impelled to do so before a commitment was made at Geneva. It would be disastrous if the administration committed itself to a treaty which the Senate then felt obliged to reject. It is for this reason that I believe the debate should not be deferred until a treaty is signed.

Perhaps I may yet vote for the treaty, if you can satisfy me that our national security would not be endangered if the Soviets, after agreeing to a treaty, continued to test in space and underground below the threshold of detection; that the development of the neutron bomb and the neutron antimissile warhead would not give the Soviets a critical military advantage over us; and that the art of detection and verification has truly advanced to the point where the treaty we are now discussing would constitute an adequate deterrent against Soviet cheating. In the light of all the information I have seen to date, however, I must say that I have the gravest misgivings on these scores.

I believe that our exchange of correspondence, if it has not succeeded in bringing us together, has at least served to give both of us a better understanding of our respective positions. It has also, I hope, served to give Congress and the American people a clearer insight into the basic issues.

Finally, I hope that the mutual respect which has characterized our exchange will help to discourage extremist statements on both sides by establishing that honest men, sharing the same values and goals, can still differ sharply on the means to be pursued in achieving their common objectives.

With my thanks again for your consideration, and with every best wish.

Sincerely,

TOM DODD.

THE PARTY OF THE THIRD PART—THE GOVERNMENT

Mr. MUNDT. Mr. President, Federal Trade Commissioner Sigurd Anderson, formerly Governor of South Dakota, spent March 28 as a daylong guest of the Middletown, Ohio, Chamber of Commerce and Junior Chamber of Commerce. Speaking at a luncheon meeting, he made some highly informative observations entitled "And the Party of the Third Part, the Government," dealing with the part the Government plays in seeing that the rules of the game are respected in commercial life.

Mr. President, I ask unanimous consent that these remarks by Commissioner Anderson be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

AND THE PARTY OF THE THIRD PART, THE GOVERNMENT

(By Sigurd Anderson)

Mr. President, distinguished guests, officers, members, and guests of the Middletown Chamber of Commerce; it is a pleasure to be with you on this occasion. I feel the impact, not only of your industrial prowess but also the historical significance of the fact that Ohio has been properly named the "Mother of Presidents." During the several years that I have driven across your State while traveling to and from South Dakota and Washington, I have not been privileged to come through Middletown. I can now see that I have erred in my travel scheduling. The benefits that come from quick travel by turnpikes may not be overbalanced by getting to know various sections of the country by actually seeing them. This is just another evidence of the fact that saving time is not the most important factor in life.

Before coming here I explored your splendid brochure, "Middletown, Ohio, A Profile * * *." Since coming here and during the forenoon, I have explored the Middletown area more fully. It is my understanding that this afternoon further exploration will be had. From what I have seen, I am most favorably impressed. Your industrial life is indeed enriching this community as well as all of the United States of America. We poked around in quite a number of places this forenoon but never for one moment was I in doubt of what we were doing, which is a little bit different from the story told about President Calvin Coolidge. The story about President Calvin Coolidge which is accepted in South Dakota is as follows: The President was on his way to spend his summer vacation in the Black Hills of South Dakota—which, by the way, I urge you, too, to visit—and stopped off en route at Pierre, the State capital. The citizens of Pierre, being very proud of a new city park that had been recently created, prevailed upon the President to take a ride through the city and eventually the entourage wound up in the new city park. After driving around the park for a while, the President looked at his companion and said, "What in the world are we doing down here, anyway"

I appreciate your invitation to come to Middletown. In a way, it was made possible by my good friend and your fellow landsman, Congressman ROBERT T. SECREST, who for many years served as a most effective member of the Federal Trade Commission, and who is now serving effectively as a Member of Congress from the 15th Ohio District. The pleasant correspondence that I have had with your president, Calvin F. Floyd, and your staff associate, Bruce Evans, has brought about a meeting of the minds to this extent, that during the formal portion of this noon meeting that I should explore with you—in a few thousand well-chosen words—some of the areas that you, as members of the business community, would be interested in insofar as trade regulation is concerned. With that thought in mind I have labeled my remarks "And the party of the third part, the Government."

ENFORCING THE RULES OF THE GAME

As business people, you have all entered into contracts. You are all familiar with the terminology of contracts that goes something like this: "Whereas the party of the first part and the party of the second part * * *." I would like to amend that statement by adding the following: "And the party of the third part, the Government."

The development of the United States from a hunting and fishing civilization to a farming civilization and then to an industrial civilization where the complications of modern life press in on us has brought about changes that our forefathers never imagined could ever take place. As the complexities of our civilization increased, the number of laws governing the conduct of our citizens increased correspondingly. In fact, one of the penalties of civilization is the multiplication of laws governing the conduct of the members of society. The early pioneers in this Ohio community had no traffic laws; they had no health and sanitation laws; they probably had no weights and measures laws. In fact, the laws governing their conduct were very few. As the community developed, the laws governing conduct came into being. This is something that we have to accept. Like you, I wish it were possible to have our development without having laws impinging upon our conduct. But it just can't be and so if we say that we long for the "good old days," we must remember that the good old days are always now.

The greatness of the United States of America is due to a combination of factors. Those factors are greater resources, favorable geographic location, a merging of peoples who were desirous of getting away from the shackles of oppression in their home countries, and a vigorous competitive spirit. Let us not forget God Almighty in this enumeration. God's help was, is, and always will be of the greatest importance. The United States has always been noted for its competitive spirit. Competition is the American way of life. When that competition simmers down or stops, then the United States of America is on the way out. Therefore, competition must be preserved. Competition does not come about automatically, nor is it automatically maintained.

You and I are not distressed if we run in a footrace and lose to a competitor who can run faster than we can. But we are distressed when a competitor trips us and, by that unsporting gesture, wins the race. We have rules of conduct for football, basketball, baseball, and golf. We have rules for playing bridge. In fact, we have rules for every game that has been invented. For these games we have umpires, referees, linesmen, and what not. And the same is true in the field of business. In order to preserve competition, it has become necessary to have rules of conduct for those who engage in business. We talk a lot about free enterprise. By "free enterprise" we don't mean the utter freedom to operate. There have to be some restraints on their freedom. This reminds me of the story of the Irishman who migrated to the United States from his home country. The first thing he did when he stepped onto the dock in New York was to hit a man on the nose. When taken before the judge, he was asked why he hit the man on the nose. The Irishman said: "Your Honor, all my life in Ireland I have heard that the United States is a free country and I was just exercising my rights of freedom." To which the judge replied: "Mr. Murphy, it is true that this is a free country, but in this country your freedom ends where the other man's nose begins."

So it is with free enterprise. It does have limitations and those limitations do not permit the free exercise of operation in any way the operator sees fit to carry out his operations. He must operate in accordance with rules and regulations that have been laid down.

BRINGING IN THE UMPIRE

The regulation of business is not something new. It goes back to the river kingdoms in Mesopotamia thousands of years ago. Regulating weights, measures, and business conduct generally has come down through the ages. It came to England; from England it came to the United States. It may be of interest to you that the first great act regulating business conduct carries the name of a citizen of your State. The famous Sherman Antitrust Act of 1890 was introduced by U.S. Senator John Sherman of Ohio. By the way, Senator Sherman as you know, was the brother of that well-known Civil War general, "Cump" Sherman, who developed the famous scorched earth policy against the Confederate States, and the man who made a statement about war that never will be forgotten. That statement is, "War is hell."

The Sherman Act of 1890 made it criminal act for businessmen to conspire to restrain trade and to monopolize or attempt to monopolize. As could be expected, there was considerable objection to the Sherman Act. But it was sustained in the courts though considerably watered down by the famous "rule of reason" doctrine. It was believed by many lawyers, economists and indeed businessmen that the "rule of reason" weakened the Sherman Act. Finally, these voices reached Congress, and in 1914 the Sherman Act was given company, so to speak. The Federal Trade Commission Act and the Clayton Act were enacted. These acts were to further supplement the work of the Sherman Act in helping preserve competition. These acts took the sting out of "rule of reason" reasoning.

In 1936 it appeared to Congress that there were some deficiencies in the Clayton Act, and the Robinson-Patman Act came into existence. These acts, the Sherman Act, Federal Trade Commission Act and the Clayton Act, as amended, are the principal Federal laws governing the business conduct of businessmen. Every businessman who is in interstate commerce, and that is coming to include more and more people these days, should have a general knowledge of these acts. True, a businessman's lawyer will have to have a real specialist's knowledge of them, but the lawyer's client should have a general idea that there are laws governing business conduct. Because of these laws, the two parties to the typical business transaction such as we know them in the past, namely, the party of the first part and the party of the second part, actually now have been joined by the party of the third part, the Government.

It is my simple advice to you that when you as businessmen are about to undertake business enterprises, you should ask yourselves, "Does the Government have any interest in this?" Unfortunately, the Government seems now to have an interest in almost all things. Therefore, do not ignore the road markers of Government interest.

What is the Federal Trade Commission? Well may you ask that question. In brief, the Federal Trade Commission is an agency of the Federal Government that has been created to enforce the laws against certain unlawful business acts and practices. The Commission is made up of five Commissioners who are appointed by the President for 7-year terms and confirmed by the Senate of the United States. At present, the Commission has a staff of 1,200 people who are located in the main office in Washington and in 11 branch offices located at Atlanta, Ga., Boston, Mass.; Chicago, Ill.; Cleveland, Ohio; Kansas City, Mo.; New Orleans, La.; New York, N.Y.; Los Angeles and San Francisco, Calif.; Seattle, Wash., and Arlington, Va.

What are some of the acts that constitute violations of the Sherman Act, the Federal Trade Commission Act or the Clayton Act, as amended by the Robinson-Patman Act? Manifestly, I cannot give you a detailed exposition in the matter because both time and opportunity prevent, but here are some things that businessmen should know to be suspect:

CONSPIRATORIAL ACTIONS ET CETERA

It is against the law for business people engaged in interstate commerce, or where there is an effect upon interstate commerce, to conspire to fix prices, or to conspire to allocate territory, or to conspire to carry out acts detrimental to competition and competitors. By conspire, which has an ugly sound, we mean "to agree." Let me take an example. Suppose a number of the businessmen in this room agree that they are going to set the price of widgets or to divide the territory where widgets will be sold, or agree to decide where they will be sold—such is unlawful. There are those who feel that if businessmen want to get together to set the prices on the goods so as to prevent a market from completely deteriorating, they have a right to do so. But the courts have rather soundly put their fingers on this theory by saying, "But the existence of sound business reasons for selling at uniform prices is not a defense to a proven conspiracy to fix prices."[1] Certainly it must be obvious that there is no competition where prices, territories, and other arrangements are agreed upon by those in the business. Competition is the opposite of agreement.

Many of you are members of trade associations. Trade associations have to be very careful not to become the vehicle for illegal action. The furnishing of rate books, common price lists, reporting of individual member activities, and the like, must be checked very carefully so as not to bring the association and its members into the legal doghouse. It is easy for business groups to get into trouble.

---

PRICE DISCRIMINATION

The famous section 2(a) of the Clayton Act, as amended, frequently called the price discrimination statute of the Robinson-Patman Act, is one that I must call to your attention. Under the law, it is unlawful for a supplier in interstate commerce to discriminate in sales between his competing customers where the effect of such discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce or to injure, destroy or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination or with customers of either of them. There are exceptions to this, such as meeting the lawful price of a competitor. It is also provided in the law that differences which make due allowance for differences in the cost of manufacture, sale or delivery resulting from the differing methods or quantities in which such commodities are to such purchasers sold or delivered, must be taken into account. It is also provided in the law that nothing shall prevent price changes due to changing conditions affecting the market or the marketability of the goods concerned, including such things as deterioration of perishable goods, obsolescence of seasonal goods, distress sales, or sales in good faith and discontinuance of the business. Sales to governmental bodies, educational institutions and others are also exempted. Possibly I could best illustrate this law in this manner. Let us assume that "X" is a manufacturer and he has customers "A" and "B" who compete with each other. Under the law, the supplier may not discriminate between these customers if the conditions obtain that I have previously set forth. Discrimination between customers can make or break those who are the beneficiary or the victim of the discrimination. Where an aggressive customer demands and receives a discriminatory price from his supplier, the supplier may be hard put to refuse to give him this favored price. But the supplier must remember that if he is in interstate commerce and none of the defenses to a discriminatory price is available, that for him to treat one competing customer in a favorable way over and against another competing customer may bring a 2(a) charge against him.

Many businessmen look upon getting a favored price as good business, and if the concession for a favored price has been wrung from an unwilling supplier, it may be that it is not as good business as originally contemplated if the Federal Trade Commission moves in on the supplier for having violated 2(a).

At this point I must say that the Commission, in acting against those who violate its laws, does not have the power of criminal sanctions. The Commission seeks injunctive relief. By that I mean if the Commission prevails against a law violator, the Commission will secure a cease and desist order against the violator. In other words, the order will recite that the violator must stop the practices it is pursuing and with which it has been charged by the Commission. Any violation of this order may result in a civil penalty suit where the penalty is $5,000 per day per violation. This is a severe penalty.

BROKERAGE

2(c) of the Clayton Act, as amended, is the famous brokerage section which inveighs against illegal brokerage. In brief, this law works this way: If "A" is a seller and "B" is the buyer, "B" cannot get passed on to him the savings in brokerage. This famous statute came about in this manner: One of the world's largest grocery stores set up a dummy brokerage firm. This brokerage firm received brokerage from the sellers based on sales to the grocery chain. The dummy brokerage firm thereupon turned the money over to the grocery chain. This practice was one of the reasons Congress enacted the famous Robinson-Patman Act.

ALLOWANCES AND PROMOTION BENEFITS

I also want to call your attention to sections 2(d) and 2(e). These sections have reference to the making of payments for advertising allowances as in section (d) or the furnishing of services for advertising promotional allowances under section (e). In other words, if a supplier wishes to give an advertising allowance to his customers for advertising or promoting his goods, he must grant those allowances on proportionally equal terms. The same is true of section 2(e) where, if a manufacturer or supplier furnishes the services, that then he must make those services available to all competing customers on proportionally equal terms. It is evident that what these two sections seeks to do is to provide equality between competing customers.

INDUCING OR RECEIVING DISCRIMINATORY PRICES

Section (f) of the Clayton Act, as amended, deals with the soliciting of discriminatory prices. A good example of this would be if I am a customer of a supplier and I demand and receive a favorable price that the supplier does not grant to my competitors. This is a type of business law violation that is rather interesting because it seems to penalize business enterprise. If I am trying to get a better price from my supplier, it seems as though I should be so entitled to do, but the law just doesn't permit it if it is a discriminatory price. If I know, or should have known, that the price that I am requesting is a discriminatory price, I would be considered to be a logical candidate for a 2(f) charge. If I had solicited either promotional services or promotional allowances, then I could be charged with a violation of section 5 of the Federal Trade Commission Act.

EXCLUSIVE DEALINGS

Another very interesting type of business practice that has been frowned on is in connection with exclusive dealings. This type of violation is covered by section 3 of the Clayton Act:

"That it shall be unlawful for any person engaged in commerce, in the course of such commerce, to lease or make a sale or contract for sale of goods, wares, merchandise, machinery, supplies or other commodities, whether patented or unpatented, for use, consumption or resale within the United States or any Territory thereof or the District of Columbia or any insular possession or other place under the jurisdiction of the United States, or fix a price charged therefor, or discount from, or rebate upon, such price, on the condition, agreement or understanding that the lessee or purchaser thereof shall not use or deal in the goods, wares, merchandise, machinery, supplies, or other commodities of a competitor or competitors of the lessor or seller, where the effect of such lease, sale, or contract for sale or such condition, agreement or understanding may be to substantially lessen competition or tend to create a monopoly in any line of commerce."

As you see from the statement of the above law, this act is very properly called an exclusive dealing act. Accompanying this type of business activity are what we call full line forcing and requirements acts. If, for instance, the seller requires his customers to deal exclusively in his goods to the detriment of competition as set out in the law, it is an exclusive arrangement. If, in addition to the exclusive purchase of the seller's goods, the customer is also required to either buy the parts or equipment used by the machinery, or is required to buy the seller's full line, it can well be seen that it is a type of practice that could sharply curtail the activities of the seller's competitors. A good example would be if I, as a seller, required your president, Mr. Floyd, who is my customer, to refuse to handle any of the goods of my competitor or competitors, and that, in addition thereto, I required him to buy from me and use only the rivets or materials used by the particular machine in question and, in addition thereto, he would have to buy my full line of manufactured equipment in order to get the machine that I am making that he desires to handle. Exclusive dealing matters are handled under section 3 of the Clayton Act, as amended. Full line forcing and requirements contracts come under section 5 of the Federal Trade Commission Act jurisdiction of the Commission.

MERGERS

I cannot refrain from calling to your attention that one of the most interesting types of antitrust activities on the part of the Federal Trade Commission and our colleagues of the Department of Justice, the Antitrust Division, is in connection with illegal mergers. A merger, as you know, is nothing more than the acquisition of one company by another. This may appear to you to be a perfectly legal act for one corporation or company to buy another company or corporation. This is true, except that section 7 of the Clayton Act, as amended, does not always so view it. Insofar as the Federal Trade Commission is concerned, if a corporation engaged in commerce shall acquire the stock or share capital and the assets of another corporation, provided they are both in interstate commerce, then such may be in violation of the law. However, no violation can occur unless the effect of such acquisition may be substantially to lessen competition or to tend to create a monopoly in any section of the country and in any line of commerce. I realize that it must come as a shock to many people to know that it is against the law under certain circumstances for one company to acquire another. I must say that most acquisitions, in fact, the vast majority of acquisitions, are not illegal and such acquisitions are never questioned. But if the acquisition is such as to have a tendency to lessen competition or tend to create a monopoly, then by law the Commission or the Department of Justice, or other governmental agencies that have jurisdiction, are required to step in to prevent the merger, or, if it has occurred, then to bring about divestiture or some other appropriate remedy. It may be of interest to know that in the manufacturing and nonmanufacturing areas in 1962, the Commission compiled a total of 1,260 mergers. This information was gained from Moody's Standard & Poor's Corp., the Wall Street Journal, and the New York Times.

These 1,260 mergers may not include all of the mergers that took place because some are of such small size as to probably slip through the mesh of the reporting agencies. Last year the Commission examined in depth approximately 50 mergers. Within the past few years the Commission has proceeded against many of these mergers. Investigations are being made as to others. It goes without saying that a merger usually results in the permanent disappearance of a customer or competitor. Exclusive dealing results only in tying up a customer or customers; mergers may cause the utter disappearance of customers and competitors. If you are in interstate commerce and you are contemplating a sale of your company to another concern which is in interstate commerce, it would be well for you to consider whether section 7 of the Clayton Act, as amended, has any bearing on your proposed merger.

DECEPTIVE ACTS AND PRACTICES

The Commission has a number of other interesting statutes that it enforces. In view of the fact that I am going to discuss the antideceptive acts and practices activities of the Commission at the Bosses Night meeting this evening, I shall not touch upon that vast area of Commission activity at this time. This is a field all by itself. This is a fantastic area of activity and includes some almost unbelievable actions on a small, but too large, part of American industry. I am sure that Ripley, who created the famous "Believe It or Not" cartoon column, could have made his living just by sitting at the Federal Trade Commission and writing about the rare and unbelieved things that come to us for attention. So, with your consideration, I will leave the area of deceptive acts and practices for discussion tonight.

WOOL PRODUCTS

I feel that it is my duty to mention to you that the Commission also has jurisdiction under other statutes which are important to you as businessmen here in the State of Ohio. The first of these is Commission activity pursuant to the Wool Products Labeling Act enacted in 1939. Under this act the jurisdiction over proper labeling, advertising, and selling of wool products is a Commission obligation. This act was passed so that persons buying woolen products would not be deceived as to texture, quality, admixture, etc., of the product that they were furnished. The old expression, "All wool and a yard wide," has some application in this connection.

FUR PRODUCTS

In 1951 Congress passed the famous Fur Products Labeling Act. This act required the correct, proper, and honest labeling and advertising and sales invoicing of fur products. With your permission, I am going to touch on this law at our evening meeting.

FLAMMABLE FABRICS

Another important consumer law obligation that the Commission has for consideration is the Flammable Fabrics Act. The purpose of this act is to afford the public protection from wearing apparel made of fabrics which are so highly flammable as to be dangerous. The Commission has issued rules and regulations, including required tests, concerning these fabrics. The act was passed in 1953 because certain fabrics had caused death or injury to wearers who were not aware of the dangerous quality of the garment's material. This act carries criminal penalties, including fine and imprisonment.

TEXTILES

In 1958 the last of the consumers' protective statutes administered by the Commission was enacted. This was the Textile Fiber Products Identification Act. This act requires disclosure on a label of the percentage as well as the generic name of the major fiber constituents of textile fiber products. Such products must be enforced as to fiber content in each marketing transaction in order to establish a complete chain of truthful content disclosure from raw fibers to the finished consumer product.

The Commission also administers portions of the McCarran-Ferguson Act, the Lanham Trade-Mark Act, and the Webb-Pomerene Export Trade Act.

A NEW FUNCTION—ADVISORY OPINIONS

It is my understanding that portions of this meeting will be devoted to questions and answers. This is, I believe, the proper way to find out something about the applicable law, and in that connection I must say that the Commission has within the last year embarked upon a program that I think will be of great benefit to the economic community. In June 1962, the Commission authorized a new procedure; namely, the device of issuing advisory opinions. It is now possible for a businessman to determine in advance whether a proposed course of action, if pursued, may violate any of the laws administered by the Commission and, where practicable, to give such businessman the benefit of the Commission's views. This new procedure operates in this way: If a businessman who is contemplating a certain course of action is not sure in his own mind as to whether it is free from violation of any act administered by the Commission, he may write to the Commission, setting forth the facts in connection with his proposal and requesting of the Commission an opinion in advance as to the legality of his contemplated action. If you, as members of the business community, want to find out if it would be wrong for you to perform an act, you may write the Commission and find out whether it's right or wrong. It's much better to find out in advance than to be sued after your contemplated course of action has turned out to be in violation of the law. This may be done by writing the Federal Trade Commission, Washington 25, D.C. I want to say that the device of granting advisory opinions is not a "permit" system. If inquirants do not wish to follow the advice given, they may ignore it.

The Federal Trade Commission wishes to cooperate fully with the members of the business community. If you have any questions or criticisms, please direct them to the Commission. If you wish to secure publications, pamphlets, booklets, and other material that the Commission has available for distribution, just send the Commission a letter stating your request. I am sure that many of you would be surprised to know how many laws apply to the conduct of American business. The Commission maintains branch offices in 11 American cities. In the State of Ohio, the nearest branch office is at Cleveland, at Room 1128, Standard Building, Cleveland, Ohio. Should you wish to come to Washington to discuss your matters with either the staff or the Commission, you may do so at the Commission headquarters at Sixth and Pennsylvania Avenue NW., Washington, D.C.

This discussion is beginning to lengthen out and I must seek terminal facilities.

I am sure that you will agree with me that there just isn't such a thing as getting too much information about one's business. I am sure you will also agree with me that the vast majority of American businessmen want to do the right thing and conduct themselves in a legal, law-abiding, and honorable manner. Many of those who do violate the business laws do so because of ignorance of the law. Therefore, it behooves business people to know what is right and what is wrong about their conduct. The only way to find out what is wrong is for either you or your attorneys to contact the Government and, in turn, in order that we of the Government may have your ideas, we must come to you to hear your points of view and to gain your ideas.

I am sure that there are very few, if any, American businessmen who want to commit economic suicide. By "economic suicide," I mean the practice of pursuing business practices that are in violation of the moral ethics and laws to the point where the Congress of the United States enacts more laws to cover such conduct. A good example of economic suicide is the infamous electrical parts conspiracy that led to the conviction of several prominent business leaders and their companies in the Federal District Court in Philadelphia. Actions like this are reprehensible. I think it can be safely said that every law on the books today that the Federal Trade Commission or any other governmental agency enforces is there because the conduct or the misconduct of somebody caused Congress to enact the law to protect the public generally. Therefore, the only thing to do in order to avoid the increase of regulatory legislation is for business to observe the highest conduct possible so that there will be no reason for the passage of legislation to cover improper conduct. To do otherwise is to bring about economic suicide. Therefore, keep in mind "the party of the third part—the Government." Business and Government must share the burdens of clean competition.

Ladies and gentlemen, it has been a pleasure to have been your guest on this occasion. I wish for you great success via the route of clean, honest, and decent competition.

THE REAL BOSS: THE PUBLIC

Mr. MUNDT. Mr. President, I have a copy of the speech given by Federal Trade Commissioner Sigurd Anderson, formerly Governor of South Dakota, to the Annual Bosses' Night meeting of the Middletown, Ohio, Junior Chamber of Commerce.

"The Real Boss: The Public" was the second address of his March 28 visit to Middletown. He undertook to square the efforts of the business community and the Federal Trade Commission with the needs of the public.

Mr. President, I ask unanimous consent that these remarks by Federal Trade Commissioner Sigurd Anderson be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE REAL BOSS: THE PUBLIC

(By Sigurd Anderson)

Mr. President, distinguished guests, all bosses, future bosses and guests at this Bosses Night banquet sponsored by the Junior Chamber of Commerce of Middletown, Ohio, it is a pleasure to be with you on this occasion where the young businesspeople and the businesspeople who are not so young, who are their bosses, sit down together with a feeling of common pride in business relationship. I wish it were possible for me to come here tonight as a member of the younger group, but the calendar tells me that no matter how much I wish it, I cannot claim to be a member of the junior chamber of commerce. In fact, it is so long ago since I was eligible for membership in the junior chamber of commerce that I can't remember.

Before we get into the program, I want to say to you members of the junior chamber of commerce that you have the greatest possession that any person can have, namely, youthful years. I am reminded of that statement of the philosopher who gave this injunction to those who would listen: "Remember, you come this way but once." Therefore, make the most of it, in the best way for the greatest good. Remember the advice of Benjamin Franklin—"If thou lovest life, then do not squander time, for that is the stuff life is made of."

It is not my purpose to begin this meeting by making those of you who are more than 35 years of age feel sad; therefore, let us say no more about this age business. I am delighted to have been invited to come here tonight. This splendid industrial area of the great State of Ohio has made and is now making great contributions to the industrial greatness of the United States. I know the pride with which you hold your Buckeye citizenship. I assume that each one of you has in his or her wallet or pocketbook a buckeye as tangible proof of the fact that you are a citizen of the Buckeye State. Sometime ago while attending a banquet in Washington, I met with a Government official who said he was from Ohio. I said, "You are a Buckeye?" He said, "Absolutely." And I asked him in a rather jocular manner, "And you have your buckeye to prove it?" And he said, "Yes, sir." And he fished one out of his pocket and he said, "I carry this with me at all times, and when I change pants I put the buckeye in the pants I am going to wear." That manifestation of pride in one's State is healthy. It's in the same class as the Texans, who are never known for lacking the opportunity to tell the rest of the world where they are from.

When Calvin Lloyd, the president of the Middletown area Chamber of Commerce, and Bruce Evans, the staff associate of the chamber, were making arrangements for my appearance here, we decided that I should discuss a phase of the work of the Federal Trade Commission that would be of general interest to the community. With that in mind, I am going to label my remarks, "The Real Boss—The Public."

ADVICE ON WORKING WITH PEOPLE

Before I dip into my formal remarks, I would like to generally pay my respects to those young men and women who will take over the steering wheel of tomorrow in not too many years hence. I challenge you on the great opportunities before you, and I trust that in the tradition of your predecessors that you will so guide the United States of America and its business enterprises that it will continue to be the greatest Nation in the world. It may be trite to say that the future is in your hands, but, by Jove, I don't know of any statement more truthful.

I cannot help commenting on the fact that all of us are salesmen. Whereas you are salesmen for your businesses and your industry, I am a salesman for the U.S. Government. All of us are salesmen for the greatest product in the world—Americanism. As sales people, not only do our words but also our actions count. Do you remember the words of the famous philosopher who said, "Your actions speak so loud I cannot hear a word of what you say."

The other day I was reading an article in a little publication called the Sample Case, which is the official publication of the United Commercial Travelers. The article, which was entitled, "Making Your Sales Talk Better Understood," was by Ernest W. Fair. I thought the article so penetrating that I am going to set it out in digested form. I feel that you young salesmen, as well as you not-so-young salesmen and I could well take to heart the words of the writer. Here they are:

1. Be sure you understand it yourself.

(a) Too often we deal in generalities.

(b) We cannot expect others to grasp important sales points by generalities.

(c) Accuracy cannot be deduced from general statements.

(d) Be sure that we have a firm and positive understanding of what we are talking about and thinking about.

2. Take no single detail for granted.

(a) There are many routine sales details in daily life which we take for granted because we live with them. Such details may not be understood or may be unknown by the customer.

(b) Check carefully to see that every detail is understandable.

3. Never mind the flowery phrases and language.

(a) Such verbiage does not contribute to clear understanding.

(b) Sometimes flowery phrases are used to avoid saying anything specific and definite.

(c) Clear, sharp and to-the-point words cannot be misunderstood.

(d) Selling has little use for flowery language.

4. Provide needed supplemental material or data.

(a) Many cases of selling failure exist because important information needed to put over the idea was not provided.

(b) Top salesmen always make sure that supplemental data or material is available to help for a better understanding.

5. Slow down.

(a) Speed never pays off in selling.

(b) Too many salesmen seek to impress customers with rapid-fire conversation.

(c) Many talk at high speed because of tensions and eagerness to get the sale over with.

(d) Not every customer has the same hearing capability.

(e) The machine gun approach will leave the listener at odds and wondering what he heard.

(f) The listener must have time to consider what the speaker said.

6. Watch your language.

(a) There are many words which have multiple meanings. Be sure that we have words that convey the same meaning to everybody.

(b) Words must have the same meaning to the customer as to the salesman. If not, no sale.

(c) Choose words that you know the meaning of.

7. The way you say it counts.

(a) Sincerity can be in the tone of the voice.

(b) Speaking with confidence and assurance has no equal in a sales message.

8. Be sure of every single fact.

(a) One bad fact has the same liability as one bad apple in a barrel.

(b) Bad facts can destroy an understanding and ruin a sale.

9. Be sure of complete attention.

(a) Gain the undivided attention of the customer before proceeding—the human brain isn't capable of considering several things at one time.

10. Concentrate on one thing at a time.

(a) Doing so always helps to avoid confusion.

11. Don't beg.

(a) The salesman who begs or tries to use influence seldom succeeds.

(b) Such approach always creates suspicion on the part of the customer.

12. Say it once emphatically.

(a) When one keeps repeating, the other person shuts his mind to the whole business.

The credo set out by Mr. Fair is packed with advice that any person could well accept. I know that advice is hard for a young man or woman to take. And speaking of advice:

I am reminded of the advice of the seven wise men of Greece. I am going to set that out, too. I am very partial to the Greeks, who had one great desire, and that was the desire to be perfect. Well can we of this age emulate the Greeks of the ancient world who created a civilization that has never been equaled. Here are the sayings of these wise men:

1. Pittacus of Mitylene: "Take time by the forelock."

2. Periander of Corinth: "Industry conquers everything."

3. Solon of Athens: "Know thyself."

4. Cleobulus of Rhodes: "Choose the wise middle course."

5. Chilo of Sparta: "Consider the end."

6. Thales of Miletus: "Surety for another is ruin to yourself."

7. Bias of Ionia: "Most men are bad."

At the north entrance of the National Archives Building, one of the most beautiful and substantial buildings in Washington, D.C., there are some statues. On one of them is carved this inscription: "Study the past." The statements of the seven wise men of Greece, men who lived 2,000 years ago, bear out the injunction to study the past because the sayings of these seven wise men of Greece are as important and as potent today as they were the day they were uttered. Wise is he or she who looks upon the past as a guide for the future. As the business leaders of tomorrow, you young men and women who are meeting with your bosses tonight can well consider what the wise men, whether they are the Greeks of 2,000 years ago or the wise people who are your bosses, have given you for your guidance. Never let it be said that you turn down good advice.

DIPPING INTO TRADE REGULATION

In order to carry out my injunction to discuss some of the work of the Federal Trade Commission, I am going to stop philosophizing and dip into trade regulation. This noon, I was the guest of the chamber of commerce at a luncheon. At that time, I gave a not-too-short speech where I discussed some of the acts and practices which were in violation of the Sherman Act, the Federal Trade Commission Act, and the Clayton Act, as amended. This evening, I would like to discuss with you some unfair methods of competition in commerce and some unfair and deceptive acts and practices in commerce which have by law been declared unlawful.

The Federal Trade Commission is an agency of the Federal Government that was created in 1914 to protect competition in interstate commerce. Since then its powers have been greatly enlarged and expanded. The Commission enforces a large number of statutes, including its basic statute, the Federal Trade Commission Act. The governing body of the Commission is composed of five Commissioners who are appointed for a 7-year term by the President of the United States and are confirmed by the Senate of the United States. The Chairman of the Commission is appointed by the President. Currently the Commission has 1,200 employees. The headquarters of the Commission are in Washington, D.C. The Commission also has 11 branch offices located in the following places: Atlanta, Ga.; Boston, Mass.; Chicago, Ill.; Cleveland, Ohio; Kansas City, Mo.; New Orleans, La.; New York, N.Y.; San Francisco, Calif.; Los Angeles, Calif.; Seattle, Wash.; and Washington, D.C. As you will note, one of our branch offices is in Cleveland. Should you wish to make any contact with the Commission at any time, you may do so by writing, calling or coming to the Commission headquarters in Washington or at its branch offices. The Commission is interested in serving the people of the United States to the greatest possible extent. In order to know your wishes, you must make them known to us.

The most important part of the Federal Trade Commission Act is set out in section 5(a)(1) of said act and contains only 19 words. Those words are: "Unfair methods of competition in commerce, and unfair or deceptive acts or practices in commerce, are hereby declared unlawful." As you have noted, these words do not enumerate what are unfair methods of competition or unfair or deceptive acts or practices. Those are determined by the Commission and, if necessary, by the courts. Congress purposely intended that the powers of the Commission should be "shotgun" in nature. For Congress to have written into a regulatory act of the size and the scope of the Federal Trade Commission Act the precise violations to be proscribed would have required thousands of examples. It would have meant that every session of the Congress would have to consider amendments to the act. Congress in its wisdom made the act very general and gave the Federal Trade Commission the power to act within the periphery of its expertise. And may I say that that periphery may reach to the horizons. I would like to have you remember, then, that the purpose of the Federal Trade Commission is to protect competition.

PROTECTING COMPETITION

The vast majority of American business people are decent, honest, and ethical. But there are some who are not so. There is a number whose halos are very loose. In fact, their halos slip over their ears and get to be as big as hula hoops. It is that group that the Federal Trade Commission and other regulatory agencies of government—Federal, State, and local—try to reach and try to correct. I would like to point out that many of the business laws are violated because of ignorance on the part of the members of the business community. Where, however, the violation is intentional, that is another matter. The Commission does not have the power to proceed criminally in exercising its jurisdiction. The Commission's power is injunctive in nature. It has the power to order a violator to cease and desist from the practices found to have been violated. If the person so charged, whom the Commission calls a respondent, does not obey after the order has been made final, then, of course, civil penalties may be exacted from the offender, and those penalties are severe. Each violation may cost the offender $5,000 per day on occasions. Criminal contempt proceedings may also be brought against violators. But the main purpose of the Commission is to stop the practice of the violators. The Commission has great power to stop practices in their incipiency before they become full blown. This is of great benefit to the public. The Commission has often been called the consumer's protector. We have also been called guardians of the free enterprise system, because we are all familiar with the fact that free enterprise calls for free competition. We have also been called policemen in gray flannel suits. And on occasions we have been called other things. Tonight I would like to touch on the deceptive acts and practices against which the Commission proceeds, practices which the Commission stops by means of the aforementioned orders to cease and desist. Our jurisdiction covers acts in interstate commerce. Therefore, we do not invade the prerogatives of the States. But in this day and age, interstate commerce becomes more and more possible, and, therefore, the areas that the Commission did not invade years ago are today common areas of operation. Let me give you some examples of deceptive acts and practices against which we take action:

HEALTH

Is there anything more important than health? It need not be argued that a person in ill health will spend his fortune to effect a cure. Even when a cure is doubtful, the person ill and distressed will seek good health. The old expression "grasping at a straw" must have had reference to a sick person seeking a cure. In the area of ill health, we find a fertile field for those who sell cures. It is in this area that cruel deception is found at its worst. It is here that we find the examples of those in ill health who spent themselves into the poorhouse, hoping for a cure that never came and that the seller knew could never come. Carl Sandburg, the great writer, put it so well when he said some sellers had this slogan: "This is good for what ails you; if nothing ails you, it's good for that, too." What are some of these cures?

Arthritis cures: Here we have the cruelest of all deceptions. Most arthritis victims cannot be cured because there are few cures for arthritis. This aching, nagging affliction has been a great moneymaker for operators who glowingly advertise and sell pills that are made of aspirin with additives of doubtful worth, copper, zinc, and other metallic bracelets and anklets or metal heel plates, all claimed to bring great relief to those who suffer from arthritis. Another cure for this ailment is to place the victim in a uranium mine so that rays of the uranium ores can penetrate the victim's body and attack the arthritis areas. I have also seen uranium pillows sold for treatment of arthritis of the neck and shoulder areas. The number of these cures that the Federal Trade Commission has stopped is great.

Rheumatism cures: These are a lot like arthritis cures. I don't believe this area has the money attraction for operators as does arthritis.

Obesity cures: This is a profitable area of operation. Here it can be said that those who offer and sell these cures literally "live off the fat of the land." It is quite a temptation for an overweight person to buy preparations that permit him to eat his favorite food and at the same time enable him to lose weight. This is a good example of "eating one's cake and having it, too." Medical authorities are firm on the proposition that caloric intake generally determines weight. In other words, "Don't eat so much." It is tough to be a Spartan. But it's that or else, if obesity is a problem. There is no magic in weight reduction—just plain willpower.

Hair restorer, preparations, and treatments: One of the banes of the male is baldness. Millions of men have traced the loss of their hair from a receding of the hairline or thinning to a complete "fringe on top." The campaign to either stop the loss of hair or to restore the hair has been, is now, and will be expensive, trying and burdensome to the anxious male with hair troubles. Countless cures, both by preparation or treatment claiming effectiveness, have been stopped by the Federal Trade Commission. Most baldness, 90 to 95 percent thereof, is male pattern baldness, for which there is no cure. Baldness is generally hereditary by nature. To avoid baldness, a man should choose his ancestors more carefully.

BUSINESS OPPORTUNITIES

This is an area where the Commission has been very active in stopping many schemes. These alleged opportunities are offered to the aged, the crippled, the retired, or the part-time workers of our country. When a retired person or an old or crippled person discovers that he or she does not have sufficient means for living, it is only natural that they will look around for supplemental income. These so-called business opportunities that are advertised and offered read and sound most alluring and before the "customer" is aware of the true nature of the business opportunity, he or she has already been victimized. It is indeed a cruel perpetration of fraud to practice upon persons who are so badly in need, but that is of no moment to the sharp operator who is interested in deception and a quick sale. Some of the types of business opportunities that the Commission has stopped are certain vending machine operations, home repair operations, and the like. Some time ago a large number of retired farmers in a Midwestern State who had invested heavily in vending machines attempted to sell the machines back to the operator who had painted such a glowing picture of financial independence from the use of the machines. When he was asked to buy the machines back, he made the classic comment, "I am in the business of selling vending machines, not buying vending machines." I cannot stress too strongly that those who are looking for business opportunity should be careful that the plan that they enter into is a bona fide operation and is not a scheme to defraud them of their money. I am sure that many of you know of friends or relatives who have been victimized. You can do no better than to urge friends and relatives to be careful, wise, and judicious in consideration of any business opportunities where the persons dealt with are not hometown people known to the community.

ADVANCE FEE DEALS

This is a type of business operation that flourished several years ago but has now tapered off due to the activities of the Federal Trade Commission, the Department of Justice, and the Post Office Department. Briefly, the operation is as follows: Where a person has real estate to sell, he or she is approached by representatives of a reputed national real estate firm that promises to make quick and ready sales of real estate. As the contract is entered into, it is explained by these representatives that it will be necessary to have a portion of the commission or the selling fee paid in advance. The smooth representatives make the story so realistic and so persuasive that the prospective seller will advance a part of the fee and after that, hear no more about the sale or the fee. This type of operation, according to authorities, cost the American people around $60 million in 1957. At the Federal Trade Commission, we still receive continuing reports about advance-fee deals. Many of you own property or you have friends or relatives who own property. If you or they wish to sell, certainly a sale can be effected through a reputable real estate firm. Dealing with strangers who are persuasive and plausible can be a dangerous business.

EDUCATIONAL FRAUDS

This is a field that should be of interest to all of us. Even the wisest become victims of plausible schemes, and that includes Ph. D.'s. In fact, lawyers and doctors may be included in this category. Many persons seeking to advance themselves take correspondence courses. There are many fine correspondence schools in the United States. But there are also many correspondence schools whose courses are of little, if any, value. It is tragic that young people or those with limited means should invest their money and their time in a correspondence course that is valueless and sometimes indeed a downright fraud. In this connection, the Commission has taken action against correspondence schools offering practical nurses training, heavy machine equipment training, preparation for Government positions, preparation for positions in foreign countries, airline hostess work and airline mechanics work, and many others that have been found to be deceptive and fraudulent in nature. A prospective student should be sure that the training received from the schools is of value and should check with one in a position to know before investing his or her time and money.

The Commission has many distressing letters in its files from people who discovered too late that the correspondence course that they had completed was valueless. It may be of interest to know that diploma mills are still grinding away, although their activities have been greatly reduced. Not long ago, the Commission successfully completed a case against a diploma mill that was offering special degrees to clergymen, of all people! With the great number of fine educational institutions available, it seems almost ridiculous to seek out some unknown institution in order to get a degree. An enterprising young man in the New England States recently came into contact with the Commission on a scheme called a diploma equivalency plan. For a certain stated consideration, this young man and his school—of about two teachers—would test individuals in any desired educational field, and, if they met the test, they would receive an equivalency diploma. Quite recently the Commission brought actions against a number of the large encyclopedia manufacturers for unlawful methods in selling their products to the public. Many of the high-pressure schemes used to sell these products to the public are somewhat like this: A smooth young man represents to the husband or wife, or both, that they have been specially selected to receive a free set or receive a reduced price if they will buy certain supplemental volumes of the publication or if they will permit their names to be used in the community as prominent people who have the seller's product. The undermining influence of the alleged low price or no price at all, with the statement that they are considered to be prominent people in the community, usually results in a sale. Upon investigation, the buyer usually discovers he paid the regular price for the product.

The gimmicks that are employed to break down sales resistance are both ingenious in nature and countless in number.

FUR PRODUCTS

In view of the fact that a fur coat or other fur garment has tremendous appeal to the women of America, I should warn you that there has been considerable deception in the sale of furs. Thanks to the efforts of the law enforcement agencies and the fur people, as well as the Better Business Bureaus of the country, the deception in this area has been almost eliminated, but there still remains some deception. The Fur Products Labeling Act requires that a fur garment shall have attached thereto a label indicating the name of the animal from which the fur came. One of the furs that lent itself to deception was rabbitskin. Rabbitskin could be processed to look like a very expensive fur. Processed rabbitskin with an exotic foreign name was sold widely. The buyers were not aware that it was a rabbitskin. Who among you would knowingly buy a rabbitskin coat? According to fur products authorities, there are 95 names for rabbitskin, including such names as Baltic lion, electric seal, electric beaver, and Hudson Bay seal. It may also interest you to know that Hudson seal is dyed and processed muskrat. There are many persons who were unaware that the fur for their Hudson seal coat bought years ago was the lowly muskrat. In connection with fur products deception, I am reminded of a story of the burglar who told his girl friend, "Honey, I have a mink stole for you. I don't know if it is mink, but I know it is stole."

DECEPTIVE PRICING

This is the type of sales technique that is a fraud upon the public. It can be explained as follows: The prospective customer sees a product advertised in the store. The product, let us say, is a watch marked $75. Someone has stricken the $75 with a marking pencil and down below are these words: "Now $20". To the public this means one thing: that the watch has previously sold for $75 and is now selling for $20. This is a tremendous inducement to buy. The fact of the matter is that the watch had probably never been sold for $75, was never intended to sell for $75, and offering the watch at this considerably "lower" price is just a gimmick. This type of deceptive pricing, usually called "preticketing," is a sales technique that is, of course, generally dishonest and generally unlawful.

A BIG DIFFICULTY: GETTING PEOPLE TO ADMIT THEY'VE BEEN VICTIMIZED

The above examples constitute but a few of the types of business frauds that the Federal Trade Commission and other law enforcement agencies have to deal with. It would be possible for me to give you scores of other examples, but time and space do not permit. I think that these examples do demonstrate a small portion of the whole area of deception and fraud upon the public.

Every one of us has a blind spot. Will Rogers once said, "Everybody is ignorant—only on different subjects." And how true that is. Sinclair Lewis, the famous author of "Main Street" who grew up at Sauk Centre, Minn., once said, "People will buy anything that's one to a customer." It was Oliver Goldsmith who said, "Every absurdity has a champion to defend it." Each of us may be strong, but in some respect or other we have an Achilles heel or a weakness. Even some of the shrewdest business people have bought worthless stock. We should recognize our weaknesses and guide ourselves accordingly. One of the difficulties that faces the Federal Trade Commission in successfully concluding injunctive actions against those who engage in unfair and unethical business practices is the fact that most Americans will not admit their failures. Years ago, a prominent advertiser used this slogan: "Even your best friends won't tell you." That is so true in connection with persons who have been victimized. They don't want to admit that they have been the victims of a fraud. For that reason, there must be countless fraudulent schemes that never come to light because of the reluctance of the victims to speak up. It is for that reason that all possible publicity should be given to schemes that are deceptive in character, so that the public may be warned.

Business frauds follow us from the womb to the tomb. It can be said that frauds run from our heads to our heels. The grandchildren of the men who sold the Brooklyn Bridge are now offering bargains that are better than their grandfathers ever thought of. It is unfortunate that the public has to be subjected to these deceptions but it is a fact of life that we must accept.

NEED FOR A WARY PUBLIC

The best policeman in protecting the public against frauds is an alert, educated and knowledgeable public. The Federal Trade Commission believes that the primary responsibility for clean, fair, and honest competition is that of the businessman and most businessmen accept this challenge. For those businessmen who do not accept this challenge and do not subscribe to that view, the Federal Trade Commission and other regulatory bodies, national, State, and local, have to step in and "blow the whistle." May I say that the obligation of the press, radio, and television is also most apparent in protecting the public. The advent of television has opened an avenue of attack by those who practice deception that is rather alarming to contemplate. I repeat, the press, radio, and television, as well as the advertising agencies, carry heavy obligations in protecting the public. I do not believe that they can escape these obligations under the guise that freedom of the press must be widely observed. With freedom to speak and to print, there also goes the obligation of not lending one's services to the machinations and schemes of those who deceive.

It must be apparent that all of us—you as young business people, your bosses as the older business people, and I as a representative of the Government—have one boss, and that is the public. The old expression, "The customer is always right," is an expression that neither you nor I can ignore with impunity, because in the last analysis the real boss is the public, those that we serve, those that buy our goods, those who pay for our services. Therefore, it behooves all of us to bear in mind that it is the public in the final analysis that is going to sit in judgment upon our actions. And I think that I could best close my discourse this evening by quoting the words of one of the shrewdest judges of human nature that has ever lived—the rail splitter of Illinois, the sage of the Sangamon, Abraham Lincoln, who said, "If you once forfeit the confidence of your fellow citizens, you can never regain their respect and esteem. It is true that you may fool all of the people some of the time; you can even fool some of the people all of the time; but you can't fool all the people all the time." Therefore, let us remember that our real boss, your real boss, and my real boss is the American public and that our dedication to that boss will pretty well determine how great the United States of America will be and for how long. May God grant us the power to serve the public honestly, cleanly, and faithfully. Thank you and good night.

BETTER CITIZENSHIP PROGRAM FROM KIWANIS INTERNATIONAL

Mr. MUNDT. Mr. President, as a former governor of the Minnesota-Dakotas District of Kiwanis International, and as a member of my hometown Kiwanis club in Madison, S. Dak. for more than 30 years, I have always felt it a privilege to have the opportunity to be associated with the important work of this organization.

Today I am pleased to bring to the attention of the Senate another of the outstanding citizenship projects undertaken by Kiwanis International.

Kiwanis clubs throughout the United States and Canada, in cooperation with local, school, and youth officials, and the National Council on Crime and Delinquency, are spearheading a timely new program directed toward helping youngsters make better citizens of themselves. The program, called "You and the Law," is a series of educational devices designed to teach youngsters, from the 7th through the 12th grades, the basic fundamentals and protections of the law.

The program's aim is stated as "to help adolescents recognize the sometimes fine line between high spirits and a serious breach of the law. No one frowns on high spirits," it says, "but fun simply cannot encroach upon your neighbor's person or property without serious consequences."

In a booklet which the Kiwanis club is making available, through proper authorities, to youngsters of the community, the questions are posed:

> This is a free country, isn't it? So why can't we do anything we feel like doing?

The booklet answers itself by saying:

> Here are the answers: We could if each of us lived entirely alone, but this is not possible. America is a land of freedom; freedom to do as we wish and go where we will—but only if we do not trespass on the rights of others. At this point freedom ends.

The booklet will be supplemented by school assemblies, Boy Scout, Girl Scout, Key Club, and other youth group meetings devoted to the subject; field trips to courts; the viewing of films; and discussions on the law, on delinquency, and on rights and responsibilities, moderated by teachers and other youth leaders.

The booklet and supplementary materials were written by the National Council on Crime and Delinquency in consultation with nationally prominent educators and police officials.

The idea of the program, "You and the Law," was originally conceived and developed by the Westchester, N.Y., Citizens Committee—an affiliate of the National Council, several years ago. As a result of the program, and other practical steps in prevention, youthful delinquency was substantially reduced there, and the project was widely acclaimed.

When it was decided to make a national project of "You and the Law" the National Council on Crime and Delinquency asked Kiwanis International—long a leader in service to youth—to act as cosponsors.

Mr. President, I know that my 100 colleagues in the House and Senate who are members of Kiwanis International, join with me in the hope that this new program will achieve the rewarding results of helping young Americans everywhere to not only better understand the importance of good citizenship but encourage a more active participation in those plans and projects which help to preserve our free society.

REDUCTION OF FOREIGN AID

Mr. BEALL. Mr. President, there has been considerable discussion in the press about reducing foreign aid, particularly since the publication of the report of the Clay Committee, appointed by the President. Almost everyone agrees now that a reduction in the overall program should be made. The President himself has recommended reductions in his original foreign aid request. The debate now hinges on the degree of the reduction and the timetable.

I have supported foreign aid in the past as money well spent for mutual security. However, it appears that some of the money has been wasted through maladministration. It also appears that money spent for the sole purpose of buying friends for the United States has been ill spent. Without doubt, reductions must be made. But, caution must be used in the reductions; they should not be made too fast.

An excellent editorial on this subject appeared in the April 7, 1963, issue of the Baltimore Sunday Sun. I ask unanimous consent to have the editorial printed in the RECORD as a part of these remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE WAY TO LOSE

The all-out opponents of foreign aid are crying foul after Secretary Rusk's harsh words of Friday; and some proponents of aid feel that a more courteous approach would have served better to forward Mr. Rusk's case. He did not, as charged, call the down-with-aiders "Communist sympathizers," but he did say that it was beyond his understanding why "any American would want to cooperate" with the Communist global strategy of getting Americans and American influence withdrawn not only from Western Europe but also from the Mediterranean, South Asia, the Far East, Latin America, Africa, and elsewhere. Aid cuts too severe, he said, would amount to such cooperation.

That is indeed rough language. What impelled the Secretary of State, ordinarily quiet-spoken at home as abroad, to resort to it? His reasons are not difficult to guess.

The Clay Committee report, issued 2 weeks ago, was seized upon by the down-with-aiders as a weapon against the whole program. They have picked up and brandished those sections of the report critical of past procedures, and those sections recommending reductions, phasings-out and in some instances terminations. With much of this the administration agrees, but it emphatically does not agree with the opponents' view that the sense of the report is antiaid. The administration emphasizes rather the committee's statement that "it is our purpose in this report to point out how this essential program can be strengthened * * * and our criticisms and proposals here should be viewed in this light."

Opposition to aid boils down to the question: In what way is it essential? Every national administration since World War II has given answers to that, in various forms. The answers can be boiled down, too:

We could lose the world struggle on the periphery. We could lose it in the Middle East. We could lose it, as the Clay Committee declared bluntly, in South Asia—the Indo-Pakistan subcontinent. We could lose it in Southeast Asia, including the islands, and in the Far East, and in Latin America and Africa. We could lose it to a degree even in Afghanistan. If in these places, bit by bit and one by one, our support were removed and our influence eroded, the enemy in many regions would have simply to walk in.

To prevent that, now and into the future, is the first purpose of foreign aid. Mr. Rusk's knowledge of how vital a purpose it is may have led him into tactlessness, but the point needed making and cannot be backed down from.

FERTILIZER FROM COAL

Mr. McGEE. Mr. President, now that spring is here many a householder's fancy has lightly turned to thoughts of seeds, flowers, and fertilizer. And throughout the Nation, and indeed in many other countries of the world, a new and remarkably efficient fertilizer, produced in Glenrock, Wyo., is being marketed. The essential ingredient for the fertilizer, Mr. President, is coal.

I mention this new fertilizer and the $1 million plant built at Glenrock to produce it, as another example of the ingenuity that is utilizing Wyoming's great potential for growth and development. Coal is not ordinarily thought of as the basis for fertilizer, yet someone had the ingenuity to look into Wyoming's leonhardite ore and found it rich in humic acid, a potent fertilizing agent. On that discovery this industry was founded.

In like manner, Mr. President, we await many new discoveries, and I would point out that I have introduced Senate Joint Resolution 7 which would provide for the investigation of new methods of utilizing mineral deposits in the West and throughout the Nation.

Mr. President, an article describing the new fertilizer plant at Glenrock appeared in the March 31 issue of the Casper Star-Tribune. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GLENROCK PLANT PRODUCES NEW KIND OF FERTILIZER

(By Irving Garbutt)

A swirl of black soot envelopes a cluster of tanks and a steel building along the highway east of Glenrock, where begrimed workers resembling blackface comedians are wheeling out 50-pound paper bags and loading a 50-ton North Western railroad car.

This is American Humates new $1 million fertilizer plant, a new industry in central Wyoming, in fact the only plant of its kind in the world—grinding and pelleting leonhardite ore into a new type fertilizer rich in humic acid.

The process is secret and you can't lug a camera into the sooty interior to photograph the equipment, but anyone from the Wisconsin dairy belt would recognize the big spray tank of the same type used to convert skim milk into the familiar powdered form found on grocery shelves.

The finely ground leonhardite ore, similarly, is heated by powerful gas jets and sprayed against the interior walls of the tank, then collected below, mixed with chemical fertilizers, pelleted and bagged for shipment.

The dust from the operation looks like coal dust, but Charles F. Canfield, vice president of the company and the engineer who helped to assemble this pilot plant explains that leonhardite is something special. Soft, lignite coal, ground up, would have no value as fertilizer. But leonhardite, halfway between peat from an Irish bog and lignite coal in the geological scale, is rich in humic acid.

It is said to have 60 times as much humus as sheep manure.

NO GOOD FOR HEAT

The ore, as it comes to the plant from deposits north of Glenrock, looks like the poorest, airslacked type of soft coal imaginable, with sulfur streaks in it, and John Ford, plant manager, explains that it is too low in Btu content to burn in your old coal heating stove, if you had one.

Even the early settlers would pass up this stuff for heating fuel, preferring buffalo chips, but it is reported to be a great soil conditioner and plant stimulator, and there is enough of it around Glenrock to run the plant for the next 200 years.

A crew of 13 hands working in three shifts at the new plant is busy meeting demands for the new fertilizer, which has been tested by orchardists, nurserymen, university specialists and farmers in many States, with surprisingly good results. This is the height of the fertilizer shipping season, and the plant can't keep up with the orders rolling in, says Ford.

At first, it was anticipated most of the product would be shipped to distant markets, but a demand developed in the Wyoming area also.

Mr. and Mrs. Homer Lathrop, well-known local feed and machinery dealers, formed a corporation known as the Western Humus & Supply Co. last month to distribute the product, known as Aqua Humus, to dealers in Wyoming, Montana, and western Nebraska. It is available in 50-pound bags and later will be sold in retail stores in convenient, 10-pound plastic bags for home gardeners and the housewife with potted plants.

GRASS IS GREENER

Lathrop treated some strips of fairways at the newly seeded Paradise Valley golf course late last fall. The treated strips show up a brighter, lusher green in an aerial photo, outstripping growth in the surrounding grass which was treated with the usual commercial chemical fertilizer applications.

A Glenrock dairyman, Allan Brubaker, also found the product stimulated his cornfield last year.

It is reported to make potatoes firmer, with 3 weeks' earlier maturity; stimulates the growth and improves the quality of many other field and garden crops.

"This is because the humus triggers other soil nutrients, makes them available in soluble form," said Lathrop.

Shipments of the new fertilizer product from Wyoming have been made all over the world, to points as distant as Tel Aviv, Israel; and Peru, as well as all over the United States. Already this year, a carload has been dispatched to Washington State, and another to Maryland. It has proved beneficial to cabbage and lettuce crops, tobacco, potatoes, and commercial rose fields.

Lathrop believes this surprising fertilizer product will find wide acceptance in Wyoming, since it loosens up heavy gumbo soil and makes it friable, counteracts alkaline soils, and improves the moisture retention of sandy and gravelly soils.

The plant has a capacity of turning out 10,000 tons of fertilizer a year.

MEDICARE, INSURANCE, OLD AGE

Mr. McGEE. Mr. President, recently Mr. Loraine Rollins, editor of the Uinta County Herald, of Evanston, Wyo., celebrated his 80th birthday. Ordinarily such an event would be cause for real celebration and I am sure that many of Loraine's friends did indeed pay him homage on that day.

However, Mr. President, he also received a short note from his insurance company informing him that because of his age his sickness policy was terminated.

I need not draw any conclusions about this action or its relevance to the debate on medical care payments to the aged through social security. Loraine is an extremely competent journalist and I would ask unanimous consent that his editorial on this action, which appeared in the March 28 edition of his newspaper be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MEDICARE, INSURANCE, OLD AGE

(By Loraine Rollins)

Much has been said, written and pictured during the past 2 or 3 years over what has been termed "medicare." Concerning that question there has been a division of sentiment. Certain groups have been strong for the passage of the proposed measure by Congress. Other groups have strenuously opposed and have fought it on every turn. At present it remains a burning but an unsolved question.

The group that has been in favor of the proposed measure, more so than any other group, are the aged people of the Nation. They, of course, would be benefited more than any other group. There are two groups in particular that have fought the passage of the measure at every turn of the road. Thus far they have blocked its passage. These two groups are the AMA (American Medical Association) and the powerful insurance companies. I speak now of companies that solicit, sell and issue health and accident policies.

There seems to be a reason why the insurance companies are opposed to it. The passage of the measure would reduce their income. At the same time it may call a halt to some of their practices.

Many of our people, perhaps the vast majority of them are not familiar with practices of these companies.

Well let me inform you of how they do business with their policy holders. I am in a position to know.

Several years ago, in the year 1946 to be exact, I took out a policy with a big and powerful insurance company with headquarters in Chicago. It was a sickness policy. At that time I was already the holder of a health and accident policy with the same company. This I had held for several years.

Did I read the sickness policy carefully? I don't remember. If so, I paid no attention to one of its provisions. Or perhaps I had forgotten it.

Well during the past week I received a reminder. In a letter dated March 14, I received a notice which read in part:

"As you undoubtedly know your sickness policy has a provision in it which automatically terminates the contract when you reach your 80th birthday."

Then I was reminded that I have passed my 80th birthday.

It stated further that my policy was paid to August 21, 1963. Then came the businesslike statement: "Effective August 21, 1963, your policy will be canceled." That was followed by a very friendly statement—spreading a little salve on the sore spot. It said: "It has been a pleasure to be of service to you under your sickness policy."

Upon receipt of the letter I found the policy and sure enough there in plain but small type I found the statement that "the policy shall not cover any person over the age of 80 years."

After a little research I found that the company actually had been of service to me. It had accepted my premium payments for 17 years. That's where the service both started and ended, except for the protection it offered. It was not an expensive policy, but during its lifetime I had paid the company $544. I had received nothing in return. I had enjoyed fairly good health. I had not been hospitalized.

Doesn't it appear that I may need the protection now more so than ever before? But such protection is not forthcoming—at least not from that company.

What has happened to me may and no doubt does happen to hundreds of other persons. These and many other instances that happen to the aged people of our country are among the reasons why medicare—assistance to the aged—was proposed that they may have proper care during their declining years.

The action taken by the company to which reference is made is perfectly legal. But the company is certainly not assuming its moral responsibility.

Big companies in general strenuously object to any Government interference or control. But given a free hand many of them take undue advantage of their customers. Certainly the older people need to be protected against the system under which they operate.

Here is an afterthought. In addition to the sickness policy above referred to, I have two other policies with the same company, one of which I have carried for approximately 25 years. During the life of these policies I have paid a total of approximately $1,300 in premiums, and what do I get as a reward? The cheering news that effective August 21 my policy will be canceled.

Let me add that this company has had some very efficient, persuasive salesmen who have dealt with gullible customers, such as I.

A DECLARATION OF INDEPENDENCE, PERTINENT QUESTIONS, A COURSE OF ACTION

Since writing the above statement, I have determined to speak out boldy.

I propose a new declaration of independence, or rather, an addition to the Declaration of Independence. Here it is:

We hold these truths to be self-evident—that all men are created equal; that they have been endowed by their Creator with certain inalienable rights; that among these are life, liberty, the pursuit of happiness—and the right to grow old.

I submit a few questions:

Shall our country, which has long and rightly proclaimed equal rights to all and special privileges to none continue to allow certain or any concerns to divide our citizens into special groups and classes?

Should these concerns, many of which have grown rich and powerful, be allowed to solicit business from our residents, accept their money, offer protection to a certain point and then even within their legal rights, withhold protection and all business connection?

Should our country that has battled and is still battling over the question of civil rights—equality to all, regardless of race, color, religion (or age) be allowed to draw the age line?

Should our country that has sent, and is sending billions of dollars to foreign countries to assist the depressed and downtrodden, including the aged, allow powerful concerns to divide our people into separate classes and discriminate against those who have reached a certain age?

Is there anything criminal connected with growing old? Should one be highly respected in his business, sought until he reaches a particular milepost in his career, and then all of a sudden be pushed aside and forced to join the ranks of "the forgotten man"?

This is the second time within a period of 2 years that I have been notified that my insurance policy has been canceled by companies with which I have done business for many years, not because of anything that I have done, or failed to do, but in each case "because of my age."

For a period of more than 45 years I have been writing and publishing editorials singing the praises of my country, the country that I love—the "land of the free and the home of the brave." And now I find myself denied the privilege that I have enjoyed over a long period of years—privileges all others enjoy with the exception of one class—the class of the aged.

It is high time that we in this class—that are in it through no fault of our own—stand up on our "hind legs" and demand equal right with all others of our countrymen.

It is my purpose to mail a copy of this editorial to the insurance company. Other copies will be sent to the Wyoming insurance commissioner; the U.S. Health, Education, and Welfare Department; to each of the Wyoming congressional delegation; to the White House press secretary with the suggestion that if he considers it of sufficient importance, he call it to the attention of President Kennedy.

NEW JERSEY STANDS OUT AT CHERRY BLOSSOM FESTIVAL

Mr. WILLIAMS of New Jersey. Mr. President, we from New Jersey always enjoy sharing the Cherry Blossom Festival with the residents of the District of Columbia. Our State is so close to the District in terms of the time it takes to travel here on highways that we feel as if we are neighbors, especially at this very pleasant time of year.

This year we had added reason to enjoy the annual parade and to feel a sense of pride at those who represented us in the festival. One New Jersey group, the Queens Guard Air Force ROTC Unit from Rutgers, the State university, won first place in the drill team contest. The third place in the same competition was won by the Pershing Rifles of St. Peter's College in Jersey City.

And the State float—bearing our beautiful princess, Miss Ingrid Helmke, of Kinellon—won third place in that competition.

These accomplishments would not have been possible unless the individuals and groups involved had not worked hard and practiced hard. I think that their performance shows the high regard they have, not only for the State they represent, but for the annual festival here. We from the Garden State are proud of their performance here.

PEACE CORPS' LAWYER PROGRAM

Mr. HUMPHREY. Mr. President, recently I was pleased to learn that the ranks of Peace Corps volunteers are soon to be swelled by an eager group of young lawyers, some of them just finishing law school.

I could not help recalling the famous advice of Mr. Justice Holmes to a questioning young law student, "Have faith and pursue the unknown end." Historians may one day write of the Peace Corps in terms of this great lawyer's advice. I know of few greater living examples of unbounded faith than that embodied in the Peace Corps.

The law profession enjoys an unprecedented level of esteem in America. Its contribution to the governmental structure of this country has been of great significance, not only because we, under a government of laws, rely heavily on the service of lawyers as public figures, but because the legal profession has given us some of our greatest leaders—Thomas Jefferson and Abraham Lincoln come readily to mind.

Lawyers were among the earliest to respond to the idea of the Peace Corps, and many are already overseas in adminstrative and technical capacities. The idea of a specialized lawyers' project, however, is a very recent one. The first group is scheduled to begin training in August 1963. The volunteers will teach in law schools, work with courts and legislatures, and assist in public administration projects. These are weighty tasks, fraught with far-reaching implications for the countries which have requested their services. I am confident that these young men will be a credit to themselves and their profession.

Finally, the American Bar Association has given the project a strong endorsement and is working closely with the Peace Corps in order to make it a success. Their guidance and counsel should be of great value.

Mr. President, I ask unanimous consent that an article announcing the lawyers' project, taken from the March 1963 American Bar Association Journal, be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Peace Corps Lawyer Volunteers: Architects of the Free Societies

The American Bar Association and the Peace Corps have combined their talents to enlist lawyer volunteers for legal service in Africa.

On February 4 the house of delegates of the association, meeting in New Orleans, La., gave overwhelming approval to a resolution supporting a Peace Corps lawyers' project which would provide qualified lawyers for a variety of legal assignments in Nigeria, Sierra Leone, West Cameroon, and Liberia. Earlier, the board of governors had approved the three-part resolution. Its provisions are:

1. That the association support and encourage a Peace Corps pilot program which would meet the requests from developing nations for Americans trained in the legal profession, in accordance with its basic concept to promote world peace and friendship.

2. That the association bring to the attention of the legal profession nationally the unique opportunities offered by this program to perform a worthy public service.

3. That the association encourage law firms and others employing lawyers to consider granting leaves of absence to lawyers who wish to volunteer for the pilot program.

Commenting on this action, President Sylvester C. Smith, Jr., said: "American lawyers are equipped by training and by tradition to respond to needs for professional and public services in many forms. All the volunteers will gain a broadened professional experience and the rewards of having helped serve as architects of the free societies developing in these lands which have newly won their independence."

The Peace Corps regional lawyers' project has been developed to assist African nations to strengthen their legal and judicial systems and to establish facilities for legal education. In Nigeria, Sierra Leone, and West Cameroon volunteer lawyers will be working in five basic capacities. These are:

1. Legal and administrative assistance in local courts. Here the volunteers will aid in the administration of justice in the local magistrates' courts where many judges have no legal training.

2. Codification of customary law. This work could involve considerable travel. It would deal with problems arising from the integration of customary law with national statutory law and the common and statutory law received from the former colonial government.

3. Teaching law in newly organized law schools.

4. Organizing and editing professional law journals and law reports.

5. Legal assistance in tax administration and enforcement. This will include research, drafting of opinions and the preparation of courses for litigation. The work would be of special interest to American lawyers since it would involve interplay of federal and regional law and institutions.

The Liberia project differs in scope. In this program lawyers will be assigned to a public administration project under the supervision of Liberia's Special Commission on Government Operation, which is similar to the U.S. Hoover Commission.

To be eligible for either of these projects, applicants must have an LL.B. degree, but not necessarily admission to the bar. In addition, a year's clerkship in a law office or with a judge would be helpful. A summer internship on Capitol Hill, in one of the judical arms of the Federal or a State Government or in a legal office of a Federal agency would also be valuable.

Preferably, volunteer lawyers should be single. Married couples will be considered for Liberia, however, but they should meet the following requirements: both husband and wife must volunteer together and the wife should be a lawyer or possess a skill usable in another project training for Liberia at the same time. They may have no dependents under 18.

All Peace Corps volunteers must be American citizens. There is no maximum age limit. Training for Liberia and the other three countries is expected to begin in late summer. It will be held at a leading American law school.

For all the projects—Liberia and regional Africa—volunteer lawyers will take an intensive program covering the history, culture and tradition of their host nations. They will also study established judicial procedures and language dialects, if necessary. Refresher courses in legal studies will be part of the program, along with a review of the American system of government. Much of their study and experience will not be obtained in the classroom, according to Peace Corps officials who say: "Through imagination, ingenuity and on-the-spot activity, the volunteer will learn his legal craft."

Volunteer lawyers, as all Peace Corps volunteers, do not receive salaries. Instead, they receive $75 a month readjustment allowance which is paid at the end of the 2-year tour of duty—a total of $1,800. Volunteers are provided with medical care and transportation along with allowances to cover food, clothing, housing and incidentals. They are expected to live on the same level as the people with whom they are working.

Volunteer questionnaires and additional information on this program may be obtained by writing to Jules Pagano, Director, Professional and Technical Division, Peace Corps, Washington, D.C.

ADDRESS BY VICE PRESIDENT LYNDON B. JOHNSON UPON RECEIVING THE B'NAI B'RITH HUMAN RIGHTS AWARD

Mr. HUMPHREY. Mr. President, a wonderful tribute was paid a fine American on April 4 when Vice President Lyndon B. Johnson was awarded the B'nai B'rith Human Rights Award in New York City.

Certainly no individual is more deserving of this honor than my good friend, the Vice President, who has given unselfishly and tirelessly to the cause of human rights.

In accepting the award, the Vice President described this as the century of human rights. He pointed out that it was not too long ago that the thought that all men and women—regardless of race, creed, color, or origin—were entitled to equality of treatment, was a novel idea.

> Our American vocabulary is filled with frequent expressions identifying illiteracy, illness, ignorance, and poverty as the oppressors of humankind—

The Vice President declared.

> I believe we need to complete our vocabulary by acknowledging frankly that the greatest oppressor of all continues to be that of bias and prejudice.

Mr. President, these are strong words, easily understood and meaningful for peoples not only of this Nation but throughout the world. I ask unanimous consent that the text of the Vice President's address be printed at this point in the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

The Century of Human Rights

(Address by Vice President Lyndon B. Johnson upon receiving the B'nai B'rith Human Rights Award in New York City, April 4, 1963)

You do me a very great honor by this award tonight. For deeply personal reasons, it is a most gratifying honor—most gratefully received— and I thank you for it.

In responding to what has been so generously said, I realize that I cannot divorce my personal words from my public station nor can I disregard the public nature of this occasion. But insofar as it is possible, I would like to speak with you as I might do privately.

This century in which we live has been given many names. One predecessor in the office I hold described it eloquently as the century of the common man. Others have applied different descriptions of both hope and despair. For myself, I feel it may be most accurately and aptly described as the century of human rights.

It may seem paradoxical to refer to a century which has seen the rise of two of the greatest tyrannies in history—fascism and communism—as the century of human rights. But in the light of historic human behavior, it becomes apparent that there is no paradox whatsoever—in fact, that the rise of these forces is evidence of the growing strength of the cause of equality.

The intense fury with which the totalitarians of both the right and the left deny the concept of human rights is the measure of their realization that their cause is doomed. People who are truly confident, people who truly believe they represent the wave of the future, do not resort to mass denial of age-old religious practices, mass denial of political rights, or mass extermination. These are the weapons of frustration—the last resort of men who know, however loudly they may deny the fact, that they have reached the end of one of the blind alleys of history.

It is difficult for our generation—which has known of Dachau and Warsaw, of the imprisonment of Cardinals and the fate of Passover in the Soviet Union—to realize the tremendous advance of the concept of equal rights in the mid-20th century.

A few short decades ago, the thought that all men and women—regardless of race, creed, color, or origin—were entitled to equality of treatment was a novel idea. There was a concept of tolerance, but to far too many people it was a tolerance for "lesser breeds without the law" who were to be treated with kindness and humanity but not with equal regard as fellow human beings.

There are very few thinking men today who regard this kind of tolerance as a virtue, however much it may have contributed at one time to peaceful relations. The whole moral drive of the Western World is focused on the concept that we are all children of God—however we may worship our God—and entitled to judgment on our individual merits without regard to irrelevant considerations of ancestry.

This is the true "wave of the future"—the fulfillment of the dreams and hopes of moral men throughout the ages. However much we may fall short of our ideals, we are striving to attain them with an intensity heretofore unknown to history. They have become an accepted part of the fabric of our society. And however vehement may be the forces of bigotry, the fact remains that those forces are on the defensive. They are fighting a losing battle.

That is why I am confident our century—the century of human rights—will be remembered for the legacy it leaves to the future more than for its inheritance from the past.

SEASON OF CHANGE

I would like to speak for these few moments about certain of our special American responsibilities to the greater fulfillment of this century of human rights.

It is abundantly clear that in the course of our Nation's affairs, we have arrived at a season of change in our policies and our relationships with the world—especially the non-Communist world. A period of searching reassessment has begun. However, we lose—and others lose—a necessary and indispensable perspective, when we neglect the fact that this is also a time for reassessment by all nations of the free world community.

All of us together are emerging from a period which has seen history's greatest explosion of political rights. We are also emerging from the early phase of what has been called the explosion of economic aspirations. In a very brief period, new world standards of political equality and equality of economic expectations have been established and we cannot neglect the implications.

We of America welcome what has happened. We are proudly conscious that both the revolution of political independence and the revolution of economic expectations had their beginnings on these shores. We are conscious of special responsibilities to these forces which have reshaped the destinies of so many men. Our national policies since World War II have sought to honor those special responsibilities.

As the authentic revolutionaries of the world, however, we of America must make it clear to those who have chosen freedom that the revolution of freedom is fundamentally and above all else a revolution of human rights. And we must make it clear not only by words but by example and precept. Our own house must be in order.

HARD DECISIONS

When our system was created, many hard decisions were required. None was harder—none was more revolutionary—than the decision embodied in our Bill of Rights that the Central Government should be prohibited from serving as the instrument for perpetuation of the prejudices and bias and discrimination of any sect or segment of American society. This decision was—and has continued to be—fundamental to our American unity, fundamental to our American capacity for economic growth, fundamental to the eternal harmony of our society, and fundamental to our capacity for exercising leadership on behalf of freedom beyond our own shores.

We must not acquiesce passively to any concept that the world can enjoy a new freedom while remaining the accomplice and prisoner of old prejudices.

To say this is to point no finger of scorn nor to cast first stones of criticism. We make for ourselves no claim of national perfection.

But if a better world is to be built—and I am an unreserved optimist about the potentials—there must be a universal recognition that mankind must marshal the full potential of human resources and make full use of those potentials without regard to hereditary bias, prejudice, and discrimination.

If we of America are to rise to our full height as men in this century, we must face courageously the world's problem of human discrimination. We must speak clearly. We must speak in concrete terms. We must help the world to understand that the curing of the problems of discrimination is the beginning—not the end—of genuine freedom.

STEREOTYPES

As long as there have been societies more complex than tribal simplicity, majorities and minorities have relied on stereotypes to mold their opinions of one another. Such stereotypes have been convenient, but they have also been cruel.

We can take some measure of satisfaction from the fact that there is progress and that these stereotypes disappear as human understanding spreads.

For example, the two highest elective offices in the strongest free nation on earth are held today by men who have overcome the dead hand of the stereotype—for reasons of religion or region of birth. And I believe that each passing day will diminish the force of the stereotype for all of us.

As recently as last week when I attended the swearing in of an Ambassador of the United States it was noted in some accounts that I am "from a Southern State." The Ambassador himself was from a Southern State, also. But the accident of my birth became newsworthy, as did his, because I was born in the South of white parents and he was born of Negro parents.

If to stand by his side and to shake his hand and to wish him "Godspeed" makes news, then that is news I am proud to make.

HIGHER SIGHTS

I say this to emphasize that the effort made by your national leadership today against discrimination, against bias, against division, and against the tyranny of stereotypes is, above all, an effort directed by men who know personally the enemy and know his toll.

But, I say this also to suggest that perhaps we of America should consider raising our sights toward larger horizons. Certainly in this field there is much still to accomplish, but what remains undone does not detract from the magnitude of what has been done.

Much of our effort is directed today to the subtle forms of discrimination. This is a necessary and worthwhile effort, and we cannot be content until we have succeeded completely. But when we look to the world as a whole the problem of discrimination is a massive problem, requiring massive effort on our part.

We cannot be content until we commit ourselves to massive support of the cause of human rights everywhere.

Our American vocabulary is filled with frequent expressions identifying illiteracy, illness, ignorance, and poverty as the oppressors of humankind. I believe we need to complete our vocabulary by acknowledging frankly that the greatest oppressor of all continues to be that of bias and prejudice.

We shall have failed our country and our cause if, from the position we are now privileged to enjoy in the world, we do not undertake the initiative in fulfilling the promise of this 20th century as the century of human rights.

If we are to be remembered as constructive builders of a better world of peace and justice and freedom we shall be remembered not for the dollars we sent abroad but for the force of the influence and leadership we exercise to improve the lot of all mankind. It is this work that challenges us, it is this undertaking that summons us, it is toward this higher goal that we must lift up our sights and set our course.

FREE ENTERPRISE AND FEDERAL AID TO SMALL BUSINESS

Mr. BYRD of West Virginia. Mr. President, I shall speak about free enterprise, small business, and Federal aid to small business.

To speak of any one of these separately could occupy us for days. To speak of all three together could be presumptuous, and not do justice to any one of them. However, what I am proposing to do is take a look at certain aspects of their interrelationships which I think peculiarly important at this juncture in our Nation's economic development.

If we look at the recipe for free enterprise we find that one of the most important ingredients is individualism. In a free enterprise system the individual has no prohibitions against his freedom of entry to businesses. If he wants to go into business there is nothing to stop him, in some cases even though he lacks the capital to do so.

It has been one of the identifying characteristics of capitalism that individual enterprise manifested through private initiative has been the motivating force. Nowhere has this been more in evidence than in the history of economic development in America.

American economic growth has been reflected in the large expansion of the number of firms doing business. In the decade of the 1950's alone, over 700,000 enterprises were added to our business population. Today there are some 4,810,000 firms doing business in the American economy.

Of the total number of firms, over 95 percent are small. In other words, the great bulk of American business is made up of undeniably small enterprises—businesses without any paid employees other than the owners. Only one out of four businesses has more than three paid employees. From these figures alone it is easy enough to see that between 3.5 and

4 million firms in operation today are tiny, regardless of what measuring stick we use.

In addition to these very small businesses there are several hundred thousand which are relatively small compared with the leading corporations in the markets in which they compete. For example, in manufacturing, the largest 200 companies accounted for 38 percent of the value added by manufacture in 1958.

But the size figures alone do not tell the whole story. The statistics of new firm formations and of discontinuances show how much in flux our economy really is. Every year thousands of firms come into existence and thousands discontinue business. In 1961, 437,000 new firms came into existence and 398,000 discontinued business—leaving a net gain of 39,000. The year before, and the year before that, and each year before, exhibits these turnovers. Thus, even though the size of the economy has been increasing year by year, it has not presented a simple picture of growth. Growth has not been just a case of adding on new businesses. Instead, the historical picture has been one of change in the whole texture, the product mix of the economy. This steadily changing mixture attests to the ability of the American economy to adapt to changing demands for goods and services, and to the changing global economy of which we are a part.

This ability to adapt has been greatly facilitated by one distinguishing feature of our capitalistic economy—the ease of entry into business. Whereas ease of entry diminishes there is invariably indicated a decline in the capitalistic nature of an economy. In the Soviet Union, for example, it is impossible for a new business to be organized. The same has been true of the societies ruled by dictators. In these situations governmental decisions have not only set the contours of the economy but have also determined its content and mix. The history of capitalism, of free enterprise, has been quite different. Here the opportunity to enter business has been unrestricted. The vigor of the American economy amply demonstrates this freedom.

Our economy is one of dramatic and rapid transition. Population is growing and will surpass 200 million people before the year 2000. The age structure of the population is changing. These two factors alone create new systems of demands for goods and services to be satisfied by the ingenuity of the American economy.

In addition, the great force at work not only in America but in other countries is that of technological change. We are undergoing a rapid technological evolution which is imposing itself upon the economic structure. Old businesses are declining and new forms of enterprise are coming into existence. Declining operations are being replaced by insurgent industries marked by strong growth trends.

The complications of technological change and changes in the demands for goods and services are producing other changes in the structure of the American economy as well as in its dynamics. The forms of retailing are undergoing great changes. Drugstores no longer sell just drugs; food stores no longer sell only food; department stores in many instances have shifted their merchandising techniques.

All of these changes have combined to affect the ways of doing business by individual firms in America. The occurrence of such changes marks the flexibility in the American economy which has made it for so long a growing, viable, healthy part of the world economy.

The preservation of this flexibility is of the utmost importance in the preservation of the freedom of enterprise in our economy. Wherever Government intervenes to inhibit the flexibility and mobility of that economy it inhibits the possibilities of future growth in the economy. Where Government takes those measures which by regulating activities within the economy promote flexibility, ease of entry, and persistence of opportunity, then Government acts to stimulate the free enterprise system.

I speak of "regulating activities" because, distasteful as is that concept in its abstract form, it is nevertheless clear that the freedom of entry to business and preservation of opportunities for small business have not occurred in the absence of governmental regulation and assistance.

I do not think it is necessary to argue the case for governmental intervention in the preservation of competition beyond a consideration of this question: If we were to assume the complete absence of any Federal regulation or assistance since 1890, what kind of economy would we be presented with today? Given historical evidence of other countries, as well as trends which have manifested themselves here, we could say with certainty that there would be many fewer firms in existence today.

In the field of manufacturing, merger movements and sharp competition would have reduced most areas of manufacturing to competition among a relatively small number of giant firms. In fact, today the only section of the economy showing a decline trend in the number of firms doing business is manufacturing.

The field of retailing would be dominated by large organizations and the same would be true in the field of banking, savings and loans, insurance, and other financial areas. Only in the service trades would we find ease of entry for the small operators.

It should be obvious that entry is precluded to small firms in many areas simply because the costs of entry—getting into business—are so high. What freedom of competition involves is, quite simply, the preservation of the opportunity for small firms to come into existence in all sections of the economy in which a small firm can operate economically.

The central questions are thus these: How best to preserve freedom of entry? How best to preserve flexibility of private enterprise? How best to assure equality of economic opportunity?

It is from the point of view of these questions that I examine the role of governmental assistance with respect to small business.

Many studies have shown—for example, the Federal Reserve Board has published such a study—that financing is the most pressing problem confronting small business. The small firm, unlike the large firm, faces very serious difficulties in getting long-term or equity financing. Small firms for the most part are limited to short-term borrowing and at generally higher costs than are paid by large firms.

The small firm is unlikely to have the management skills and know-how which is available to larger firms; neither will it have access to information concerning research and development of new products which are available to large firms. In addition, the small firm is frequently at a great disadvantage in bidding on Federal procurement opportunities.

Here are areas where small business can use assistance. In none of these areas has the private economy working alone been able to provide assistance, on the scale and to the degree, which the small business population requires.

And if Government could provide this assistance without establishing giveaway programs of any kind, and without affecting the conditions of competition—that is to say, without slanting the conditions of competition simply for the benefit of the small firm—then certainly Government would be fulfilling its obligations to the American people in a wholly legitimate, thoroughly desirable fashion. It would be fulfilling the role of assisting the economy and economic growth without in any way inhibiting freedom of enterprise by its actions.

It seems to me that the development of the Small Business Administration constitutes a wise and heartening step in the right direction.

Congress has long recognized that assistance to small business constitutes a contribution toward the success of the private enterprise system rather than an encroachment upon that system. In the preamble to the Small Business Act itself, Congress made it clear that it considered a strong and prosperous small business community to be a basic element in a free and competitive economy:

> The essence of the American economic system of private enterprise is free competition. Only through full and free competition can free markets, free entry into business, and opportunities for the expression and growth of personal initiative and individual judgment be assured. The preservation and expansion of such competition is basic not only to the economic well-being but to the security of this Nation. Such security and well-being cannot be realized unless the actual and potential capacity of small business is encouraged and developed. It is the declared policy of the Congress that the Government should aid, counsel, assist, and protect, insofar as is possible, the interests of small business concerns in order to preserve free competitive enterprise * * * and to maintain and strengthen the overall economy of the Nation.

It is the job of the Small Business Administration to aid, counsel, assist, and protect the small business community. At no time in our history has that job been as important as it is today, when the Nation is making every effort to sustain economic recovery. It is clear that a strong and prosperous small business community can contribute materially to that recovery. For small businesses constitute not only a significant proportion of the total production of goods and services, but also a vast and diversified source of employment opportunities. At a time when the Nation is striving toward full capacity and full employment these facts take on a significance.

How does the Small Business Administration go about assuring that the actual and potential capacity of small business is encouraged and developed?

The SBA, working in cooperation with banks, makes funds available to small firms in the form of loans on a sound business basis. Small firms are not given money but establish eligibility for loans on the same basis as is required at a bank. The program has enabled thousands of businesses to acquire funds for operating or growth purposes which they otherwise would not have obtained. The soundness of the program is testified to by the very small percentage of loss on these loans.

The SBA has made a determined effort to cut through the tangle of redtape and delays which had long made the process of loan applications a bewildering maze to small businessmen. One of the most significant steps in this regard has been the institution of the simplified bank loan-participation plan, under which the SBA in effect accepts the experienced judgment of the bank itself. The response to this program has been gratifying. Today, some two-thirds of all SBA loans are made in participation with banks and other private lending institutions. Perhaps most significant, the agency has thus taken a major step toward encouraging the development of permanent relationships between the banks and the small businessmen of this Nation. This is, of course, helpful to small business; but it is also helpful to the banking industry.

A striking development in this area has been the program announced jointly by the Small Business Administration and the American Bankers Association. The essence of the program is that the banks will make and service the loans for the Small Business Administration and will provide a large share of the loan funds. The banks' share will be repaid before the Small Business Administration begins collecting its share of the loan principal. Under the new program it should be easier for small businessmen to obtain secured long-term loans from the bankers with the Government underwriting a large part of the transaction. The plan thus meets the dual objective of providing small business financing while at the same time utilizing the resources of the private banking system.

In addition, the SBA has been given the authority to license small business investment companies for the specific purpose of making equity and long-term capital available to small businesses. Here, as in the case of the financial assistance program, the SBA is simply filling in part a gap whose existence has been pointed to by most all students of the subject. That gap has by no means yet been filled.

In the past 2 years the agency has licensed almost 510 small business investment companies. Approximately $425 million in venture capital has been brought into the financial markets for investment in small business enterprises. Perhaps the most significant aspect of the program from the point of view of the businessman and of the taxpayer is that the Federal funds which have been committed so far constitute only one-seventh of the available capital. Thus the Government has assumed a role, not of a competitor with private enterprise, but rather that of a partner; providing, not a substitute for private enterprise, but rather an incentive for increased activity in the private sector of the economy.

Management problems make up one of the greatest difficulties facing the Nation's small businesses; and, perhaps not surprisingly, a high percentage of business failures stem from poor management. In recognition of these economic facts of life, the SBA has undertaken a broad program of strengthening small business management.

The agency publishes a variety of management, technical, marketing, and research aids. These materials have met with enthusiastic response from small businessmen in this country and have been widely translated abroad. Further, through management research projects undertaken by outside organizations and financed by SBA, new and valuable information is becoming available to more and more small business owners and operators. In addition, SBA provides individual management counseling—in the form of letters, telephone calls, and personal visits—to established or prospective small businessmen.

Finally, SBA seeks to make available to the small businessman all of the know-how and developments in managerial skills and techniques which have been developed by large businesses and by universities and colleges. It does this through the establishment of training programs and seminars conducted by colleges, universities, and other institutions in cooperation with the SBA. All of these business education programs are self-financing.

In still another area the SBA acts to open doors which otherwise the small firms would have difficulty in even finding. The Federal Government procures goods and services totaling billions of dollars annually. Large firms with their teams of engineers and contact men have had little difficulty in bidding on Federal requests for procurement. In cooperation with the Department of Defense the SBA, in carrying out the will of Congress, seeks to set aside a certain proportion of all Federal procurement for bidding by small firms only.

It should be clear that the procurement which is set aside for small firms is set aside for competitive bidding, and that the procuring officer must be satisfied that there is a sufficient number of competent bidders to assure a fair price. The ultimate savings to the Government which result, while difficult to measure, are apparent. The SBA also makes an effort to develop information on firm capabilities and to call this to the attention of procuring officials in order that procurement contracts can be made available to the small firms on a competitive basis.

In still other instances, the SBA seeks to assist the small firm which is having production difficulties. Here the SBA makes available to the small firm production know-how which would not otherwise be available to the small operator.

In summary, in each of these instances the efforts of the SBA have been directed toward increasing the competitive capabilities of the small firm and its operators. There is represented here no effort to give a kind of special protection or privilege to the small operator. There are no giveaways involved. The entire program is based upon the idea that the American economy is a competitive economy, and that its future success depends upon the maintenance of a high degree of competition. Therefore, if through financial and other assistance the SBA can make the small firm a better, more alert, more efficient competitor—then it will have contributed substantially not only to the growth of the American economy but to the preservation of the essential capitalistic features of that economy.

This, in my opinion, the Small Business Administration is doing.

It is clear that much has already been accomplished. In the last fiscal year small businessmen received more financial help from the Agency than in any comparable period in its history—an increase of 24 percent in number and 44 percent in dollar amount of loans approved over the previous year, 69 and 114 percent over fiscal year 1960. At the same time, small firms received record assistance in obtaining Government contracts under the SBA's cooperative procurement programs. In a number of contracts awarded under the joint set-aside program during calendar year 1962, the Agency recorded an 18 and 116 percent increase over the 2 previous years; in dollar amount, the increase was 24 and 91 percent, respectively.

But it is equally clear that much remains to be done. Some 6,200 small business loans represent a gratifying achievement; but, when viewed in the context of the great need that exists, it is quite obviously a drop in the bucket. The sharp increase in SBIC's licensed is an encouraging sign; but the equity financing gap which has long plagued small firms remains largely unfilled. More than 54,000—calendar year 1962—prime contracts awarded to small businesses bespeaks an increased recognition on the part of Government of its obligation not to allow its procurement practices to work inequitably; but the dismal fact is that the last few years have seen small firms receiving a steadily decreasing share of the Government procurement dollar. This trend was halted during fiscal year 1962 by herculean effort on the part of SBA and the procuring agencies but strong efforts will be required if a further drop in the share going to small firms is to be prevented.

Yes, much remains to be done; and at one of the most critical moments in our history for the small business community. One need only look to the daily newspapers to see the economic developments which imperil the future of the small firm; business failure at about 8 percent below the post-war high; corporate mergers at record levels; the growth of discounting endangering the very existence of traditional forms of merchandising; the increase in costs of production resulting in a profit squeeze which only the hardiest can weather; the rapid evolution of automation; the mounting competition from the newly rebuilt industrial complexes of Europe and Japan.

I do not believe that the Small Business Administration—or, indeed, any agency of Government, State or Federal—can or should be thought of as the answer to these problems. In the final analysis, it is the ingenuity, adaptability and perseverance of the small firm which will determine whether it can survive. But it is clear to me that there is a great deal which an agency like the SBA can do to ease the path and guide the way on that road to survival.

What the SBA needs—and what it has never received, either in sufficiently large doses or with sufficient regularity—is adequate resources. Lipservice tribute to the value of small business to the American economy is simply not enough. What is absolutely essential is a recognition that, while the cost of augmenting the SBA's resources does constitute a temporary drain on the budget, the cost is neither great nor long-lived. Loaned funds are repaid with interest; Government contracts awarded to small businesses lead inevitably to lower prices and better quality for the Government dollar; the success story of a small firm can be told in terms of increased employment, increased profits—and increased tax revenues.

Providing adequate resources for the Small Business Administration thus constitutes neither a dole nor an uneconomic commitment. It constitutes, rather, an investment, and one which is at once the soundest and most gratifying we can make: an investment in the future of America.

APPOINTMENT OF CHESTER BOWLES AS AMBASSADOR TO INDIA

Mr. McGOVERN. Mr. President, the announcement of Chester Bowles' appointment as our next Ambassador to India deserves the most enthusiastic reception both in the United States and in India. Indeed, Mr. Bowles has a worldwide stature that is unsurpassed.

During the years since World War II the United States has sent a succession of brilliant Ambassadors to India that represents one of the most satisfying chapters in our diplomatic history. The Senator from Kentucky, John Sherman Cooper, was one of that distinguished succession as is the resigning Ambassador, Prof. Kenneth Galbraith, of Harvard University.

Chet Bowles who previously held the high post to which he has been again assigned brings to that responsibility the highest possible qualifications.

As President Kennedy said in announcing Mr. Bowles' appointment, no other American has such a deep understanding of India and indeed of all Asia.

Chet Bowles has demonstrated throughout his public career a capacity to see clearly the basic forces which are shaping today's world. Many of us are indebted to him for insights that have made the 20th century more intelligible to us. For years he has been one of America's most articulate and inspiring spokesmen.

I congratulate President Kennedy for the wisdom of his choice, and I salute the people of India for their good fortune in once again having in their midst one of our truly great citizens, Chester Bowles.

A VITAL NATIONAL INTEREST—EXPORTS

Mr. HUMPHREY. Mr. President, with the development in Western Europe and the Common Market, with the ever-increasing concern by our Government with the outflow of gold, with the increased pressure of foreign competition on world markets, the policies and programs of American industry and government in the field of foreign trade become evermore important.

Industry in the Midwest is showing awareness of the importance of foreign trade and U.S. trade policies. This typifies a new economic spirit and a desire and willingness to compete in the international markets that will serve well our national interests.

I was privileged to address the Minneapolis Chamber of Commerce on Friday, March 22, on the subject "Why We Must Increase Exports." The Minneapolis Chamber of Commerce is sponsoring a tour of Midwest businessmen to the Western European Common Market area this coming summer. Midwest industrialists are seeking markets. They are preparing themselves for foreign competition. This group will be in Washington in late June meeting with representatives of the Departments of Commerce and State in order to be more fully informed on U.S. trade and economic policy. I wish to commend the Minneapolis Chamber of Commerce for its initiative and I am pleased that Midwest industry has recognized the importance of foreign trade and is seeking to obtain its fair share of the world markets.

I ask unanimous consent that the text of my remarks be printed in the Record.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

Why We Must Increase Exports

Increasing our exports is the greatest challenge facing American business today. It is the best solution to our balance-of-payments problem, and it represents a real opportunity to create new jobs for Americans and new profits for business.

New markets are opening for U.S. goods all over the world. Personal incomes are rising rapidly in Europe and Japan. We hope to improve the economic picture in Latin America dramatically in the next 10 years. And in Asia and Africa new countries are hungry for imports of both capital equipment and consumer goods.

We face many problems in developing profitable business opportunities in these countries. But now is the time for American business to move and move aggressively into these foreign markets. If we don't, other countries are going to get this business. And once they are firmly entrenched, it is going to be harder for us to come in to change their established business and trade patterns.

For many business enterprises, there are good profits to be made in global marketing. For our country as a whole, the need to increase our exports is vital. There is simply no other way to put an end to deficits in our balance of payments, without undermining our national security and our political leadership in the world.

We have been able to persuade some of our allies to buy more military equipment in the United States to offset some of the dollar outflow caused by our overseas military commitments. But as long as we face the threat of Communist aggression, these military expenditures will continue to be a drain on our payments position.

We have also been successful in tying more of our foreign aid to purchases in the United States, and in persuading other countries to step up their contributions to the economic development of the new nations. But it will be a long time before these new countries can stand on their own two feet—able to take care of their own economic development and to resist Communist influence and subversion.

Last year we were able to bring our payments deficit down to $2.2 billion—a little more than half the deficit we ran up in 1960. But the 1962 deficit would have been much higher if we had not increased our exports by nearly $1 billion, and if our private investment in other countries had not dropped by nearly $1 billion.

We do not look remarkably good on exports, frankly. Exports account for only 4 percent of our gross national product, while the six countries of the Common Market export 12 percent of their total gross national product—3 times the rate.

Growth in Europe and Japan since the end of World War II has been phenomenal. An entirely new way of life is developing—based on higher incomes, higher living standards, and substantially increased demands for goods and services.

In the United States we have many advantages in competing in these markets. We do not have to build industries, as many foreign nations still must do. We have the equipment, the manufacturing and merchandising skills, and we have established lines of merchandise. We also have in our factories a force of trained workmen that we are not using to the fullest, and we have idle capacity in many of our industries that is ready and waiting to be put into use.

We have an historic reputation for having the best salesmen in the world. It's high time we put our salesmanship to the test of foreign markets, and directed more of our talents and energies to exporting.

There are obstacles, I know. But I suggest the highest obstacle is ourselves. We have not been export minded in the past, and the whole process is strange to us. We have failed to develop markets abroad. In some cases we have actually refused markets that could have proved profitable.

Much is made of foreign wage differentials—it is said that American industry cannot compete with the low pay in, say, Europe. But while average hourly earnings are lower in Europe than the United States, they have been rising much more sharply than in the United States.

Furthermore, added to European wages are fringe benefits that generally exceed the U.S. average of 14 percent. For example, fringe benefits run about 44 percent of wages in Germany, 51 percent in France, and 74 percent in Italy. In one industrial area in Italy, they are more than 90 percent.

The real test of our ability to compete is not wages so much as it is productivity. Our highly automated industry is tremendously productive, and our unit-labor costs are slightly declining. Available data for the principal trading nations of Europe and Japan indicate that there is no comparable decline in any of these countries.

Finally, there is a scarcity of skilled labor abroad. The shortage is acute in the Netherlands and Germany and serious in parts of France and Belgium. U.S. firms who manufacture abroad have found that even with advanced American machinery more men were required in production that would have been necessary in the United States.

The barriers to international trade we hear most about are tariffs, quotas, and the like. These present real barriers to our experts, in many instances, but fortunately we now have ways to deal with them.

The Common Market, which is such a rich and promising customer for our goods, presents a particular problem.

As you know, by 1967 the member nations of the EEC hope to have eliminated all tariffs among themselves, and to have established a common external tariff for nonmembers that will about equal the average tariffs of individual members in force on January 1, 1957. Many industrial items, however, have, through negotiations, been further reduced by 20 percent.

On July 1 of this year the EEC will make the second move toward final common external duties. Fortunately the President has today, in the Trade Expansion Act of 1962, broad authority to enter into the reciprocal tariff agreements required by such changing and rapidly developing patterns of world trade.

This new authority, in my judgment, represents the third major development in American trade policy in our history. The first development came in the form of Alexander Hamilton's report on manufactures, which set a pattern of protectionism for industry and labor that lasted until 1934. Then, out of the dismay of the depression, came the adoption of the first Reciprocal Trade Agreements Act during the first administration of President Franklin D. Roosevelt—the second development. Under that legislation, the President was empowered to lower tariffs reciprocally on goods coming from nations who granted us like concessions.

Since passage of the 1962 Trade Act, we have had to face a significant change. The present failure of Britain's application for membership in the Common Market has, of course, reduced the practical significance of the "special" or "dominant supplier" negotiating authority included in the trade act. However, the most important negotiating authority in the trade act remains unaffected. We still have the broad, general authority under the act to negotiate reductions of up to 50 percent on all duties as of July 1, 1962, except for certain sensitive items covered by escape clause or national security provisions. With this broad authority we should be able to negotiate significant reciprocal reductions in free world trade barriers.

In addition, the trade act authorized reduction of U.S. duties to zero in several special situations—for example, where the duty is less than 5 percent ad valorem, or where such reduction on agricultural commodities would help expand our exports of these commodities. Reductions to zero also would be possible on tropical agricultural and forestry products which are not produced in substantial quantities in the United States—provided the Common Market countries admit these tropical products on a comparable, nondiscriminatory basis.

Thus, our negotiators can go into the forthcoming tariff sessions with sufficient negotiating authority to secure substantial reductions in the duties that restrict U.S. export opportunities.

In these negotiations, we will not be interested in tariffs alone. We are also very much concerned with non-tariff barriers, which can be equally damaging. This administration is going to see to it that they are bargained down, so that we can get into these new expanding markets.

Now who will handle these negotiations on behalf of the United States? Ultimately, authority and responsibility rests, of course, with the President. But, unlike previous tariff negotiations, which were handled through the Department of State, this round will be handled by a special representative of the President—Christian Herter.

This distinguished gentleman is bringing together an outstanding staff of trade, industry, and agricultural specialists—including some experts he has recruited from the Commerce Department and other agencies. His deputy is William Gossett, former vice president of the Ford Motor Co.

The negotiations will be carried out under the General Agreement on Tariffs and Trade —the GATT—which has 44 member nations. The timing—hopefully early next year—and the scope of the negotiations and other procedural matters remain to be worked out through mutual agreement.

To assure that implementation of the Trade Expansion Act will be meaningful, American business must begin to sell aggressively in world markets now.

TAX PROGRAM

American business must move ahead now to improve our cost position through greater investment in more modern plant and equipment.

We have, thanks to the 87th Congress, a new tax credit for investment in new machinery and equipment. New Treasury depreciation schedules, together with the tax credit, will make it possible for many companies to recover more than 30 percent of their new machinery and equipment costs in the first year. And we have corporate borrowing costs that are essentially as favorable as those at the bottom of the 1960–61 recession.

Conditions are right. We now have an urgent reason to get on with the job of modernizing the industrial plant of this country to increase our productivity and efficiency and lower our per-unit costs.

American business must expand its research and development to create new and improved products for sale at home and abroad and to improve our productive processes through a steadily advancing civilian technology. Too much of the U.S. research dollar is defense-oriented. Not so in Europe, for example.

While we are ahead of other countries in productivity, and currently enjoy a lower per-unit labor cost, they are making gains.

The President's tax program recognizes the need to stimulate industry initiative and investment in research and development, as well as in plant modernization. In addition to his proposal for reductions in the corporate income tax rate, the tax revision program includes a new provision for treating capital investment in research facilities as a currently deductible business operating expense.

EXPORT-CREDIT GUARANTEES

Through the Export-Import Bank of Washington and the Foreign Credit Insurance Association, as you know, steps have been taken to improve credit availability and export insurance for commercial and political risks, so that American businessmen can operate on a par with foreign exporters. Innovations recently made include FCIA policies to insure political risks alone, and a new rate schedule for both FCIA insurance and Eximbank guarantees to private banks, which calls for lower fees and premiums than those previously charged.

I understand that 17½ percent of FCIA policies in the last few months have been for companies that never exported before. This is another indication that more companies are being brought into the export field.

FCIA now has 74 leading insurance companies participating in its program from its office in New York or from insurance agents and brokers throughout the country.

Eximbank is working with 75 U.S. commercial banks, and application forms and information can be obtained through any commercial bank in the United States.

NATIONAL EXPORT EXPANSION COUNCIL—REGIONAL EXPORT EXPANSION COUNCILS

The National Export Expansion Council is an arm of the U.S. Government operating in the Department of Commerce, and directing the 35 regional export expansion councils located across the Nation.

These REEC's conduct a series of export expansion workshops for businessmen; they work with banks to encourage them to strengthen their export departments and, especially in the smaller banks, to establish the supportive financial services that exporters need; they work with colleges and universities on special courses and seminars that will help businessmen learn about the special problems in exporting and help them overcome any fear they may have of an unfamiliar type of business; they contact top executives directly to apprise them of the potential for marketing their specific products abroad; the St. Louis REEC has even organized its own trade mission.

The NEEC has asked each of its 900 REEC members to obtain one new exporter. This is a good beginning. The total impact of 900 new exporters will be considerable, and it will build each year as these exporters gain experience and their foreign sales grow.

TRADE MISSIONS, CENTERS AND FAIRS

The Department of Commerce has developed an extensive program of trade missions, trade centers, trade fair exhibitions and specialized export services designed to bring American sellers and foreign purchasers together. Last year each official trade mission carried about 500 U.S. business proposals abroad, and returned with leads on foreign investment opportunities and contacts.

The Department's new trade centers in London, Bangkok, and Frankfurt offer considerable promise to exporters. More than 200 companies which had never exported before have obtained agents to represent them overseas as a result of exhibits in one trade center or another.

An Atlanta toy company increased its total sales volume by 10 to 15 percent, following the toy show at the London center last year.

A Texarkana company sold its entire exhibit after the show for medical, dental and surgical supplies and equipment at the Bangkok center. Since then it has received substantial orders from the Thai company that bought the exhibit, and has had inquiries from companies in other southeast Asian countries whose representatives saw the exhibit in Bangkok.

The newest trade center in Frankfurt is off to an encouraging start, and the Department expects similar good results when they open their permanent showcase for U.S. goods in Tokyo on April 2 and in Milan later in the year.

In addition to the trade fairs staged for the USIA, the main purpose of which is to project the image of America, the Commerce Department is launching a new program of purely commercial exhibits in prime markets for U.S. goods. These exhibits are organized after market surveys have been made to identify specific export opportunities for our producers. The first of these all-commercial exhibitions was just held at the Royal Netherlands Industry Fair in Utrecht. Exhibitions will follow at the Lyon International Fair in France in April and the International Samples Fair in Barcelona in June.

I encourage companies in Minnesota to participate in these international trade centers, fairs and missions as a regular practice. Foreign trade means a great deal to Minnesota. The jobs of more than one-third of Minnesota's workers engaged in manufacturing are tied in one way or another to exports. And agricultural exports account for the production of almost 1 in every 10 farmworkers here in Minnesota.

The export job has to be done by private business. It has to be done by existing exporters putting more drive behind their export efforts—expanding their marketing to more countries, working their existing foreign markets more intensively, and giving greater attention to their export activities at the top levels of management. It also has to be done by bringing more companies with export capabilities into the export markets.

It is in your interest, as well as the national interest, to do everything you can to make certain that no company here in Minnesota with export capability fails to take advantage of its foreign sales opportunities.

In short, gentlemen, we pride ourselves on our energy and initiative; let's show a lot more than we have. The Government is cranking up to help—but the responsibility is squarely on the shoulders of the business community.

We are going to export or we are going to be in real economic trouble. That, it sems to me, is the key to prosperity in the 1960's.

LEGISLATIVE PROGRAM AND CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, I should like to call up some bills on the calendar to which there is no objection. I hope that Senators who may desire to make extraneous remarks will withhold them until the youth employment bill is laid before the Senate.

The distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN], and I intend to call up four bills which I understand are noncontroversial.

WATER FOR LANDS IN THIRD DIVISION, RIVERTON RECLAMATION PROJECT, WYOMING

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 90, Senate bill 982.

The PRESIDING OFFICER (Mr. McINTYRE in the chair). The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 982) permitting the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton reclamation project, Wyoming.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill.

Mr. McGEE. Mr. President, we have heard some comments about the slowness of pace of this body, but this afternoon we are witnessing some very rapid movement in meeting an emergency which has arisen in my State of Wyoming.

The settlers on the third division of the Riverton reclamation project are again faced with the prospect of having no water to irrigate their crops. The problem arises because of the inability of the settlers and the Bureau of Reclamation to reach an agreement on a repayment contract. As a result, the Bureau is without authority to deliver water until this legislation is enacted.

Even as we are working on legislative proposals to correct some of the deficiencies of the project, it is evident the farmers must have irrigation water to grow their crops in order to protect their investments and to meet their current obligations.

The Congress is meeting this need today. The House of Representatives has already passed a companion bill to this measure—S. 982—which I introduced along with my colleague [Mr. SIMPSON]. The Interior and Insular Affairs Committee is to be commended for its action in reporting this measure to the Senate so that we can send it to the President for his signature.

As I have previously stated, there will be additional legislation introduced in the near future to meet other needs of these settlers. I am confident the Congress will provide the additional assistance to make this project one that is an economic reality and one which will provide the families living on the project with a comfortable living.

There are many individuals who have played an important part in seeking the solutions to the problems on the third division, and to them I can offer my gratitude and the thanks of the settlers on the project.

Mr. President, I hope this body will give speedy approval to S. 982 so that the farmers on the third division can make their plans for the coming year.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 112), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of S. 982, which was introduced as the result of an executive communication, is to authorize the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton Federal reclamation project, Wyoming, during calendar year 1963 without regard to the time limitation specified in the Reclamation Project Act of 1939. It provides that only those water users who desire water will be required to receive water and pay for it. This legislation authorizes a temporary arrangement for this year only pending receipt from the Department of the Interior of recommendations for a permanent solution and the enactment of permanent legislation.

COST

The legislation provides that the operation and maintenance costs in excess of the water payments received will be nonreimbursable. However, payments by those water users who have already indicated that they will take water if it is available will be sufficient to almost pay the operation and maintenance expenses, and, therefore, the nonreimbursable cost, if any, will amount to no more than a few thousand dollars.

NEED

There is an urgent need for the enactment of this legislation at an early date since the Secretary is without authority to deliver water to lands of the third division during the forthcoming irrigation season. Many of the farmers have already started preparing their lands to receive water in anticipation that it will be available. Failure to enact this legislation would result in financial losses to many of the farmers and add to the problems of the third division.

EXPLANATION

The lands of the third division, Riverton project, were opened to entry in 1949 and 1950. Settlement of these lands came about primarily because of this Nation's efforts to assist veterans following World War II. Inadequate study was given to the project lands prior to entry and serious drainage problems were encountered soon after the settlers came on the lands. In addition, the third division farmers have been plagued by numerous other problems related to the general economic conditions that have prevailed in agriculture in recent years. In the 83d Congress an attempt was made to resolve these problems by the enactment of Public Law 258 which permitted settlers in the third division to select units on other reclamation projects. Under that authority over one-half the settlers moved off the third division lands to other projects. In an attempt to form economic units the settlers remaining were given additional land, and it was hoped that this action would put the third division on a sound operating basis. However, this has not proved to be the case.

The development period expired in 1959 on a portion of the third division lands and in 1960 on the remainder of the lands. In 1960, Congress passed legislation authorizing the Secretary to continue to deliver water during the calendar years 1960 and 1961. Last year, Congress again enacted legislation authorizing delivery of water during calendar year 1962. While it now appears that a permanent solution may be reached this year, this legislation is necessary in order that those desiring water may receive it during this irrigation season.

At the time the legislation was enacted last year, the committee emphasized the need for pursuing this problem unceasingly until it was resolved and advised the Secretary that it expected firm recommendations early this year with respect to such a solution. The House committee also suggested a review commission be appointed to study the Riverton project and all other reclamation projects in the State of Wyoming, existing or proposed. As a result of this suggestion, the Wyoming Reclamation Projects Survey Team was appointed last August. The survey team gave immediate consideration to the Riverton project problems and submitted its recommendations thereon in January. The survey team's report has been made available to the committee and the Department's recommendations with respect to permanent legislation are expected to be transmitted to Congress within the next few weeks.

COMMITTEE'S RECOMMENDATIONS

The Committee on Interior and Insular Affairs recommends the enactment of S. 982.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of House bill 4423, the companion bill.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate proceeded to consider the bill (H.R. 4423) to permit the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton reclamation project, Wyoming.

The bill was ordered to a third reading, was read the third time, and passed.

The PRESIDING OFFICER. Without objection, Senate bill 982 is indefinitely postponed.

AGE LIMIT WITH RESPECT TO U.S. PARK POLICE APPOINTMENTS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 91, Senate bill 932.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 932) relating to age limits in connection with appointments to the U.S. Park Police.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 113), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

THE BILL

Members of the Park Police force are recruited under the laws applicable to civil service. This includes a provision which prohibits the establishment of a maximum age limit for entrance on civil service work contained in "Title III: General Provisions" of the Independent Offices Appropriation Act of 1957.

Police work is arduous work, carried on an around-the-clock basis in all kinds of weather. Older policemen use more sick leave than younger men. Those recruited at older ages retire after relatively short terms of service although there is a considerable investment in their training. Further, the liberal allowances for police sick benefits, hospital and clinical care, and early retirement make the recruitment of Park Police applicants without regard to their beginning age a heavy drain on the police budget.

It is intended, under the discretion granted the Secretary of the Interior in S. 932, to fix a maximum age for entry into Park Police duty in the 29- to 31-year age range.

This is now the situation in regard to Metropolitan Police, under authority given the District Commissioners in the act of January 24, 1920 (41 Stat. 398), to "fix the minimum and maximum limits of age within which original appointments to the Metropolitan Police and Fire Departments may be made."

The committee is convinced that it will be in the interest of economy and the good of the Park Police force to give the Secretary the authority proposed in S. 932.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is hereby authorized to determine and fix the minimum and maximum limits of age within which original appointments to the United States Park Police may be made.

HARPERS FERRY NATIONAL HISTORICAL PARK

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 92, Senate bill 18, introduced by our distinguished colleague from West Virginia, Senator RANDOLPH.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 18) to change the name of Harpers Ferry National Monument to Harpers Ferry National Historical Park.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 114), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

BACKGROUND

This measure was approved by the Senate as S. 3566 in the 87th Congress.

Harpers Ferry has been the site of historical significance in various periods of American history. While it is probably best known for John Brown's raid in 1859 and for Civil War battles and events, it was also a site of importance in other periods.

President George Washington selected Harpers Ferry as a site for a Federal arsenal and armory because of its proximity to waterpower, iron and charcoal, and water transportation to the District of Columbia.

In the 1830's it was the goal of builders of competing transportation agencies racing to establish service to the valley of the Ohio River and the West—a race ultimately won by the Baltimore & Ohio Railroad when the Chesapeake & Ohio Canal was terminated at Cumberland, Md.

John Brown's raid in 1859 was a forerunner of the Civil War, which followed in a year and a half. Harpers Ferry was seized early in the war by Stonewall Jackson, who captured a treasure in railroad equipment and supplies for the South. It was captured again in 1862 by Jackson as a part of Confederate strategy in Lee's ill-fated attempt to invade the North. It served as a Union Army base in later years of the war.

The committee is in agreement with the Department of the Interior that the 500-acre area, soon to be expanded to 1,500 acres, would be more appropriately designated as a national historical park then as a national monument.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Harpers Ferry National Monument established pursuant to the Act entitled "An Act to provide for the establishment of the Harpers Ferry National Monument", approved June 30, 1944 (58 Stat. 645), shall hereafter be known as Harpers Ferry National Historical Park, and any law, regulation, document, or record of the United States in which such monument is designed or referred to under the name of Harpers Ferry National Monument shall be held to refer to such monument under and by the name of Harpers Ferry National Historical Park.

Mr. RANDOLPH. Mr. President, I am gratified in the passage of the Harpers Ferry National Historical Park bill.

As a Member of the U.S. House of Representatives, it was my privilege to introduce the original measure to create a national monument at Harpers Ferry. This was enacted by the Congress in 1944. In the years since the area's actual usage there has been a steady increase in the number of annual visitors to this section which is so heavily saturated with American history. In 1956, for example, 115,000 persons journeyed to Harpers Ferry, a figure which had increased more than fivefold by 1962, when the total visitations reached 657,991.

In view of the continued significance of Harpers Ferry as a pivotal point in American history from the time of President Washington, it is most appropriate that the Congress acknowledge this significance by altering the status of Harpers Ferry National Monument to that of Harpers Ferry National Historical Park. It is my hope that this action will soon be followed by the conveyance to the park of the remainder of the 1,500 acres which have been authorized.

My colleague, Senator ROBERT C. BYRD, and members of the West Virginia delegation in the House of Representatives, have been associated with me in this effort to achieve for Harpers Ferry the status of a national historical park. I am confident that this year the measure will also be passed in the other body, its final enactment being an appropriate act of commemoration for West Virginia's centennial year.

BIG HOLE BATTLEFIELD NATIONAL MONUMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 94, Senate bill 138.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 138) to redesignate the Big Hole Battlefield National Monument, to revise the boundaries thereof, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs with amendments on page 3, after line 4, to insert a new section, as follows:

SEC. 4. There is hereby retroceded to the State of Montana such jurisdiction as has been ceded by such State to the United States over any lands within the boundaries of the Big Hole National Battlefield reserving in the United States, however, concurred legislative jurisdiction over such lands.

And, at the beginning of line 10, to change the section number from "4" to "5"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Big Hole Battlefield National Monument, established by Executive Order Numbered 1216 of June 23, 1910, and enlarged by Proclamation Numbered 2339 of June 29, 1939, is hereby redesignated as the Big Hole National Battlefield.

SEC. 2. In order to preserve historic features and sites associated with the Battle of the Big Hole and to facilitate their administration and interpretation, the boundaries of the Big Hole National Battlefield are hereby revised to include the following described lands:

MONTANA PRINCIPAL MERIDIAN

Township 2 south, range 17 west: section 13, southwest quarter southeast quarter, southeast quarter southwest quarter, east half southwest quarter southwest quarter; section 23, east half northeast quarter southeast quarter; section 24, west half east half, north half southwest quarter, southeast quarter southwest quarter, east half southwest quarter southwest quarter; section 25, those portions of the northeast quarter northwest quarter and the northwest quarter northeast quarter lying north of the north right-of-way line of relocated Montana State Route 43; consisting of approximately 466 acres.

SEC. 3. (a) The Secretary of the Interior may acquire by donation, purchase, exchange, or otherwise, lands and interests in lands within the area described in section 2 of this Act.

(b) Any lands described in section 2 of this Act that are a part of the Beaverhead National Forest when this Act takes effect are hereby excluded from the forest and added to the Big Hole National Battlefield.

(c) Lands included in the Big Hole National Battlefield pursuant to this Act shall be administered in accordance with the provisions of the Act entitled "An Act to establish a National Park Service, and for other purposes", approved August 25, 1916 (39 Stat. 535; 16 U.S.C. 1–3), as amended and supplemented.

SEC. 4. There is hereby retroceded to the State of Montana such jurisdiction as has been ceded by such State to the United States over any lands within the boundaries of the Big Hole National Battlefield reserving in the United States, however, concurred legislative jurisdiction over such lands.

SEC. 5. There are authorized to be appropriated no more than $20,000 to carry out the purposes of this Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 116), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

BACKGROUND

During the retreat of the Nez Perce Indians in the summer of 1877 from Idaho to the Canadian border, the Indian camp at Big Hole River was attacked by Federal forces. The Indians forced the Army to retreat to the 200-acre location which is now Big Hole Battlefield National Monument, which was reserved for "military purposes" in 1910. It was given national monument status in 1939.

S. 138 proposes the addition of 466 acres to the tract, including 160 acres from the Beaverhead National Forest and 306 acres of land to be acquired from private owners. The additions will include the site of the Nez Perce Indian encampment, where the first and most important phase of the battle took place; the twin trees from which an Indian sharpshooter punished the retreating troops; and the Army's howitzer pit, which was outflanked and captured by the Nez Perce warriors.

The area would be renamed "Big Hole National Battlefield" in keeping with the policy of the National Park Service's offer to give uniform titles, which best reflect the nature of the individual areas, to units under its jurisdiction.

This bill was approved by the Senate, September 12, 1962, too late for the House of Representatives to complete action on it in the 87th Congress.

AMENDMENT

On page 3, line 4, renumber section 4 to section 5, and insert before the renumbered section 5 the following new section 4:

SEC. 4. There is hereby retroceded to the State of Montana such jurisdiction as has been ceded by such State to the United States over any lands within the boundaries of the Big Hole National Battlefield reserving in the United States, however, concurrent legislative jurisdiction over such lands.

This retrocession of concurrent jurisdiction over the area is intended to avoid a broad range of technical legal difficulties which sometime arise as a result of exclusive Federal jurisdiction. The citizenship of persons born in such an area, probate of wills, voting rights, and other civil matters are complicated. Concurrent jurisdiction also permits trial in State courts of criminal offenses committed in such areas.

COSTS

A limit of $20,000 is imposed on land acquisition costs. The National Park Service estimates that development costs, including road extensions, will be approximately $25,000 as a result of the acquisition of the additional area. Maintenance and management costs are not expected to be materially affected.

The PRESIDING OFFICER. The question is on agreeing to the committee amendments.

The amendments were agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

YOUTH CONSERVATION CORPS

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 89, S. 1.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs.

The PRESIDING OFFICER. The question is on agreeing to the motion by the Senator from Montana.

The motion was agreed to, and the Senate proceeded to consider the bill, which had been reported from the Committee on Labor and Public Welfare, with an amendment to strike out all after the enacting clause and insert:

SECTION 1. This Act may be cited as the "Youth Employment Act".

TITLE I—YOUTH CONSERVATION CORPS

Short title

SEC. 101. This title may be cited as the "Youth Conservation Corps Act".

Statement of purpose

SEC. 102. The purpose of this title is (1) to provide useful work experience opportunities for unemployed youths so that their employability may be increased through participation in such programs of conservation planned and designed by, and under the immediate supervision of, the various Federal agencies charged with the responsibility of planning and carrying out such programs; and (2) to enable the Federal agencies charged with the responsibility of conserving and developing natural resources and recreational areas to accelerate programs planned by such agencies to fulfill such responsibility.

Establishment of a Youth Conservation Corps

SEC. 103. In order to carry out the purposes of this title, there is hereby established within the Department of Labor a Youth Conservation Corps (hereinafter referred to as the "Corps"). There shall be a Director of the Corps who shall be appointed by the President, by and with the advice and consent of the Senate, and whose annual salary shall be $20,000. The Director shall perform such functions in connection with the Corps as may be prescribed by the Secretary of Labor (hereinafter referred to as the "Secretary").

Authority of Secretary

SEC. 104. The Secretary shall have authority to—

(1) establish adequate standards of safety, health, and conduct for enrollees of the Corps, and enter into agreements with the Secretary of Health, Education, and Welfare, for the provision, by the latter, of medical, dental, hospital, and other health services to enrollees, either directly or through other public or nonpublic facilities and personnel;

(2) enter into agreements with Federal agencies charged with the responsibility of conserving, developing, and managing the natural resources of the Nation, and of developing, managing, and protecting recreational areas, whereby the enrollees of the Corps may be utilized by such agencies in carrying out, under the immediate supervision of such agencies, programs planned and designed by such agencies to fulfill such responsibility;

(3) utilize, with their consent, the services and facilities of Federal agencies, and with the consent of any State, accept and utilize the services and facilities of the agencies of such government or of any county or municipal subdivision thereof; and to utilize such voluntary and uncompensated services as may from time to time be needed;

(4) insure the provision of a system of training and educational services to enrollees of the Corps, in addition to the regular program of work and on-the-job training: *Provided,* That to the maximum extent practicable such programs shall be provided by State and local educational authorities under agreement with the Secretary of Health, Education, and Welfare;

(5) expend such amounts as he deems necessary within available appropriations for supplies, materials, and equipment for enrollees to be used in connection with their work, instruction, recreation, health, or welfare;

(6) prescribe such rules and regulations, establish such procedures, enter into such contracts and agreements, and generally perform such functions as he may deem to be necessary to carry out the provisions of this title; and

(7) authorize the performance by the Director of any functions of the Secretary under this title.

Interdepartmental Committee on the Youth Conservation Corps

Sec. 105. (a) There is established a committee to be known as the Interdepartmental Committee on the Youth Conservation Corps (hereinafter referred to as the "Committee"). The Committee shall be composed of four members as follows: The Secretary of Labor (or his designee) who shall be Chairman, and a representative of the Department of Health, Education, and Welfare, a representative of the Department of Agriculture, and a representative of the Department of the Interior, each of whom shall be appointed by the Secretary of the Department of which he is a representative.

(b) The Committee shall consult with and advise the Secretary with respect to all phases of the operation of the Corps.

(c) Each member of the Committee shall act in a liaison capacity between the agencies of the Federal Department represented by him and the Corps in carrying out any agreement between such agency and the Corps.

National Advisory Council on the Youth Conservation Corps

Sec. 106. (a) There is hereby established in the Department of Labor a National Advisory Council on the Youth Conservation Corps (hereinafter referred to as the "Council"). The Council shall be composed of the Secretary or his designee, who shall be Chairman, and not more than fourteen additional members appointed by the Secretary without regard to the civil service laws. The appointed members of the Council shall be persons (including persons from public and voluntary organizations) representing the fields of conservation, agriculture, education, training, youth employment, labor, management, and the public in general. Upon request of the Secretary, the Council shall review the operations of the Corps in general, the kind of work performed and the training provided and shall from time to time make recommendations to the Secretary relative to the execution of his responsibilities under this title. The Council shall meet at least twice each year and at such other times as the Secretary may request.

(b) Appointed members of the Council, while attending meetings of the Council or otherwise serving at the request of the Secretary, shall be entitled to receive compensation at a rate to be fixed by the Secretary, but not exceeding $75 per diem, including travel time, and while away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. Notwithstanding the foregoing or any other provision of law, the Secretary may accept the services of appointed members under this section without the payment of compensation therefor (and with or without payment of travel expenses or per diem in lieu of subsistence).

Composition of the Corps

Sec. 107. (a) The Corps shall be composed of male individuals who are permanent residents of the United States, who have attained age sixteen but have not attained age twenty-two at the time of enrollment, and whose participation in the Corps will be consistent with the purposes of this title. Enrollment or participation in the Corps shall not be grounds or a legitimate reason for deferment or rejection under the Selective Service Act. The number of enrollees shall not exceed at any one time fifteen thousand during the first fiscal year of its operation and during the next four fiscal years such numbers as may be maintained within the appropriations made therefor by the Congress.

(b) In order to enroll as a member of the Corps, an individual must agree to comply with rules and regulations promulgated by the Secretary for the government of the Corps.

(c) Enrollment in the Corps shall be for a period of not less than six months; if permitted by the Secretary, an individual may reenroll, but his total enrollment shall not exceed two years.

(d) For purposes of accepting enrollment in the Corps in any year, (A) 50 per centum of the total number of the authorized enrollment of the Corps for such year shall be allocated to the various States on the basis of the ratio that the total male population of each State within the age group referred to in subsection (a) bears to the total male population of the United States within such age group, (B) 50 per centum of the total number of the authorized enrollment of the Corps for such year shall be allocated by the Secretary to the various States, determined each year in accordance with (1) the ratio that the total unemployment of each State bears to the total unemployment in the United States, using in both cases the previous year's annual average following its publication; and (2) the extent of additional allocation which should be made to any State in order to compensate for benefits accruing to other States from the placement within such States of camps established or maintained under this title; and (C) allocations not utilized in (A) shall be reallocated under (B). The population categories and the other relevant factors referred to above shall be determined in accordance with the most recent statistics available from the Bureau of the Census and the Department of Labor.

Compensation of enrollees

Sec. 108. (a) (1) The base compensation of enrollees shall be $60 per month for the first enrollment and an additional $5 per month for each subsequent enrollment. Up to an additional $10 per month may be paid on the basis of assigned leadership responsibilities, or special skills.

(2) The Secretary shall establish procedures whereby each enrollee may make an allotment to his parent, dependent, legal guardian, or any fund established for his benefit, of part of the periodic compensation to which he is entitled under this title, and such allotment shall be paid directly to the person or fund in favor of which it is made.

(b) Enrollees as well as applicants for enrollment may be furnished with such quarters, subsistence, transportation (including travel from and to the place of enrollment), equipment, clothing, training, educational and recreational services, medical, dental, hospital and other health services, and such other expenses (including funeral and burial expenses) as the Secretary may deem necessary or appropriate for their needs.

(c) In the case of any individual who is an enrollee within the meaning of this title, the value of items furnished shall be exempt from income tax under subtitle A of the Internal Revenue Code of 1954, except to the extent that the Secretary, in consultation with the Secretary of the Treasury or his delegate, determines any portion thereof to be additional base compensation.

Application of provisions of Federal law

Sec. 104. (a) Except as otherwise specifically provided in this title, an enrollee is deemed not to be a Federal employee and shall not be subject to the provisions of Federal laws relating to Federal employment including those relating to hours of work, rates of compensation, leave, unemployment compensation, and Federal employee benefits such as retirement, life insurance, and health benefits.

(b) (1) Section 210 of the Social Security Act (42 U.S.C. 410) is amended by adding at the end thereof the following new subsection:

"Service as Enrollee in Youth Conservation Corps

"(p) The term 'employment' shall, notwithstanding the provisions of subsection (a), include service performed by an individual as an enrollee in the Youth Conservation Corps established by title I of the Youth Employment Act and all such service shall be deemed to have been performed by such individual as an employee of the United States."

(2) Section 209 of such Act (42 U.S.C. 409) is amended by adding at the end thereof the following new paragraph:

"For purposes of this title, in the case of an individual performing service to which the provisions of section 210(p) apply, his 'wages' for such services, shall, subject to the provisions of subsection (a) of this section, be deemed to be $150 for each calendar month during all of which he is an enrollee within the meaning of title I of the Youth Employment Act, or $5 per day for any calendar month during part (but not all) of which he is such an enrollee."

(3) The first sentence of section 205(p)(1) of such Act (42 U.S.C. 405(p)(1) is amended by striking out "and including service," and inserting in lieu thereof "service," and by inserting "and service, performed as an enrollee within the meaning of title I of the Youth Employment Act, to which the provisions of section 210(p) are applicable," after "to which the provisions of section 210(o) are applicable,".

(c) (1) Section 3121 of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new subsection:

"(q) Service as Enrollee in Youth Conservation Corps.—For purposes of this chapter, the term 'employment' shall, notwithstanding the provisions of subsection (b) of this section, include service performed by an individual as an enrollee in the Youth Conservation Corps established by title I of the Youth Employment Act, and all such service shall be deemed to have been performed by such individual as an employee of the United States."

(2) Subsection (i) of such section is amended by adding at the end thereof the following new paragraph:

"(4) Service in the youth conservation corps.—For purposes of this chapter, in the case of an individual performing service to which the provisions of subsection (q) apply, his 'wages' shall, subject to the provisions of subsection (a)(1) of this section, be deemed to be $150 for each calendar month during all of which he is an enrollee within the meaning of title I of the Youth Employment Act, or $5 per day for any calendar month during part (but not all) of which he is such an enrollee."

(3) The first sentence of section 3122 of such Code (relating to Federal service) is amended by striking out "and including service," and inserting in lieu thereof "service," and by inserting "and service, performed as an enrollee within the meaning of title I of the Youth Employment Act, to which the provisions of section 3121(q) are applicable," after "section 3121(p) are applicable,".

(4) Section 6051(a) of such Code is amended by adding at the end thereof the following new sentence: "In the case of compensation for service as an enrollee in the Youth Conservation Corps, the statement shall show, in lieu of the amount required to be shown by paragraph (5), the total amount of wages as defined in section 3121(a), computed in accordance with such section and section 3121(i)(4)."

(5) Section 3401(a) of such Code (relating to the definition of wages for purposes

of the collection of income tax at source on wages) is amended by striking out ", or" at the end of paragraph (6) and inserting in lieu thereof "; or", by striking out the period at the end of paragraph (12) and inserting in lieu thereof "; or", and by striking out the period at the end of paragraph (13) and inserting in lieu thereof "; or", and by adding at the end thereof the following new paragraph:

"(14) pursuant to section 108(b) of title I of the Youth Employment Act, other than any portion determined thereunder to be additional base compensation, for service performed as an enrollee within the meaning of such title."

(6) Section 121(a) of such Code is amended by striking out the period at the end of paragraph (18) and inserting in lieu thereof ";", and by adding at the end thereof the following new paragraph:

"(19) Amounts received by enrollees under section 108 of title I of the Youth Employment Act, see such section 108(c)."

(d) The amendments made by subsection (b) of this section and by paragraphs (1), (2), (3), and (4) of subsection (c) of this section shall apply with respect to service performed after the date of the enactment of this Act. The amendment made by paragraph (5) of subsection (c) of this section shall apply with respect to remuneration paid after the date of the enactment of this Act.

(e)(1) Enrollees under this title shall, for the purpose of the administration of the Federal Employees' Compensation Act (39 Stat. 742, as amended), be deemed to be civil employees of the United States within the meaning of the term "employee" as defined in section 40 of such Act and the provisions thereof shall apply except as hereinafter provided.

(2) For purposes of this section—

(A) The term "performance of duty" in the Federal Employees' Compensation Act shall not include any act of an enrollee—

(i) while he is on authorized leave or pass; or

(ii) while he is absent from his assigned post of duty, except while participating in an activity authorized by or under the direction or supervision of the Corps.

(B) In computing compensation benefits for disability or death under the Federal Employees' Compensation Act, the monthly pay of an enrollee shall be deemed to be $150 a month, except that with respect to compensation for disability accruing after the individual concerned reaches the age of 21, such monthly pay shall be deemed to be that received under the entrance salary for GS-2 under the Classification Act of 1949, as amended.

(C) The term "injury" as defined in section 40 of the Federal Employees' Compensation Act shall include disease, illness, or injury if it arises out of service in the Corps.

(D) Compensation for disability, including medical care, shall not begin to accrue until the day following the date on which the injured enrollee is discharged from the Corps.

Appropriations authorized

SEC. 110. (a) For the purpose of carrying out the provisions of this title, there is authorized to be appropriated for the fiscal year commencing July 1, 1963, the sum of $60,000,000, and for each of the four succeeding fiscal years thereafter such amounts as the Congress may determine to be necessary to carry out the provisions of this title.

(b) Funds authorized to be appropriated under this title may be transferred between departments and agencies of the Government for use for the purpose for which they are specifically authorized and appropriated and may also be transferred to State governments for the purposes provided in this title.

Reports

SEC. 111. Not later than one hundred and twenty days after the close of each fiscal year, the Secretary shall prepare and submit to the President for transmittal to the Congress a full and complete report on the activities of the Corps during such year, and not later than January 1, 1966, the Secretary shall prepare and submit to the President for transmittal to the Congress a full and complete report evaluating the activities of the Corps from its inception, together with such recommendations as he may deem desirable.

TITLE II—STATE AND COMMUNITY YOUTH EMPLOYMENT PROGRAM

Short title

SEC. 201. This title may be cited as the "State and Community Youth Employment Act".

Statement of purpose

SEC. 202. The purpose of this title is to provide useful work experience opportunities for unemployed youths so that their employability may be increased through participation in State and community youth employment programs thereby enabling the agencies of the State, county, or municipality or political subdivision thereof to carry out programs in the field of conservation and development of natural resources and recreational areas, or various other programs which will permit or contribute to an undertaking or service in the public interest which will otherwise not be provided.

Development of State and community employment programs

SEC. 203. In order to carry out the purposes of this title, the Secretary of Labor (hereinafter referred to as the "Secretary") shall assist and cooperate with the agencies of State (which for the purposes of this title shall include the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and American Samoa), county, and local governments and private nonprofit agencies in developing programs for the employment of young people in State and community service activities, hereinafter authorized, including the conservation, development, and management of the natural resources of the State and the community and the development, management, and protection of recreational areas within the State and the community, which, whenever appropriate, shall be coordinated with a program of training and education provided by local educational authorities. In those States where the public land holdings of the Federal Government are less than 5 per centum of the land area within the State, the Secretary when requested, may offer such additional assistance as may be required in the development of programs of conservation and recreation. The Secretary shall advise such State and local governments as to the number and availability of unemployed young people, their skills and qualifications for various types of work, and shall provide in cooperation with local school authorities for the orderly selection and referral of youths for enrollment in such programs.

Approval of programs

SEC. 204. (a) The Secretary is authorized to approve for assistance under this title any State, county, municipal, or local programs submitted hereunder if he determines, in accordance with such regulations as he may prescribe, that—

(1) enrollees in the program will be employed either (A) on publicly owned and operated facilities or projects, or (B) on local projects, sponsored by private nonprofit agencies approved by the appropriate State agency;

(2) the program will increase the employability of the enrollees, or will enable student enrollees to resume or to maintain school attendance;

(3) the program will permit or contribute to an undertaking or service in the public interest which will not otherwise be provided, or will contribute to the conservation, development, and management of the natural resources of the State or community or to the development, management, or protection of State or community recreation areas;

(4) the program will not result in the displacement of employed workers;

(5) the rates of pay and other conditions of employment are appropriate and reasonably consistent with the rates and conditions applicable with respect to comparable work in the locality;

(6) to the maximum extent feasible, the program will be coordinated with vocational training and educational services adapted to the special needs of enrollees in such program and sponsored by State, county, or local school authorities: *Provided*, That where such services are inadequate or unavailable, the program may make provision for the enlargement, improvement, development, and coordination of such services with the cooperation of, or where appropriate pursuant to agreement with, the Secretary of Health, Education, and Welfare; and

(7) the program includes standards and procedures for the selection of applicants including provisions assuring full coordination and cooperation with local and other authorities to encourage students to maintain or resume school attendance.

(b) In approving projects under this title, the Secretary shall give priority to projects with high training potential.

Enrollees in programs

SEC. 205. (a) Enrollment in programs under this title shall be limited to young men and women who are permanent residents of the United States, who have attained age sixteen but have not attained age twenty-two, and whose participation in such programs will be consistent with the purposes of this title.

(b) Enrollees shall not be subject to the provisions of any other Federal law relating to Federal employment including hours of work, rates of compensation, or employee benefits.

(c) The number of enrollees in programs under this title shall not exceed at any one time the equivalent of 60,000 full-time enrollees during the fiscal year ending June 30, 1964, and during the next four fiscal years such numbers as may be maintained within the appropriations made therefor by the Congress.

(d) The Secretary shall provide for testing, counseling, job development, and job referral services through either governmental or private nonprofit agencies to youths in order to carry out the purposes of this title.

Federal share of program costs

SEC. 206. (a) Whenever a State, county, municipal or local youth employment program is determined under section 204 to be appropriate, the Secretary may enter into an agreement with the State, county, or municipal government, or agency or political subdivision thereof, or a private nonprofit agency, under which such government or political subdivision thereof or agency shall pay not more than 50 per centum and not less than 25 per centum of all costs of the program, including those of administration, in such proportion as may be determined by the Secretary, considering among other relevant factors (1) the severity of the rates of unemployment and underemployment in the area and the duration of such unemployment and underemployment, and (2) the income levels of families in such area. The contributions by such government, or political subdivision thereof, or agency, pursuant to such agreements may be in cash or in kind, fairly evaluated, including but not limited to plant, equipment, and services. Such agreements shall further provide that the Secretary will pay grants to such governments or political subdivisions thereof or agencies covering the balance of all costs of such programs, including those of administration.

(b) Funds available for grants under agreements authorized by subsection (a) shall be allocated among the States in the following manner: (A) 50 per centum of such funds in any fiscal year shall be allocated among the States on the basis of the ratio that the total population of each State within the age group referred to in subsection 205(a) bears to the total population of the United States within such age group, and (B) 50 per centum of such funds in any fiscal year shall be allocated by the Secretary in accordance with the ratio that the total unemployment of each State bears to the total unemployment in the United States, using in both cases the previous year's annual average following its publication, and (C) allocations not utilized in (A) shall be reallocated under (B). The population categories and the other relevant factors referred to above shall be determined in accordance with the most recent statistics available from the Bureau of the Census and the Department of Labor.

Authority of secretary

SEC. 207. (a) In carrying out this title, the Secretary is authorized to—

(1) delegate to the heads of other departments and agencies of the Federal Government any of his functions, powers, or duties under this title as he deems appropriate, and to authorize the redelegation thereof by the heads of such departments and agencies.

(2) utilize with their consent the services and facilities of Federal agencies and, with the consent of any State accept and utilize the services and facilities of the agencies of such government or of any county or municipal subdivision thereof; to establish State and local advisory committees; and to utilize such voluntary and uncompensated services as may from time to time be needed.

(3) make such contracts or agreements, establish such procedures, and make such payments, either in advance or by way of reimbursement as he may deem necessary to carry out the provisions of this title.

(4) encourage the enrollees to participate in a systematic program of training and education provided by State and local educational authorities.

(5) prescribe such rules and regulations as he may deem necessary to carry out the provisions of this title.

(b) Any agreement under this title shall contain such provisions as may be necessary to promote effective administration, protect the United States against loss, and insure the application of funds in a manner consistent with the provisions and purposes of this title and the terms of such agreement.

National Advisory Council on State and Community Youth Employment Programs

SEC. 208. (a) There is hereby established in the Department of Labor a National Advisory Council on State and Community Youth Employment Programs (hereinafter referred to as the "Council"). The Council shall be composed of the Secretary or his designee, who shall be Chairman, and nine members appointed by the Secretary without regard to the civil service laws. The appointed members of the Council shall be persons (including persons from public and voluntary organizations) who are recognized authorities in professional or technical fields related to the employment of youth or who represent the fields of conservation, agriculture, education, training, labor, management, and urban development, or persons representative of the general public who are leaders in programs concerned with employment of youth. The Council shall advise the Secretary on the administration of this title. The Council shall also include, whenever appropriate, the various agency heads designated in section 209 of this title.

(b) Upon request of the Secretary, the Council shall review the operation of this title in general and shall from time to time make recommendations to the Secretary relative to the execution of his responsibilities under this title. The Council may also make recommendations to the Secretary on projects referred to it by the Secretary. The Council shall meet at least twice each year and at such other times as the Secretary may request. The Secretary is authorized to utilize the services of any member or members of the Council in connection with matters relating to this title for such periods, in addition to conference periods, as he may determine.

(c) Appointed members of the Council, while attending meetings of the Council or otherwise serving at the request of the Secretary, shall be entitled to receive compensation at a rate to be fixed by the Secretary, but not exceeding $75 per diem, including travel time, and while away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. Notwithstanding the foregoing or any other provision of law, the Secretary may accept the services of appointed members under this section without the payment of compensation therefor (and with or without payment of travel expenses or per diem in lieu of subsistence).

Interagency consultation

SEC. 209. In the administration of this title, the Secretary shall seek the advice and assistance of the Secretaries of the Departments of Health, Education, and Welfare, Agriculture, and Interior, of the Attorney General, the Administrator of the Housing and Home Finance Agency, and of such other agency heads as the Secretary deems appropriate.

Appropriations authorized

SEC. 210. (a) For the purpose of carrying out the provisions of this title, there is authorized to be appropriated for the fiscal year commencing July 1, 1963, the sum of $60 million and for each of the 4 succeeding fiscal years thereafter such amounts as the Congress may determine to be necessary to carry out the provisions of this title.

(b) Funds authorized to be appropriated under this title may be transferred between departments and agencies of the Government for use for the purpose for which they are specifically authorized and appropriated and may also be granted to State and local governments for the purpose provided in this title.

Report by the Secretary

SEC. 211. Not later than 120 days after the close of each fiscal year, the Secretary shall prepare and submit to the President for transmittal to the Congress a full and complete report on the activities and programs authorized by this title during such year; and not later than January 1, 1966, the Secretary shall prepare and submit to the President for transmittal to the Congress a full and complete report evaluating the activities and programs authorized by this title from its inception together with such recommendations as he may deem desirable.

THE ENEMY'S NAME IS KHRUSHCHEV, NOT KENNEDY

Mr. MOSS. Mr. President, the pamphlet, "Has Cuba Been Abandoned to Communism?" written by W. Cleon Skousen, represents a serious attempt to undermine the confidence of the American people in their Government. Honest, forthright dissent is an essential element in the democratic process of government, but this does not mean that we must silently accept deliberately distorted allegations against our U.S. Government. Any opinion or idea offered in the political marketplace must stand the test of challenge and inquiry; it is in this fashion that general interest and public understanding of political issues is fostered. In a democracy, the people are the ones who are responsible for their Government—and the people must be honestly and continually informed. Only in such a way can each citizen perform his role in making our form of government work. An alert, informed citizenry is the one essential element upon which a democracy such as ours depends. That is why such a pamphlet as this one disturbs me so much—because it is a deliberate attempt to misinform the people. Moreover, it is a cleverly calculated, shrewdly executed, and piously self-righteous attempt to misinform the people.

We must not confuse such calculated, deceptive literature with honest and legitimate differences of opinions about our problems with Cuba. There is great need for such open, public debate about the Cuban situation today, because the American people need to reach a consensus on what the U.S. policy toward Cuba should be. First, there should be a factual understanding about what the situation with regard to Cuba is; next, we should examine the possible avenues of action open to us, considering the consequences of each; and finally, decide on what we want done, and give the Government our full and undivided support in carrying out our wishes. This is how a democracy works.

Such a booklet as Skousen's clouds and muddies the entire picture of Cuba, and thereby does a great disservice to the American people. This booklet is riddled with vagueness, half-truths, isolated events taken out of context and strung together artificially, and in some instances with outright deception. What the motivation behind such a deliberately calculated attempt to misinform the American people was, I cannot presume to say. But I emphatically resent the objective of this pamphlet, and therefore feel compelled to point out a few things about it in a frank, open, and I honestly hope successful, effort to completely discredit it. I am not going to honor this booklet with an attempt to refute it word for word, sentence for sentence, page for page. It does not merit such attention. If it were an honest opinion of dissent, I would be the first to acknowledge that it did deserve such a reply, but it is not.

This booklet, as I stated in an address on the floor of the Senate of the United

States, is based almost entirely on the completely false charges that our President has betrayed the United States by making the following commitments to Khrushchev:

> 1. A personal guarantee by the President that the United States would not attempt to liberate Cuba.
>
> 2. A personal guarantee by the President that the United States would not allow any other Western Hemisphere country to liberate Cuba.

What is the source given by Skousen to substantiate these charges? A letter from the Premier of Soviet Russia, Mr. Khrushchev, which Skousen states was printed in the New York Times on October 29, 1962. The booklet states that the Khrushchev letter was in answer to the "secret letter" from our President to Mr. Khrushchev several days earlier, in which the President made these commitments. But as I pointed out previously to my colleagues in the Senate, the letter from our President was not secret, because it was published right alongside the letter quoted by Skousen, on the same day and on the same page, in the New York Times. And if Mr. Skousen had not been attempting to deceive the American people, and had quoted from our President's letter, instead of from the Premier of Soviet Russia's letter, the people could plainly read that the President set the conditions of onsite inspection inside of Cuba as our condition of promising—not to refrain from attempting to liberate Cuba, as charged by Skousen—but to refrain from invading Cuba.

Furthermore, as the President's letter states, he did not guarantee the United States would not allow any other nation in the Western Hemisphere to liberate Cuba, as falsely charged by Skousen; he said that if Russia allowed on-site inspection and we pledged noninvasion of Cuba—"I am confident that the other nations of the hemisphere would be prepared to do likewise." Perhaps they would have, and perhaps not, but that is beside the point. The point here is that a false charge was made against the President of the United States by a man who quoted the No. 1 Communist in the world to back up this false charge. And this in spite of the fact that the letter he quoted as proof from the New York Times was printed right along side of the President's letter, which Khrushchev distorted and which Skousen falsely called secret. I ask Senators sincerely, Is this honest? Does this represent legitimate dissent in the interest of informing the American public about the truth? Obviously it does not.

In any case, I am sure that any newspaper reader knows that the Russians did not permit inspection of their dismantled missile sites inside of Cuba, and therefore did not meet the necessary preconditions for our tentative promise to refrain from invading Cuba. The Secretary of State and the President of the United States have both stated unequivocally that we are therefore not bound in any fashion by any agreement with the Soviet Union, because they did not fulfill their half of the contemplated agreement. I am disturbed about the motivations of Skousen and his backers in deliberately and deceptively trying to paint the President as a traitor to his country.

On page 3 of this misleading tract of his, Mr. Skousen, using a typical propaganda device, lifts a quote out of context and surrounds it with his own commentary in order to pervert its original meaning. The quote is from an article written in 1947 by Arthur M. Schlesinger, Jr., and the lifted quote is an attempt by Skousen to portray one of the President's advisers as a sinister pro-Communist, in an inferential attempt, I suppose, to further undermine the confidence of the American people in their elected President. The fact is that the Schlesinger article was advocating the containment of Soviet Russia expansionism—remember, this was in 1947, when only a few people recognized the dangers of a renewed appetite for territory on the part of our wartime ally against Hitler. That does not sound like a pro-Communist position to me. But, of course, I am not picking a sentence out of context.

In much the same familiar, deceptive manner, this pamphlet goes on and on, speaking of our policy of softness toward communism, when we are spending $50 billion a year to build and maintain a Defense Department capable of making a cloud of dust out of what is now the Soviet Union if harm is threatened to the United States. Skousen makes a little list of 15 items which he says illustrate the American policy of softness toward communism. Some of them are so vague and ridiculous that they cannot even be sensibly answered, but I am going to take a few of these points, and show that in each case the charges made by this booklet are misleading, deceptive, or based on a complete misrepresentation of the real facts of the matter.

One such charge is that the Kennedy administration "ordered the lifting of the ban on the distribution of Communist propaganda through the U.S. mails, allowing it to be distributed to American citizens postage free." How deceptive a little statement like this can be. Let me take 1 minute to give the facts in this matter, and then Senators may judge for themselves how misleading this statement of Skousen's is. First of all, no material, propaganda or not, is delivered postage free. If it does not bear postage, mail is not delivered. But let us examine the more serious charge.

Prior to 1958, an interception program relating to Communist propaganda material was in effect. Under this program, printed matter arriving from Communist countries, and thought to be Communist propaganda, was delivered to addressees if they had specifically indicated they desired it, or if it was addressed to a registered foreign agent, a foreign embassy, a U.S. Government agency, a newspaper, a library, or an educational institution. In 1958 this policy was amended so that individual addressees who did not come within one of these exceptions were asked whether they wanted the propaganda publications addressed to them. If they replied that they did, the material was delivered.

In 1960 approximately 5½ percent of printed material from Communist bloc countries was excluded as being propaganda not desired by the addressees.

During 1960 a committee of the National Security Council had recommended the discontinuance of the interception system. The recommendation was accepted by the Planning Board of the National Security Council, but was not carried forward until March 1961, when it was concluded that the interception program had no intelligence value. Six legal actions had been filed against the Government questioning the constitutional and legislative authority to detain this mail. The Department of Justice was convinced that legislative authority was lacking to detain such postage-paid mail.

The discontinuance of the interception program in no way affected the method of handling publications addressed to libraries, universities, and the like, which have been receiving them all along; and it did not permit the mails to be used to carry literature which could not use the mails before.

So, it was the U.S. National Security Council, under President Eisenhower, that made the decision not to further detain mails for evaluation and acceptance by the addressee. But it is true that it was under President Kennedy, who had been President for about 50 days, that the change in regulations came into effect on March 17, 1961.

But all this quibbling about who was President when the decision was made or came into effect is nonsense, and Skousen knows it. The reason? Before his pamphlet was published, there was a new law on the statute books, chapter 51 of title 39, United States Code, as amended, which states in section 4008:

> Communist political propaganda, shall be detained by the Postmaster General upon its arrival for delivery in the United States, or upon its subsequent deposit in the United States domestic mails, and the addressee shall be notified that such matter has been received and will be delivered only upon the addressee's request.

That is the present law of the land, approved, signed, and enforced by the President of the United States. But would we know this from reading the Skousen charge? Of course not, because it was designed to deceive us. But Senators can see the trouble and care one must go to in order to clarify and disprove such statements.

I am only going to take time to dispose of a few more of these charges, such as this one that the Kennedy administration began laying the foundation for the seating of Red China in the United Nations and then backed away under an avalanche of public protest. The truth is that it was the Soviet Union who laid the foundation of the admission of Red China to the U.N., and it was done in early 1950, when young John F. Kennedy was merely a third-term Representative from the State of Massachusetts. And incidentally, our representative to the

United Nations under President Kennedy, as under President Eisenhower, and under President Truman, has consistently opposed the admission of Red China to the U.N.

The final charge which I am going to take the trouble of exposing as false and misleading is that the current administration pushed through the abolishing of the loyalty oath for students seeking Federal loans. Again, the facts of the matter are contrary to the charge. It was a large group of colleges and universities which pushed through the amendment to the National Defense Education Act, eliminating the so-called disclaimer affidavit. Institutions of higher education which refused to participate in, or withdrew from, the NDEA program because of the disclaimer affidavit requirement included Princeton, Radcliffe, St. John's, Vassar, Wesleyan, Yale, Harvard, and many others, all of them among our leading universities.

There was, of course, a reason for these institutions to oppose the disclaimer affidavit. It was that there were two affidavits, one a positive oath or affirmation of faith and allegiance to our Government, which the schools mentioned did not oppose, and the other a negative disclaimer to the effect that the student was not a member of and would not support any organization dedicated to the overthrow of our Government. It was this challenge to young people's loyalty specifically that these schools opposed, and it was this negative disclaimer which was eliminated on the demands of these schools and a total of some 200 more major universities, including Indiana University, the Universities of Colorado, Oregon, Washington, Wisconsin, and many more. How does that square with the vague and misleading charge that the Kennedy administration pushed through the abolishing of the loyalty oath? Once more, obviously it does not stand up.

I have taken this trouble to clarify the charges brought up by Mr. Skousen not to honor them as worthy of answering, but to discredit them. Such charges, whether they be made against President Eisenhower or President Kennedy, are designed to undermine the faith of the American people in their duly elected public officials. What the motivations for this are I do not know, but the results I deplore. I would like to close with a quote from the Director of the FBI, Mr. J. Edgar Hoover, who wrote in his book, "Masters of Deceit," which described the dangers of the Communist menace to the United States, that—

> As we have seen, identifying Communists is not easy. They are trained in deceit and trickery and use every form of camouflage and dishonesty to advance their cause.
>
> For this reason we must be absolutely certain that our fight is waged with full regard for the historic liberties of this great Nation. This is the fundamental premise of any attack against communism.
>
> Too often I have seen cases where loyal and patriotic but misguided Americans have thought they were "fighting communism" by slapping the label of "Red" or "Communist" on anybody who happened to be different from them or to have ideas with which they did not agree.
>
> Smears, character assassination, and the scattering of irresponsible charges have no place in this Nation. They create division, suspicion, and distrust among loyal Americans—just what the Communists want—and hinder rather than aid the fight against communism.

Mr. President, a few weeks ago when I first mentioned the pamphlet written by Mr. Skousen and made my remarks on the floor, I received a letter from a citizen of Salt Lake City who asked that I place the pamphlet in the RECORD. Therefore, I ask unanimous consent that the pamphlet entitled "Has Cuba Been Abandoned to Communism?" written by W. Cleon Skousen, may be printed in the RECORD.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

HAS CUBA BEEN ABANDONED TO COMMUNISM?

(By W. Cleon Skousen)

In all the excitement over the October 1962 crisis in Cuba, many Americans apparently missed the fact that the President of the United States paid an appalling price for the Russian promise to dismantle the Cuban missile bases.

Nearly all the newspapers carried headlines such as "Khrushchev Backs Down," or "J.F.K. Gets Russian Accord." Down in the small print—which too few people read—was the shocking disclosure that President Kennedy had made two commitments to Khrushchev which Cuban freedom fighters could scarcely believe:

1. A personal guarantee by the President that the United States would not attempt to liberate Cuba.
2. A personal guarantee by the President that the United States would not allow any other Western Hemisphere country to liberate Cuba.

KHRUSHCHEV'S VICTORY

The New York Times for October 29, 1962, carried the full text of Khrushchev's reply to the Kennedy commitments. He shrewdly spelled out the embarrassing details of the amazing and completely unnecesary capitulation which President Kennedy had made in his secret letter to Khrushchev 2 days earlier. Said Khrushchev:

"I regard with respect and trust the statement you made in your message on October 27, 1962, that there would be no attack, no invasion of Cuba, and not only on the part of the United States, but also on the part of other nations of the Western Hemisphere, as you have said in the same message of yours" (the New York Times, western edition, Oct. 29, 1962, p. 4).

Those who caught the full impact of this tremendous legal and diplomatic victory for Khrushchev wondered how the President and his advisers could have been so completely outmaneuvered. Only a few days before, President Kennedy had made himself a world hero by standing up to Khrushchev and commanding the military might of the U.S. armed services to throw a blockade around Cuba. Khrushchev had immediately tried to conciliate the President by promising that the Soviet Union would not indulge in any rash act. It was obvious that Khrushchev was afraid of the brink. (For a brief background on Castro's original conquest of Cuba see "The Naked Communist," ch. 11.)

Military authorities had already advised the White House that the Soviet leaders would not dare make a war issue out of Cuba because of America's vast superiority in fire power. Latin American countries has assured the United States of their complete support in this new posture of U.S. firmness. Thousands of Cuban freedom fighters had been encouraged to join Spanish-speaking units of the U.S. Army with the confidence that the liberation of Communist-conquered Cuba was only days away. Members of Congress openly assured the President that this was the hour to invoke the Monroe Doctrine and the Rio Pact to show the Soviet Union that foreign conquests of independent nations in North and South America would not be tolerated.

With such manifest forces of unity and strength behind the United States, why did the administration allow Khrushchev to extort from it a promise that there would be no attempt to liberate Cuba if the Soviets would just dismantle their illegal missile bases? And by what authority did the President commit the military might and prestige of the United States to a policy of preventing any other country in the Western Hemisphere from liberating Cuba?

There was also the very serious possibility that the President had entered into a secret pact which amounted to a treaty agreement without providing any opportunity to have the Senate approve it as required by the Constitution. The treaty-approving power of the Senate was intended by the Founding Fathers to bring the facts out in the open where the people could have a chance to examine the issues before any sweeping commitments were made. In this spirit Woodrow Wilson had strongly advocated open covenants, openly arrived at. The merits of such a policy were demonstrated in the Kennedy-Khrushchev negotiations. If Khrushchev had not published these commitments, the American people might never have heard of them. Undoubtedly Khrushchev knew he was embarrassing the American President by publishing what was to have remained a secret agreement between two heads of state.

Citizens wondered what was in the President's mind when he deliberately tied the hand of the American forces and committed the United States to a permanent policy of neutrality toward Soviet-conquered Cuba.

IS PRESIDENT KENNEDY FOLLOWING THE SCHLESINGER-ACHESON LINE?

Among the closest advisors to President Kennedy is Arthur M. Schlesinger, Jr., who has openly opposed any anti-Soviet policy. He also says the United States can come to socialism "through a series of New Deals." He has referred to the freedom fighters behind the Iron Curtain as "reactionaries" and called their lost liberties "obsolete prerogatives." As far back as 1947 Dr. Schlesinger boasted that the State Department was following the policies which he advocated:

"Though the secret has been kept pretty much from the readers of the liberal press, the State Department has been proceeding for some time somewhat along these lines. Both Byrnes and Marshall have perceived the essential need—to be firm without being rancorous, to check Soviet expansion without making unlimited commitments to an anti-Soviet crusade, to invoke power to counter power without engaging in senseless intimidation, to encourage the growth of the democratic left. The performance has often fallen below the conception; but the direction has been correct. Men like Ben Cohen, Dean Acheson, Charles Bohlen, have tried to work out details and whip up support for this admittedly risky program" (CONGRESSIONAL RECORD, volume 107, part 16, page 21482).

It was risky indeed. By the end of 1948 all of Eastern Europe had been pulled behind the Iron Curtain with a loss of over 100 million allies. By the end of 1949, we had lost China with its teeming population of between 450 and 600 million. Congressional testimony revealed that the same tragic policy continued throughout the Korean war. Even when there was a change of administration in 1952, the men who were masterminding the foreign policy behind the scenes continued to follow the stubborn, almost blind, conviction that the Communists would change.

As Dr. Schlesinger pointed out in his book, "The Vital Center" (1949), the object is to have communism mellow and the free democracies come together with it under peaceful socialism. That is what he means by stating that we should contain the Soviets but push the rest of the world toward the "democratic left." He believes the Communist leaders should not be looked upon as enemies but as over-zealous allies whose brutalities must be tempered so that they behave more like true socialists. And because the Communists are allies in this sense, Dr. Schlesinger is not in favor of liberating any of the Communist-conquered countries. He makes this very clear in his statement:

"At the same time, the United States must not succumb to demands for an anti-Soviet crusade nor permit reactionaries in the buffer States to precipitate conflicts in defense of their own obsolete prerogatives."

Notice that the freedom fighters behind the iron curtain are referred to as reactionaries and their longing for liberty as obsolete prerogatives.

These views are prevalent among a certain body of powerful policymakers who serve in the State Department and the White House. Their influence seeps to the surface on numerous occasions where it may be easily observed.

THE POLICY OF SOFTNESS TOWARD COMMUNISM

In the Cuban crisis of October 1962 the President was apparently guided by these policymakers who followed the Schlesinger line as outlined above. It was characterized by a determination to remove the threat of Russian military conquest but smother the rising tide of popular demand for the liberation of Cuba from communism. It was the same kind of thinking during the previous administration which guided the State Department in supporting Castro in spite of reliable warnings that he was a Soviet agent. Men of this persuasion do not seem to fear the cunning of Communists the way most ordinary people do. They somehow feel that the Communists can be controlled, they can be manipulated, they can be forced to mellow. They therefore approach them in a spirit of accommodation and appeasement which often violates the most elementary aspects of protecting American interests. This is evident in the following incidents which have occurred during the past 18 months. These incidents shocked many Americans at the time they occurred, but only on rare occasions were enough citizens paying attention to do anything about it. Every one of these incidents created circumstances favorable to the Communist position and detrimental to that of the United States.

1. Official State Department proposal to disarm the United States and transfer its military, naval and air force equipment (including nuclear weapons) to the United Nations.

2. Refusal by the President to proclaim the 3d week in July as the traditional Captive Nations Week because it was an unnecessary irritant in relations with the Soviets. Public pressure finally prevailed but the proclamation was extremely weak, making no reference to communism and the slave states under it.

3. Ordered the dismissal of charges against indicted Russian spy, Igor Y. Melekh, to improve Soviet-American relations.

4. Ordered the release from prison of Communist Party organizational secretary, Harry Winston, one of 11 Communist leaders convicted of conspiring to overthrow the U.S. Government by force and violence. Winston immediately went to Russia with State Department permission where he appeared on radio and television castigating the United States.

5. Forced the anti-Communist government of Laos to accept Communists in positions of leadership. Threatened to withdraw all American aid if the Laotian Government failed to comply.

6. Ordered the lifting of the ban on the distribution of Communist propaganda through the U.S. mails, allowing it to be distributed to American citizens postage free.

7. Forced Dutch New Guinea to become a part of pro-Communist Indonesia in spite of a previous promise to help these people become an independent country.

8. Openly promoted a Communist coalition government in the Congo. Gave financial support to the conquest of Katanga which had broken away from the Congo in protest against the Communist domination of the government.

9. Sent more than 70 jet planes to the Communist government of Yugoslavia.

10. Used political pressure to force the Senate to give up its resistance to foreign aid to Yugoslavia and Poland.

11. Ordered military officials to submit speeches to the State Department for censorship. References to the threat of the Soviet Union and the need for victory in the cold war were deleted.

12. Began laying the foundation for the seating of Red China in the United Nations and then backed away under an avalanche of public protest.

13. Pushed through the abolishing of the loyalty oath for students seeking Federal loans.

14. Sided with Russia in condemning our long-time ally, Portugal, for suppressing the Communist-inspired uprising in Angola. Allies in Europe condemned United States for being on the wrong side.

15. Initiated negotiations with Russia to discuss concession of rights in Berlin when these rights had been previously fixed in at least five iron-clad agreements.

SOFT POLICY SHOWS UP AT BAY OF PIGS INVASION

In an article entitled, "Kennedy's Fateful Decision," the U.S. News and World Report for September 17, 1962, summarized the facts surrounding the tragic Bay of Pigs invasion of Cuba. The Readers Digest reprinted the same article in its November 1962 issue.

The facts are not pleasant. President Kennedy had approved the invasion which took place April 17, 1961, and he had promised the invaders air cover. Two U.S. carriers, their decks loaded with fighting planes, were standing by within easy striking distance. In addition, the invaders had their own planes which they expected to use for their protection. Here is the way the article describes what happened:

"Secure in this assurance of air support, the invaders went ashore in the early morning darkness of Monday, April 17. Their landing was successful; 1,400 armed men reached the beaches of a place called the Bay of Pigs.

"In the battle that followed, Castro's troops suffered heavy casualties. Castro's tanks, coming up to the battle, were sitting ducks for an attack by air. Confidently, the little invading force waited for its air support to arrive. Its leaders had assurance of that support. It was provided in the preinvasion planning.

"Hours before, on Sunday evening, a small but potent force of B-26's was sitting in readiness on an airfield 500 miles away, waiting to take off for the Bay of Pigs. Those were planes of the invasion force, with Cuban pilots.

"But those planes didn't take off.

"The reason: President Kennedy forbade their use.

"That was the fateful decision President Kennedy made on that Sunday evening. He decided that the anti-Castro Cubans could not have the support of their own air force during the invasion. Without that support, the invasion failed."

President Kennedy made his decision the night before the invasion and while the invasion force was still on the high seas. Nevertheless, the Cubans were allowed to continue their course and make their landing without ever being told that their air cover had been canceled. The military aspects of the decision was one factor, the moral question of promising these fighting men protection and then removing it without letting them know, was quite another. It did something to the image of American leadership in Latin American minds which may never be forgiven.

Then there is the military aspect of the decision.

Even after the landing when officials in charge of the invasion pleaded with the President to change his mind, he refused. Even when they told him the mission was collapsing he remained adamant. In this hour President Kennedy was the Commander in Chief. No one could overrule him. Whatever his motives, they must have been powerful indeed to resist both the advice of CIA officials and the obvious embarrassment which the collapse of the invasion was bound to bring.

The U.S. News & World Report emphasizes how easy it would have been to liberate Cuba had the President's promised help been provided:

"The invaders inflicted close to 2,000 casualties on Castro's forces, suffered only a hundred or so casualties of their own. But without air support, the invaders could not hold out. Most of them wound up as Castro captives.

"American military officials who followed this operation say that it came within a hair's breadth of success. They say: Given early air support, the invaders could have destroyed Castro's air force and tanks. Defections from his militia, which had started, would have spread. Underground forces, waiting for word of success before rising against Castro, would have sprung into action. When that word did not come, they remained underground."

SOFT POLICY SHOWS UP IN EVENT CULMINATING IN THE OCTOBER CRISIS

By midsummer 1962 it was impossible to completely suppress the reports from Cuba that the Soviets had landed substantial military forces and were building Cuban bases for the launching of nuclear missiles. Senator KENNETH B. KEATING, of New York, carried these reports to the floor of the Senate in August 1962. He repeated them during the month of September. On October 10 he declared: "Construction has begun on at least a half dozen launching sites for intermediate-range tactical missiles. My own sources on the Cuban situation * * * have substantiated this report completely."

The administration seemed casual if not indifferent to these warnings. It is now known that by October 16 aerial photos had verified the existence of both offensive missiles and Soviet jet bombers in Cuba but the official line continued to discount charges that a crisis was brewing in Cuba. As late as October 20, newsmen peppered the Defense Department with questions about the reports of Soviet missiles and jet bombers in Cuba and were met with flat denials.

The U.S. News & World Report later published an article entitled: "How U.S. Newsmen Were Misled About Cuba." The article stated:

"American news reporters and editors are complaining that they were deceived by the Kennedy administration about the situation in Cuba" (issue of Nov. 5, 1962, p. 8).

The President, meanwhile, was on a campaign tour, and had run headlong into a political chill at the grassroots level wherever the subject of Cuba came up. On the eve of an election the crisis in Cuba had become an issue with the people. Suddenly, the President terminated his tour, claiming he had contracted a cold, and hurried back to Washington.

Two days later President Kennedy went on the air and proclaimed a blockade of Cuba. A shout of triumph went up all over the free world. It looked as though the sleeping giant were waking up at last. But certain aspects of the President's blockade speech were puzzling: the Monroe Doctrine was never mentioned, there was no promise of any help to liberate the Cuban people, the overthrow of Castro's Communist regime was definitely not on the agenda.

It was on October 27 that President Kennedy sent his secret communication to Khrushchev promising that no attempt would be made to invade Cuba and that no other country in the Western Hemisphere would be allowed to liberate Cuba if the Soviet Union would remove its missiles. It was on October 29 that the New York Times published the full text of Khrushchev's reply and told the world what President Kennedy had agreed to do.

It appeared that legally and diplomatically, Cuba had been abandoned to communism.

The administration team had conducted itself completely within the framework of the Schlesinger-Acheson doctrine of keeping the Soviet within bounds but not attempting to liberate any Communist-conquered territory.

Only one question then remained for Cuba: Would the American people stand for it? Americans everywhere seemed to feel that the sooner Cuba was liberated the less blood it would cost. The longer it was postponed the stronger the forces would become which inevitably must be rooted out. They knew it was not just for Cuba that a new policy of firmness was required—the whole future of the world depended on it.

THE NUCLEAR TEST-BAN TREATY

Mr. CLARK. Mr. President, the nuclear test-ban treaty proposed by the President of the United States is in the national interest.

This afternoon, I wish to discuss this question on the basis of scientific fact and rational argument, rather than on the basis of partisan politics. I regret very much that a good deal of the discussion of the nuclear test-ban treaty proposed by the United States has been, to date, on a partisan basis. I deplore this very much.

I wish to make the following points:

First, a nuclear test-ban treaty is in the best interests of the United States and is in the best interests of world peace. It would reduce international tension. It would decelerate the spread of the arms race. It would inhibit the spread of nuclear weapons to countries which do not now have them. It would prevent additional fallout, which, all over the world, is causing great damage to the health of future generations; and if testing is resumed, this damage will accelerate almost in geometrical progression.

Second, American security is impaired, not enhanced, by the unlimited development of nuclear weapons capability. At the present time, both the United States and Soviet Russia have a substantial overkill capacity. If an attack were to be made by one on the other, regardless of which one began it, it would be impossible for either side to escape incredibly destructive retaliation.

Third, presently we are far ahead of the Soviets in the development of nuclear weapons. Reputable scientific opinion believes that we have from three to eight times as many intercontinental ballistic missiles as the Soviet Union. Therefore, continued development through testing would not be in our interest; but it would be in the interest of Soviet Russia. It would be against our interest, because since we have this overkill capacity, inevitably the result of continued testing would be to narrow that gap. I make the categorical statement that the policies of President Eisenhower and of President Kennedy have not cost us our nuclear superiority. We still have it by a substantial margin. But in the event of nuclear war, the Soviet Union has enough to be able to wreak frightful damage on our country.

Fourth, the argument that our representatives are pursuing a "soft" political line in the negotiations at Geneva and elsewhere is completely fallacious. It is true that we have decreased the number of onsite inspections which we would require as part of any treaty which we would sign, but this is because of the development of the art of seismic detection. We do not need nearly as many inspections as we did before in order to ascertain whether a suspicious seismic event is an earthquake or is a nuclear explosion. The fallacious argument that we do need as many as we formerly did was exposed in great detail, and most convincingly, by the able Senator from Minnesota [Mr. HUMPHREY] in a brilliant speech which he made on the floor of the Senate about 3 weeks to a month ago. I deeply regret that his speech was not adequately reported in any of the communications media. It is not true that massive underground tests can be conducted in the Soviet Union without detection. There is not enough soft alluvial soil in the Soviet Union to provide the sites for such massive tests; and if such tests were conducted underground anywhere except in alluvial soil, they would be rapidly detected by the detection stations now in existence, and they would be confirmed by the seismic stations which, under our treaty draft, we would be entitled to erect on Russian soil.

Fifth, those opposed to a treaty grossly exaggerate the risks of cheating, and minimize the risks of continuing the arms race. For example, Dr. Edward Teller has made the completely fallacious, unsound, and untrue statement that the test-ban treaty we have proposed would call for another Munich. That is not true. He also said it would be virtually unpoliced. That is not so. He also said it would not interfere with the Russian program. That is not so. Each of those statements by Dr. Teller is a flagrant violation of fact. Even worse is his calling upon "all patriotic Congressmen" to oppose the test-ban treaty itself. I consider myself as patriotic an American as Dr. Teller; and I have no hesitation in stating that the preponderance of scientific opinion is strongly against him. For my part, I hope all clear-thinking Members of both Houses of Congress will rally in support of the test ban proposed by the President of the United States, with the approval of the Secretary of Defense, the Atomic Energy Commission, the Secretary of State, and the Chief of the Arms Control and Disarmament Agency. One can be sure that the Secretary of Defense did not act without adequate consultation with the Joint Chiefs of Staff.

Sixth, I should like to state the direct advantages to the United States of the test-ban treaty proposed at Geneva by the President.

First, it would give us dependable assurance that no atmospheric underwater, or outer space testing would occur. All such testing can be reliably detected by stations outside the boundaries of the Soviet Union.

Second, it would give us dependable assurance that no high yield series of underground tests would occur, because tests underground of nuclear weapons above the 3 kiloton measurement would readily be detected by existing seismic detection stations if conducted underground.

Third, it would give reasonable assurance that no series of tests of small nuclear weapons below 3 kiloton measurement would occur underground without detection

My seventh point is that the Soviets did not, as has been frequently averred, break a test ban agreement in 1961. In point of fact, there was no such agreement at that time. There was a moratorium which had been participated in by both the United States and Soviet Russia, but we terminated that moratorium when President Eisenhower, in December of 1959, more than a year before the Soviets resumed testing, stated that, so far as we were concerned, we were no longer bound by the moratorium.

Eighth, and finally, the views which I have here expressed are set forth far more ably and with closer logic than I have been able to bring to bear in this speech by a number of very able American scientists and physicists in a letter which appears on page 10 of this morning's Washington Post under the heading, "Statement on the Test-Ban Treaty."

The signers of the communication are Dr. Bernard Feld, Department of Physics, at Massachusetts Institute of Technology; Dr. David Inglis, Argonne National Laboratories, Argonne, Ill.; Dr. James Watson, Department of Biology, Harvard University; Dr. Bruno Rossi, Laboratory for Nuclear Science, Massachusetts Institute of Technology; Dr. Donald Glaser, Department of Physics, University of California; Dr. Hans Bethe, Department of Physics, Cornell University; Dr. Freeman Dyson, Institute of Advanced Studies, Princeton University; Dr. Francis Low, Department of Physics, Massachusetts Institute of Technology; and Dr. K. T. Bainbridge, Department of Physics, Harvard University.

Mr. President, surely those eminent, reputable, and well-known American scientists, each with competence in his field, are worthy of belief. I ask unanimous consent that the statement to which I have referred be printed in the RECORD at this point in my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON THE TEST-BAN TREATY

In view of recent controversy concerning the desirability of concluding a nuclear test-ban treaty with the Soviet Union, we wish to make the following statement in support of the efforts of the U.S. Government to conclude such a treaty as soon as it can be negotiated.

Our primary reason for support lies in the fact that a test-ban treaty is in the best interests of the United States and of world peace. A treaty would reduce the speed of the present arms race, inhibit the spread of nuclear weapons to nonnuclear powers, reduce the likelihood of nuclear war, and prevent the extension of the hazards of fallout. We therefore commend the President of the United States for his sincere attempt to reach a workable agreement with the Soviet Union on a test ban, and urge that Members of the United States Congress and of the general public consider the question of the test-ban treaty in the light of scientific fact and rational argument rather than in terms of partisan politics.

Unfortunately, public debate on the issue has been confused in recent weeks by some Members of Congress and by public figures who have attacked the test-ban treaty by spreading a completely false view of the test-ban situation. They also would appear to be operating on the fallacious assumption that American security can best be maintained by unlimited development of our nuclear weapons capability no matter what the other nations may be free to do in this regard. The attackers have failed to recognize the clear fact that once the overkill capabilities of the Soviet Union and the United States have reached their present level—and hardened missile bases are in place, making a successful disarming attack impossible for either side—an increase in nuclear capacity by one side or the other does not upset the balance of deterrence.

DETERRENCE REMAINS

Even though we probably possess between three to eight times as much intercontinental nuclear weapons capability as the Soviet Union, we would still have little chance of escaping an incredibly destructive retaliation were we to strike first with our strategic force. Since the smaller Soviet force is enough to deter us from a nuclear attack on the Soviets, a considerable change in force levels would still leave us with more than sufficient force to deter the Soviets from making a nuclear attack on us.

The opponents of the test-ban treaty also base their argument on the fallacious assumption that any attempt on our part to negotiate with the Soviet Union means that we are taking a soft political line and making dangerous concessions. The treaty opponents therefore consider any lowering of the number of onsite inspections by the United States simply as a sign of weakness and of yielding to the advantage of the Soviet Union, rather than as realistic negotiation to improve national security. In fact, during the period since the test-ban discussions began in 1958, detection techniques have been rapidly improving and may be expected to improve still further. It is now possible to detect many of the explosions within a given country by stations outside that country, and the number of onsite inspections required for checking the identification of earthquakes versus explosions has been greatly reduced. Research has also shown that there are many fewer earthquakes in the Soviet Union than was formerly thought, thus making a reduction in the possibility of their being confused with nuclear tests.

The strategy of the opponents of a treaty is to exaggerate the risks of clandestine testing and to minimize the risks of a continuing nuclear arms race. Among the most flagrant violations of fact which they have publicized in these matters are the recent statements by Dr. Edward Teller that a test-ban agreement "would be virtually unpoliced" and "would not interfere with Russian progress," and Senator DODD's claim that the test-ban policy of the Eisenhower and Kennedy administrations "has already cost us our nuclear superiority over the Soviets."

MISSTATEMENT CHARGED

In making this claim, Senator DODD is completely misstating the facts as set forth by responsible Department of Defense officials. If the Soviets learned more than we did in the 1961–62 testing and narrowed the gap between us, it was because they had more to learn. There is every reason to believe that they would have narrowed the gap even more rapidly had there not been a moratorium and had there been continuous testing on both sides after 1958. Conversely, if we had been able to conclude a test-ban treaty in 1959, the Russian tests of 1961–62 would not have taken place and we would still have our great superiority of nuclear weapons technology. By no stretch of the imagination could these tests have been carried out secretly underground.

The direct advantages to the United States of a test-ban treaty are these:

1. Dependable assurance that no atmospheric testing, which is the really important kind, is taking place.

2. Reasonable assurance that underground testing of small nuclear weapons is not taking place.

What assurance do we have that in the event of a test-ban treaty the Soviet Union would not conduct secret underground tests?

Even though a single small test might be concealed by being confused with an earthquake if the test were conducted in a region of frequent earthquake occurrences, any significant series of tests would be almost impossible to conceal.

RISK IS EMPHASIZED

It is extremely unlikely that the Soviet Union would be willing to risk the breakdown of the treaty for the marginal gain they might achieve by testing explosions small enough to escape detection. It is important to recall that American nuclear weapons experts insisted that underground testing was of little value for military purposes when, in 1961, our testing was temporarily limited to underground explosions. We have additional assurance in the fact that the Soviet Union has agreed to three onsite inspections should suspicious indications of underground testing be discovered by the detection system of the United States and the United Kingdom, and is willing to permit a number of automatic seismic stations on Soviet territory.

The Soviets surprised us by starting big atmospheric tests in 1961 when we thought at that time they would continue negotiations for a test ban treaty. The opponents of a present treaty now claim that this means the Soviets broke a test ban agreement in 1961. On this basis they warn against entering another agreement. It is too often forgotten that there was no test ban agreement (much less a treaty) in 1961; and that President Eisenhower on December 29, 1959, terminated the 1-year informal moratorium by announcing, "The voluntary moratorium on testing will expire on December 31." Even though the Soviets and most other nations have broken treaties, a test ban treaty would be very different from a mere cessation of tests, particularly if adhered to by an increasing number of nations, because it would be in the interest of the United States and the Soviet Union to abide by it. To be on the safe side, our developments and preparations would continue as far as possible without testing, and there should be no doubt that American testing would be resumed if the Soviets should break the treaty by again resuming tests in the atmosphere.

Even if the treaty should be abrogated after a time or should fail to develop into a world test ban because of the recalcitrance of France or China, it would not have interfered with our nuclear development appreciably more than the Soviets. The treaty would emphasize above all the common interest of the United States and the Soviet Union in trying to avoid nuclear war.

In summary, the test ban treaty, as proposed, will stop atmospheric testing as long as the treaty is in effect. It will leave some uncertainty about very small tests (one ten-thousandth the size of the H-bomb) but could reasonably be expected to deter the Soviets from even small-scale cheating (a) because it would teach them relatively little, (b) because of the serious risk of being caught, and, (c) because there are good reasons for the Soviets to want the treaty to function.

Careful studies by the foremost experts in the United States and by the President's advisers on national security, including those in the Defense Department, have furnished the conclusion that the risk of continuing the arms race without a test ban treaty is considerably more than the risk that such a treaty might be violated by secret testing. We support the President in this conclusion and believe that once the Members of Congress and the people of the United States are aware of the realities of our present situation and of the facts of the test ban case, that they too will support the President in his effort to find answers to the greatest question before the world today—the question of survival.

Mr. HUMPHREY. Mr. President——

Mr. CLARK. Mr. President, I yield to the Senator from Minnesota with the understanding that I do not lose my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUMPHREY. I join with the able Senator from Pennsylvania in his comments relating to the article which appeared in this morning's issue of the Washington Post and Times Herald, as well as his general observations on the subject of the nuclear test ban proposed treaty. I had intended to invite the attention of Senators to the very article which the Senator from Pennsylvania has placed in the RECORD. It represents a well-thought-out, constructive, and sensible statement by a group of eminent scientists in support of a nuclear test ban treaty. Signed by nine leading physicists and experts in other branches of science, the statement takes on added significance, because these are men of no partisan persuasion in particular, but are rather men of competence, excellence, and scholarship in the field of science, particularly as physicists. In little more than two columns of newsprint they provide us with a superb analysis of the advantages of a test-ban agreement between the United States, Britain, and the Soviet Union. The authors have approached the question from the only point of view that has any lasting relevance to the Senate. They have argued almost exclusively from the point of view of U.S. national security and national interest. It is a very convincing argument indeed.

I was particularly struck, Mr. President, by the passage refuting the allegation that a test ban would give "nuclear superiority" to the Soviet Union. The scientists, including Dr. Hans Bethe, of Cornell University, concede that the surprise Soviet test series of 1961–62 narrowed the gap between Soviet nuclear technology and ours. But the writers do not conclude from this that a test ban is ipso facto unenforcible or that it would inevitably put us behind the Soviet Union. On the contrary, they say:

> There is every reason to believe that (the Soviet Union) would have narrowed the gap even more rapidly had there not been a moratorium and had there been continuous testing on both sides after 1958. Conversely, if we had been able to conclude a test ban treaty in 1959, the Russian tests of 1961–62 would not have taken place and we would still have our great superiority of nuclear weapons technology. By no stretch of the imagination could these tests have been carried out secretly underground.

Mr. President, it is always pleasant to find oneself in agreement with men who know their business and who do not decide momentous issues on the basis of prejudice. In my speech of March 7 in this Chamber, I referred to this very question of the comparative advantages of a test-ban treaty. Let me recall my remarks at that time:

> As of this date, the balance of power is in our favor. The balance of power 5 years ago was even more in our favor. Ten years ago it was unmistakably in our favor. Had we been able to obtain a test-ban treaty 6 years ago, the Soviet Union today would be, for all practical purposes, a second-rate power.
>
> But some of the criticisms leveled today against a test-ban treaty were leveled against the same basic proposal 6 or 8 years ago. I held hearings of the Disarmament Subcommittee on this subject. Time after time, year after year, I have heard exactly the same thing. Yet it is now an accepted fact that had the United States of America been able to get the Soviet Union to agree to stop nuclear testing 6 years ago, the Soviet Union would never have been able to equal the power of the United States, or even come close to it.

These same points were developed further in colloquy between myself and the Senator from Pennsylvania [Mr. CLARK], who had the perseverance to stand at my side throughout quite a long speech. My distinguished colleague and I were in full agreement that endlessly repeated rounds of nuclear testing are distinctly harmful to the overall security posture of the United States. Their one result would be to allow the Russians to narrow the gap.

I wish to make clear that there is not a scientist of any competence who does not say that continuous testing tends to narrow the gap between what we now have as a superiority over the Soviet Union.

My colleague and I concluded that a test-ban treaty is most advantageous to the country which at any given time happens to be in the lead. That is our position now. I hope that the opponents of a test ban will take this into consideration in their vigorous campaign against an agreement which has not even reached the President's desk, let alone the U.S. Senate.

Mr. President, the Senator from Pennsylvania [Mr. CLARK] has had printed in the RECORD the "Statement on the Test-Ban Treaty" signed by Drs. Bernard Feld, David Inglis, James Watson, Bruno Rossi, Donald Glaser, Hans Bethe, Freeman Dyson, Francis Low, and K. T. Bainbridge.

I caution Senators on one point in the article that has been placed in the RECORD.

I do not completely share the conclusion that the present "overkill capabilities" of the Soviet Union and the United States make a "successful disarming attack impossible for either side," although this may be an unpleasant fact of life in the very near future. Yet I commend the authors of the statement for a courageous, outspoken defense of a test-ban agreement at the earliest possible time.

Mr. President, I consider this statement in this morning's press to be very timely, significant and meaningful in terms of our national security and the national interest. I hope that it will be studied meticulously and thoughtfully by every person in the United States, and indeed throughout the world, who is interested in world peace.

Mr. President, this weekend we are going to have a papal encyclical on the subject of peace on earth. It will be one of the most important documents issued by any spiritual leader, or any lay leader or political leader. His Holiness Pope John is doing great things for this world in his courageous spiritual leadership, calling to man's attention the evil of our times and the evil of our ways and, above all, calling to our attention the importance of peace on earth and the ways and means to find it.

As we approach Good Friday it might be well for Members of Congress to contemplate the great mission and the message of the Prince of Peace, who brought to our attention and to the attention of the world the importance of peacemakers and the fact that they are blessed indeed.

I am anxiously awaiting—and I hope thoughtfully—the great message which will come to us this weekend from the Holy See. I say this because if the world needs anything today it needs this kind of courageous, fearless spiritual leadership, to bring to the attention of political leaders of the world the fact that there is something else in the world today other than the sheer exercise of physical power. There is something else which possibly can lead us into the paths of peace. I am sure the message we will receive, according to what we have heard thus far, will be not only meaningful in terms of its spiritual content but also will have what some people often refer to as the practical methodology for achievement of a spiritual objective.

PROGRESS AT GENEVA: COMMUNICATIONS LINK AND TEST BAN

Mr. President, I add there is other good news we could well contemplate. There has been progress in the past few days at Geneva, Switzerland, as well as progress at home and in other parts of the world in the cause of peace.

The news from the Geneva Disarmament Conference within the past few days has been encouraging. The Soviet Union, at long last, has accepted a proposal advanced by the United States to establish a reliable arrangement for a communications link between Moscow and Washington to be used in time of crisis. This link is expected to be in the form of a teletype and would help to reduce the likelihood that war might break out due to miscalculation or failure of communication at the height of a crisis.

Mr. President, I ask unanimous consent to include, at the close of these remarks, that portion of a U.S. working paper on reduction of the risk of war through accident, miscalculation, or failure of communications that deals with the subject of communications on military emergencies. This document was submitted to the Conference on December 12, 1962, and it gives the outline of the U.S. proposal which, as I have said, the Russians have accepted.

The PRESIDING OFFICER. Is there objection to the request by the Senator from Minnesota? The Chair hears none, and it is so ordered.

(See exhibit 1.)

Mr. HUMPHREY. Mr. President, it is interesting to note that one of the recommendations made by the Senate Subcommittee on Disarmament in the year 1958 related to providing a better means of communication between the Soviet Union and the United States, to prevent accidental war. We called upon the executive branch of the Government then, as we have repeatedly since, to find a way through modern media of communications to avoid any accidental war through miscalculation or through some breakdown in communications. I am pleased that at long last there seems to be an agreement upon this detail.

Details of this measure will now be worked out in Geneva. We should regard this as an important step forward, but it is only one step and a small one. The next step should be agreement for a test-ban treaty.

The Soviet Union has not moved on its position on inspections since Chairman Khrushchev's letter of last December proposing three onsite inspections and three automatic recording seismic stations in the territory of the Soviet Union. It is time the Soviets moved. The last move was made by the United States. Clearly the next move is up to the Soviet Union. The Soviet Union keeps contending that the question of an agreement on a test ban is political and has no scientific basis. Of course, the Soviets are half correct when they say it is political, because the question of a test-ban treaty and the proper verification safeguards in it is a question of political judgment based on scientific and other considerations. The United States, from a deterrent point of view, cannot accept the three inspections offered by the Soviet Union. The number is simply not enough. The eight new nations in the Geneva Conference—the so-called neutral or unalined nations—according to news reports, are proposing a compromise. Certainly it is hoped that any compromise proposed by the eight nations will be one that takes into consideration both the point of view and situation of the United States, as well as that of the Soviet Union. The responsibility on any third party in such an important situation is very great. It is time for the Soviets to begin to negotiate seriously on this matter now that they have come forward and made a significant move toward establishing a communications link. A test-ban treaty should be next.

Mr. President, I also ask unanimous consent to have printed in the RECORD a letter to the editor of the New York Times, published Monday, April 8, written by the Honorable James J. Wadsworth, former U.S. Ambassador to Geneva, on the subject of disarmament and a test ban.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

EXHIBIT 1

COMMUNICATIONS ON MILITARY EMERGENCIES

PURPOSE

Although extensive technical means of communication are available today, there is a question as to whether existing arrangements for communications between States would prove sufficiently rapid and reliable in time of a military emergency or crisis. If there is to be assurance that means of communication will be available when needed, steps must be taken in advance, and it would appear to be a reasonable precaution to place in effect between particular States special arrangements which could ensure the availability of prompt, dependable, and direct communications. Awareness of the availability of such communications links could itself prove reassuring, and should the need to use them arise, they could be employed with a minimum of the uncertainty that is characteristic of periods of tension.

PRINCIPAL ELEMENTS

In considering the establishment of special communications links, it would be necessary for the States concerned to reach agreement on a number of matters.

1. In view of the essentially experimental and untested character of such arrangements, it would not appear necessary or desirable to attempt to specify in advance all types of situations in which a special communications link might be utilized. However, there should be a common understanding of the general purpose of the link and of the broad circumstances under which it might be most useful. In the view of the United States, such a link should, as a general matter, be reserved for emergency use; that is to say, for example, that it might be reserved for communications concerning a sudden change in the military situation or the emergence of a military crisis which might appear directly to threaten the security of either of the States involved and where such developments were taking place at a rate which appeared to preclude the use of normal consultative procedures. Effectiveness of the link should not be degraded through use for other matters.

2. Specific technical means should be determined in the light of the geographic locations and types of equipment available to the States concerned. The primary criteria would be that technical arrangements be effective on a continuing basis and that they be as rapid as practical. Ordinary voice telephone represents one possibility, and radio might also be considered although until communications satellites become available on an operational basis, radio might not prove sufficiently reliable. In both these cases, however, there would seem to be some possibility of inadvertent error either through lack of precision in reception or through incorrect translation. Considering all aspects of the problem, the use of teletype systems might, on balance, prove preferable. It should be noted that a line reserved for transmission of messages by teletype could have a dual capability and be used for voice communication as well should that prove desirable.

3. Each state would be responsible for arrangements within its own territory, would determine the terminal (or originating) point of the link, insofar as its end of the circuit was concerned, and would make such arrangements as might be needed to effect internal distribution of messages to appropriate Government officials. In the case of the United States, it might be practical for the link to originate (or terminate) in the national command center, which maintains continuing contact with principal Government officials, including the President. Such a location would also permit relevant data and experience in military matters to be brought rapidly to bear. The route for connecting the two end points of a particular link would, of course, have to be agreed.

4. Adequate arrangements would be made by each state for continuous manning of the link and for acting on messages which might be received. Periodic joint tests or checks of the link could be undertaken.

5. No exchange of personnel would be involved. However, if military missions were exchanged concurrently with the establishment of a direct communications link, such missions would be available for consultation should that prove desirable in connection with matters requiring use of the link.

Although the foregoing arrangements would be undertaken directly between the states concerned, such states might, at their discretion, wish to notify the Secretary General of the United Nations of the circumstances involved in a military situation of a character warranting emergency use of the link.

EXHIBIT 2

TEST-BAN REPORT ATTACKED—WADSWORTH DENIES PANEL SPEAKS FOR ALL HOUSE REPUBLICANS

(The writer of the following was disarmament adviser to the Eisenhower administration and serves as U.S. representative to the United Nations.)

To the EDITOR OF THE NEW YORK TIMES:

Critics of the protracted efforts to achieve a nuclear test-ban treaty with the Russians have been most outspoken since the chances of agreement seemed to improve in the wake of the Cuban crisis. These critics are to be found in both parties, as are the consistent advocates of a workable treaty. Unfortunately, however, the Republican leadership in the House has left the impression that the GOP as a whole opposes the administration's current test-ban policy.

This impression has been left by Representative CRAIG HOSMER'S Republican House Panel on Nuclear Testing, whose reports are signed by the entire GOP leadership. The panel's first report, presumably based on the views of "experts" whose antitest ban views were already well know, was released to the press before scientists with a different approach could be heard.

Not surprising, the first report concluded that the present basis for negotiations on detection machinery fails to offer realistic probability of detecting violations. Yet it was not until almost a month later that Government witnesses spelled out the areas of recent progress in underground test detection before the hearings of the Joint Committee on Atomic Energy.

Anyone seriously interested in the facts could hardly be in a position to judge the detection machinery without hearing from the men most closely associated with making it work.

UNDERGROUND EXPLOSIONS

Now the hearings are over and Mr. HOSMER'S panel has issued another report. This time the panel has seized upon one bit of testimony, carefully ignored other statements, and has come to the conclusion that the American-British detection system cannot detect small underground nuclear tests over an area of 2.5 million square miles in the U.S.S.R.

The Hosmer panel's calculations are based on the assumption that secret Soviet tests would be conducted in dry alluvium, a soft earth. But the panel ignored the testimony of Dr. Franklin Long, of the U.S. Arms Control and Disarmament Agency, who indicated that there are only two small areas of alluvium in the U.S.S.R. One is on the Iranian and Afghan borders, the other about 400 miles from Iran. Both are within detection range of stations outside of the U.S.S.R.

As a Republican and as the former chief negotiator for the Eisenhower administration, which initiated the nuclear test-ban talks, I find the operation of the Hosmer panel one of the most unfortunate domestic developments since I served in Geneva. It is biased in its presentation of the argument and misleading in its pretense of speaking for all House Republicans. I feel sure that the panel does not reflect the views of all Republicans in the House and certainly in the Senate, which must ultimately ratify any treaty which is signed.

BASIS FOR NEGOTIATIONS

Some congressional and press attacks on continued efforts to reach agreement imply that the top officials of the administration and their negotiators are "giving away" our national security, piece by piece. Levelheaded Americans know that successful negotiations must be based on a structure of mutual advantages for both sides. A workable nuclear test ban—and further steps toward mutual disarmament—would improve the security of both major powers as well as all other nations.

If this administration is guilty of anything, it is the failure to educate the public to the comparative risks of continued testing versus a treaty. President Kennedy made a cogent point during his press conference of March 21 when he spoke of the probability that many more nations would have the nuclear weapon by the mid-seventies. I hope he will continue to voice this warning until it is well understood. When the public is made aware of the choice we face, it can intelligently weigh the risks of new paths of international security.

JAMES J. WADSWORTH.

WASHINGTON, *March 26, 1963.*

DISARMAMENT

Mr. DOMINICK. Mr. President, will the Senator from Pennsylvania yield to me?

Mr. CLARK. I yield to the Senator from Colorado with the understanding that I shall not lose my right to the floor.

Mr. DOMINICK. I should like to ask the Senator from Pennsylvania to clear up a couple of points which have really bothered me.

In the process of the Senator's discussion on disarmament I received the implication, at least, that the United States under the leadership of President Eisenhower was the Nation destroying the moratorium or test-ban agreement with Russia. I do not see how under any conceivable set of facts this conclusion could be reached.

Mr. CLARK. If the Senator will look at the letter from the eight scientists which I placed in the RECORD in my remarks, he will find that in December of 1959 President Eisenhower made a public statement that, from that time on, the United States would no longer be bound by the 1-year moratorium, to which we had earlier agreed. Therefore, after December of 1959 and before the

Russians resumed testing in the fall of 1961 there was absolutely no agreement between the two countries with respect to a moratorium.

Mr. DOMINICK. Was it not true that following that statement which was made—which was obviously an effort to try to induce the Russians into reaching a written agreement as such—it was also said that the United States would not resume any testing, and that this situation went on for a period of months and months and months? Is that not also the fact?

Mr. CLARK. That is not my understanding, but I shall ask my friend from Minnesota to verify the fact. The Senator from Minnesota would like to have the Senator repeat his question.

Mr. DOMINICK. After the December 1959 statement was made, the President publicly said that we were not going to do any testing, so that so far as we were concerned the moratorium was still in effect.

Mr. HUMPHREY. Mr. President, will the Senator yield to me?

Mr. CLARK. I yield.

Mr. HUMPHREY. I think the Senator from Colorado is correct in that. I know President Eisenhower did serve notice that we were not necessarily bound any longer by the 1-year moratorium, but he gave notice that we would not test.

I would be less than candid if I did not say that during that period of time I felt this was a justified Executive action, because the President of the United States was seeking to bring some pressure to bear on the Soviet Union to arrive at an agreement. I do not stand in criticism of the efforts of President Eisenhower. I will be frank with the Senate. I think he was very sincere and made a determined effort, and the program he entered into was a sound one.

I want to pay tribute to a man who did a monumental job, Ambassador Wadsworth, who served us so well at Geneva and later as a delegate to the United Nations. Ambassador Wadsworth has only recently responded, in a letter to the editor, to certain criticisms leveled against a proposed nuclear test-ban treaty.

I think he is a great statesman and has dedicated a life of experience to the cause of a just and enforcible peace.

Mr. DOMINICK. I thank the Senator.

Mr. CLARK. I share the views of the Senator from Minnesota with regard to President Eisenhower relating to a test ban. I think he was right. I had occasion to state yesterday on the floor of the Senate how much more right Ambassador Wadsworth was on the subject of disarmament than my friend, David Lilienthal, who has gone overboard in this area.

To answer specifically the question of the Senator from Colorado, I should like to read and quote from the statement of the scientists which I placed in the RECORD:

> The Soviets surprised us by starting big atmospheric tests in 1961 when we thought at that time they would continue negotiations for a test-ban treaty. The opponents of a present treaty now claim that this means the Soviets broke a test-ban agreement in 1961. On this basis they warn against entering another agreement.

This is the key sentence:

> It is too often forgotten that there was no test-ban agreement (much less a treaty) in 1961; and that President Eisenhower on December 29, 1959, terminated the 1-year informal moratorium by announcing, "The voluntary moratorium on testing will expire on December 31."

It is true, as the Senator from Colorado has said, he also announced we did not for the time being intend to test further, but there was no binding commitment on the Soviet Union, and none on us. But they started it.

Mr. DOMINICK. Did we not also say, when we announced that we are not going to do any testing, that we were getting ready to do so?

Mr. CLARK. Yes, we did.

Mr. DOMINICK. I thank the Senator.

RULES, CUSTOMS, AND MANNERS OF THE SENATE

Mr. CLARK. Mr. President, I turn to another subject, that of the rules, customs, and manners of the Senate. I point out that the last four or five speeches on the floor of the Senate, starting with the interesting talk of the Senator from Tennessee [Mr. KEFAUVER] about the drug industry, and concluding with my present talk, have been nonpertinent and nongermane to the pending business before the Senate, which is the Youth Employment Act.

I again deplore, for the record, the fact that we have no rule of germaneness and therefore for the last hour we have been discussing matters which in essence have slowed down the pending and important business of the Senate.

I myself have participated in this. I make no apology for it. I do point out that we do need, right now, not next year or the year after, the limited rule of germaneness of the nature proposed by the senior Senator from Rhode Island [Mr. PASTORE] so we can go ahead with the business of the Senate.

AUTHORIZATION FOR CERTAIN STAFF MEMBERS TO BE PRESENT ON THE FLOOR

Mr. CLARK. Mr. President, I ask unanimous consent that the ranking Republican member of the Subcommittee on Employment and Manpower [Mr. PROUTY] may be entitled to have on the floor during the consideration of S. 1 such members of his staff as he may select to accompany him to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CLARK. I ask unanimous consent that the full staff of the Committee on Labor and Public Welfare may be on the floor during the debate on S. 1.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT TO 10 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. CLARK. I am happy to yield to the majority leader.

Mr. MANSFIELD. I ask unanimous consent that when the Senate adjourns tonight, it adjourn to meet at 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, will the Senator from Pennsylvania yield?

Mr. CLARK. I am happy to yield to the Senator from Illinois.

Mr. DIRKSEN. I should like to ask the majority leader whether or not he anticipates completing action on this bill tomorrow.

Mr. MANSFIELD. I wish it were possible.

Mr. CLARK. Could we say it is our pious hope?

Mr. MANSFIELD. As the Scotchman says, "I hae my doots," but we do intend to come into session early and stay late. I hope it is possible this week to finish action on the youth employment bill and the military procurement bill.

I had hoped we could bring up the water resources bill, but because one of our colleagues is away because of a death, that bill will not be taken up.

I had understood that the northwest power preference measure was ready to be reported, but it has not been reported.

To repeat, I hope we will be able to take up and finish the consideration of the youth employment bill and the military procurement bill. If we do not finish it this week, then I think after adjournment on Thursday we can anticipate starting in on it Monday morning next.

Mr. DIRKSEN. But if, on the other hand, action on those two measures is completed, the other measures and the confirmations of nominations for the satellite corporation could well go over until after the Easter recess?

Mr. MANSFIELD. If that happens, they will go over.

Mr. CLARK. The Senator does not mean the youth employment bill will go over?

Mr. MANSFIELD. No; if the youth employment bill and the military procurement bill are disposed of one way or the other.

Mr. PROUTY. Mr. President, I would like to assure the majority leader that if the Senate feels inclined to accept an amendment which I shall offer later on, we can dispose of the bill very rapidly.

Mr. MANSFIELD. In the same spirit the Senator from Vermont is speaking, would he be willing to consider a limitation of time at this time?

Mr. PROUTY. Definitely not, because I think a great deal of educational work is necessary, because much information in respect to this bill is misleading, and the Senate needs to be informed, as well as the public at large.

Mr. MANSFIELD. I made the proposal in the same spirit of cooperation in which the Senator from Vermont made his proposal. I thought we could approach the objective from different directions.

Mr. HUMPHREY. I wonder if the majority leader will be willing to conduct night school, if we need education?

Mr. MANSFIELD. Up to a certain time.

Mr. CLARK. I suggest vocational education.

Mr. PROUTY. If I may suggest, I hope I will not be compelled to speak to 90 empty seats. I think that would be unfortunate.

Mr. MANSFIELD. When the Senator from Vermont gets the floor, I shall be glad to have a quorum call, because I think he is entitled to a respectable audience.

Mr. DIRKSEN. Is it the intention of the majority leader to set this bill aside for the military procurement bill which will be on the calendar tomorrow?

Mr. MANSFIELD. As of the moment, it is not the intention of the majority leader to do so, but if something comes up which indicates that not too much time will be taken with the military procurement bill, that suggestion will be given consideration after consultation with the distinguished Senator from Pennsylvania and the distinguished Senator from Minnesota about it.

YOUTH CONSERVATION CORPS

The Senate resumed the consideration of the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs.

Mr. CLARK. Mr. President, the pending measure is S. 1, the youth employment measure, whose title is "A bill to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs."

This bill, S. 1, was introduced by the able Senator from Minnesota [Mr. HUMPHREY], for himself and a great number of other Senators. Extensive hearings were held on the bill before the Subcommittee on Employment and Manpower of the Senate Committee on Labor and Public Welfare, of which subcommittee I have the honor to be chairman.

In all, 61 witnesses were heard; 59 of the witnesses supported the bill and 1, representing the National Association of Manufacturers, opposed it. The bill is an administration measure. If Senators will refer to appendix B of the hearings, which appears at page 719, they will note the message of the President of the United States on "Our Nation's Youth," which was sent to the Senate on February 14 of this year, and in which he endorsed the principles of S. 1. They will also note excerpts from the budget message of the President, in which he made favorable references to the bill. They will note also a letter from Philip S. Hughes, Assistant Director for Legislative Reference of the Executive Office of the President, Bureau of the Budget, in which he states that S. 1 is in accord with the program of the President. They will also note letters from Secretary of the Interior, Stewart Udall, the Secretary of Health, Education, and Welfare. Anthony J. Celebrezze, regarding the bill. Also, there was a rather unusual hearing, at which five Cabinet officers appeared as a panel to support the legislation. They were the Attorney General, the Secretary of Labor, the Secretary of Health, Education, and Welfare, the Secretary of Agriculture, and the Secretary of the Interior.

In my opinion, they made a strong case for this measure, which I hope the Senate will shortly pass.

The purpose of the bill is to provide useful work experiences for unemployed youths so that their employability may be increased. In providing these opportunities, the bill requires that youths enrolled in the program work on projects important to their Nation, State, or community.

The bill contains two titles.

Title I creates a Federal Youth Conservation Corps.

Title II establishes a State and community youth employment program.

The programs authorized under the bill will be administered by the Secretary of Labor in consultation with appropriate Federal agencies, State, and local representatives, and authorities in the fields of youth education and training and conservation.

Legislation similar in intent has been before Congress for more than 4 years. S. 812, introduced in the 86th Congress by Senator HUMPHREY and 20 other Senators, passed the Senate in 1959. Similar to title I of S. 1, this program was not acted upon by the House of Representatives.

A similar, though larger and broader bill, also introduced by the Senator from Minnesota [Mr. HUMPHREY], with a number of cosponsors, was reported favorably by the committee and the subcommittee in the 87th Congress, but was not acted upon by the Senate.

I shall now briefly state the provisions of the two titles of the bill.

Title I provides for a Youth Conservation Corps, whose members are to be enrolled across the country, to work on Federal lands, largely national forests and national park lands, under the jurisdiction of the Departments of Agriculture and Interior.

The members of the Corps would engage in conservation projects to improve natural resources in outdoor recreational facilities. Its work would be similar to the Civilian Conservation Corps, one of the most successful Federal programs of the 1930's.

The camps and the work to be performed by the boys who would live away from home would be under the supervision of the appropriate conservation agency.

The work program in the camps would be complemented by educational and vocational training. During the first year of its operation, the enrollment in the corps would be limited to 15,000 young men between the ages of 16 and 21. The program is a 5-year program, and after the first year the number of enrollees would be governed by the amount of the appropriations which Congress allowed. The sum of $60 million is authorized by the bill for the first year of the Corps. Thereafter, Congress would have to decide from year to year what appropriations would be needed.

I turn now to title II of the bill, known as the State and community youth employment program. This program would include the establishment by the States, if they so desire, of conservation camps similar to those under title I, but on State lands and local and community lands, to improve the natural resources or recreational facilities.

In addition, work opportunities in improving educational, recreational, or other community assets; the elimination of blight, or assisting in hospitals, libraries, playgrounds, and welfare activities may be provided under the direction of the States or local communities.

Enrollees under this title may live either in State conservation camps away from home or may live at home. As under title I, educational and vocational training will have an integral role in the training experience. Evaluation, testing, counseling, and guidance will also be provided.

This title would also, generally, be administered by the Secretary of Labor, but immediate supervision and control would be in the hands of the relevant State and community agencies.

During the first year of operation, title II programs will be limited to 60,000 full-time enrollees. During the remaining 4 years of the program enrollment will be in accord with funds appropriated by Congress.

The bill authorizes $60 million for the first year and for the 4 remaining years leaves it to Congress to determine the level of appropriations.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. CLARK. Yes; although I would prefer to finish my statement on the bill before we get into an extended colloquy.

Mr. PROUTY. Does not that, in effect, mean that we are acting on a 1-year program? We have no idea or knowledge of what Congress will do next year or in succeeding years.

Mr. CLARK. I would answer the Senator's question in this way. It is the hope of those of us who support the measure that the program will be so successful in its first year that Congress will see fit to substantially expand it in a few years. We may, however, be disappointed in that expectation, and Congress, accordingly, will have the opportunity, through the appropriations process, to curtail or even to eliminate the program if it sees fit to do so. The point of the matter is that we want to go through now with an authorization for a 5-year program.

Having established the principle that Congress supports the President in the program, we can then leave it to the appropriating process of future Congresses as to whether they wish to extend, curtail, or eliminate the program. However, the authorization will be in effect for 5 years, and it will not be necessary, if the bill is passed by the Senate and the House, to come back at the end of the first year and start with a new bill all over again.

I think that is responsive to the Senator's question.

Under title II, the participating States or communities are required to share a part of the costs in accordance with a formula similar to that adopted by Congress for the Accelerated Public Works Act of 1962. That Act provides that costs shall be shared half by the Federal Government and half by the State or community, except in cases of severe financial hardship, in which, in the judgment of the Secretary of Labor, a lower cost-sharing ratio may be required to enable the State or community to participate. In no case, however, may the State or local share be less than 25 percent. State or local contributions may be made in kind as well as in cash.

I emphasize at this point that we who support the proposed legislation are most hopeful that many local communities and counties—indeed, metropolitan areas—will collaborate in asking for and receiving projects under title II, for which they, not their States, would put up the required amount of matching funds.

In my own city of Philadelphia, in Fairmount Park, we have had for a number of years work projects clearing trails and bridle paths, and the like; and the elimination of storm damage. This has given useful employment to a number of our school dropouts. There are many other projects of a similar nature across the country. I mention this one only because I am familiar with it.

In committee, the bill was significantly rewritten to bring it into its present form. Senators will note that the original text has been stricken and that the new text, in italic, commences on page 24 of the bill. This rewriting was the result of consideration by the subcommittee and, to a lesser extent, by the full committee, of the testimony of the 60 witnesses, and also by very stimulating discussion in executive session.

I shall now refer to the need for the bill. In his Manpower Report, transmitted to Congress in March 1963, the President declared persistent unemployment to be the major domestic challenge confronting the Nation today. Youths aged 16 to 21 account for a disproportionately large number of those without work—15.6 percent; whereas Senators will recall, the percentage of unemployment in the labor force across the country as a whole has dropped again, I am happy to say, below 6 percent. This high ratio of unemployment among youth is traditional when there is a sluggish market for labor; but these difficulties are further aggravated by the failure of many young people to finish high school.

As the President points out, there is less and less demand for unskilled and uneducated labor. Workers must have a fundamental education and some kind of work discipline if they are to hold jobs.

It is often said that there will be few places in the future of our country for those with strong backs and weak minds. Of course, this is generally true with respect to members of the labor force, who in the traditional American way, will desire to move up the ladder of business or profession, or of any other kind of occupation, to success. Yet it would be foolish not to recognize that there will always be in the world in general, and in the United States in particular, much useful work which individuals who do not have a high school degree will be able to do, and will be called upon to perform. It is hoped by the sponsors of the bill that that kind of work experience, that kind of training, for the less technical jobs, or jobs which do not need some higher level of education, will be provided for a number of our younger people by this measure.

At present, every year between 750,000 and 800,000 young people are dropping out of high school without finishing. The figure for vocational schools is still higher. Whereas in the conventional high schools the dropout rate is from 3 to 4 out of every 10 students, in the vocational schools the number of dropouts is 2 out of every 3.

I do not wish to be an alarmist about this situation, because there is pretty good evidence to the effect that the school dropout rate is no higher now than it has been over the course of the years—certainly over the course of the past 40 or 45 years. But it was alarming then, and it is alarming now. It becomes all the more important now as our population increases and we face the rather frightening fact that more than 1 million more young people will be joining the labor force next year than joined it last year. Where in the world will those young people—far too many of them school dropouts—find useful employment?

Note, for example, that approximately 350,000 young people over the age of 16 dropped out of high school between January and October of 1961. Of the school dropouts in that year, 27 percent were unemployed that fall, whereas the percentage of unemployment of high school graduates was 18 percent—far too high, to be sure, but substantially less than the number who had dropped out.

One of the things which concerns the administration, and concerns the committee, about this problem may be described by an old cliche, which is certainly true, to the effect that idle hands and idle minds turn to mischief, delinquency, and crime, and become a burden to the productive members of society.

Mr. President, one of the purposes of the bill is to provide a new setting in which these school dropouts may be taught work discipline and may be given a new motivation to strive to better themselves. At a time when machines are replacing more and more human labor and when opportunities for employment in agriculture and in manufacturing are in steady decline, the Nation faces an enormously great educational challenge in order to prepare young workers for gainful employment.

However, I hasten to add that the pending bill is certainly not the whole answer to the problem I have been discussing. Vocational education and its improvement are of great importance. Manpower retraining is highly important. The provisions, under the Area Redevelopment Act, for bringing new industries into areas of chronic and persistent unemployment will inevitably have a salutary effect on the employment of our younger people. Of course the most important factor of all would be stimulation and revival of the entire economy, which those of us on this side of the aisle hope will be provided by the President's tax bill. It is clear that private industry—not the Government—will have to pick up a large part of the load in helping American citizens—young, middle aged, and old, alike—who are in desperate need of gainful employment.

Yet, Mr. President, if this bill is enacted into law, it will have a substantial impact. I repeat that no one has suggested that this program provides in any sense the ultimate solution of all the problems involved in providing jobs for the new entrants into the labor force whom we can expect each year in the coming decade. This bill is only a start.

I should point out that among the witnesses who, in testifying before the committee, supported the proposed legislation were representatives of governmental agencies, representing at least 22 States, counties, and cities; also representatives of the National Association of Counties, the American Municipal Association, the Association of State Foresters, the American Legion, the Veterans of Foreign Wars, the AFL-CIO, educational institutions of all varieties, and a number of religious institutions. All the conservation groups and most of the youth and welfare organizations also urged the passage of the bill.

The representative of the National Association of Manufacturers was the only witness in opposition, although statements in opposition were filed by the American Farm Bureau Federation and the National Chamber of Commerce.

Mr. President, I think I can say without fear of contradiction that the overwhelming preponderance of the testimony was in support of this measure, and that those who opposed it were not representatives of organizations which have any real competence to speak in the field of youth training, employment, and youth education.

I turn now to the conservation tasks undone, on Federal land which can be benefited by title I of the bill; and on State and local land by title II. This is work which will not be done under the regular conservation programs of the States and the Nation. This bill matches idle young hands with these important tasks.

Senators who will turn to page 6 of the report will note the startling figures on the millions of acres of the national forests, the extraordinarily widespread number of national parks and national monuments, and the large areas of the State and local conservation lands on which work under the bill could be authorized and could be done.

Speaking only about the Nation's potential on Federal lands, let me say there is a sufficient backlog of conservation work to provide 900,000 man-years of work. This work will not be done by regular appropriations. Congress will never provide the funds necessary to be provided in order to do all this work; and the President's budget will not support it. So—as was the case in the days of the Civilian Conservation Corps—this bill comes in to help our conservation programs—local, State, and National—all across the board.

Mr. President, let me say a few words about what can be done under title II. State recreation facilities and forest lands are deteriorating for lack of hands on the State and local payrolls to do the work. Help is needed in the cities' playgrounds, libraries, and hospitals, and to clean up blight. There is ample precedent at both the State level and the local level for such a youth employment program—as Senators will see if they turn to page 7 of the committee report.

Now let me say a few words about the kind of training which it is hoped the program will provide the enrollees. I shall state some of the occupations in which an enrollee under either the title I program or the title II program can expect to obtain some competence. I do not say we can expect them to come out highly trained and highly skilled; but they will be subjected to training in these kinds of occupations and skills; and one can hope they will be employable at least at the apprentice level when they finish the training under the program. Although the official program contemplates enrollment for 6 months, there are provisions for reenrollment for not to exceed 2 years.

The following are some of the skills in which training can be given: auto mechanic trainee, electrician's helper, traffic device maintenance trainee, traffic checker, mimeograph machine operator, multilith offset operator, photocopy machine operator, calculating and adding machines operator, telephone operator, secretarial, filing and general clerical worker, stockroom and office supplies checker, removal and planting of forest, town, roadside and park trees, construction of retaining walls, rehabilitation of picnic areas, block paving, typewriter repairman, addressograph machine operator, accounts and audits assistant, mechanic's assistant, and work in the food trades.

Then the committee report states in some detail the physical and educational benefits which the bill will provide; and in the report reference is made to the splendid work done for the youth of the country in the old Civilian Conservation Corps during the 1930's. I call attention to page 8 of the report, where Senators will find a very concise statement of the benefits the country received, both in terms of youth training and in terms of useful conservation work, by means of the old Civilian Conservation Corps program.

Mr. PROXMIRE. Mr. President, will the Senator from Pennsylvania yield?

The PRESIDING OFFICER (Mr. INOUYE in the chair). Does the Senator from Pennsylvania yield to the Senator from Wisconsin?

Mr. CLARK. I yield.

Mr. PROXMIRE. I wish to ask the Senator from Pennsylvania whether it is true that many economic studies have shown that one of the principal reasons for unemployment is the lack of skills on the part of our young people.

Mr. CLARK. That is correct.

Mr. PROXMIRE. Is it not also true that the heaviest concentrations of unemployment are among these three categories: first, young people; second, unskilled workers; and, third, minority groups?

Mr. CLARK. That is correct. In the young people category I would lay special stress on the school dropouts.

Mr. PROXMIRE. Yes. So the bill strikes directly at the heart of what liberals as well as conservatives have recognized is the principal reason why people have not been able to find work?

Mr. CLARK. That is correct.

Mr. PROXMIRE. Is it not also true that one of the best ways in which contributions can be made at all levels to the economic strength and the economic growth of the country is to provide training, so that those who are trained can make definite and important economic contributions?

Mr. CLARK. That is correct.

That is the opinion of a majority of the committee, which I share.

(At this point Mr. KENNEDY took the chair as Presiding Officer.)

Mr. PROXMIRE. That particular section of the bill is extremely important. Frankly, I have heard those who oppose the bill contend that the bill does not provide adequate training of the kind that would be necessary after the participants leave the Civilian Conservation Corps and return to the cities. Having had a few years of work in conservation, they would not be trained for the kind of work which they would have to do if they wanted to continue to live in an urban environment. What is the Senator's answer to that charge?

Mr. CLARK. The testimony, buttressed by the experience under the CCC back in the 1930's, pretty clearly established that we would receive at least three major benefits from work under both title I and title II. In the first place, particularly in the work under title I, and in that part of the work under title II in which boys would live in a camp in the woods, we would observe extraordinarily enhanced physical buildup. The evidence is clear that young people who are too fat would come back lean. Those who are too lean would come back having put on needed weight. They would have an opportunity to have dental work done and to have a physical examination. The physical buildup of such young people, as revealed both in the experience under the CCC program and the testimony of witnesses in support of the bill, has been amply demonstrated.

The second benefit which we hope the program will bring will be an understanding of work discipline, of the need to maintain regular hours, of the need not only for health, but for adequate sanitation, the need to obey superiors and to work as part of a team which is trying to do useful work. We believe that to be very important indeed.

The third benefit would be educational—both vocational and technical. The educational process we believe will be a substantial part of the benefits under the bill.

Mr. PROXMIRE. Is it true that there would be an opportunity in each State and locality to try to do what I understand has been done in Milwaukee with great success, namely to tailor the kind of training the men would receive to the kind of jobs in which skilled operators are needed, and in which the training could be useful, so that the men would have a much better opportunity—a direct, practical, well developed, and explored opportunity—to find work after they have finished a period of training in the Conservation Corps?

Mr. CLARK. That is the intention of a majority of the committee. It is the expressed intention of the Secretary of Labor. We have been unwilling to write into the bill what we call a straitjacket amendment, which would require that a skill could not be taught unless it could be established that there was at that time a need for that kind of skill, either in the specific area from which the enrollee comes or where the work is being done. But education is certainly a part of the program, and it is fully intended that it should be followed out.

Mr. PROXMIRE. One further question. Is it not true that while the conservation aspects of the bill are very important and constructive, the essence of the bill is to provide the kind of human conservation and human training which are essential if young people are to have an economic opportunity in life, and if they are to make the kind of contribution that American citizens would like to make to their locality, their State, and their Nation.

Mr. CLARK. The Senator is correct.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. CLARK. Having yielded to my friend the Senator from Wisconsin, I am happy to yield to my friend from Vermont. I shall not require more than 5 or 10 minutes to complete my statement.

Mr. PROUTY. I merely wish to comment on a statement made by the distinguished Senator from Wisconsin. Milwaukee is to be congratulated on its vocational educational training program. It is my understanding that it has one of the lowest high school dropout rates in the country. I believe it is 5 percent or less. Milwaukee has spent a great deal of money to modernize the entire approach to vocational education. To my mind, that is the answer to the problem with which we are now confronted, rather than sending a boy out in the woods for 6 months, where, based upon the testimony of witnesses, he will acquire no skill and will return to find himself at the same place he was when he started. I congratulate Milwaukee. I hope other cities in the country will follow the example of that city.

Mr. CLARK. Mr. President, I should like briefly to refer to some of the other points in the bill which should be before the Senate when it acts. The standards of selection provided by the bill are purposely flexible so as to permit the Director to distinguish between good and bad risks. That is a problem with which the subcommittee and the committee wrestled at some length. It is a difficult task indeed to provide an adequate definition as to what kind of boys should go into a conservation corps and what kind of girls and boys should be offered employment under title II of the program.

Since I may not have mentioned it before, title I is intended entirely for the benefit of young men and boys. Title II is intended for both girls and boys, except in the State camps, where only boys will be accepted. But in the community projects under title II, young women will also be accepted. The age limits are from 16 to 21 inclusive.

Returning to the standards of selection, the present occupant of the chair, the Senator from Massachusetts [Mr. Kennedy], is responsible for the provisions in the bill under which the Director would be given substantial flexibility to distinguish between good and bad risks. However, the committee is very clear that a delinquency record would not automatically exclude a boy who had demonstrated that he had the willingness and the capacity to become a productive member of the program.

However, it would exclude one whose behavior, in the light of his record, suggests that he might be a disruptive element in the corps, or that he might not benefit from the kind of program proposed. It is anticipated that prospective enrollees will be screened in centers by the administrative force authorized under the bill in order to separate those who would make good risks for the program and whose performance would be in accordance with the purposes of the bill from those who would be disruptive influences, and therefore would not only fail to benefit by the bill, but also might be a detriment to the other members and to the whole program.

Senators should know that the enrollment opportunities are allocated among the States on the basis of population and need. A short time ago I referred briefly to that point. But it is intended that the proposed flexible formula will give the Secretary of Labor sufficient latitude to relate enrollment opportunities to youth unemployment as it exists within each State, in accordance with comparative need. Thus, the formula anticipates that allocations will be made fairly among both urban and rural areas, that adequate numbers of members of Indian tribes, where serious unemployment is at present the rule of the day, will be enrolled, and that States with small populations, which will be assigned smaller quotas, will be able in most cases to derive substantial benefit from the conservation work which will be carried on within their borders.

The compensation of enrollees will be $60 a month, but will include food, shelter, transportation, equipment, clothing, medical, dental, hospital and other health services, and recreational services.

As noted before, a substantial number of hours will be devoted to educational and vocational training.

The kinds of work which the members of the Corps could perform under title I and under the State and local camps called for by title II would include the prepartion and cleaning up of camps, picnic grounds, trails, boundary marking, forests, croplands, timber management, small bridge building and maintenance, fencing, range seeding, brush control, water management, plant control, weed eradication, building and levee maintenance, dam repairs, gully control, tree planting, seeding and sodding, historical and archeological projects and biological work on grasslands.

These are some of the areas in which useful employment can be provided, according to the witnesses who appeared before the committee.

The work classifications to which these young men would be subjected—they would have an opportunity at least to gain a primary skill, though not more than the skill of an apprentice, however—would involve instruction in and operation of construction equipment, both hand and power, electrical wiring, masonry, plumbing, carpentry, truck-driving, automotive repairing, metalworking, photography, conservation and engineering, surveying, mapping, cooking, and clerical tasks.

It is important to note that the Director will not assign enrollees of the Corps to direct construction work where historically such work is normally performed by skilled mechanics and laborers employed by construction contractors under contract with the conservation agencies.

The bill is not intended to replace regularly employed workers with cheap labor furnished by enrollees of the camps.

I shall say a word about the treatment of the school dropouts, who will, in all likelihood, comprise a very substantial percentage of the number of enrollees. These dropouts will be encouraged to go back to school at the end of their 6 months' tour of duty. High school graduates will be encouraged to continue their education. It is not intended that this program should siphon off young people who are presently in high school. Every effort will be made to discourage anyone from dropping out of school in order to enroll in a camp.

It should be pointed out also that this is to be a voluntary program. No one is to be drafted into it. I say again that the Director must take every step possible to encourage applicants to stay in school and complete their education; or, if they have dropped out, to return to school if that is at all possible.

I should now like to say a word about costs, which is one of the major differences between my friend from Vermont [Mr. Prouty] and the majority of the committee.

Secretary of Labor Wirtz testified during the hearings that the cost of the title I program would approximate $4,000 per enrollee; that is to say, $3,985. This figure is based upon amortizing fixed investments over their useful lives, and writing off annual costs each year.

Interested Senators will find the details of Secretary Wirtz' cost figures on page 12 of the report. I shall not detain the Senate at this time by a detailed discussion of those costs, but I merely say that in my judgement the Secretary of Labor made an excellent case for his figures.

In connection with the cost figures I should like to comment again, as I have in other connections during the past few weeks, on the comparatively low cost of this program. We are asking at this time for appropriations to be authorized of $60 million under title I and $60 million under title II, a total of $120 million.

Let it be noted that the cost of the defense program between the time I now speak at 25 minutes after 4 o'clock in the afternoon and 8 o'clock tomorrow morning will be more than the total cost of both titles of this program for the first whole year under the terms of the bill. We are presently spending $1 billion a week for defense. Can we not spend one-tenth of what we spend each week for defense to give to these school dropouts and to other youths an opportunity for 1 year to rehabilitate themselves, to build up their bodies and minds, to give them useful work experience, and to return them to their communities with some hope that they can find gainful employment?

The Federal share of the program cost is to be, of course, 100 percent under title I, but under title II the formula, as I said earlier, is modeled after that contained in section 2(c) of the Public Works Acceleration Act of 1962, as interpreted by the Area Redevelopment Administration. I think I said enough about that formula earlier this afternoon so as to make it unnecessary to deal with this matter in greater detail now.

I should point out that the bill calls for a National Advisory Council of Citizens on Youth Employment Programs consisting of 10 members, including the Secretary of Labor or his designee, who shall be Chairman. Members of the Council are to be representatives from the fields of youth employment, youth welfare, labor, local or county government, management, education, training, and conservation. The Council shall also include, whenever appropriate, representatives of the Secretaries of the various Federal departments who have an interest in the program, the names of whom I indicated earlier.

The Advisory Council is modeled on those which have been used with great success on other subjects in the Department of Health, Education, and Welfare.

Mr. President, I ask unanimous consent that the section-by-section analysis of the bill, which begins near the top of page 16 of the report and runs to the middle of page 20, may be printed in full at this point in my remarks.

There being no objection, the analysis was ordered to be printed in the Record, as follows:

SECTION-BY-SECTION ANALYSIS

TITLE I. YOUTH CONSERVATION CORPS

Section 101: Title I may be cited as the "Youth Conservation Corps."

Section 102: This provision describes the objectives of the title I program: To provide on-the-job training for young unemployed men aged 16 to 21 together with supplemental training and education programs adapted to their special needs in order to increase their chances for permanent employment. The section would put these young men to work conserving our natural resources.

Section 103: A Youth Conservation Corps will be established in the Department of Labor to be administered by a Director of the Corps, appointed by the President, by and with the advice of the Senate. The Director shall perform such functions as may be prescribed by the Secretary of Labor.

Section 104: This section describes the general authority of the Secretary of Labor to carry out his responsibilities under this title. His authority includes (1) the establishment of adequate standards of safety, health, and conduct for YCC enrollees and to provide, through agreement with the Secretary of Health, Education, and Welfare, for medical, dental, hospital, and other health services; (2) the execution of agreements with the participating agencies of the Federal Government responsible for the conservation, development, and management of the natural resources of the Nation and of the Nation's recreation areas under whose supervision the enrollees will work; (3) the utilization of the services and facilities of Federal agencies and with the consent of any State, of the services and facilities of the agencies of the State, or a county, or municipal subdivision; and of (4) the development of a system of training and educational services for enrollees in the Corps coordinated with their regular on-the-job training program, under such agreements as the Secretary of Health, Education, and Welfare may execute with State and local educational authorities; (5) the expenditures of such amounts as may be necessary for the purchase of supplies, materials, and equipment to be used in the work of the Corps; (6) the promulgation of such rules and regulations as may be necessary to carry out the provisions of the title; (7) the delegation of any of the Secretary's functions to the Director of the YCC.

Section 105: An Interdepartmental Committee on the YCC is established by this section. It is composed of the Secretary of Labor, or his designee, and representatives from the Departments of Health, Education, and Welfare; Agriculture; and Interior. The Committee is directed to consult and advise with the Secretary with respect to all phases of the operation of the Corps.

Section 106: A provision is made for the creation of a National Advisory Council on the YCC consisting of 15 members representing the fields of conservation, agriculture, education, training, youth employment, labor, management, and the public in general.

Section 107: Subsection (a) provides that the Corps will be composed of male individuals who are permanent residents of the United States, who are not younger than 16 or not older than 21 at the time of enrollment and whose participation in the Corps will be consistent with the purposes of the title. Participation in the Corps will not be grounds for deferment under the Selective Service Act. It specifies that the number of enrollees within the Corps shall not exceed 15,000 during the first fiscal year of its operation and during the next 4 fiscal years shall be maintained in such numbers as permitted by the appropriations made therefor by the Congress.

Subsection (b) requires the enrollee to abide by the rules and regulations of the Corps.

Subsection (c) provides a period of enrollment of not less than 6 months with reenrollment for such additional periods not in excess of 2 years.

Subsection (d) provides the basis of apportioning enrollment quotas among the several States. Fifty percent of the allocation will be made on the basis of the comparative populations within the male 16 to 21 age group covered by the bill. The remaining 50 percent will be distributed among the States by the Secretary based upon the State's share of national unemployment there is provision for a compensating allocation to those States which will not have Federal conservation camps.

Section 108: Under subsection (a)(1) the compensation of enrollees is specified at $60 per month with $5 additional for such subsequent enrollment. An additional $10 per month is provided for assigned leadership responsibility or special skills.

Subsection (a)(2) will enable the enrollee to make allotments to parents or dependents.

Subsection (b) provides for food, shelter, transportation, and other assistance, including education, medical, and hospital services for enrollees as well as applicants for enrollment. Applicants for enrollment will receive a subsistence allowance during preenrollment and screening stages.

Subsection (c) provides an income tax exemption for the subsistence items described above.

Section 109: Subsection (a) provides that the Federal laws relating to Federal employees governing working hours or work rates or compensation, leave, unemployment, and other employee benefits will not apply to the enrollees under this title except as specifically authorized.

Subsections (b), (c), and (d) sets a figure of $150 per month for computing wages within the meaning of the Social Security Act and the Internal Revenue Code and contains appropriate amendments to those laws.

Subsection (e) extends the benefits under the Federal Employees Compensation Act to enrollees in the Corps, specifying $150 per month as the basis for compensation benefits for disability and death with the high rate described in the entrance salaries for a GS–2 grade under the 1949 classification act in the case of permanent disability.

Section 110: Subsection (a) authorizes an appropriation of $60 million for the first fiscal year beginning July 1, 1963, and authorizes such amounts as the Congress may deem to be necessary to carry out the provisions of the title during each of the 4 succeeding fiscal years and after.

Subsection (b) provides for the transfer of appropriate funds between Federal agencies for the purposes covered by the title.

Section 111: The Secretary of Labor is directed to submit two annual reports on the activities of the Corps to the President for transmittal to Congress, together with such recommendations as he may deem to be desirable.

TITLE II. STATE AND COMMUNITY YOUTH EMPLOYMENT PROGRAM

Section 201: This title may be cited as the "State and Community Youth Employment Act."

Section 202: The purpose of title II, like title I, is to relate useful and meaningful jobs which can and should be undertaken in the public interest with the need for unemployed youths within the 16 to 21 age group to obtain useful work experience. The objective of the program, as in the case of the first title, is to enable these young men and women to develop sufficient work discipline and experience to enable them to obtain regular employment.

Section 203: The Secretary of Labor is directed to assist and coordinate with agencies of the States, county, and local governments, including Indian tribes, as well as the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and American Samoa, in the development of employment programs for young men and women within the 16 to 21 age group. The programs will combine on-the-job training with vocational training and education provided by local educational authorities. Included among the programs contemplated by this title are those in conservation and the development and management of natural resources and recreational areas.

Section 204: Employment programs developed by the State and communities under this title are submitted to the Secretary of Labor for approval as federally assisted projects. The Secretary will approve these programs if he finds that (1) the enrollees will be employed on publicly owned and operated facilities or projects, including Indian lands or in local projects, sponsored by private nonprofit agencies approved by the appropriate State agency; (2) the program will increase the employability of the enrollees or will enable student enrollees to resume or maintain school attendance; (3) the program will contribute to a project or service in the public interest which will not otherwise be available or will contribute to State or community programs in the field of conservation and recreation; (4) the program will not result in the displacement of employed workers; (5) the rates of pay or other conditions of employment are consistent with the rates and conditions in the area; (6) the program will be coordinated with vocational training and educational services adopted to the special needs of the enrollees with further provision for development and improvement of such services in any case where they are insufficient; and (7) the program includes standards and procedures for the selection of applicants and will be fully coordinated with local activities to encourage students to maintain or resume school attendance.

Section (b) directs the Secretary to give priority to projects with high training potential. These would include those programs which are fully coordinated with vocational training and educational services sponsored by State and local educational authorities and adapted to the special needs of enrollees within the training program.

Section 205: Young men and women who are permanent residents of the United States, who are within the 16 to 21 age group, and whose participation in the employment program will be consistent with the aims and objectives of the title are eligible for enrollment under subsection (a).

Subsection (b) provides that enrollees shall not be subject to the provisions of Federal law relating to Federal employment.

Subsection (c) provides that the number of enrollees during the first fiscal year ending June 30, 1964, shall not exceed the equivalent of 60,000 full-time enrollees and shall not exceed such numbers during the 4 fiscal years thereafter as may be maintained within congressional appropriations.

Subsection (d) directs the Secretary of Labor to provide for testing, counseling, job development, and job referral services through either governmental or private nonprofit agencies to young men and women enrolled within the program.

Section 206: Subsection (a) provides that whenever the Secretary determines that an employment program conforms to all of the standards of the title and is appropriate for Federal assistance, he may enter into agreements with the sponsoring agencies in which the Federal Government will bear a share of all costs of the program, including administration on the basis of a flexible formula. The Federal share will range from 50 to 75 percent in such proportion as may be determined by the Secretary upon the basis of all relevant factors including rates and duration of unemployment and underemployment in the area covered by the program and the income levels of families within such areas. The share to be borne by the State or the political subdivision or the agency sponsoring the plan may be paid in cash or in kind fairly evaluated, including but not limited to plant equipment and services.

Subsection (b) directs the Secretary to apportion the funds under this title among the

States upon the basis of population and need. Fifty percent of such funds will be apportioned among the States on the basis of population ratios within the 16 to 21 age group covered by this title. The remaining 50 percent will be allocated by the Secretary to the States and to areas within based on the share of each State of the national unemployment.

Section 207: Subsection (a) provides the Secretary with authority to carry out his responsibilities under the title. He may delegate whatever powers may be appropriate to the heads of other Federal agencies to carry out the purposes of the title. He may use the services and facilities of Federal agencies or, with the consent of the State, of the agencies of a State or subdivision thereof. He is authorized to establish State and local advisory committees, to make such contracts and agreements as may be necessary, to execute his responsibilities, to take such steps as may be necessary to encourage the enrollees to participate in a systematic program of training and education, coordinate with State and local education authorities regarding on-the-job training programs and to prescribe rules and regulations.

Subsection (b) contains the usual provisions with respect to protection of the United States against loss.

Section 208: Subsection (a) establishes a National Advisory Council on State and Community Youth Employment Programs. Membership in the Council will consist of the Secretary of Labor or his designee and nine members including representatives from the fields of youth employment, conservation, agriculture, education, training, labor, management, and urban development. The Council shall also include, wherever appropriate, the Secretary of HEW, Agriculture, and Interior, as well as the Attorney General, Administrator of the Housing and Home Finance Agency, and other agency heads who may have an interest in the administration of the program.

Subsection (b) provides that the Council, upon request of the Secretary, shall review the operations under this title and shall make recommendations with respect to the administration of the act. It may also make recommendations to the Secretary on projects referred to it by him.

Subsection (c) fixes the compensation of council members.

Section 209: Directs the Secretary to seek the advice and assistance of the Secretaries of the Departments of HEW, Agriculture, and Interior, of the Attorney General, the Administrator of the Housing and Home Finance Agency, and of such other agency heads as he may deem appropriate.

Section 210: Subsection (a) authorizes appropriations of $60 million for the first fiscal year beginning July 1, 1963, and authorizes such sums for each of the 4 succeeding fiscal years thereafter as Congress may deem necessary for the administration of the title.

Subsection (b) authorizes the transfer of funds between Federal departments and also authorizes grants to States and local governments for the purposes provided by this title.

Section 211: The Secretary shall file annual reports with the President for transmittal to Congress, including a full and complete evaluation of the activities and programs authorized by the title together with such recommendations as he may deem desirable.

Mr. CLARK. Mr. President, I now turn briefly to the minority views. I shall say only a word in this regard, because one of my colleagues on the committee, the able Senator from West Virginia [Mr. Randolph], will deal in some detail with the minority views. I wish to say in all candor that the minority views are pretty bitter, pretty extravagant. They go far beyond any testimony by witnesses who came in to oppose the bill.

Generally speaking, the minority views are largely negative, and have no constructive suggestions to make other than a complete overhauling of our vocational education system, which is obviously a matter for the education bill and not this bill; and, in the opinion of a majority of the members of the committee, we should have done something a long time ago to meet the youth problem.

I deny that the case for the bill was poorly prepared by the administration witnesses.

I am glad to admit that title I of the bill relies heavily on the very successful experience with the Youth Conservation Corps in the 1930's. That program is as pertinent today as it was then; and, in my opinion, it should not have been abandoned. It was abandoned only because of World War II.

I deny that the YCC will not provide any skilled training. I think it will, at the apprentice level. I deny that the cost will be exorbitant.

I deny that there will be a potentially serious disciplinary problem in the camps. In that regard, I have drawn for support of my viewpoint on the magnificent testimony of George Catlett Marshall, probably the greatest soldier the United States has known in my lifetime, who was intimately connected with the administration of the CCC program, and who rallied to its defense in testimony before the Congress a good many years ago.

I am amazed that the minority would make this statement:

> A young man who had committed murder might actually meet these enrollment requirements and join the YCC.

This extravagant statement has, of course, no truth whatever.

Nor do I think the bill would be helped by the amendments proposed by the Senator from Arizona [Mr. Goldwater] to bring the Defense Department actively into the program. We conferred with the Defense Department. We know that it wants no part of the program. This is supposed to be a civilian program, and not a military program. The committee relies upon that decision.

Nor do I think there is any basis for the opinion that the Corps would weaken family ties; nor that the "Hometown Youth Corps," as the minority calls the youth program, would be another boondoggle.

So I turn briefly to the amendments to S. 1 printed in the appendix to the minority views and proposed before the full committee by the Senator from Arizona [Mr. Goldwater].

Each of these amendments was carefully considered in committee. Each of them was rejected. I shall not attempt to anticipate which will be proposed again, but I assure Senators—and I am sure the Senator from West Virginia will amplify this statement when he speaks—that there is a sound, strong reason for opposing on the floor of the Senate every one of the amendments proposed by the Senator from Arizona, which were defeated in the committee.

In conclusion, in the view of the majority of the committee, this is a good bill. It is needed. The administration is correct when it asks the Congress to pass it. It would provide useful employment opportunities, both at home and in conservation camps, for substantial numbers of unemployed youth, a very large percentage of whom are school dropouts. Its cost would be moderate. It would make at least a moderate beginning toward giving the young people of our country the kind of training and opportunity which would enable them to obtain employment, to live out useful lives dedicated to the benefit of our country, and give them normal expectations of raising families of fine Americans.

Mr. President, I yield the floor.

Mr. PROUTY. Mr. President, I move that the Senate refer the pending bill, S. 1, to the Senate Committee on Interior and Insular Affairs, with instructions to report the bill again to the Senate, together with its views, not later than April 30, 1963.

Mr. MANSFIELD. Mr. President, will the Senator yield, without losing his right to the floor, so that I may suggest the absence of a quorum?

Mr. PROUTY. I shall be glad to yield to the distinguished Senator; but let me say first that I do not intend to take a great deal of time in discussing the motion. I hope Senators will remain in the Chamber so that there may be a vote in short order.

Mr. CLARK. Mr. President, will the Senator yield before the majority leader suggests the absence of a quorum?

Mr. PROUTY. I yield.

Mr. CLARK. I wonder if the Senator from Vermont would be willing to agree to a unanimous-consent agreement, applicable to this amendment only, limiting debate to 15 minutes, or perhaps 30 minutes, to a side.

Mr. PROUTY. As of now, I am unable to agree to any such unanimous-consent request.

Mr. MANSFIELD. Mr. President, it is my understanding that the Senator from Vermont desires a live quorum. I suggest that attaches on both sides of the Senate notify Senators.

I suggest the absence of a quorum, with the thought in mind that it will be a live quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

The PRESIDING OFFICER (Mr. Kennedy in the chair). A quorum is present.

The question is on agreeing to the motion of the Senator from Vermont [Mr. Prouty] that the bill be referred to the Committee on Interior and Insular Affairs with instructions to report back not later than April 30 next.

Mr. PROUTY. Mr. President, on this motion, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. PROUTY. Mr. President, I intend to be brief in justifying my motion that the bill be referred to the Committee on Interior and Insular Affairs. The vote on the motion could come very soon. I know also that many Senators are desirous of leaving Washington; but I think so much misinformation has been given with respect to S. 1 that considerable time will be necessary to explain exactly what the bill does and does not do. But the utilization of a great deal of time will be necessary only if the pending motion is defeated.

Never during my service as a Member of the Senate have I seen such evasive answers given to legitimate questions asked by members of the subcommittee as was the case with respect to the consideration of S. 1. I think the reason was that most of the witnesses did not have the necessary information. They could not give definite and specific answers to many—perhaps most—of the questions which were asked by members of the subcommittee.

At the outset, I wish to make it clear that it is not my purpose to sabotage the bill. I feel very strongly that the Senate has an exceedingly difficult problem to solve—the problem of our unemployed young people. During the course of the debate, I hope to offer amendments which, in my judgment, would be far superior to the approach suggested by the bill.

Originally the impression was created that S. 1 is an educational measure; that it was proposed to take unemployed boys off the city streets and send them into camps, so that they would return fully qualified for gainful employment; and that they would acquire skills of one kind or another which would make them self-supporting citizens of our society. However, practically no testimony has been given before the subcommittee, which suggests that this would be the case. I shall quote briefly now from one of the statements made on this point. Focus your attention on the significant words of Secretary of Labor Wirtz:

> I call attention to this: First, there is no suggestion that this training program will qualify one of the enrollees for a skilled occupation. That we should dismiss completely.

I could quote other witnesses, and shall as the debate progresses, if my present motion is not approved.

Now a word about costs.

We were told originally that 50-man camps would be built at a cost of $250,000, a ridiculously low figure, one which I think cannot be justified. If sufficient camps were constructed, the program would more than utilize the $60 million provided in the proposed authorization, to say nothing about operating costs. I shall not go into that subject in detail at the present time. However, I do wish to emphasize that we are talking about a conservation measure. It is a measure that should have been referred to the Committee on Interior and Insular Affairs or the Committee on Agriculture and Forestry, committees which are definitely concerned with subjects of this nature.

We have heard something about camps. In the Congressional Record of April 4, page 5666, is a list of camps which the administration and the proponents of the proposed legislation now tell us can be occupied within a very short period of time to take care of 12,000 boys. Yet I found that the administration does not know where the camps would be located, despite the list. Secretary of Labor Wirtz admitted as much during the Senate hearings. I asked the Secretary where the Government would house 15,000 enrollees in the Youth Corps if existing facilities were used. He replied as follows:

> Where are we going to put them? That question I cannot answer.

I asked the Secretary of Labor if he could tell me the pertinent facts about the existing facilities that might be utilized. I inquired of him regarding the age of the buildings involved; the type of construction; and whether the buildings are currently occupied by the staff of any Federal agency. The Secretary could not provide any of this information. Indeed, he had several days, following his oral testimony, in which to supply the requested data before the record of the hearings was closed. Yet he did not provide it.

Mr. President, this whole subject would be comical if the welfare of the country and the solvency of the Federal purse were not involved.

It is true that the administration has submitted a list of camps which it says are available for Youth Corps enrollees. The list provides the name of the agency which supposedly has jurisdiction over the camps, and it also cites what is allegedly the approximate capacity of the camps.

I ask Senators not to make the mistake of being impressed by the list. In the past 24 hours, I have discovered that one of the camps that is supposed to be used in a Western State does not even exist.

It seems to me that every bit of information we have received in connection with the bill has been in the "preplanning stages." Figures and estimates have been juggled all over the place in an effort to make this woodland folly palatable.

Perhaps the most tragically comical incident occurred during the hearings on S. 1, when I asked the Secretary of Labor about potential Youth Corps camps in Vermont. Permit me to read the colloquy:

> Senator Prouty. Are any of these camps in Vermont?
>
> Secretary Wirtz. Are any of the camps in Vermont? I will have to check that.
>
> Now, when you say, "Are any of the camps in Vermont?" I am talking only about the list I have before me at the moment, the list which has been presented and prepared by the Department of Interior; and as far as the Department of the Interior is concerned, there is a camp at Swanton in Vermont.
>
> Senator Prouty. Can you give me any information about that camp, how long it has been built, what type of camp it is?
>
> Secretary Wirtz. It is a camp the Bureau of Sport Fisheries and Wildlife established. It would be a small one. The capacity of that camp is indicated, according to the figures I have, which I must give you at this point, on the basis of what I have before me, at 10 people, with a cost of $25,000, which would be available within 90 days of the approval of the project.

The fascinating thing about this Vermont camp is that it does not exist. The Department of the Interior rather squeamishly admitted that the camp is nonexistent, but stated in half apologetic tones that the Department is considering building a camp there.

Just imagine that, Mr. President. The administration cited as a camp available for use one at Swanton, Vt., which is not even in the blueprint stage.

I also referred to another camp in a Western State, which is of the mythical variety.

These are only two glaring examples of the administration's lack of knowledge of existing facilities. In short, the administration does not know which ones will be used, or which ones are presently occupied, or how they are constructed. In fact, the administration does not even know whether they exist.

Mr. President, the hearings on Senate bill 1 amounted to an extensive monolog by administration spokesmen on the glories to our civilization which will result from the two titles of Senate bill 1.

More particularly, the major portion of those hearings extolled the magnificent elation which unemployed youth will experience from 6 months—or 2 years—in the woods and forests, as contemplated, in the Youth Conservation Corps, under title I of the bill.

One significant fact emerges from a reading of the hearings on title I: The apparent failure in the bill to deal with the matter of the preparation of unemployed youth to enter the skilled labor force which our economy now needs.

Almost without exception, the witnesses before the Subcommittee on Employment and Manpower, which conducted the hearings, concentrated on the conservation of natural resources which is sought to be fostered by Senate bill 1.

Indeed, one of the committee amendments to title II of the bill was to insure that the hometown programs proposed under that title should give priority to conservation and park cleanup projects.

So Senate bill 1 is, in essence, a conservation bill, rather than a bill to deal with the unemployment problem among our youth.

I greatly favor conservation of our natural resources. I recognize the importance of our park system to the people of the United States. But there is an appropriate means by which the Senate should consider such legislation.

The time and service which members of the various Senate committees devote to the problems before them give to those members special insight into those problems. However, some of us who serve on other committees are perhaps less familiar with those areas of legislation, and look to our better informed colleagues for assistance.

The Committee on Labor and the Subcommittee on Employment and Manpower should, and do, know something about our unemployment problems. But we, as members of the Committee on Labor, do not possess the specific knowledge with respect to conservation and park land matters which members of the Interior Committee are able to develop.

Certainly that committee should have an opportunity to consider Senate bill 1. This would seem to conform to the view of the proponents of the pending bill.

Consideration by the Senate Committee on Interior and Insular Affairs would appear to me to be a valuable asset to the bill. The Senate, and indeed the entire Nation, to say nothing of the administration, would seem to be wisely served by a report from that committee on both titles of Senate bill 1.

The Interior Committee is entitled to express itself on this matter. The Senate is entitled to have the benefit of those views. Indeed, for the sake of an orderly conservation program, consideration by that committee would seem to be absolutely necessary.

Mr. President, I have heard that some of the agencies which have supervision over the camps which were listed in the RECORD of April 4 are very much concerned that the names of these camps or their location have been divulged—for the reason that many of them feel that if new undertakings of this nature are to be instigated, the camps should be in different locations, in order to take care of the problems in existence in those areas. Moreover, I defy anyone to show that many of these camps are in such a condition that they can readily be utilized by the proposed Youth Conservation Corps.

Representatives of the administration have said that the expenditure of $15 million would be required in order to put these camps into shape. That would reduce the available money the first year to $45 million. Based on a statement during the hearings, prepared by a majority staff member of the Committee on Labor and Public Welfare, the minimal cost would be $4,500 per boy. That means that the potential enrollment would be reduced to 10,000. Of course, as I suggested earlier, if they had undertaken to build camps sufficient to provide housing for 15,000 boys, the cost would have been $75 million, instead of the $60 million which would be authorized under the provisions of the bill.

I believe it is in the best interests of sound legislation to permit the Committee on Interior and Insular Affairs, which is familiar with facilities on public lands to have an opportunty to study the bill and to hear witnesses who are far more qualified to discuss this matter than were most of the witnesses who were heard by the Committee on Labor and Public Welfare.

So, Mr. President, I urge the Senate to refer the bill to the Committee on Interior and Insular Affairs, with instructions that it report the bill to the Senate not later than April 30.

Mr. HUMPHREY. Mr. President, I trust that the Senate will have ample opportunity to examine the arguments submitted by the distinguished junior Senator from Vermont in reference to the condition of the camps and their location, and also the other arguments he has made in opposition to the bill.

The question now before the Senate is on agreeing to the motion of the Senator from Vermont that the bill be referred to the Committee on Interior and Insular Affairs.

The remarks I shall submit at this time will be brief.

The old Civilian Conservation Corps camp program, which was so phenomenal a success that it was almost without opposition or criticism, remains a landmark of public policy. That legislation was initiated by the Committee on Labor and Public Welfare, and was reported to the Senate by that committee; and it was under the jurisdiction of that committee that the program was established.

Second, exhaustive hearings on Senate bill 1 or on legislation identical in nature have been held during the last three Congresses, as follows: On Senate bill 812, in the 86th Congress; on Senate bill 404, in the 87th Congress; and on Senate bill 1, in the 88th Congress.

I may state that Senate bill 812 was passed by the Senate after having been reported by the Committee on Labor and Public Welfare.

Insofar as this proposed legislation is concerned, the jurisdiction of the Committee on Labor and Public Welfare is uncontested by the Reorganization Act of 1946.

Third, the bill does not provide any new authorizations involving forests, parks, or public lands. Of course, it is true that when this measure becomes law and becomes public policy, many of the youths who will be employed under the provisions of the bill will work upon public lands or in national or State parks or in Federal forests or State forests. But so far as new authorizations are concerned, such parks, forests, and public lands are not included within the purview of this proposed legislation.

The proposed legislation is essentially an employment bill and an education bill. It would be just as germane and reasonable to suggest that when the Hill-Burton Hospital Act comes before the Senate it be referred to the Committee on Public Works; or that when the program of accelerated public works is reported by the Public Works Committee, each section of that bill that related to a hospital or to a health center go to the Committee on Labor and Public Welfare; or that if any funds were to be expended upon any kind of streets or sewerage system, the bill be referred to the committee that handles housing and home finance activities.

The responsibility for the measure is clearly in the Committee on Labor and Public Welfare. To determine otherwise would be unjust to that committee and to the work of a committee which reported the bill after a vote of 11 to 3, and a committee that during three Congresses has held hearings day after day and week after week. I believe it would really be an insult to the committee to reject its jurisdiction and refer the bill to another committee which has its own field of jurisdiction and does well within that field of jurisdiction, as was indicated only recently by the wilderness bill, which passed this body by an overwhelming majority.

I call upon Senators to sustain the committee and the leadership on this question, to vote against the motion of the Senator from Vermont, and to support the committee representative who is handling the measure.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Vermont to commit the bill to the Committee on Interior and Insular Affairs.

Mr. ANDERSON. Mr. President, I should like to be recognized briefly. I suppose the question might be asked, Why would I speak upon this question? Perhaps my easiest excuse is that I have served on the Committee on Interior and Insular Affairs longer than any Member of the present Congress. I have served for 14 years. I have seen a good many bills go through that committee.

There is another reason why I am interested in the bill. I served for some time in the Department of Agriculture, as many people will recall. If we are to consider the forests of the United States, the man who has charge of that field is the Secretary of Agriculture, and the committee that might have jurisdiction after the Committee on Interior and Insular Affairs has concluded its hearings would be the Committee on Agriculture and Forestry.

I have still another reason which is somewhat compelling to me. In the year 1935, as a representative of Mr. Harry Hopkins, I tried to be administrator of the CCC program, not only in my own State, but eventually in all 11 Western States. I know that the interest of those camps was not in trails but in youth. Therefore I am anxious to make sure that the measure comes from the committee whose main interest is youth.

The words with which the bill starts are as follows:

> SEC. 102. The purpose of this title is (1) to provide useful work experience opportunities for unemployed youths.

That is the whole point. If the main concern of the bill was work in the interior areas of our country and upon forests, I might insist upon jurisdiction for the Committee on Interior and Insular Affairs.

I see present in the Chamber my fine and always honored friend the chairman of the Committee on Finance, the distinguished Senator from Virginia [Mr. BYRD]. We have considered some bills relating to taxation on minerals. We have considered bills designed to help the lead and zinc industry. They have contained tax features. There has never been any difficulty about them. Those were finance bills. The Committee on Interior and Insular Affairs has taken a look at each of them. Each time the committee has done so, we have asked to have that look. When there is a necessity for the Committee on Interior and Insular Affairs to have a look at a bill, we do not hesitate to make the request.

I did not consider the pending bill to be a bill of that nature.

First, I point out that no new authority to do things on forests, parks, or public lands created from public domain is involved in the bill. Hence, I do not believe the bill belongs in the Committee on Interior and Insular Affairs.

Second, as the Senator from Minnesota has pointed out, the old CCC Act, was under the jurisdiction of the Committee on Labor. When jurisdiction has been granted, it has persisted for a long time.

In the House of Representatives, the sugar bill is handled by the Committee on Agriculture. In the Senate, it is handled by the Finance Committee. There is no logic in the arrangement, but there is tradition, and we live up to it. Any Senator who might try to take the sugar bill away from the committee of which the able Senator from Virginia is chairman would find himself in a peck of trouble. Senators would insist that it return to the committee which had been handling that measure.

Third, I point out that exhaustive hearings have been held in the 86th, 87th, and 88th Congresses by the Committee on Labor and Public Welfare. I am not authorized to speak for the chairman of the Committee on Interior and Insular Affairs, who is the Senator from Washington [Mr. JACKSON]. I desire that point to be clearly understood. But I am able to say that the schedule of that committee has been pretty well taken up. We have a great deal of hard work to do. We have already done hard work.

Some of the bills considered by that committee have already passed the Senate. It would be difficult, if not impossible, for that committee to give the measure careful consideration and report back by April 30.

Title I of the bill deals with Federal lands only. At the most the enrollees could number 15,000. But title II deals with urban areas and State lands. States may decide that the work be performed elsewhere. The program would involve some 60,000 enrollees. Therefore the very purpose of the bill seems to be to benefit urban areas, and not so much forest areas.

The standing rules of the Senate mark out the jurisdiction of the Committee on Interior and Insular Affairs. The duties of the committee are clearly defined. They involve "public lands generally, including entry, easements, and grazing thereon."

Bringing boys to camp to develop trails in an endeavor to help them does not relate to grazing on such lands.

Therefore, when we deal with the measure, I hope we deal with it realistically and allow the bill to remain with the Committee on Labor and Public Welfare, and not be referred to the Committee on Interior and Insular Affairs. As much as I like to preserve the jurisdiction of that committee, and as much as I like to have its jurisdiction expanded, I do not believe that the bill now before the Senate is a proper bill to be referred to that committee.

Mr. TOWER. Mr. President, the argument that the bill is properly within the jurisdiction of the Committee on Labor and Public Welfare, and therefore should not be referred to another committee, is a rather narrow argument indeed, especially when we consider that only last week in this body there was considered a measure—the Mass Transportation Act—which had been studied carefully by the Committee on Commerce, which did not have jurisdiction of the bill. Senators in charge of that bill said that although they had originally opposed the idea of the Committee on Commerce considering the measure because they felt that "too many cooks spoil the broth," they themselves admitted—and it was the consensus—that the consideration or study of the measure by the Committee on Commerce had resulted in a much improved bill. The Committee on Commerce had made some good contributions to it. In the light of that precedent established only last week, it is only reasonable to conclude that the bill should be referred to the Committee on Interior and Insular Affairs.

Mr. PROUTY. Mr. President, my distinguished friend the Senator from New Mexico [Mr. ANDERSON] read the first two lines of section 102 under the stated purpose. I should like to read the entire section:

STATEMENT OF PURPOSE

> SEC. 102. The purpose of this title is (1) to provide useful work experience opportunities for unemployed youths so that their employability may be increased through participation in such programs of conservation planned and designed by, and under the immediate supervision of, the various Federal agencies charged with the responsibility of planning and carrying out such programs; and (2) to enable the Federal agencies charged with the responsibility of conserving and developing natural resources and recreational areas to accelerate programs planned by such agencies to fulfill such responsibility.

I submit that programs of a conservation nature do not come under the jurisdiction of the Committee on Labor and Public Welfare, but very definitely are under the jurisdiction of the Committee on Interior and Insular Affairs.

I submit also that at the present time no one, including those in the executive departments, has any idea whatsoever what camps included in the list on page 5666 of the RECORD of April 4 are available and what the cost of rehabilitation would be. I am certain of that because I have been told by some in a position to know that they have not the slightest idea. They were asked to submit certain figures, and they did so. But the figures are not very realistic. I am sure we will find that to be the case if and when the program gets underway.

I have no desire to prolong this discussion. When the debate gets underway, if my motion is defeated, we shall examine the camp situation, together with other aspects of the program.

The PRESIDING OFFICER (Mr. BREWSTER in the chair). The question is on agreeing to the motion of the Senator from Vermont.

Mr. MILLER. Mr. President, will the Senator from Vermont yield to me?

Mr. PROUTY. I yield to the Senator from Iowa.

Mr. MILLER. I ask the Senator from Vermont whether it is his thought at this time that the Youth Conservation Corps should be under the Department of Labor, or whether it is his thought that it should be somewhere else?

Mr. PROUTY. I think it should not be under the Department of Labor. It should be either under the Department of the Interior or under the Department of Agriculture, because this facet of the program is concerned primarily with activities over which those departments have definite jurisdiction.

Mr. MILLER. May I ask the Senator about the CMTC camps which were established? The point was made that the bill setting up those camps was cleared by the Committee on Education and Labor in the thirties. There was an inference that since that bill had been handled by the Committee on Education and Labor, the pending measure should be handled by a similar committee. Does the Senator recall whether the CMTC camps fell under the jurisdiction of the Department of Labor?

Mr. PROUTY. I am sure they did not.

Mr. MILLER. I thank the Senator.

The PRESIDING OFFICER. The question is on agreeing to the motion made by the Senator from Vermont [Mr. PROUTY] to refer the bill to the Committee on Interior and Insular Affairs, with instructions to report the bill to the Senate, together with its views, not later than April 30 next.

On this vote the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Ohio [Mr. LAUSCHE], the Senator from Missouri [Mr. LONG], the Senator from Virginia [Mr. ROBERTSON], the Senator from Alabama [Mr. SPARKMAN], and the Senator from Georgia [Mr. TALMADGE] are absent on official business.

On this vote, the Senator from Oklahoma [Mr. EDMONDSON] is paired with the Senator from Nebraska [Mr. CURTIS]. If present and voting, the Senator from Oklahoma would vote "nay," and the Senator from Nebraska would vote "yea."

On this vote, the Senator from Virginia [Mr. ROBERTSON] is paired with the Senator from Missouri [Mr. LONG]. If present and voting, the Senator from Virginia would vote "yea," and the Senator from Missouri would vote "nay."

On this vote, the Senator from Alabama [Mr. SPARKMAN] is paired with the Senator from Pennsylvania [Mr. SCOTT]. If present and voting, the Senator from Alabama would vote "nay," and the Senator from Pennsylvania would vote "yea."

I further announce that, if present and voting, the Senator from Georgia [Mr. TALMADGE] would vote "yea."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT] is absent because of the death of his mother.

The Senator from Utah [Mr. BENNETT] and the Senator from Wyoming [Mr. SIMPSON] are absent on official business.

The Senator from Kentucky [Mr. COOPER], the Senator from Nebraska [Mr. CURTIS], the Senator from New York [Mr. JAVITS], and the Senator from Pennsylvania [Mr. SCOTT] are necessarily absent.

If present and voting, the Senator from Colorado [Mr. ALLOTT], the Senator from Utah [Mr. BENNETT], and the Senator from Wyoming [Mr. SIMPSON] would each vote "yea."

On this vote, the Senator from Nebraska [Mr. CURTIS] is paired with the Senator from Oklahoma [Mr. EDMONDSON]. If present and voting, the Senator from Nebraska would vote "yea," and the Senator from Oklahoma would vote "nay."

On this vote, the Senator from Pennsylvania [Mr. SCOTT] is paired with the Senator from Alabama [Mr. SPARKMAN]. If present and voting, the Senator from Pennsylvania would vote "yea," and the Senator from Alabama would vote "nay."

If present and voting the Senator from New York [Mr. JAVITS] would vote "nay."

The result was announced—yeas 29, nays 58, as follows:

[No. 46 Leg.]

Javits
Lausche
Long, Mo.
Robertson
Scott
Simpson
Sparkman
Talmadge

So Mr. PROUTY's motion was rejected.

Mr. CLARK. Mr. President, I move to reconsider the vote by which the motion was rejected.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

LEAVE OF ABSENCE

Mr. HOLLAND and Mr. PROXMIRE addressed the Chair.

The PRESIDING OFFICER. The Chair recognizes the Senator from Florida.

Mr. HOLLAND. Mr. President, first, I ask unanimous consent of the Senate to be absent from my duties beginning now. I have been invited to appear tomorrow before the Florida Legislature on the poll tax amendment. I have frequently given assurance to this body that that would be my course. I therefore ask unanimous consent to be excused from attendance on my duties in the Senate.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

COMMITTEE MEETING DURING SENATE SESSION TOMORROW

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the Senate Permanent Subcommittee on Investigations of the Committee on Government Operations may hold hearings tomorrow while the Senate is in session.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

YOUTH CONSERVATION CORPS

The Senate resumed the consideration of the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employement for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs.

Mr. HOLLAND. Next, Mr. President, I want to say that I voted against this motion not because I favor the bill, but because I think the committee which reported the bill had ample authority to do so. It not only has jurisdiction in labor matters, but also in educational matters. The substance of this bill falls in one place or another.

Second, the Committee on Interior and Insular Affairs apparently does not want to take jurisdiction. So I think there was ample reason for the Committee on Labor and Public Welfare to have considered the bill.

I want the record to show that I oppose the bill. I think it is as wrong as can be for the Department of Labor to be engaging in an effort of this kind, with substations to be located in every village and farm in the Nation. I hope the bill will fail, and I am sorry I will not be able to be present to vote against it when the vote on passage is taken.

Mr. PROXMIRE. Mr. President, I send an amendment to the desk, on behalf of myself and the Senator from Missouri [Mr. SYMINGTON], and I ask unanimous consent to dispense with the reading of the amendment.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The amendment offered by Mr. PROXMIRE, for himself and Mr. SYMINGTON, is as follows:

> On page 38, line 11, strike out "$60,000,000" and insert in lieu thereof "$50,000,000".
>
> On page 48, line 23, strike out "$60,000,000" and insert in lieu thereof "$50,000,000".

Mr. PROXMIRE. Mr. President, I am willing to agree to a limitation of debate on the amendment, if the Senator from Pennsylvania wishes me to do so.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. CLARK. I wonder if there could be an agreement to a limitation of 5 minutes on each side on this amendment and if the yeas and nays may be ordered.

Mr. PROXMIRE. Yes, indeed.

Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield so that the unanimous-consent request may be acted on?

Mr. PROXMIRE. Yes.

Mr. CLARK. I ask unanimous consent that the debate on the amendment of the Senator from Wisconsin be limited to 5 minutes on each side.

The PRESIDING OFFICER. Is there objection?

Mr. GOLDWATER. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. PROXMIRE. Mr. President, this is a simple amendment. It would cut back the cost of the bill from $120 million to $100 million.

The President, in his budget, on page 619, requested $100 million for this program. That was the limit of what he requested. As I understand, the numerous and formidable administration witnesses who appeared before the committee did not request that the amount of $100 million be increased. The administration position is clear. The administration is very sympathetic to this program. It studied it carefully, evaluated it carefully, and felt that $100 million would accomplish the purpose.

Mr. RUSSELL. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. RUSSELL. Is this $100 million for the first year, or do the amounts escalate after the first year?

Mr. PROXMIRE. It is $100 million for the first year. I understand that after the first year there will be such appropriation as Congress wishes to make.

Mr. RUSSELL. In other words, the sky and the demands of the various communities will be the limit.

Mr. PROXMIRE. It depends on what Congress decides to do.

Mr. RUSSELL. I realize that. However, when a camp is established in one community, it will be very difficult for a neighboring community to understand why it cannot also have a camp.

Mr. PROXMIRE. The Senator's Armed Services Committee has recommended a reduction of some $420 million in the defense budget.

Mr. RUSSELL. It is about $771 million.

Mr. PROXMIRE. Yes, gross, but the committee increased the appropriation in another section by over $300 million.

Mr. RUSSELL. Yes.

Mr. PROXMIRE. So the net decrease was about $400 million.

Mr. RUSSELL. Yes.

Mr. PROXMIRE. It seems to me if we can cut the defense budget by that amount, we can certainly cut the program that is recommended here to the level of what the administration requested. As Members of the Senate know, there is a deficit this year in our Federal budget of about $9 billion. There is a budget of $100 billion. The President has asked us to increase spending to the extent of $4.5 billion to $6 billion.

It seems to me it makes sense to keep spending at least down to the level that the administration itself has requested. I earnestly hope the distinguished Senator from Pennsylvania will accept the amendment, because I know how deeply he feels about the bill. I believe it is a good bill, a necessary bill; but I think we should go along with the administration's original request.

I wish to make one further statement. On page 4 of the committee report on the bill, the committee itself states:

> The committee agrees that this program must begin small. It would be unwise to appropriate sums for a full-scale attack upon the segment of the youth employment problem covered by this bill until the machinery and procedures for such a program are operable.

I submit that a $120 million program is not small. It is 20 percent above what the administration requested. Under those circumstances I believe it makes sense for us at least to cut back the amount to the administration's request for spending.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. GOLDWATER. I commend the Senator from Wisconsin for presenting his amendment. I point out that one reason why I think the amendment is a wise amendment is that there was submitted for the Record the other day a list of campsites that would be available. I forget whether 10 or 12 were listed in my State. Only one of these camps could be occupied to any extent at all. One was located 40 miles west of Wickenburg. I know that Senators do not know where Wickenburg is located. However, it has temperatures reaching 125 degrees in the shade. I never heard of that camp. Another one is proposed to be located at the bottom of Grand Canyon. I do not believe that the Park Service would agree to have a camp down there.

I think highly of the Senator's amendment. I wonder if he would agree to give me the honor to let me cosponsor his amendment.

Mr. PROXMIRE. I ask unanimous consent that the name of the Seantor from Arizona be added as a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. I understand that the administration did not expect to spend more than $60 million on this program during the first year. Therefore, my amendment would give the administration ample flexibility.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. AIKEN. A few weeks ago I thought surely I would not have voted for the proposal of the Senator from Wisconsin. However, many things have happened since then. We have heard from the Secretary of the Treasury and from the Director of the Internal Revenue Service, Mr. Caplin. Mr. Caplin has stated that the fate of the Nation virtually depends on our saving $5 million through emasculating the Internal Revenue Service in a considerable number of States. I had not realized until this day that our country is in such dire financial straits. However, inasmuch as Mr. Caplin seems to feel that the Nation is likely to fall apart unless we save $5 million somewhere, I think it is much better to save it by voting for the amendment of the Senator from Wisconsin than it is through emasculating the Internal Revenue offices in 12 States and depleting them in many others.

Therefore, I shall vote for the amendment of the Senator from Wisconsin. I hope that before the end of this session of the Congress, we will be able not only to try to save Mr. Caplin his $5 million, but also, in connection with other measures that will come up, as much as $5 billion.

I am glad to vote for the amendment of the Senator from Wisconsin.

Mr. CLARK. Mr. President, it is true, as the Senator from Wisconsin says, that the administration, interested as always in economy, recommended an authorization of only $100 million for the bill. After carefully hearing the testimony of approximately 60 witnesses, the committee decided by a vote of 11 to 3 that an additional authorization would be desirable, fully appreciating that when the bill reaches the Appropriations Committee, if it ever does, there will be a natural tendency to appropriate somewhat less than the authorization. However, the Goldwater-Proxmire axis——

Mr. PROXMIRE. Symington.

Mr. CLARK. I beg the Senator's pardon. It is the Goldwater-Proxmire-Symington axis. It is a brave Senator who would oppose an amendment jointly sponsored by such fine Senators. Therefore, on behalf of the committee, I am prepared to accept the amendment.

I point out one final consideration. I hope the matter will be kept in proper perspective. We are spending something like $1 billion a week on the defense program, or $52 billion a year. The suggestion was made the other day, in connection with the pending bill by the Secretary of Labor—and it is true—that we will spend on the defense program between this minute, 5:45 p.m., and 8 o'clock tomorrow morning, more money than the committee asks in this bill for a whole year.

I suggest that we keep these things in proper perspective. If we have any desire to help the young people of our country become employable, I hope we will keep the authorization for the program substantially as it is and the bill as it came from the committee.

I am prepared to vote in favor of the Symington-Proxmire-Goldwater axis reduction in the authorization.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Wisconsin [Mr. Proxmire], on behalf of himself, the Senator from Missouri [Mr. Symington], and the Senator from Arizona [Mr. Goldwater]. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Oklahoma [Mr. Edmondson], the Senator from Arizona [Mr. Hayden], the Senator from Florida [Mr. Holland], the Senator from Ohio [Mr. Lausche], the Senator from Missouri [Mr. Long], the Senator from Alabama [Mr. Sparkman], and the Senator from Georgia [Mr. Talmadge] are absent on official business.

I further announce that, if present and voting, the Senator from Oklahoma [Mr. Edmondson], the Senator from Florida [Mr. Holland], the Senator from Ohio [Mr. Lausche], the Senator from Missouri [Mr. Long], the Senator from Alabama [Mr. Sparkman], and the Senator from Georgia [Mr. Talmadge] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. Allott] is absent because of the death of his mother.

The Senator from Utah [Mr. Bennett] and the Senator from Wyoming [Mr. Simpson] are absent on official business.

The Senator from Kentucky [Mr. Cooper], the Senator from Nebraska [Mr. Curtis], the Senator from New York [Mr. Javits], and the Senator from Pennsylvania [Mr. Scott] are necessarily absent.

If present and voting, the Senator from Colorado [Mr. Allott], the Senator from Utah [Mr. Bennett], the Senator from Nebraska [Mr. Curtis], the Senator from New York [Mr. Javits], and the Senator from Wyoming [Mr. Simpson] would each vote "yea."

The result was announced—yeas 65, nays 21, as follows:

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, it is my understanding that there will be no further voting tonight; therefore, there will be no further business to come before the Senate except for Senators who wish to make speeches, unless I hear otherwise from Senators in charge of the bill, the Senator from Pennsylvania [Mr. CLARK] and the Senator from Minnesota [Mr. HUMPHREY].

MEETING OF SUBCOMMITTEE ON MIGRATORY LABOR DURING SENATE SESSION ON WEDNESDAY

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent that the Subcommittee on Migratory Labor of the Committee on Labor and Public Welfare be permitted to meet tomorrow to hear the testimony of Secretary of Labor Wirtz and Secretary of Health, Education, and Welfare Celebrezze.

Mr. KUCHEL. Mr. President, reserving the right to object, I wish to be assured that the members of the subcommittee on this side of the aisle have approved this request.

Mr. TOWER. Mr. President, I assure the Senator from California that, as the ranking minority member of the subcommittee, I have discussed the request with the Senator from New Jersey and have agreed to it.

The PRESIDING OFFICER. Is there objection to the request of the Senator from New Jersey? The Chair hears none, and it is so ordered.

THE CAROLINA CHARTER OF 1663

Mr. ERVIN. Mr. President, more than 375 years ago at Fort Raleigh on Roanoke Island, on the outer banks of North Carolina, Sir Walter Raleigh established the first English colony in the New World. It was there in 1585, more than 20 years before the founding of Jamestown and more than 30 years before the Pilgrims landed at Plymouth, that Virginia Dare, the first child of English-speaking parents, was born. Thus it was that this area of the New World, which in time was to be known as North Carolina, achieved the double recognition of the first State to be colonized by the English and the first to record a birth of a child of English descent.

However, there is another, later event which is at least as significant as this early colonization to the history of my State and our country. Although it was not known by the name until later, and although some settlers were already there by that date, 1663 was in a real sense the birthdate of North Carolina, for it was then that a charter was given by King Charles II of England to eight of his noblemen. The land granted by the charter stretched from Virginia to Florida. It was bounded on the east by the Atlantic and on the west by the Pacific; and it was called Carolina. That land covered part or all of 17 of the present States; and the charter is, therefore, peculiarly important to the history of each.

The Carolina Charter, which the King issued to his eight lords proprietors 300 years ago formed part of the foundation upon which our Nation's laws and government are built; it is a keystone of our U.S. Constitution. This significant contribution of the charter has been succinctly pointed out by the Tercentenary Commission:

> It is nevertheless an indispensable link in the chain of record beginning with Magna Carta that establishes and preserves our political liberties down to the present.

Three provisions deserve special attention in this connection. Under the first of these the lords proprietors were directed to "make and enact laws with the advice, consent, and approbation of the freemen of the said province, or the greater part of them, or of their delegates or deputies."

Another provision granted to the people of Carolina "all liberties, franchises, and privileges of this our kingdom of England." A third grants a large measure of religious freedom to the settlers. These portions of the charter contained what seems to me the heart of our American Constitution which was adopted more than a century and a quarter after the charter was granted.

The charter itself was the basis of succeeding colonial and State constitutions of North Carolina. The first constitution adopted after the charter was the Concessions and Agreement of 1665, which provided for a popularly elected assembly with powers broader than those contemplated by the proprietors. From the beginning the people of Carolina demonstrated that they were of independent stock, unwilling to be the transatlantic serfs of eight lords in England. The proprietors themselves were only too aware of what they considered to be the capricious nature of the ungrateful settlers whom they admonished "were a people that neither understood your own nor regarded our interests." During this time the first American uprising against distant and arbitrary rule occurred. This was Culpeper's rebellion in the Carolina county of Albemarle in December 1677. The object of this protest was a tax measure which the proprietors imposed without the consent of the colonists; this became the first rebellion against "taxation without representation." The colonists succeeded in electing an assembly and controlling Carolina for 3 years after the uprising. At that time the settlers were referred to as rebels; a century later their descendants would be known as patriots.

During its first half century the control of Carolina alternated between its inhabitants and its nominal rulers in England. Finally in 1729, the charter was returned to the crown, and North Carolina remained an English colony until its independence. The King had no better luck than did the proprietors with impressing upon his subjects what he considered their proper station. Rebellion and formal protests were the rule during this period. In May 1775, the Mecklenburg Declaration of Independence was adopted. In April 1776, the North Carolina Provincial Congress, in the Halifax resolves, formally urged the dissolution of ties with England and a Union of the Colonies. This was a major impetus toward drafting the Declaration of Independence on July 4. North Carolina was, however, the next to the last original colony to ratify the Constitution, joining the Union only after it had received firm commitments that a Bill of Rights, similar to the rights already guaranteed by the State, would be added to the document.

Mr. President, the tercentenary celebration is focusing attention on the first hundred years following the issuance of the Carolina Charter. There were many events and many great men during that period who were important to the cultural, financial, agricultural, and religious history of the Nation. However, the events I have just cited are to me of the greatest moment. Everything else is nothing without the freedom and liberty upon which this country was based.

Today, 300 years after the charter was granted, North Carolina is a world leader in industry, agriculture, education, and progressive government. For these great blessings we owe our eternal thanks to the heritage that was North Carolina's from its inception.

In 1962, President Kennedy signed into law a joint resolution of the 87th Congress, establishing the North Carolina Tercentenary Celebration Commission "to formulate and implement plans to commemorate the 300th anniversary of the State of North Carolina, and for other purposes." The President has appointed my good friend, Frank Graham, the distinguished United Nations mediator, as Chairman of that Commission, on which I am proud to serve. In addition, in North Carolina there is a State Carolina Charter Tercentenary Commission which is supervising a yearlong celebration. Just this past Saturday a stamp commemorating this great event was issued in Edenton, N.C., one of the oldest towns in the country.

1963 is a year of festivity in North Carolina with special cultural observances marking our anniversary throughout the State. This, therefore, will be a particularly exciting year for tourists to visit the "variety vacationland" of North Carolina and attend the great outdoor dramas which depict life during the State's early colonial history and visit our many sights of historical interest.

Mr. President, I ask unanimous consent to have the following items concerning the Carolina Tercentenary Celebration printed at this point in the RECORD: "Charter Issued—State Is Born," Greensboro Daily News, Greensboro, N.C., March 24, 1963; "The Carolina Charter Commission," pages 2 to 5; "Calendar of Forthcoming Events for Carolina Charter Tercentenary 1963; and Tercentenary Projects"; Public Law 87-437; "Tar Heel Stamp Placed on Sale," Greensboro Daily News, Greensboro, N.C., April 7, 1963.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Greensboro (N.C.) Daily News, Mar. 24, 1963]

THREE HUNDRED YEARS AGO: CHARTER ISSUED—STATE IS BORN

(By Robert Page)

Today, 300 years ago, North Carolina was born. It was not christened as North Carolina until almost 50 years later, but was bred by the Charter of Carolina.

In his court at Westminster, England, 300 years ago today, King Charles II, surrounded by his eight loyal and powerful supporters, gave to the eight lords proprietors the Charter of Carolina.

Considered outrageously liberal in its provisions to the proprietors and to the settlers in the territory, the charter established certain freedoms for the colonists. It became a link in a chain of invaluable documents, preceded by the Magna Carta and the English Bill of Rights, and followed by the Declaration of Independence and the Constitution of the United States.

During 1963, the Carolina Charter is being honored by a yearlong celebration. The occasion is also being used to tell of the many significant events which occurred as a result of the charter until 1763 in North Carolina.

Two years after the charter called for an assembly of the settlers in Carolina, the Grand Assembly of the Albemarle convened in 1665 at Hall's Creek. The only settlers of Carolina were in the Albemarle Sound area.

North Carolina's 1963 General Assembly will visit the site of that first assembly on April 17. The current legislature is a lineal descendant of the Grand Assembly of 1665.

The U.S. Post Office has recognized the importance of the charter in producing a commemorative stamp which will go on sale April 6 at Edenton. Significance is added to the Carolina Charter stamp in that the number of commemorative stamps issued by the Post Office is now 9, reduced from 45 of the recent years.

ART EXHIBITION TO BE HELD

A Tercentenary Art Exhibition will open on March 23 and run through April 28 at the North Carolina Art Museum in Raleigh.

Scores of annual tourist attractions, conventions and meetings have adopted the theme of North Carolina's 300th anniversary.

On April 22, the North Carolina Symphony at Durham will premiere a symphonic composition written by North Carolina composer Hunter Johnson who has worked to capture and transmit through music the spirit of the colonists in good and hard times.

A 3-day wagon train in western North Carolina will tell of "Daniel Boone's Crossing of the Blue Ridge," June 27-29.

Less spectacular, but vital, work is being done in schools, churches and study groups to reevaluate the role North Carolina played in the early development of the Nation as a result of the Carolina Charter.

A statewide essay contest, a documentary motion picture, special publications and campus and school programs are being sponsored within the State's schools to rejuvenate recognition of North Carolina's importance and proud past.

As Gov. Terry Sanford stated: "Too often in the past, neighboring States have stolen the thunder on commemorations and celebrations of this type. It is time we began paying proper attention to our past. North Carolina is richer and more interesting in its heritage and history. It is richer still in its potential. Building on the foundation stones of that rich past, North Carolinians intend to achieve that great potential."

Whatever the great potential becomes in reality, it should be remembered that it all began 300 years ago—to the day.

THE CAROLINA CHARTER TERCENTENARY COMMISSION

The year 1963 marks the 300th anniversary of the Carolina Charter of 1663. On March 24 of that year, King Charles II at his court in Westminster issued this document to eight of the supporters who, a few years earlier, had provided him crucial backing in his successful struggle to regain the English throne. Under the terms of the grant the eight lords proprietors became the owners of an immense area extending southward from Virginia to Florida (then a Spanish possession) and from the Atlantic to the South Seas or Pacific Ocean. Although the Carolina Charter was granted by Charles II to his eight friends in settlement of political and, perhaps, other indebtedness, it is nevertheless an indispensable link in the chain of records beginning with Magna Carta that establishes and preserves our political liberties down to the present.

In the Carolina Charter are found, for example, guarantees of the representative form of government which characterizes our way of life. The lords proprietors were required to "make (and) enact under their seals * * * any laws whatsoever, either pertaining to the public state of the said province or to the private utility of particular persons, according to their best discretion, of and with the advice, assent and approbation of the freemen of the said province, or the greater part of them, or of their delegates or deputies, whom for enacting the said laws when and as often as need shall require we will that (the lords proprietors) shall from time to time assemble in such manner and form as to them shall seem best."

The original document from which these words are taken was acquired for the State of North Carolina by a group of public spirited citizens who purchased it from a British antiquarian bookseller in 1949. The venerable 4-page parchment is on display in the Hall of History in Raleigh, encased in a modern, fireproof safe so constructed that each page can be examined without damaging it. Each year many thousands of visitors, including entire classes of schoolboys and girls, view the document. It is worth noting that only six other States possess their colonial charters today.

In 1959, the North Carolina General Assembly, the lineal descendant of that early body which convened in Albemarle County pursuant to the provisions of the charter, established the Carolina Charter Tercentenary Commission. This group was charged with the development and execution of plans for a program for the celebration of the tercentenary of the charter in 1963. The charter commission, as it is commonly referred to, comprises 25 members of whom 3 are ex officio, namely: the superintendent of public instruction and the directors of the department of conservation and development, and of archives and history. The remaining 22 members are appointed by the Governor for 2-year terms. The Honorable Francis E. Winslow, of Rocky Mount, is chairman of the commission. Brig. Gen. John D. F. Phillips, U.S. Army, retired, who was appointed executive secretary of the charter commission in May 1960, maintains an office in Raleigh at 121 Halifax Street.

Among the important early decisions taken by the charter commission was one to include in the scope of the celebration the first century of the colony's existence, that is, the period 1663-1763. Several cogent reasons influenced the members of the commission in this determination. Since the actual granting of the Carolina Charter occurred in England, there is not available in North Carolina a locale specifically associated with the year 1663 as is Jamestown for 1607 or Plymouth Rock for 1620. Moreover, the tempo of activity in the colony immediately following the issuance of the charter was slow; it was not until October 1664, that the first colonial official, William Drummond, was appointed Governor and commander in chief of Albemarle County, one of the three regions into which the colony was divided by the lords proprietors.

During these early years settlements were confined chiefly to the coastal region. It is estimated that by 1700 the total population of the colony did not exceed 5,000 with perhaps half this number in a small area adjoining Albemarle Sound. By 1763, however, the colony's population had grown to approximately 200,000 and settlement had extended westward to the Blue Ridge mountains. The fortification from which the present-day town of Old Fort, near Asheville, is descended was built in 1755.

It is obvious, therefore, that the time frame 1663-1763 provides a broad geographical base for 1963's celebrations and offers a reasonably wide selection of events suitable for commemoration. Increased opportunities are afforded for local as well as State-wide observances, a situation which the charter commission considers conducive to a genuinely popular celebration.

Still another important consideration motivated the charter commission in its decision to adopt the period 1663-1763 as a chronological basis for its plans. Historians regard the year 1763 as the end of the colonial epoch of American history. In that year the Seven Years' War, or the French and Indian War, as the conflict was known in the colonies, ended. With the elimination of the local threat, provincial spirit tended to become increasingly self-sufficient and nationalistic, a development that was not slowed by Britain's efforts to induce the colonies to accept economic measures designed to liquidate part of the cost of the war. Events led rapidly to the outbreak of the hostilities which resulted in American independence.

While much is known about North Carolina's role in the struggle for independence—the Regulators, the Battle of Alamance, the Provincial Congresses, and the Halifax resolves are familiar to Tar Heels—the events of the first century following the Carolina Charter are less well understood. The Culpeper revolt in 1677, for example, in which the colonists successfully maintained their right to representative government as established in the Carolina Charter of 1663, is equally as significant as the Halifax resolves as a "first" in American colonial and national history. Renewed attention to the period 1663-1763 during the Carolina Charter Tercentenary in 1963, therefore, will permit a better understanding of the part played by pioneer North Carolinians in shaping the institutions of our country. The more familiar events of the period following 1763 will, no doubt, be commemorated during the bicentennial of the American Revolution in the 1970's.

Several committees have been organized to formulate plans in various fields of activity: Arts; commemorative events; programs in schools, colleges, and universities; religious activities; and scholarly activities. Each of these groups includes, in addition to members of the charter commission, a number of prominent citizens whose interests and experience lie in the field of the committee concerned. These persons are designated associate members of the charter commission.

The committee on the arts is responsible for planning a program in the field of fine arts, music, and literature. Projects in this category include literary competitions, musical compositions and performances, playwriting and dramatic productions, ballet, production and exhibition of works of art, and other related activities. Mrs. J. O. Tally, Jr., of Fayetteville, is chairman of the committee.

Two other prominent ladies are cochairmen of the committee on commemorative events: Mrs. Inglis Fletcher of Edenton and Mrs. Harry McMullan of Washington. This group, which has a steering subcommittee headed by the Honorable J. Vivian Whitfield, of Wallace, is concerned with commemorative activities observing significant events which occurred during the period of establishment and consolidation of colonial North Carolina. These observances will be festive or serious in character as the event to be commemorated requires. Emphasis will be given to local as well as statewide commemorations. In order to enlist the support of local patriotic and civic organizations in the promoting of these programs, the committee on commemorative events requires membership from most, if not all, of the counties of the State.

In like manner the committee on programs in schools, colleges and universities has a large membership. Its job is planning for the observance during the tercentenary of significant events of the colonial period by students in all of the State's education institutions. Representation on the committee from each county and from each institution of higher learning is rapidly being attained. The committee is headed by Dr. H. H. Cunningham, dean of Elon College, assisted by Miss Lois Edinger, former president of the North Carolina Education Association.

Recognition of the historic role of the church in the establishment of the colony is accorded by the charter commission through its committee on religious activities. Although its organization is still incomplete, this group will encourage the development of plans for observing the tercentenary by churches throughout the State, particularly those which trace their establishment to the colonial period.

The committee on scholarly activities, under the leadership of Mr. Lambert Davis, director of the University of North Carolina Press, is concerned with the identification and selection of scholarly materials for exhibition, publication and microfilming. The major project planned by the committee on scholarly activities is the publication of a completely revised edition of the "Colonial Records of North Carolina" with its first volume to be issued in 1963. The group is also making arrangements for certain national and regional learned societies to conduct conferences and conventions in North Carolina in 1963. Mr. William S. Powell, librarian of the North Carolina collection of the University of North Carolina Library, is cochairman of the committee on scholarly activities.

A major objective of the charter commission is support of construction by the State of an appropriate building to serve as a repository for North Carolina's priceless archives and other historical items, and as a modern, efficient, historical museum. The lack of suitable facilities for these purposes, which every neighboring State possesses, is considered by the charter commission as entirely out of keeping with the forward-looking attitude of a great State. The charter commission, therefore, seeks public support for such a building which will afford an appropriate setting for the historic Carolina Charter of 1663, permit the proper preservation of the State archives, and provide an up-to-date hall of history, worthy of the State's proud record. To facilitate the achievement of this objective, the charter commission has formed a committee on finance and building which is headed by Mr. James G. W. MacLamroc, of Greensboro.

It has been proposed that the projected structure be called the Carolina Charter-Confederate Memorial Building, a name which in time might be appropriately shortened to "Charter-Memorial Building." Such a building, apart from its critical need to serve a functional purpose, would indeed constitute a fitting monument to the great heritage of North Carolina. The charter commission is much encouraged by the action of the 1961 general assembly on the recommendation of the commission on reorganization of State government to "provide for the establishment of a center, to be called Heritage Square, wherein may be eventually erected suitable buildings for the State library, the department of archives and history, the museum of art and the museum of natural history."

The completion of the proposed Charter-Memorial Building as one of the structures in the complex contemplated in the foregoing recommendation would be a proper climax to the activities of the Carolina Charter Tercentenary. Such a building would symbolize for the citizens of North Carolina the history and traditions which have made it the great commonwealth it is. It would keep present and future generations of our citizens aware of the roots from which they spring, and in so doing would nurture those civic virtues of courage, determination and sense of purpose so much in evidence among the early settlers of the colony.

Calendar of Forthcoming Events for Carolina Charter Tercentenary 1963 and Tercentenary Projects

April 15 to 22: Tercentenary week in Chowan County with pilgrimages to Colonial Edenton on 19 to 21.

April 20: Dare County Pirates' Jamborama, tercentenary weekend.

April 21: "Adam Sherrill's Crossing of Catawba River" commemoration at Rehobeth Church, Maiden, Catawba County.

April 22: Assembly program, North Carolina College at Durham.

April 22: Premier performance of tercentenary symphonic composition by Hunter Johnson; North Carolina Symphony at Durham.

April 24: Literary Club meeting, Winston-Salem Teachers' College.

May 8 to 11: State Federation of Music Clubs convention, Statesville, to feature tercentenary.

May 20: State winners in essay contest announced; invited to Raleigh for special ceremony.

June 22: Rhododendron Festival, Bakersville, to feature tercentenary.

June 27 to 29: "Daniel Boone Crosses the Blue Ridge," 3-day wagon train; all day celebration on 29th along Blue Ridge Parkway. Opening of "Horn in the West," in evening of 29th with special tercentenary program.

July 31: Tercentenary program, 8 p.m., at Mineral and Gem Festival, Spruce Pine.

Date indefinite: "Prince of Parthia" production, Parkway Playhouse, Burnsville. (First play written in America, by Thomas Godfrey, completed in North Carolina.)

Public Law 87–437

Joint resolution providing for the establishment of the North Carolina Tercentenary Celebration Commission to formulate and implement plans to commemorate the three hundredth anniversary of the State of North Carolina, and for other purposes

Whereas the year 1963 will mark the tercentenary of the charter by which King Charles II of England conveyed to Edward, Earl of Clarendon; George, Duke of Albemarle; William, Lord Craven; John, Lord Berkeley; Anthony, Lord Ashley; Sir George Carteret, knight and baronet; Sir William Berkeley, knight; and Sir John Colleton, knight and baronet "all that territory or tract of ground situate, lying and being within our dominions in America extending from the north end of * * * Luck Island which lies * * * within 6 and 30 degrees of the northern latitude, and to the west as far as the South Seas, and so southerly as far as the River Saint Mathias, which borders upon the coast of Florida and within 1 and 30 degrees of northern latitude, and west in a direct line as far as the South Seas aforesaid * * * to have, use, exercise and enjoy * * * as * * * true and absolute lords and proprietories (with authority to make and) enact under their seals any laws whatsoever, either pertaining to the public state of the said province or to the private utility of particular persons, according to their best discretion, of and with the advice, assent and approbation of the freemen of the said province, or the greater part of them, or of their delegates or deputies;" and

Whereas the foregoing event constitutes a major landmark in the early history of North Carolina and of the United States as an English Colony; and

Whereas it is fitting and desirable that we commemorate the beginnings of the State of North Carolina, together with its subsequent history and future role in the family of the United States, for the benefit of all the people of our Nation; and

Whereas such a commemoration, with careful planning, can be of enduring, rather than transitory, worth to our people: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) there is hereby established a commission to be known as the North Carolina Tercentenary Celebration Commission (hereafter referred to in this joint resolution as the "Commission") which shall be composed of fifteen members as follows:

(1) Four members who shall be Members of the Senate, to be appointed by the President of the Senate;

(2) Four members who shall be Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives; and

(3) Seven members to be appointed by the President.

(b) The President shall, at the time of appointment, designate one of the members appointed by him to serve as Chairman. The members of the Commission shall receive no salary.

Sec. 2 (a) The functions of the Commission shall be to develop and to execute suitable plans for the celebration of a series of anniversaries occurring during 1963, commemorating the three hundredth anniversary of the Carolina charter of 1663, together with significant events in the history of North Carolina from 1663 to 1763, both years inclusive.

(b) In carrying out its functions the Commission is authorized to cooperate with and to assist the Carolina Charter Tercentenary Commission and any other agency created or designated by the General Assembly of the State of North Carolina for the purpose of planning and promoting the Carolina charter tercentenary celebration. If the participation of other nations in the celebration is deemed advisable, the Commission may communicate to that end with the governments of such nations through the Department of State.

Sec. 3. The Commission may employ, without regard to the civil service laws or the Classification Act of 1949, as amended, such employees as may be necessary in carrying out its functions. Service of an individual as a member of the Commission, on a part-time or full-time basis, with or without compensation, shall not be considered as service or employment bringing such individual within the provisions of section 281, 283, 284, 434, or 1914 of title 18 of the United States Code, or section 190 of the Revised Statutes of the United States (5 U.S.C. 99).

SEC. 4. (a) The Commission is authorized to accept donations of money, property, or personal services; to cooperate with patriotic and historical societies and with institutions of learning; and to call upon other Federal departments or agencies for their advice and assistance in carrying out the purposes of this joint resolution. The Commission, to such extent as it finds to be necessary, may, without regard to the laws and procedures applicable to Federal agencies, procure supplies, services, and property and make contracts, and may exercise those powers that are necessary to enable it to carry out efficiently and in the public interest the purposes of this joint resolution.

(b) Expenditures of the Commission shall be paid by the executive officer of the Commission, who shall keep complete records of such expenditures and who shall account also for all funds received by the Commission. A report of the activities of the Commission, including an accounting of funds received and expended, shall be furnished by the Commission to the Congress within three months following the celebration as prescribed by this joint resolution.

(c) Any property acquired by the Commission remaining upon termination of the celebration may be used by the Secretary of the Interior for purposes of the national park system or may be disposed of as surplus property. The net revenues, after payment of Commission expenses, derived from Commission activities, shall be deposited in the Treasury of the United States.

SEC. 5. The Commission shall expire upon the completion of its duties, but in no event later than April 1, 1964.

Approved April 27, 1962.

[From the Greensboro (N.C.) Daily News, Apr. 7, 1963]

TAR HEEL STAMP PLACED ON SALE

EDENTON, April 6.—U.S. Postmaster General J. Edward Day dedicated a new postage stamp issue today in this historic coastal city commemorating the 300th Anniversary of the Carolina Charter.

Day told the 500 people gathered in the auditorium of the Edenton Elementary School that the stamp "will renew in the millions of Americans who see it and use it an interest in the Carolina Charter."

"I hope and believe that in so doing," he said, "the stamp will also reawaken an awareness of the value of our hard-earned political freedoms."

ISSUED IN 1663

The Carolina Charter was issued in 1663 by King Charles II of England, conveying to eight lords proprietors the "Carolina Territory." From this, 14 States eventually were formed.

The red and brown stamp shows a reproduction of the first page of the charter.

Day said "the Carolina Charter Tercentenary Commission, through its activities celebrating the anniversary of the charter, is making Americans aware of the historic roots of this State. Our commemorative stamp program serves a similar purpose, to honor outstanding individuals and events of national importance."

He said the special stamp is the first to be issued this year, in line with a policy to turn out fewer of the special issues.

Day's speech was preceded by a speech by Congressman HERBERT C. BONNER who termed the occasion "a great day for the Albemarle, the State and the Nation."

BETTER JOB

U.S. Senator B. EVERETT JORDAN, who followed BONNER, told the gathering "the New England States have been doing a better job of dramatizing their colonial history." He commended the work of the Tercentenary Commission for stirring more interest in North Carolina's past.

Francis E. Winslow of Rocky Mount, chairman of the Carolina Charter Tercentenary Commission, spoke at a luncheon following the ceremony. Edenton Mayor John A. Mitchener, Jr. served as master of ceremonies at both events.

Edenton's post office did a booming business selling and canceling first-day issues of the commemorative stamp. J. L. Chestnut, local postmaster, had 35 extra workers on hand to handle first-day cancellation requests from stamp collectors across the country.

The Edenton Post Office was supplied with 1½ million of the special stamps for the occasion.

NORTH CAROLINA'S WORK-RELEASE PROGRAM: A SIGNIFICANT ADVANCE IN PRISONER REHABILITATION

Mr. ERVIN. Mr. President, in these days of rising crime rates, habitual offenders, and overcrowded prisons, the problems of criminal rehabilitation and prison reform are of acute national concern. In this connection, I have read an excellent article which I believe will be of great interest to the Senate. The article deals with North Carolina's progressive prison program. In only 2 years the prison population in the State has been reduced by 1,000, or almost 10 percent, at a time when the national average was steadily increasing.

The experience of North Carolina in meeting the crime challenge I feel certain will be of great help in other jurisdictions throughout the country. Accordingly, I ask unanimous consent to have printed at this point in the RECORD, Robert E. Baker's article entitled "North Carolina Prisoners Support Families, Learn Skills in Work-Release Plan," published in the Washington Post of April 8, 1963.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNIQUE AND REWARDING: NORTH CAROLINA PRISONERS SUPPORT FAMILIES, LEARN SKILLS IN WORK-RELEASE PLAN

(By Robert E. Baker)

RALEIGH, N.C.—A young woodcarver works in a mountain craft shop near Asheville and earns $130 a week.

A bricklayer works on a construction job in Raleigh at $3 an hour and supports his 61-year-old mother. Another bricklayer here supports his wife and two children at his $2.75-an-hour job.

These three men and more than 1,400 other North Carolina jobholders have one thing in common:

They are all inmates of the North Carolina prison system who work in the free community under the State's unique and rewarding work-release program.

It is part of an overall prison reform in North Carolina that is paying off. The Tarheel State's prison population is diminishing while the population in the prisons of the Federal Government, District of Columbia and almost every growing State is rapidly increasing.

REACHED PEAK IN 1961

North Carolina's prison population reached an all-time high of more than 12,000 2 years ago. Today it is under 11,000—3,000 below the prediction made by experts in 1956.

One reason for the drop is that North Carolina's economy is improving; its people are better off.

But more important is the multiple attack against increasing prison populations launched by former Gov. Luther H. Hodges, accelerated by present Gov. Terry Sanford, and administered by George W. Randall, Director of Prisons.

"Crime in the Nation is growing four times faster than the population," Randall said. "That shows the old ways don't work. We just had to do something else."

The overall program is designed to improve the preparation of prisoners for release through effective rehabilitation programs and increased use of parole.

AN $800,000 SAVINGS IN YEAR

Taxpayers should like it. Because fewer former prisoners fail to live within the law, the taxpayers save money. The reduction of the State's prison population means North Carolina taxpayers will save more than $800,000 this year. The prison department's budget request for the next 2 years is $1.25 million less than had been expected.

"But more important than saving tax dollars," Randall said, "is the incalculable saving of human suffering. There is no way to measure the waste, heartaches, and human misery caused by crime."

One example of North Carolina's progressive prison program is the school attendance required for all inmates who have less than fourth-grade achievement level.

"The link between crime and lack of education is irrefutable," said Randall. "Of 541 youthful felons that we have, 512 were school dropouts."

MANY FINISH HIGH SCHOOL

Prisoners are encouraged to go beyond the fourth grade. Many have received the equivalent of high school certificates.

The alcoholic rehabilitation program is another example. Alcoholics Anonymous groups in the communities take their program into the various prisons.

"About 75 percent of our inmates are here because of an alcohol problem," Randall said. "This program has had fine results."

About 345 inmates who participated in the voluntary alcoholic rehabilitation program failed and came back to prison. But 2,000 others, followed closely by prison officials to see if it worked, remain in the free society and continue to participate in Alcoholics Anonymous outside.

Other programs include extension vocational training, mental health clinics in the prisons to help mentally disturbed inmates, expansive work and recreation systems.

WORK-RELEASE PROGRAM

But the eye-catcher is the work-release program, unique in the United States.

This permits selected prisoners who are serving 5 years or less to work in the free community during working hours. Nonworking hours are spent back in the prison.

From the money they make, they pay the Prison Department for their cells and meals and the transportation to and from work. They support their families. Any money left over is deposited in a trust account for them when they are released from prison.

Many prisoners have $1,800 to $2,000 when they are released. Some have used the money for downpayments on new homes. A welder, serving 5 years for breaking and entering, was accepted in the work-release program and used the money he saved to establish his own business when released.

A printer with a wife and two children worked 3½ months in the work-release program and made $1,075, minus taxes and social security.

He paid $229 to the prison for housing and board, $53 for transportation to and from his job, $750 to support his family, and was released with $43 in cash from the trust fund.

Inmates in the work-release program are actually paying their way through prison.

About 20 percent of the 8,000 prisoners now serving 5 years or less have been approved for the program. About 5 percent of those who are accepted are withdrawn for violations. Most violations fall into two categories: taking a drink or slipping off to see the wife.

Many of the inmates work for former employers. But many other learn a trade in prison and then are accepted for the work-release program for outside work. They are shifted to prisons near their employment.

Because participants in the program are able to support their families while in prison, when otherwise the dependents might be forced on the welfare rolls, families are saved. So are tax dollars. The prisoner has a job when he is released; the crime rate is reduced. Prisoners have an incentive to make a good record.

Public opinion was initially hesitant about the work-release program, but it is changing.

"Many people think the prisoner is a different breed of man," Randall said. "But that's not so. The prisoner is more like the average man on the street than most of us are willing to admit.

"People forget that 97 percent of our prisoners are going to be released. We simply ask: Is it better for them to come out with a job and self-respect and contribute to society, or to come out with nothing?"

YOUTH OPPORTUNITIES

Mr. MOSS. Mr. President, we all know it is difficult sometimes to predict with assurance the effect enactment of a particular bill will have on the country. Especially is this true if it is groundbreaking legislation—something new and untried. We can always forecast what we believe will happen—what we hope will happen—but we cannot always be certain.

In the case of S. 1, however, we do not have to hesitate or equivocate. Title I is based on the highly successful Civilian Conservation Corps of the depression years. The establishment of the CCC is still paying us dividends through the many good citizens it built up, and the natural resources it preserved.

A good example is a news story with dramatic pictures which appeared in the Deseret News, one of Utah's outstanding newspapers, on January 2 of this year. The story relates how through the cooperative efforts of the CCC, and State and Federal forestry departments, flood control work done in Davis County in the 1930's has completely controlled the serious floods which formerly devastated that county.

Davis County is located immediately north of Salt Lake County, in which Salt Lake City is located. For years prior to the 1930's the small communities which stretch along the base of the Wasatch Mountains in this county, and the rich farmlands between the towns, were regularly devastated by destructive flash floods. Overgrazing had denuded the mountains of the necessary foliage to hold back the water in a cloudburst, and almost each summer the county suffered a disastrous flood in some portion of it. A number of people were killed, and vast farmlands covered with mud and boulders.

Then came the CCC boys who went to work to build terraces, dikes, and channels, to control the runoffs. This was combined with a reforestry and foliage-cover program inaugurated by the State and Federal forestry services.

As a result there has not been a single serious flood in Davis County since 1930—a fact the Deseret News cheered in the story carried last January. I ask that the entire article be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Cooperative Efforts Pay Off—Davis Cheers Flood Controls

(By Gary R. Blodgett)

Farmington.—Cooperative efforts of the Civilian Conservation Corps (CCC) and State and Federal forestry departments to control floods throughout Davis County have been successful—if measured by time.

Not since 1930 has there been a serious flood in this northern Utah county between Salt Lake City and Ogden.

Beginning in the early 1930's the Civilian Conservation Corps went to work to build terraces, dikes, channels, and storm drainage creeks to control flood runoffs.

At the same time, United States and State forestry department officials began an extensive grazing control program to allow foliage to grow on the hillsides along the Wasatch Mountains.

"With this cooperative effort we have come a long way with storm drainage control," said Alden Blain, now a research forester at the Intermountain Forest and Range Experimental Station, Farmington.

But prior to 1930, floods from the Wasatch Mountain canyons were common—and destructive.

Between 1923 and 1930 at least four flash floods roared down the mountains onto the farmlands of Davis County causing several hundred thousand dollars in damage and killing six persons.

The most tragic of all Davis County floods was August 23, 1923, when a flash flood struck without warning in Farmington Canyon, killing six campers.

"This flood struck shortly after dark," recalls Amasa L. Clark, 95-year-old Farmington resident. "The only warning was the thunderous roar of the rocks and debris tumbling down the mountainside."

COUPLE, SCOUTS

Killed when they were trapped in the canyon were a young married couple and four Boy Scouts.

"They never had a chance to escape the wall of water which roared down the steep, narrow canyon," said Mr. Clark.

In Centervile, floods the same day brought mud and rock down the mountains and deposited them in the orchards and on the farmlands in the valley.

Homes in the path of the Ford Creek flood were destroyed. Water also overflowed from Barnard Creek causing minor damage.

BOX ELDER FLOOD

In Willard, Box Elder County, a flash flood roared down the foothills behind majestic Ben Lomond Peak, destroying everything in its path.

Residents were caught by surprise. Three persons were killed and thousands of dollars damage was reported from loss of homes, barns, and farmland.

Another major flood hit Davis County in 1930 when heavy rains caused water, mud, rock, and debris to spill down into the center of Centerville.

BOULDERS ROLL

So devastating was this flood that huge boulders—some weighing as much as 200 tons—were dislodged and rolled down the mountainside.

Caught in the middle of the floodwaters was the Centerville Elementary School. Part of this building was damaged and at least one home, the Streeper home, was washed away by the flood, according to U.S. Forestry Department reports.

Since the floods, residents of central Davis County have taken advantage of the flood remains by using the rocks washed down from the mountains to build homes, walls, garages, and foundations for sheds and barns.

HOME OF ROCKS

Hugh J. Ford, 1304 North Main, Centerville, only 2 years ago built a new home of rock—every stone gathered from his own backyard.

Rock walls, homes, and other buildings such as the Farmington First-Second Ward, Church of Jesus Christ of Latter-day Saints, and the old Farmington Hotel (now an apartment house) are made of mud and stone.

So popular is the use of rock for building construction that even the new Davis County library and jail have exterior stone walls—even if they are precast rock.

Mr. MOSS. Mr. President, it is a source of considerable satisfaction to me that the YCC bill was one of the first bills I cosponsored when I came to the Senate 4 years ago, and that I have been a consistent supporter ever since. Because of the fine work done in Utah in the past by the CCC, the measure has wide support in the State. An effort has been made recently to establish a Salt Lake County youth camp, based on the old CCC pattern to help fight juvenile delinquency. There is no Federal source of assistance for this camp and the recent session of the State legislature failed to provide State funds, but I understand its supporters are still seeking ways to make the camp a reality. However, the wide interest in it, and in the YCC concept in the past 4 years, convince me that the idea of putting young men to work on the backlog of conservation work on our soil and in our forests—not just as a remedy for juvenile delinquency—but as a way of building character and muscle and improving our resource heritage, has considerable support in Utah. I am confident, also, that the YCC would be a constructive force in the life of all young American men who might be privileged to serve in its ranks.

I studied with great interest the charts describing existing camp facilities placed in the Congressional Record last week by the distinguished Senator from Minnesota [Mr. Humphrey] during his masterful address on the Youth Opportunities Act. These charts, you will remember, were compiled by the Department of the Interior and the Department of Agriculture, and described camp facilities now available in each State and the estimated cost of rehabilitating them. Eight camps were listed in Utah as follows:

Wolf Creek, capacity 75, Forest Service.

Cold Springs, capacity 50, Forest Service.

Cedar City, capacity 100, Bureau-Land Management.

Green River, capacity 100, Bureau-Land Management.

Dinosaur, capacity 25, National Park Service.

Flaming Gorge, capacity 200, National Park Service.

Zion, capacity 25, National Park Service.

Uintah and Ouray, capacity 113, Bureau-Indian Affairs.

I have visited most of these areas personally, and I can attest to the fact that not only would they be excellent locations for YCC camps, with bracing air and good sunshine for the recruits, but that there is an unlimited amount of work to be done to enhance and preserve the natural resources in the area. I would hope other YCC sites would also be developed in Utah.

Title II of the bill is, of course, a newer approach to the problem of teenagers and young people out of work, but one which I most certainly feel is worth trying. I understand that there are 800,000 young men between the ages of 18 and 22 who are at present neither in school or in gainful employment, and there is every reason to believe the number will grow.

Because of the great emphasis on education the dropout rates in Utah are not as high as in the Nation as a whole. However, they are altogether too high. The National Committee for the Support of Public Schools reports that only 77 percent of Utah boys and girls who enroll in the eighth grade complete high school. Utah is 15th in the Nation in this respect, far behind such States as Wisconsin, Nebraska, and California who have truly remarkable success in holding their teenagers in school.

Unemployment is high among this dropout group in Utah, just as it is elsewhere. I understand that for the Nation as a whole for the period of January 1, 1962, through January 1, 1963, young people under 25 totaled about 14 percent of all unemployed. In Utah, in the same period, young people under 25 totaled between 20 to 23 percent of all unemployed. This indicates that young people in Utah who have been able to get jobs and then have lost them are having an even more difficult time than those in some other States in finding new employment.

This bill presents somewhat of a dilemma to the Members of this body. We are all concerned, I am sure, about the size of our Federal expenditures in relation to our income, and everybody is searching for ways to reduce Government spending without endangering the health or welfare of our people. I have listened with interest to Senators who feel we cannot afford this legislation; that we cannot afford any legislation which will result in any new Federal spending.

There are most certainly many proposals for Federal programs which I agree we cannot afford at this time, but this Youth Opportunities Act is not one of them. It will conserve two of our most precious resources—our youth and our natural resources. Neglect of them now will only cost more in the long run—more in juvenile delinquency and penal programs—more in water and land and forest protection in the years to come. It is cheaper and wiser and better to do it now. I hope the bill will pass.

IN MEMORY OF BATAAN

Mr. **KUCHEL**. Mr. President, 21 years ago today, the United States lost a battle.

On April 9, 1942, the epic defense of Bataan Peninsula in the Philippines by American and Filipino troops ended. In a matter of days, the fall of the island bastion of Corregidor followed.

It is not my intention to review the significance and meaning of the Battle of Bataan today. Nor do I wish to analyze its tactical and strategic impact on the course of the Second World War in the Pacific. This has already been done by historians.

I make this simply an occasion for a salute to all Americans and Filipinos who, in one way or another, participated in that struggle.

I salute those who gave their lives during the battle, those who fell on the wayside during the death march, those who did not survive to see the day of victory. I salute those who survived the ordeal of war, and those whom the dead left behind—widows and orphans and loved ones—with only the knowledge and memory and a pride of gallantry and heroism to comfort them.

I take this opportunity to express America's admiration for the people of the Philippines—for all Filipinos everywhere.

We admire their courage and bravery on Bataan.

We admire their steadfast adherence to freedom and democracy.

We admire their determined recovery from the ravages of war, their effective struggle against the Red menace in their country, their dedicated efforts to strengthen their economy, to preserve their independence, to play their important and valiant role in international affairs with sobriety and maturity.

The wounds of the Second World War have healed. Foes then are friends now, and enemies, allies. The savagery of that conflict has been forgotten. This is as it should be.

But to forget the bravery, the courage, the gallantry and heroism of the defenders of Bataan would be almost sacrilege.

This we will not forget.

It is for this reason that I wish to read into the RECORD that sad but proud message broadcast by the Voice of Freedom, a makeshift radio station operating on Corregidor Island, on April 9, 1942:

> Bataan has fallen. The Philippine-American troops on this war-ravaged and blood-stained peninsula have laid down their arms. With heads bloody but unbowed, they have yielded to the superior force and numbers of the enemy. The world will long remember the epic struggle that Filipino and American soldiers put up in these jungle fastnesses and along the rugged coast of Bataan. They have stood uncomplaining under the constant and gruelling fire of the enemy for more than 3 months. Besieged on land and blockaded by sea, cutoff from all sources of help in the Philippines and in America, these intrepid fighters have done all that human endurance could bear. For what sustained them through all these months of incessant battle was a force that was more than merely physical. It was a force of an unconquerable faith—something in the heart and soul that physical hardship and adversity could not destroy. It was the thought of the native land and all that it holds most dear, the thought of freedom and dignity, the pride in these most priceless of all human prerogatives. The adversary, in the pride of his power and triumph, will credit our troops with nothing less than the courage and fortitude that his own troops have shown. All the world will testify to the almost superhuman endurance with which they stood up until the last in the face of overwhelming odds.
>
> But the decision has to come. Men fighting under the banner of an unshakable faith are made of something more than flesh, but they are not made of impervious steel. The flesh must yield at last, endurance melts away, and the end of battle must come.
>
> Bataan has fallen, but the spirit that made it stand—a beacon to all the liberty-loving people of the world—cannot fail.

Mr. President, our willingness to give meaning and significance to these words in the days ahead will determine the outcome of the struggle of freemen everywhere against another form of tyranny.

Mr. **MAGNUSON**. Mr. President, will the Senator from California yield?

Mr. **KUCHEL**. I am glad to yield to the able Senator from Washington.

Mr. **MAGNUSON**. Apropos what the Senator from California has said, I point out that 21 years ago this week, when Corregidor and Bataan were being besieged and when things in the Pacific were looking very dark for our country, a small task force left Pearl Harbor, and finally made a rendezvous in the Pacific; and on April 18, despite the fact that we were then losing the war on all the perimeter of the Pacific, that task force made a very spectacular attack on the mainland of Japan. The physical damage it did was not extremely great, but the psychological effect of that attack was enormous. I think that first air attack on Tokyo restored the spirits of all the people of the free world.

This week there will be held at Seattle, Wash., a celebration in connection with the 25th anniversary of the Tokyo Raiders. I had the privilege of being on one of the aircraft carriers which launched the planes that day. I remember very well that while we were proceeding on that mission, we were very anxious to obtain any news we could about the situation at Corregidor and Bataan. We were saddened by what happened there; but by participating in that task force, we contributed what we could to the improvement of the psychological situation in the free world.

Mr. **KUCHEL**. I thank the Senator from Washington for his reference to those events which illumine our country's history. From time to time I have talked with his friend and mine, Gen. Jimmy Doolittle, who, on the occasion of the anniversary celebration, will participate with others who took part in that memorable raid. I am glad that during the session of the Senate today, we can pause for a moment to recall some of the historic moments through which our country passed 21 years ago.

Mr. MAGNUSON. I suppose military historians have suggested, and others will suggest, that the months of March and April of that year probably were the darkest months in U.S. history, from the military point of view.

Mr. KUCHEL. Unquestionably so.

Mr. MAGNUSON. But we passed through that period; and it is well that we honor those who served during those dark days.

Mr. KUCHEL. I thank the Senator very much.

OPPOSITION TO AMENDMENT OF REGULATIONS UNDER THE PACKERS AND STOCKYARDS ACT

Mr. MILLER. Mr. President, I ask unanimous consent to have printed in the Record a letter to the Secretary of Agriculture from the Agriculture Committee of the Iowa State Senate. In the letter, the committee protests the action taken by the Department of Agriculture in amending the regulations under the Packers and Stockyards Act. The committee points out that those amendments are having an undesirable influence on the livestock market and also on the efficient method of advertising and promotion of meat, which the matter deleted from the regulations by the recent action of the Secretary of Agriculture was designed to promote.

There being no objection, the letter was ordered to be printed in the Record, as follows:

The Senate, State of Iowa,
Des Moines, Iowa, April 4, 1963.

Hon. Orville L. Freeman,
U.S. Secretary of Agriculture,
Washington, D.C.

My Dear Mr. Freeman: We ask your reconsideration of the action taken in the amendment to the regulations of the Packers and Stockyards Act, an amendment nullifying authorization of packers, market agencies, and dealers to deduct funds from receipts of livestock sales for research and meat promotion by the National Livestock Meat Board.

This is a real blow to livestock feeders who are now showing a net loss of $25 to $50 a head on fat cattle being marketed. It will also stop the efficient method of advertising and promotion of meat as well as result in the loss of excellent research into the nutritional value of meat conducted for the benefit of the consuming public.

The outstanding work conducted by the National Livestock Meat Board within the prior consent of deduction of funds from livestock sales of producers and feeders over a 40-year common law period should establish without question its right to continue.

We urge your immediate reconsideration of this drastic ruling to avoid further loss along with the high cost of operation of the livestock industry.

Respectfully yours,
Senate Agriculture Committee.
By John A. Walker, *Chairman.*

RADIO COMMENTARY BY W. EARL HALL

Mr. MILLER. Mr. President, for 20 years, W. Earl Hall, editor and publisher of the Mason City Globe-Gazette, has aired his views in his "One Man's Opinion" over Iowa radio stations KGLO, Mason City; WOI, Ames; and WSUI, Iowa City. His commentaries have covered many subjects, including education, communism, his trips and findings abroad, his faith in God and in our country—in short, in essence his philosophy as a working newsman and an American and, I may add, as one of our most prominent Iowa citizens.

The reports have been published each week by the Mason City Globe-Gazette, and have quite well set forth the credo of this distinguished gentleman.

The last report he has made was published in the April 2 issue of the Mason City Globe-Gazette. It begins with the following words, "I come now to the end."

Mr. President, we regret very much that he has come to the end of his splendid commentaries. I ask unanimous consent that the article by Mr. Hall, as published in the Mason City Globe-Gazette of April 2, 1963, be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

One Man's Opinion

(A radio commentary by W. Earl Hall, editor and publisher)

THESE ARE THE THINGS I BELIEVE

I come now to the end of 20 years of once-a -week commentaries. The words I've spoken in these quarter-hour talks would fill at least 20 books of conventional novel length. Subjects have ranged from the love life of the honey bee to man's place in the scheme of things. I've really covered the waterfront.

It would be possible—let me hasten, however, to say I'm not suggesting it—to browse through my 3-foot-tall pile of typewritten manuscripts and either identify my credo or discover that I don't have one. I have told not only all I know but all I even suspect.

Most of the time since March 19, 1943, when I launched my series of broadcasts, my little network has included two State university stations. Conscious of the obligations thus implied, if not actually imposed, I probably have tempered my preaching more than I otherwise would have done.

My abiding belief in the fatherhood of God and the brotherhood of man has been stated more than once. Corollary to this is my belief that there is a God-directed evolution * * * always upward. The gift of an intellect and a conscience made man a partner of the Supreme Architect in this evolutionary process of which I speak.

With Grove Patterson, of the Toledo, Ohio, Blade, whom I was proud to call my friend for many years, I can't bring myself to believe that this Supreme Architect would build for man a stairway leading nowhere.

Throughout the period of these commentaries I have rejected the oftrepeated assertion that man is a fighting animal. To the exact contrary, I have maintained—and do maintain—that deepest instinct in humankind is the instinct for peace, not war.

This premise was at the center of my opening commentary two decades ago (March of 1943). Although the outcome of World War II was by no means decided, I predicted victory for the free world and a peace organization which would permit America to make amends for its role in scuttling the League of Nations.

It was my contention then, as it has been many times since, that people in most of our world are entitled to better government than they have had. In a true democracy such as ours, of course—and there are few others—people get almost precisely what they deserve. But for nine-tenths of the world's population this rule is not applicable.

Not in modern times certainly and probably never have those who must do the fighting and the dying been responsible for our wars. The decision is made by those far removed from the fighting and the dying. In this I find the most compelling argument possible for a quest for lasting world peace through a system of enforcible law.

It may be a far-off goal but there can be no security against future wars unless and until we have a world peace organization equipped to reach down into the individual nations and eliminate the Hitlers, Mussolinis, and, yes, the Stalins and Khrushchevs before they plunge us into another bloodbath.

Some say—and I readily agree—that the course of action I've suggested here involves substantial risk. I ask only that this risk be set down alongside the ever-present risk attaching to following the same road that has led to two World Wars within my own span of maturity.

Almost before the ink was dry on the United Nations Charter, I sensed that we had sent a boy to do a man's work. The lofty goals set up in that document were not matched by the means of reaching them. In fairness, as I have pointed out innumerable times in these commentaries, it must be admitted that we were no less responsible than the Kremlin for the inadequate setup we got in U.N. 18 years ago.

How to make amends for lost opportunity is by no means clear at this time. We're locked in a life-and-death struggle with world communism. Even if it ended in complete victory at an early date—and this is by no means an impossibility—I'm not sure that we'd profit fully from the lesson we should have learned from two attempts at world organization for peace.

Now for a moment or two, let's turn our attention to that most nefarious ideology ever visited upon our world—communism. No subject has had more frequent or extensive attention in my commentaries down through the years. I've spoken about it with more than a little feeling.

Communism presented itself as a reality to me, as distinguished from a theory, a dozen years ago. First it was Tito's Marxism, then Stalin's. In Yugoslavia I saw empty store windows and ill-clad people in the center of a land suggestive of Iowa in its fertility. Then it was East Berlin, still in ruins whereas West Berlin was a flourishing city.

Later I saw Marxism at its fountainhead—Kiev, Leningrad, Moscow. I viewed its collective farming at close range. I studied its education from nursery schools to graduate level in 35-story University of Moscow looking down on the historic Moskva River from a commanding site on Lenin Hills.

I didn't see Russia's assembly line industry because my intourist guide was under orders not to let me. I could only judge it by its products, which included automobiles and trucks and tractors 20 years behind the times alongside their American counterparts.

What has become a well-defined impression in Yugoslavia and East Germany a half dozen years previously became a settled conviction on the basis of my time in Russia. Here are some of the things I believe about the ideology spawned by Marx and Engels, applied by Lenin and adapted by Stalin and Khrushchev:

Communism is as phony as a three dollar bill. It never went anywhere on honest invitation. It could stay nowhere—not even Russia—if there was a free choice and a plausible known alternative. Its one genius, if that word can be used, has been its ability to hold a pistol at the temple of its enslaved people longer than any other tyranny of our time.

I verily believe that communism bears the seed of its own destruction. I am willing to stake my reputation as a reporter on a prediction that Americans now living—including my seven grandchildren—will be on hand to witness the burial rites for this most loathsome ideology ever conceived in the mind of man. If, and it's a big if.

If we of the free world remain strong economically, militarily, and most important of all—spiritually.

This is a point of view I have expressed more than once—many times, in fact—in this extended series of commentaries now coming to an end.

Another oft-recurring theme in my weekly visits has been education in its varied manifestations. My conviction that education is the one most important business in the world has presented itself in numerous garbs. My reasoning has been rather elemental.

With education and an application of the technology embraced by education, there can be food for the 4 billion people who will inhabit our earth by 1970. With education—and only with education—can religion be elevated from superstition to something supremely meaningful.

Education is an indispensable precedent to true self-government in the democratic pattern. This was a studied judgment reached 2 decades ago on an extended fact-finding mission through South America. I had to report—and I'd still have to report—that there wasn't in all of Latin America any true democracy—republics, yes, but no real democracy.

Where illiteracy prevails, as it does in at least two-thirds of our world, a despotism is inevitable. The only question is whether it shall be a benevolent or a malevolent tyranny. I know of no exception to this rule.

Where there's democracy—our kind or any other form which glorifies human dignity—aggressive warfare becomes an impossibility. No war, as I've already suggested, could be launched by popular vote in an enlightened people. It's as simple as that.

It may be said of me that I have been a sucker for causes * * * safety, Red Cross, Community Chest agencies, crippled children, cancer, Radio Free Europe, all of them. If I am so accused, I shall not be disposed to enter a denial. Support for causes designed to promote happiness and human welfare has been deeply rooted in my credo.

As I have given of my time, my effort and my means, I have always had the deep-seated conviction that I was receiving even more than I gave. That is my heartfelt testimonial. I'm truly sorry for those who have not experienced the comfort and satisfaction which come from believing—really believing—in a cause and doing something about it.

Some of the causes I've espoused have prospered. Others—and a larger number, I suspect—have not—at least not yet.

Safety doesn't lend itself to permanent solution. My approach to the problem is that we get the degree of safety we deserve and demand. There's a price to be paid and we haven't been willing as yet to pay it.

In recent years, even recent months, there has been a most encouraging cutting through the ignorance and superstition that has blocked scientific water fluoridation. Vaccination's story is being repeated.

Iowa's adoption of a constitutional amendment which can put us at the forefront of judicial and court reform—if it's properly implemented by our legislature—has been a source of tremendous gratification to me by reason of having been head of the State citizen organization behind the move.

My story with respect to calendar reform isn't as pleasant to relate. There is a plan that would provide uniformity in months, quarters, and years. The logic for its adoption would seem to be unanswerable. Other nations favor it but American inertia blocks the path. We seem to need a modern Julius Caesar or Pope Gregory for another giant stride forward in time reckoning.

I had some slight part in bringing the city manager plan to my community. Its abandonment through apathy by our self-admitted good people was disappointing. But I haven't given up. Someday it will return because it constitutes the one best path to efficient and economical municipal government.

On the less serious side I haven't been able to make it known that it was Charles Dudley Warner, not Mark Twain, who said "everybody talks about the weather but nobody does anything about it." Nor have I been wholly successful in getting across the information—even among some of my own associates—that the word is adDRESS—not ADdress.

"One Man's Opinion" has been a generally pleasant and rewarding chore—and interesting at times. I'm remembering some shortwave transmission by BBC during my tour of duty in war correspondence and an airmail transmission of a tape cut in Melbourne, Australia, during the 1956 Olympics at a cost suggestive of platinum if not radium.

But my happiest memory is going to be about the thousands of stimulating letters from listeners. These have undergirded my well-defined conviction that humankind is mostly good and that our God-directed evolution is ever upward.

IMPACT ON THE BANKING INDUSTRY OF SEC INVESTIGATIONS AND CONTROLS

Mr. MILLER. Mr. President, in the American Banker for March 27, in the column entitled "Today," written by Raoul D. Edwards, appears an article in which he points out that the American Bankers Association is joining forces with the Comptroller of the Currency, Mr. Saxon, in seeking to ward off the impact on the banking industry of SEC investigations and controls. In the article he points out the extent to which the Federal regulatory agencies are involved in the banking business. I must say that a very impressive case is made for not adding further to the burdens on the American bankers.

I ask unanimous consent that the article be printed in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY: ABA JOINS SAXON IN COMMON CAUSE

(By Raoul D. Edwards)

WASHINGTON.—The bank president looked up at his cashier with a harassed, tired look in his eyes. "Now what?"

The cashier looked equally tired. "Some examiners have shown up from the Housing and Home Finance Agency. They want to go over our loans on the slum clearance project. And that new school loan we made."

"Well, go ahead; that's their legal right. Go ahead. The more the merrier. But tell me—when do you think we can get a little work done around here?"

The president turned to his desk, fuming. In the last 2 weeks his bank had been inundated by the usual spring rush. The Fed had been in for its examination; the Comptroller's Office had sent a trust examiner down and the SEC had been in to probe his trust operations; FHA and VA officials had gone over his mortgage operations with a fine-toothed comb, and the FDIC had been in, examining all loans in its jurisdiction, as had several other agencies. Half his staff was shepherding some examiner or another around the premises; papers were scattered everywhere, and customers weren't getting the attention they deserved.

Incredible? Impossible? Of course, but—

"If banking were regulated by everyone whose jurisdiction it touches, the effectiveness of the banking system in meeting the public's needs would be threatened. One industry simply could not be responsive to the regulation which this multisupervisory system would entail. Ultimately, the public would be denied the benefits of our uniquely designed business because banking would no longer be able to offer the services that have been so important to our people."

The picture of a bank being intruded upon by a dozen supervisory agencies is unlikely, but the above warning, sounded by Dr. Charles Walker, executive vice president of the American Bankers Association, is not unwarranted.

Dr. Walker was throwing the whole weight of the ABA behind the Comptroller of the Currency in his effort to keep the Securities and Exchange Commission out of regulation of bank trust powers, as far as they cover common trust operation of funds under the Keogh Act.

But Dr. Walker made a second point, and one which in the long run may be far more important: that banking cannot endure much more of a regulatory burden than it now bears. Perhaps no other business in the country is as heavily regulated as is banking.

Thoughtful bankers know this. They know that SEC attempts to regulate their use of this particular trust fund is not needed, for the simple reason that banks already are more closely regulated in this field, than are mutual funds.

In Dr. Walker's words: "Bank regulatory agencies already effectively supervise our business."

Indeed, bank supervisory bodies regulate far more closely than the SEC does, or probably would want to. Banks operating in the trust field are not permitted the management fees, or the "pack" or price, that mutual funds are. They do not want them; even if they did, the bank supervisory bodies would not permit them to take these higher fees.

And, as Dr. Walker added, "if the need for greater regulation does develop, it should be imposed by existing bank supervisory agencies."

As it now stands, a bank can be held answerable depending on the system to which it belongs—to the Comptroller of the Currency on trust functions; the Federal Reserve as a member bank, the Federal Deposit Insurance Corporation as an insured bank, its State supervisor as a State-chartered bank, the Justice Department on antitrust matters, and, in a more limited sense, other State and Federal agencies on controls over certain types of loans handled, and the like. FHA rules must be observed in making FHA loans, for example. And don't forget the Internal Revenue Service, that senior partner of every corporation in the country.

Without considering the legalities of SEC control over some bank trust functions—a matter in grave doubt—it still seems that there is no need, and no public good, to be gained by adding this agency to banking's many other regulators. The ABA's decision to support Mr. SAXON's position is well advised.

COMMITTEE MEETING DURING SENATE SESSIONS ON APRIL 10 AND 11

On request of Mr. HUMPHREY, and by unanimous consent, the Foreign Relations Committee was authorized to sit during the sessions of the Senate on April 10 and 11.

WINSTON CHURCHILL BECOMES AN HONORARY CITIZEN OF THE UNITED STATES

Mr. HUMPHREY. Mr. President, today the President of the United States signed the resolution giving to Sir Winston Churchill the first honorary citizenship of the United States, and thus making him an honorary citizen of our great Republic.

Mr. President, Winston Churchill is known by every American. The Associated Press, in a remarkable article about this great world citizen, has reminded us of Sir Winston's visit to the Congress. I shall read part of the article, because it tells a little of the story of this great man's capacity and ability, almost with the incisiveness of the great man's rhetoric, to present his views:

> For Congress he rolled out a display of this renowned oratory. He looked around the Senate Chamber and remarked impishly:
>
> "I cannot help reflecting that if my father had been an American and my mother British, instead of the other way 'round, I might have got here on my own."

And, you know, I do believe he would have.

During this visit to the Capital Sir Winston addressed a joint meeting of the House and the Senate. All of us remember it. It was a most exciting chapter in the history of the United States.

Mr. President, today is another great chapter in the history of the United States and in the history of Great Britain, our faithful, loyal, and strong ally. When President Kennedy signed the resolution giving honorary United States citizenship to Sir Winston Churchill, I am sure the President was speaking for every American, because our Nation loves, admires, and respects Mr. Churchill. We respect him as a great warrior, as a great wartime leader, as a great statesman, as a great Englishman, and, above all, as a great citizen of the free world.

I think his willingness to accept the title of honorary citizen of the United States is an honor to the American people. We can embrace him as one of our own; he becomes a citizen of this Republic, as well as a citizen of the United Kingdom.

As my colleagues know, Sir Winston's mother was an American. The bond of friendship between this country and the great English leader is all the more enduring because of this parental bond. His steadfast courage and loyalty throughout the war will remain as a constant reminder with all Americans who can recall those grave and fateful days.

What better way than by this act of Congress and this act by the President of the United States to perpetuate for the ages the wonderful relationships existing between the United States and Great Britain.

The United Kingdom and the United States now have a common bond that goes far beyond diplomatic niceties or far beyond the alliances that arise through treaties. We now have the common bond of citizenship in common with Sir Winston.

I ask unanimous consent that the article by the Associated Press be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HONORARY AMERICAN: CHURCHILL BECOMES CITIZEN

Sir Winston Churchill, the magnificent Briton, becomes officially today what he has been for 2 decades in the hearts of Americans—the first honorary citizen of the United States.

The bestowing of this honor, unique in all history, requires only a touch of President Kennedy's pen on a bill enacted by Congress and a second signature on a presidential proclamation.

Weary now with the weight of 88 years, Sir Winston was unable to be present to receive a nation's accolade. Neither were Herbert Hoover, Harry S. Truman, and Gen. Dwight D. Eisenhower, the three former Presidents, able to accept Mr. Kennedy's invitation to attend today's ceremony.

But the ceremony was carefully timed so that the British Broadcasting Corp. could bounce it off the orbiting Relay satellite and Sir Winston could watch it on television in his London home.

And Sir Winston sent a special message of acceptance and appreciation to be read by his son, Randolph.

The setting was the rose garden outside the White House where Sir Winston helped chart the strategy of global war and peered at the problems of an uneasy peace in the climactic years of a stirringly erratic career.

It was in this house that the man Britain chose as its Prime Minister in the moment of its greatest peril showed up suddenly and secretly a few days after Japan smashed at Pearl Harbor and the United States went limping off to war.

Side by side in the oval Presidential office, Sir Winston Churchill and Franklin D. Roosevelt thundered at the common enemy at a joint news conference. They assured the world that allied might ultimately would win out over Germany first and then Japan. Spryer then, Sir Winston climbed onto a chair, chomped a cigar, and poked his split fingers aloft in his renowned V-for-victory salute.

For Congress he rolled out a display of his even more renowned oratory. He looked around the Senate Chamber and remarked impishly:

"I cannot help reflecting that if my father had been an American and my mother British, instead of the other way 'round, I might have got here on my own."

Today he got back to the National Capital in thought and spirit.

And memories surged back through Washington of how Sir Winston seared the Nazis with acid tongue and tone, of how he preferred a spot of brandy to that "bleak beverage," water; of his head to toe, zippered air raid suit; of the big cigar and jaunty air.

Today homage comes to Sir Winston not only from the Ambassadors of Britain and seven Commonwealth nations. Invitations to the citizenship ceremony also brought an outpouring of acceptances from American friends and admirers of Sir Winston in and out of Government.

Half the Cabinet accepted. So did leading men in Congress. So did Chief Justice Earl Warren.

On the list were such persons as the sons of the late President, John Roosevelt and Franklin D. Roosevelt, Jr.; former Ambassadors to the United Kingdom, John Hay Whitney and Winthrop Aldrich; Financier Bernard Baruch; Mrs. Alice Roosevelt Longworth; General of the Army Omar N. Bradley, and retired Gens. Carl. A. Spaatz and J. Lawton Collins, Jr.

Mr. MONRONEY. Mr. President, I should like to associate myself with the remarks made by the assistant majority leader, the distinguished Senator from Minnesota, who has so eloquently described his happiness at the designation of citizenship for Sir Winston Churchill.

Many of us remember the day when he spoke at the joint session of the Congress during the bleak days of World War II, when his great leadership of England, matched with that of Franklin Delano Roosevelt, stood guard against the conquering of most of the world by the forces of Hitler. I remember that he remarked to the assembled Senate and the House that his mother was an American and his father was a Britisher. Had it been the other way around, he might have been here in his own right.

I am certain we all agree that, had his father been an American, with his great statesmanship, he would eventually have been a leader in the Senate or in the House of Representatives. His great strength of character, his grasp of strategy, and his great talent of leadership for the British people through hopeless conditions following the fall of France, will stand out as a burning torch for men who desire to maintain their freedom everywhere.

EFFECT OF CHANGES IN TAX LAWS RELATING TO OIL AND GAS

Mr. MONRONEY. Mr. President, proposed changes in Federal tax laws would have grave consequences not only for the millions of Americans directly associated with the oil and gas industry, but for all Americans who must rely on a healthy and responsible fuels production capability as part of our national defense. In hearings recently before the House Ways and Means Committee many witnesses testified that the proposed changes in the tax laws would reduce exploration and drilling by U.S. petroleum companies at a time when Soviet Russia is developing its oil as a principal weapon in the cold war.

Recent authoritative studies have resulted in the prediction that the demand for energy fuels in the United States will triple by the year 2000. The question that faces Congress this year is whether the U.S. petroleum industry can fill its share of the demand if it carries the brunt of a so-called tax reform program.

I am convinced the people of the United States are far too complacent about their future fuel requirements. This complacency results, to a large extent, from lack of information.

In the April 1 issue of the Oil and Gas Journal, an authoritative publication, the bleak outlook for U.S. crude oil reserves has been carefully pictured. The magazine reports that U.S. oil reserves declined last year to the lowest point since 1958. A gain in the discovery of natural gas reserves failed to offset the decline in total liquid hydrocarbon reserves available to this Nation in the event our foreign supplies were again denied us by war or other catastrophe. The summary which the Oil and Gas Journal published will be of interest to the Members, and I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GAS RESERVES UP, OIL DOWN IN 1962

Crude-oil explorers last year turned in their worst record in the United States since World War II, and reserves fell to the lowest point in 4 years.

Even a good gain by natural-gas liquids failed to forestall the second decline in total liquid-hydrocarbon reserves in the postwar period. Natural-gas drillers, by contrast, had one of their better years.

The Canadian industry registered sizable increases in all categories, but exploration danger signals were being raised there as well.

These results were reported by the American Petroleum Institute, the American Gas Association, and the Canadian Petroleum Association. Their annual studies presented the following picture of North America's reserves as of January 1:

Crude oil: 31,389,223,000 barrels down 369,282,000 barrels or almost 1.2 percent for the largest postwar decline, while production rose 1.5 percent to 2.550 billion barrels, third highest on record. Peak gain was in 1957, followed by the gain in 1956.

Natural-gas liquids: 7,311,517,000 barrels, up 262,421,000 or 3.7 percent, while production hit a fourth consecutive new high of 470 million barrels, up 1.8 percent.

Texas, the other State with a higher level of activity, still dropped 201 million barrels. Substantial setbacks were also suffered by the other important oil States—Wyoming, Oklahoma, Illinois, Arkansas, Colorado, New Mexico, and Utah.

Natural-gas liquids: Following the trend in natural-gas success, reserves in this category increased more than in the previous year.

But the size of the addition was the second lowest in 5 years because of steadily rising production.

Among the 20 States broken out separately there were as many losses as gains. But success in the two big States offset the decreases with some to spare. Louisiana added 204 million barrels and Texas 74 million. The only other substantial gains were made by New Mexico and Oklahoma.

California's loss of 34.5 million barrels was the only minus sign worthy of note.

Natural gas: In the face of record production, the increase in natural-gas reserves was more than 50 percent larger than the increase for the previous year.

The life index changed very little and remained at about 20 years.

Louisiana's position as the Nation's hottest gas-hunting province was never more pronounced. Its net gain of 5.9 trillion cubic feet accounted for virtually the entire national increase. Almost half of the 19.5 trillion cubic feet of gas found in the United States last year was discovered in this single State.

Texas, still by far the leader in reserves and production, slipped by 335 billion cubic feet.

The only other major gas State recording a sizable improvement was Oklahoma, which added 1 trillion cubic feet net with gross additions of 2 trillion cubic feet. If the trend continues another year, Oklahoma will surpass Kansas in reserves as it has done in production, becoming third ranked behind Texas and Louisiana.

These four States, together with New Mexico, ended the year with more than 88 percent of the Nation's entire gas supply.

Alaska, with no production to speak of yet, actually made the third largest addition to reserves of any State and is now assigned a conservative total of 1.6 trillion cubic feet. California's modest resurgence permitted this huge market, supplied some two-thirds from out of State, to increase its own supply slightly.

Canada. Exploration for new oil and natural gas up 5.7 percent to 35.4 trillion cubic feet. Canadian explorers gathered almost all of their increase from revisions in estimates and extensions to known fields.

Crude oil: With U.S. drilling hitting the lowest point in a decade, reserves responded accordingly by dropping for the third time in the past 6 years.

Reserves dipped to the lowest level since 1958.

The new oil added through discoveries of 380 million barrels was the best performance since 1957, auguring well perhaps for 1963, but still below the postwar average.

But revisions and extensions, which traditionally account for the great bulk of reserves additions, contributed less than for any year in the postwar period. This marked only the second time since World War II that the figure dipped below 2 billion barrels.

Of the 23 States listed separately, only 5 increased their reserves. And of these 5, only 2 made notable additions—Louisiana, with 155 million barrels, and California, reversing its trend of recent years with an increase of 33.7 million barrels. These States were two of the three to show drilling increases of consequence last year.

Total liquid hydrocarbons: 38,700,740,000 barrels, down 106,861,000 barrels or just under three-tenths of 1 percent, while production increased almost 1.6 percent to 3.02 billion barrels, exceeding 3 billion for the first time.

Natural gas: 273.8 trillion cubic feet, up almost 2.3 percent or 6 trillion cubic feet, in spite of another production record of 13.7 trillion cubic feet, 1.9 percent above the 1961 level.

Canada: reserves hit new highs in all categories. Crude reserves are up 7.4 percent to 4.48 billion barrels, natural-gas liquids up 20.8 percent to 695.4 million barrels, total liquid hydrocarbons up 9 percent to 5.176 billion barrels, and natural-gas liquids was singularly unsuccessful in Canada last year, although substantial additions to reserves were made.

Only 21 million barrels of the 552-million-barrel gross addition to crude oil came from new discoveries. British Columbia, which had a big development year, adding 65 million barrels in revisions and extensions, wasn't assigned a single barrel of oil from new strikes.

Alberta contributed 450 million barrels from extensions and revisions, but only 11 million from new discoveries, putting geologists on the spot to open new plays or face a reversal in the supply trend. This threat was raised down the road, although the current picture is bright as Canadians found more than twice as much oil as they produced last year.

British Columbia and Alberta were the only two Provinces to show an increase.

In natural-gas liquids, only 3.7 million of 143 million barrels in gross additions came from new finds.

Natural gas showed up somewhat better, having gross additions of 2.8 trillion cubic feet, including 453 billion from discoveries.

Big production gains were made across the board—crude oil, up 23.9 million to 244.9 million barrels; natural-gas liquids, up 9.8 million to 23.5 million barrels; total liquid hydrocarbons, up 33.7 million to 268 million barrels; and natural gas, up 161.7 billion to a total of 949 billion cubic feet.

NO APPLESAUCE AT HOME

Mr. MONRONEY. Mr. President, long after the beautiful petals of the cherry blossoms have been blown away by the winds, and the lovely dresses and coiffures of the princesses are forgotten, Oklahomans will remember Miss Peggy Harlow, our princess for this year.

Peggy is the attractive daughter of Mr. and Mrs. Bryce Harlow, of Oklahoma and Washington. For many years Mr. Harlow was a congressional aid. He later served, during 8 years in the White House, as a legislative aid to President Eisenhower. As her father distinguished himself as a writer, so has Peggy won distinction by winning first place in the essay contest among the princesses.

Her essay brilliantly deals with the true meaning of culture in America. She has carefully separated the frills from the basic outlines of our customs and our arts. Her eloquent summary of Oklahoma's contribution to our Nation's culture portrays our outstanding progress during the State's relatively brief history.

It so clearly defines Oklahoma's unique and proud contributions that I ask unanimous consent to have it printed in full in the body of the CONGRESSIONAL RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

NO APPLESAUCE AT HOME

(Winning essay by Miss Peggy Harlow, cherry blossom essay contest winner)

To the self-styled sophisticate, it may seem strange that the word "culture" springs to mind as I think of my wonderful Oklahoma. But let me explain.

So much of "culture" these days seems to consist of taking pictures of prominent people making glittering entrances into theaters, opera houses, or art museums. Often, it seems staged, and composed of activities suited to the intellectual elite and the well to do.

It was such cultural posturing that made our beloved Will Rogers protest, "Say, when you come right down to it, that intelligence and culture thing is a lot of applesauce."

I am sure that Will Rogers, had he been challenged, would have explained that real culture is not "applesauce"; he meant, rather, that it is more than museums, theaters, and opera houses, more than kleig lights playing on mink coats and evening gowns in front of marquees. Oklahoma's great cowboy-philosopher knew that culture is the totality of a society's contributions to mankind, encompassing every field of endeavor. The rich and poor, the gifted and mediocre, the leaders and followers are all part of it, and to it each of us makes his large or small contribution.

So it is that I think of culture as I regard my Oklahoma, for it is in this broad context that my State has excelled since territorial days.

Our educational progress gives a measure of what I mean. In scarcely more than a half century, Oklahoma has worked wonders. In 1959 she was first in America in teacher education and preparedness. More than 99 percent of her public school teachers held at least one college degree, compared with the national average of 75.3 percent. Here Oklahoma's standards—Oklahoma's culture—are revealed.

I know that when non-Sooners talk of Oklahoma schools many suggest that our real interest is football—often said with some envy. And imply that our educational standards leave much to be desired. But the science and mathematics taught at Oklahoma City University in conjunction with the Massachusetts Institute of Technology and at Oklahoma University and Oklahoma State University; our preeminence in petroleum engineering; the atomic reactor being used for advanced experimental work—these exemplify the central preoccupations of our people. Undergraduate degrees are offered in more than 70 areas, master's degrees in more than 50 areas, doctorates in more than 20 areas. The University of Oklahoma Press is unexcelled in the quality and rich variety of its work. All this, remember, in one of the youngest States in the Union.

And then, we of Oklahoma have excelled in such artistic endeavors as painting, music, and dance. The whole Nation values our contributions to the national culture through the hauntingly beautiful and stirring art of the Indian. Such names as Acee Blue Eagle, Noah Deere, and Kodaseet make all Americans proud of exceptional accomplishment. Art museums from coast to coast prominently display Oklahoma Indian works. For years such paintings adorned the White House corridor adjacent to the President's office.

Our wonderful Indian and cowboy heritage still gives zest to many aspects of Oklahoma life. Square dancing, cowboy laments and ballads, and the primitive mysticism of Indian religious songs add a tingling delight to our total art. Other gifted Oklahoma Indians—Maria Tallchief, Rosella Hightower, Yvonne Choteau, Moscelyne Larkin—bypassing their unique culture, have triumphed in ballet. They are rightly the pride of the United States.

Nor have I mentioned our extraordinary scientific achievements. The Frontiers for Science Foundation, nurtured and matured in Oklahoma, catapulted my youthful State from arrows to atoms virtually overnight. It has had the warm praise of the President of the United States, given in person in Oklahoma City, as well as tremendous acclaim from the top scientists of our country. Considering also our Medical Research Foundation, the FAA Aeronautical Center at Oklahoma City, the restless probings by our colleges and universities, ours is clearly a State that is vital, aggressive, and intellectually afire—a State new, but born to lead.

Such spectacular achievements do not just happen. They evolve from the verve, vitality, and venturesome spirit of the people of Oklahoma. A refreshing spontaneity, freedom of the inhibitions of old world sophistication, a disregard of the deadening obsession for physical security, and eagerness to push ever outward the boundaries of human knowledge and opportunity—such qualities have made my State, in only two generations, a shining star in the Union.

But in the golden philosophy of Will Rogers is found the most admirable Sooner qualities. He projected, for all the world to see, the instinctive honesty, the friendliness, the optimism, the belief in fellow men, which came from the pioneers of the 1889 run. His philosophy is still the hallmark of my home State. In his, "I never met a man I didn't like," appears the commitment to enduring human values, the best in real culture, that represents Oklahoma to the United States and to the world.

RESULTS OF THE TAX CREDIT FOR INCENTIVE

Mr. SMATHERS. Mr. President, last year a provision was inserted in the tax bill which called for a 7 percent tax credit to serve as an incentive to business, if business would make an investment in new equipment. At the time the proposal was before the Senate, well intentioned Senators and others said that it was not a wise move to make. The contention was made that it would not in fact stimulate capital investment. Many opposed the bill on that ground.

It is interesting to observe that since the bill passed with that tax investment credit in it, it has accomplished exactly the purpose at which it was aimed. It has achieved the ambition set out for it by the administration when it was first recommended.

I have in my hand an article from a recent issue of the Wall Street Journal. I do not know the exact date of it, but I am sure that the date can be recaptured easily. The article states, "Capital goods gain." The article describes how many of our large companies in the United States have made expenditures far above that which they had originally planned to make in order to take advantage of the incentive credit. I should like to read a couple of paragraphs from the article:

> CHICAGO.—Many large corporations are taking a second look at their 1963 capital spending plans and are revising them upward.
>
> That's the picture that emerges from talks with executives of more than two-score companies and with officials of capital goods producers who closely watch the buying moods of corporate managers. It is backed up by many economists.
>
> One economist predicts the revisions will lead to a sharp rise in capital spending this year from last year's record $37.4 billion. "I'll be surprised if spending doesn't increase 8 to 10 percent this year," declares George W. Cloos, senior economist for the Federal Reserve Bank of Chicago.

I will skip down to the place in the article which describes some of the conditions and what companies have actually done:

> Some steel company executives say their experience with the Federal tax incentives has caused them to remodel spending plans upward. A number of railroads have been similarly affected.
>
> "The extra cash we're generating from these tax savings has encouraged us to do some things we wouldn't have otherwise," says H. C. Murphy, president of the Chicago, Burlington & Quincy Railroad. "The intent of the tax savings is to enable railroads and industry to plow them back into income-producing property and we expect to follow this intent."
>
> The Atchison, Topeka & Santa Fe Railway has earmarked $90 million for capital improvements this year, up 80 percent from $50 million last year. Great Northern Railway has a spending budget of $24 million for this year, double its 1962 outlay. Railway Age, a trade publication, estimates the industry's capital spending this year will increase 20 percent. Last fall some industry experts were looking for a slight drop in 1963 spending.
>
> ### OTHER SHARP INCREASES
>
> Sharp spending increases are slated by other types of companies, although not all reflect recent changes in plans. General Motors Corp.'s outlay for U.S. facilities will jump to $520 million from $425 million in 1962. Ford Motor Co.'s U.S. spending will go up to $130 million from $95 million. Container Corp. of America has budgeted $40 million for 1963, up from $24 million last year. Montgomery Ward & Co. has set aside $50 million compared to only $20 million spent last year. Domestic spending by International Harvester Co. this year is scheduled to rise to $60 million from $47 million in 1962.

The article designates several other companies which will make considerably more expenditures for capital investment than they had originally planned, and all of it encouraged and caused by the investment credit which we passed last year.

I desire to call that to the attention of the Senate to let Senators understand that the administration in its recommendation last year, which was severely criticized for a while, was totally correct in what it intended to do. The administration hit a high mark. It probably exceeded that which they thought would be hit. But it does show the wisdom of the economists who are helping the administration to make up its mind about what are the proper fiscal and financial programs which the present administration should follow.

I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITAL GOODS GAIN: MANY COMPANIES RAISE PLANT AND EQUIPMENT SPENDING GOALS FOR 1963

(By Harlan Byrne)

CHICAGO.—Many large corporations are taking a second look at their 1963 capital spending plans and are revising them upward.

That's the picture that emerges from talks with executives of more than two-score companies and with officials of capital goods producers who closely watch the buying moods of corporate managers. It is backed up by many economists.

One economist predicts the revisions will lead to a sharp rise in capital spending this year from last year's record $37.4 billion. "I'll be surprised if spending doesn't increase 8 to 10 percent this year," declares George W. Cloos, senior economist for the Federal Reserve Bank of Chicago. Upward revisions are most notable in the steel and railroad industries, he says.

An economist for the National Industrial Conference Board, an economic research organization based in New York, also believes earlier capital spending forecasts should be scaled upward. He looks for a 6 to 8 percent gain this year from 1962.

GOVERNMENT ESTIMATE DUE SOON

A fuller view of the 1963 spending outlook will emerge late this week or early next week when the Commerce Department and Securities and Exchange Commission issue results of their quarterly survey of industry's capital outlay plans. Last fall, the report estimated first quarter spending would drop to an annual rate of $37.7 billion, down 1.7 percent from the fourth quarter rate and only slightly above the total 1962 volume. The coming report will take a second look at the first quarter rate and forecast spending for all of 1963.

There are plenty of signs that corporate executives are in a freer spending mood than they were last fall. Their mood reflects a number of factors: Corporate earnings may have set a record in 1962's fourth-quarter and many companies are reporting first-quarter profits above the year-ago period. Auto sales are high. The stock market has held a reasonable steady upward trend since last fall. And more and more companies are finding they make worthwhile savings on their equipment purchases with a 7-percent tax credit on such buying and liberalized tax rules for depreciating the equipment both of which were put into effect by the Government last year.

"From talks with our customers it is obvious many of them are going to spend more this year than they had originally planned," says Julien P. Steelman, chairman and president of Koehring Co. of Milwaukee, which makes heavy construction and industrial equipment. Koehring has had a "sharp" increase in orders in the last 3 months, Mr. Steelman says.

DU PONT STEPS UP SPENDING

Du Pont Co. has quickened the pace of its spending. "Last fall, we figured we would spend as much as $325 million in 1963; now we expect to spend $350 million and it may go still higher," says an official. This year's projected spending is 45 percent above the record $245 million Du Pont spent in 1962.

Upward revisions in steel industry spending are evident when plans of major companies are matched against a survey taken last November by the American Iron & Steel Institute. The survey showed steel firms expected to spend $1 billion in 1963, only $75 million more than in 1962. A sampling now indicates the estimate of a $75 million gain is undoubtedly too low. Inland Steel Co.'s 1963 capital spending budget is $110 million, compared to $42 million last year. Bethlehem Steel Corp. will lay out $250 million in contrast to last year's $193 million. Among other companies planning increases are United States Steel Corp., Republic Steel Corp., and Jones & Laughlin Steel Corp.

Some steel company executives say their experience with the Federal tax incentives has caused them to remodel spending plans upward. A number of railroads have been similarly affected.

"The extra cash we're generating from these tax savings has encouraged us to do some things we wouldn't have otherwise. says H. C. Murphy, president of the Chicago, Burlington & Quincy Railroad. "The intent of the tax savings is to enable railroads and industry to plow them back into income-producing property and we expect to follow this intent."

The Atchison, Topeka & Santa Fe Railway has earmarked $90 million for capital improvements this year, up 80 percent from $50 million last year. Great Northern Railway has a spending budget of $24 million for this year, double its 1962 outlay. Railway Age, a trade publication, estimates the industry's capital spending this year will increase 20 percent. Last fall some industry experts were looking for a slight drop in 1963 spending.

OTHER SHARP INCREASES

Sharp spending increases are slated by other types of companies, although not all reflect recent changes in plans. General Motors Corporation's outlay for U.S. facilities will jump to $520 million from $425 million in 1962. Ford Motor Company's U.S. spending will go up to $130 million from $95 million. Container Corp. of America has budgeted $40 million for 1963, up from $24 million last year. Montgomery Ward & Co. has set aside $50 million compared to only $20 million spent last year. Domestic spending by International Harvester Co. this year is scheduled to rise to $60 million from $47 million in 1962.

American Telephone & Telegraph Co., which last year accounted for about 8 percent of all U.S. capital spending, plans to increase its outlay some 3 to 5 percent this year to about $3.1 billion.

Another important rise in capital spending this year would be a significant sign of vitality in the U.S. economy. Last year's outlay of $37.4 billion was up 8.5 percent from the $34.4 billion of 1961.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. SMATHERS. I am happy to yield.

Mr. HUMPHREY. I commend the Senator for bringing this important item to our attention. The Senator alluded, in a private conversation, to the article which was published in the Wall Street Journal earlier today. It substantiates the hopes expressed and the claims made at the time the Senate voted on the investment tax credit.

I am pleased that it was my privilege to vote for that tax relief measure. Not only did I vote for it, but also I worked for it, because I felt it would release much needed capital for the improvement of heavy goods industries and for a capital improvement in the industrial structure of the country.

As I indicated to the Senator from Florida earlier today, I have received several letters from businessmen who have told me in their letters that they have made new investments because of the recommendation of the administration and the action by the Congress in regard to the investment tax credit. I received a letter from a large utility in the State of New York outlining the plans which had been made and the moneys which already have been committed for expansion in the utility industry.

The tax credit was a very important piece of legislation, which has had a good effect on the economy.

Today's newspapers tell us that the profits of American business—profits now available for dividends and for new industrial improvement—are running the highest ever in the history of the Nation. I think this administration can take a bow for being a friend to business. How could one be more friendly to business than to make possible an economic climate in which American business can prosper, in which American business can modernize, in which American business can receive just and equitable tax treatment.

Now the President has come forward with another proposal which is designed, as was the investment tax credit, to release capital into the private economy, for the consumers and investors. The consumers will be able to make a choice as to spending. The investors will be able to make a choice as to long-range investment.

This is why I basically support the broad outlines of most of the provisions of the administration tax bill, because I believe it is the way to help the economy help itself. That is the kind of legislation which will permit the industrial economy, the financial community, and the consuming public to make their own decisions as to the use of capital.

Mr. SMATHERS. I thank the Senator from Minnesota.

I am sure that on this particular point the Senator would agree with me—and I think the statistics support the contention—that by virtue of the investment tax credit given last year, and the stimulus to capital investment which resulted, there has been brought about a situation in which more jobs are being created, so that the whole economy will be strengthened. Some of these companies had not been paying very much in taxes, because of a lack of income. As the Senator so well pointed out, and as was stated in this morning's newspaper, they are now in better financial condition. The Senator cited the morning paper, which showed how much profit these companies are now beginning to enjoy. This means that in the long run the U.S. Treasury will realize a greater income.

Therefore, when the taxes are lowered in some instances, as was done last year, the net effect of the reduction is to actually increase revenues at the same time, while strengthening the economy.

That is the philosophy behind the tax cut provided last year, and that is the philosophy behind the recommended personal income tax reduction for this year.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. HUMPHREY. Mr. President, if there is no further business to come before the Senate, I move, according to the previous order, that the Senate stand in adjournment until 10 o'clock tomorrow morning.

The motion was agreed to; and (at 6 o'clock and 23 minutes p.m.) the Senate adjourned, under the previous order, until tomorrow, Wednesday, April 10, 1963, at 10 o'clock a.m.

HOUSE OF REPRESENTATIVES

TUESDAY, APRIL 9, 1963

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Hebrews 11: 6: *Without faith it is impossible to please God.*

Most merciful and gracious God, during these troublous days when we are encountering and must withstand many mighty and mysterious forces of evil, inspire us to maintain and safeguard the continuity of faith in Thee and in a nobler civilization built upon the foundation of truth and righteousness.

Grant that in this glorious spring season there may blossom forth among all the nations of the earth the fragrant spirit of brotherhood, the spirit of mutual obligations and cooperation, supplanting the spirit of selfishness which manifests itself in a sordid scramble for prestige and power.

Show us how we may have a share in raising the spirit of mankind to a higher quality and seek to clothe it with a dawning splendor which brightens more and more unto the perfect day.

Hear us in the name of our blessed Lord who called himself the Bright and Morning Star. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

ACCELERATED PUBLIC WORKS PROGRAM

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent to address the

House for 1 minute and to revise and extend my remarks.

The **SPEAKER.** Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. **EDMONDSON.** Mr. Speaker, this morning's edition of the Washington Post predicts that there will be a donnybrook on this floor today on the proposed elimination of funds for the accelerated public works program and quotes one of our distinguished colleagues, the gentleman from Wisconsin [Mr. LAIRD], as saying that if Congress is serious about cutting spending, this is the one place to start, and further quoting, that it is not necessary for the minority to win this fight, but it must make its position clear.

Apparently the position of the opposition is to be in favor of percentage cuts on some items but against every red cent for the accelerated public works program. It is interesting to see that they have brought out a bill which provides a cut of approximately 2 percent in the money for forest land management, of approximately 25 percent in educational television, of less than 18 percent for General Services Administration supplies, but of 100 percent for a program to give jobs to American people, for a program which is in effect in 45 of the 50 States, and for a program which is making possible useful sanitation improvements, water supply, hospital construction, and other desirable and long needed improvements in depressed areas. I say if this is the one place to start in the mind of the opposition party, then let us draw the line good and clear for the American people, because the program of accelerated public works is the one program in this bill that is guaranteed to improve employment in the depressed areas of this country. I earnestly hope we can have a thorough debate of both party positions in the course of today's consideration.

SUBCOMMITTEE ON NATIONAL PARKS OF THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

Mr. **MORRIS.** Mr. Speaker, I ask unanimous consent that the Subcommittee on National Parks of the Committee on Interior and Insular Affairs be permitted to sit this afternoon during general debate.

The **SPEAKER.** Is there objection to the request of the gentleman from New Mexico?

There was no objection.

PAN AMERICAN DAY, 1963

Mr. **CONTE.** Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The **SPEAKER.** Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. **CONTE.** Mr. Speaker, on Thursday, April 11 we again commemorate Pan American Day throughout the Western Hemisphere. This year marks the 73d anniversary of the system of inter-American cooperation which is embodied today in the Organization of American States. From very humble beginnings in this city of Washington in 1890, the inter-American system has made tremendous strides in the accomplishment of the dreams of its original champion, Simon Bolivar.

We have seen the growth of the pan-American idea to encompass hemispheric security, economic growth and betterment, and social and cultural progress. We have seen the development of the multinational acceptance of the Monroe Doctrine, the Good Neighbor Policy, and the Alliance for Progress. Each of these was a historic step in the development of true pan-Americanism.

But 1963 does not mark a resting place in the continued development of inter-American cooperation. We can be thankful for the support shown by our neighbors during the October missile crisis without being disillusioned that our troubles are over in Latin America. We must face the future, all Americans, north and south of the Rio Grande, with a renewed determination to preserve and protect liberty and justice in this hemisphere. And our sincerity will be measured not by our words, but by our deeds. Thus it is that we commemorate this 73d Pan American Day with dedication of our efforts to a free and progressive hemisphere.

NUCLEAR TEST BAN PROPOSALS

Mr. **HOSMER.** Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The **SPEAKER.** Is there objection to the request of the gentleman from California?

There was no objection.

Mr. **HOSMER.** Mr. Speaker, I think it should be brought to the attention of the Members of the Congress that there has been a spate of letters to the editor, and so forth, in the New York Times and in the Washington Post this morning and probably in other newspapers from so-called scientists and people like James J. Wadsworth, all containing exactly the same sort of argument put forth by the disarmament agency in connection with the upcoming treaty proposals to be made by the administration at Geneva later this month to the Soviet Union. These proposals have been disclosed in part to the Joint Committee on Atomic Energy. A public record has been made showing the proposals contain a big hole through which the Soviets could drive their way to nuclear superiority. The gentlemen who wrote these letters were not in attendance at the hearings; and do not have the information upon which to give the assurances they are relating apparently on information furnished by the disarmament agency. It seems to me to be an obvious and organized effort to brainwash the American people to accept treaty safeguards which are illusory and do not actually provide for the national security and survival of the United States of America. I hope the people of the United States will read these communications with the knowledge that the men who have affixed their names to them do not have the information to sustain the contentions they make in public over their names and reputations, in many cases in various fields not connected with nuclear weaponry, in which cases they are not authorities on the subject on which they seek to assure the American public with authority.

TRANSFER OF FLOODED ACREAGE

Mr. **STUBBLEFIELD.** Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 5067) to amend the Agricultural Adjustment Act of 1938, as amended.

The Clerk read the title of the bill.

The **SPEAKER.** Is there objection to the request of the gentleman from Kentucky?

Mr. **BELCHER.** Reserving the right to object, Mr. Speaker, will the gentleman explain this bill?

Mr. **STUBBLEFIELD.** Mr. Speaker, this bill was introduced by the gentleman from Mississippi [Mr. WHITTEN]. It provides for the transfer of flooded-out cotton acreage allotments from the bottomlands of the Mississippi to high ground for a period of 1 year. This is the same bill that was passed in 1958, 1961, and 1962, on the Consent Calendar. It is estimated by USDA that 11,400 acres are flooded affecting about 656 farms in Arkansas, Kentucky, Mississippi, Missouri, Illinois, Tennessee, and Louisiana.

The bill applies to the 1963 cotton crop only, and provides that the acreage allotments will not be affected.

Mr. **BELCHER.** I withdraw my reservation of objection, Mr. Speaker.

The **SPEAKER.** Is there objection to the present consideration of the bill?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 344(n) of the Agricultural Adjustment Act of 1938, as amended, is amended (1) by striking out the figures "1962" where they first appear therein and inserting the figures "1963."

With the following committee amendments:

Page 1, line 4 insert after "(1)" the following:

By striking out the word "substantial" where it appears, (2) page 1, line 6, strike out the period and insert

, and (3) by striking the period at the end of the second sentence thereof and substituting a colon therefor and the following proviso: "*Provided,* That, notwithstanding the provisions of section 344(m)(2) of this Act, the transfer of any farm allotment under this subsection for 1963 shall operate to make the farm from which the allotment was transferred eligible for an allotment as having cotton planted thereon during the three year base period."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CALL OF THE HOUSE

Mr. **HALLECK**. Mr. Speaker, I make the point of order that a quorum is not present.

The **SPEAKER**. The gentleman from Indiana makes the point of order that a quorum is not present. Evidently, a quorum is not present.

Mr. **ALBERT**. I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 17]

Andrews
Barrett
Brademas
Bray
Burton
Celler
Cooley
Corbett
Daddario
Farbstein
Fino
Foreman
Fuqua
Gibbons
Gilbert
Glenn
Green, Oreg.
Green, Pa.
Halpern
Healey
Jones, Mo.
Kilburn
Mailliard
Martin, Nebr.
Multer
Osmers
Patten
Powell
St. George
St Germain
Shelley
Smith, Iowa
Thompson, La.
Toll
Van Pelt
Wallhauser
Walter
Whitener
Willis

The **SPEAKER**. On this rollcall 389 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

SUPPLEMENTAL APPROPRIATION BILL, 1963

Mr. **DELANEY**. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 311 and ask for its immediate consideration.

The Clerk read the resolution as follows:

> *Resolved*, That during the consideration of the bill (H.R. 5517) making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes, all points of order against the provisions contained in lines 5 through 10, page 22, are hereby waived.

Mr. **DELANEY**. Mr. Speaker, I yield one-half of my time to the gentleman from Ohio [Mr. BROWN], and yield myself such time as I may consume.

Mr. Speaker, this resolution provides for waiving all points of order on one item in the supplemental appropriation bill. The item is contained on page 22 in lines 5 to 10. It deals with the authorization of the purchase of furniture and fixtures for the Rayburn Office Building, the appropriation for which is to be handled in the legislative branch appropriation bill. This is the only item on which we ask a waiver, this single item, so they can go ahead and order the furniture for the new Rayburn Building.

Mr. **GROSS**. Mr. Speaker, will the gentleman yield?

Mr. **DELANEY**. I yield to the gentleman.

Mr. **GROSS**. Why should points of order be waived on this purchase? Does the gentleman not think that it ought to be authorized?

Mr. **DELANEY**. This is the authorization that we are asking for now in the interest of saving time. This building is completed and apparently there was no authorization for the furniture. Therefore, we are asking for the authorization in this bill.

Mr. **GROSS**. When is the building to be completed?

Mr. **DELANEY**. I believe the gentleman from Texas [Mr. THOMAS] can answer that question much better than I can.

Mr. **THOMAS**. Mr. Speaker, may I say to my good friend, the gentleman from Iowa, the best information we have now is that the building will be completed in toto in August of next year. Some parts of the building will be ready for occupancy beginning in April of next year. The language contained in this bill waiving the point of order is merely an authorization to get the furniture. There is not 5 cents provided for here to buy the furniture. That will be handled by another subcommittee within the next 60 or 90 days. The purpose of this is to give to our distinguished committee of the House, the gentleman from Georgia [Mr. VINSON], our beloved Speaker, and our beloved gentleman from New Jersey [Mr. AUCHINCLOSS] anywhere from 60 days to 6 months leadtime to procure the furniture. That is the sum and substance of the matter.

Mr. **GROSS**. If I understand this thing correctly, there is not going to be any occupancy of this building for nearly a year and a half. It seems to me, therefore, that we could do this in the normal and regular legislative way and that is to authorize this rather than to come in with an appropriation bill where obviously, you have to waive points of order because this is unauthorized.

Mr. **THOMAS**. That is what we are seeking to do, to authorize this. There is not 1 penny of money provided for here to buy any furniture.

Mr. **GROSS**. That does not make any difference. You are shortcircuiting the regular legislative process; are you not?

Mr. **THOMAS**. This is not the regular legislative committee that is handling this, but we are doing this at the request of our committee composed of the Speaker of the House, the gentleman from Georgia [Mr. VINSON], and the gentleman from New Jersey [Mr. AUCHINCLOSS]. The purpose in following this procedure is to save time and to afford some leadtime for procurement, otherwise you will not have any furniture to go into the building when it is ready. That is the point.

Mr. **GROSS**. If the gentleman will yield further, do you mean to tell me the legislative committee cannot come in with legislation in the regular way for this purpose and then buy the furniture for this building that is to be occupied next August? I cannot understand that.

Mr. **THOMAS**. The purpose of this is to save about 3 to 6 months' leadtime. That is all that is involved here. The furniture cannot be bought in a day.

Mr. **ROONEY**. Mr. Speaker, will the gentleman yield?

Mr. **DELANEY**. I yield to the gentleman.

Mr. **ROONEY**. I should like to point out with regard to legislative authorizations for the Rayburn Office Building that the entire transaction and every part of it has been handled in this same way in appropriation bills right from the time of the initial planning for the building.

Mr. **STEED**. Mr. Speaker, will the gentleman yield?

Mr. **DELANEY**. I yield to the gentleman.

Mr. **STEED**. The leadtime that the approval of this legislation today will give us will enable the companies that manufacture office furniture to make bids that competitively will be more favorable to the Government. The manufacturers have told us that on an item this large and involving this amount of furniture, they will require a lot of time, first of all, to manufacture the furniture, and this will give them that extra time and we can expect to get better bids and thus hope to save a considerable amount of money by having this leadtime that will be provided in this bill.

Mr. **DELANEY**. Mr. Speaker, I urge the adoption of the resolution.

Mr. **BROWN** of Ohio. Mr. Speaker, I yield myself such time as I may consume.

The **SPEAKER**. The gentleman from Ohio is recognized.

Mr. **BROWN** of Ohio. Mr. Speaker, as the gentleman from New York [Mr. DELANEY] has explained, the only reason we have a rule on this particular measure, which comes from the Appropriations Committee, is because there is a legislative provision in the bill, and it is therefore necessary to waive points of order so that by the passage of the bill the House at least, and I presume the other body, if it approves the legislation, will authorize later appropriations for purchasing furniture for the new House Office Building now under construction, the so-called Rayburn building. I presume it will be necessary to buy some sort of furniture for the new building. I am a bit concerned over the cost of the building itself. I did not like the way it was authorized in the first place. I am not sure the Congress as a whole, or the general tax-paying public will be too much impressed by the amount of money the furniture for the Rayburn building may cost in these days of inflation when we are moving forward so rapidly with "vigah"; nevertheless, I do feel it is necessary to take some action; therefore, I will support this legislation.

However, in all the discussion that has taken place thus far in connection with this particular bill, for some reason or other there has been no mention of the real issue contained in this measure; that is the question as to whether or not there will be an item of some $500 million reinstated in the bill, $500 million that had been stricken out by order of the Appropriations Committee, from page 7 of the bill, to finance the accelerated public works program as had been budgeted originally, and requested by the President.

Mr. **ROONEY**. The gentleman surely does not mean the Rules Committee, does he?

Mr. **BROWN** of Ohio. No, the Appropriations Committee. The $500 million item was stricken out by the Appropriations Committee after it had been in the President's budget to finance continuation of the accelerated public works program which had originally been approved by a rather divided and controversial vote here by the last Congress for a total of $900 million, $400 million of which was appropriated in 1962.

That vote will come, as I understand, on a motion to restore the cut; that is, on an amendment offered to reinstate the $500 million item for the purpose of financing the accelerated public works program, as requested by the President. That vote will come in the Committee of the Whole, either by voice vote, standing vote, or teller vote. If the motion to restore the item prevails, then a rollcall will be demanded in the House on that amendment, under the rules of the House. However, if the attempt to amend and to restore the $500 million item for the accelerated public works program is defeated in the Committee of the Whole, then there will be no rollcall on this particular issue.

I have stated the parliamentary situation to the best of my ability because there have been so many questions asked about it. A great many people have indicated their belief the Rules Committee made in order the offering of this amendment. That is not true. The amendment could have been offered regardless of the action of the Rules Committee. However, the rule waiving points of order on the furniture item was necessary on the basis that one individual Member could have otherwise objected to the consideration of the item to authorize the purchase of it. However, if this rule is adopted, as written, then the section dealing with the purchase of furniture will be subject to the usual debate under the 5-minute rule, and vote in the House, so the majority decision will control the final action on that particular item. So no rights have been taken from the House to pass upon the question as to whether or not it wants to authorize the purchase of this furniture. It does not fix any amount in this bill for the purchase of furniture. Another Appropriations Committee later on will bring in a bill for that purpose. Whether or not you authorize it will be subject to the will of the House and not to that of one individual Member who could otherwise object and strike out the item.

After all, I think the big controversy and the real issue at hand in this bill is whether or not we will have a $500 million increase in the amount carried in the bill, as the Appropriations Committee has reported the measure, to be spent on this accelerated public works program which bore the label some time ago of being a slush fund. That issue is one that the House will have to confront when we get down to considering the bill under the 5-minute rule. There may be other amendments offered and considered, but this will be the principal amendment, as I understand the situation.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from Iowa.

Mr. GROSS. Can the gentleman tell me whether under the item of "furniture" it will include the equipment for the swimming pool?

Mr. BROWN of Ohio. No. But if the gentleman wishes a set of water wings, I shall try to have them furnished him. Personally, I do not object to the bill.

Mr. GROSS. This does not include equipment for the swimming pool, then?

Mr. BROWN of Ohio. I do not know what it contains. I presume when the particular appropriation item is considered there will be hearings made available to the House, and the item will be fully explained. It will be in the legislative appropriation bill, when and if the measure reaches the floor of the House. I hope the legislative appropriation bill may be passed soon so this Congress may adjourn and go home, which will be a blessing to the American people and result in the saving of a lot of money.

Mr. GROSS. It is still my hope that instead of spending $10 million on a fish tank to be located on Hains Point, that swimming pool will be converted into a pool for fish.

Mr. BROWN of Ohio. The only comment I wish to make on that, may I say to the gentleman from Iowa for whom I have great affection, is that it was worth a great deal to most of us here in the House to listen to the dialog and matching of wits between the gentleman from Iowa and the gentleman from Ohio concerning this so-called fish pond, or whatever you wish to designate it. I am sure we did obtain a great deal of inspiration and enjoyment from that debate.

Mr. Speaker, I hope this rule will be adopted.

Mr. DELANEY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. THOMAS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5517, making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes; and, pending that motion, Mr. Speaker, I ask unanimous consent that general debate on the bill be concluded not later than 5 p.m. today, one-half of the time to be controlled by the gentleman from Ohio [Mr. Bow], and one-half by myself, and that at the conclusion of general debate today the Committee will rise.

Mr. BOW. Mr. Speaker, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from Ohio.

Mr. BOW. When the gentleman requests that debate conclude at 5 o'clock, that is a rather unusual length of time on this bill.

I assume that the gentleman feels that by having a full and complete debate under general debate, we could promptly get to the reading of the bill and vote on the bill tomorrow, and that we could finish sometime tomorrow.

Mr. THOMAS. The gentleman is exactly right. Of course, if we get through before 5 o'clock under the unanimous-consent agreement, we could get out sooner. Further, maybe we might prevail on the Speaker and the minority leader and the majority leader to come in early tomorrow morning and wrap it up tomorrow.

Mr. BOW. Mr. Speaker, will the gentleman yield further?

Mr. THOMAS. I yield.

Mr. BOW. May I say to the gentleman that I hope if we have this general debate this afternoon going on until 5 o'clock, or however long it may be, that those who are going to speak on the subject will take the time today, so that we can proceed on tomorrow with debate under the 5-minute rule. And, with general debate extending to 5 o'clock this afternoon, I should like to serve notice now that I shall insist upon the 5-minute rule, with no extension of time after the 5 minutes tomorrow. I will object to any extension of time, because there will be plenty of opportunity here today for general debate. I hope that we can move on and dispose of the bill tomorrow as promptly as possible.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from Iowa.

Mr. GROSS. What really confronts us is 4 hours of general debate. That is in effect what the gentleman is asking for, is 4 hours of general debate. Now, I am one of those that likes to see adequate time taken on all bills, but this is something new for the gentleman from Texas [Mr. THOMAS] to ask for 4 hours of general debate on bills from his subcommittees. He usually tries to get his bills through in an hour and a half or 2 hours or even less, at times, and I am surprised. Can the gentleman tell me what changed his mind?

Mr. THOMAS. May I say to my distinguished friend that we are going to try to finish this bill tomorrow when we start reading it under the 5-minute rule. Following the lead of my able and distinguished friend from Ohio, we are going to try to put speed on it tomorrow, so let everybody debate today and get their statements in the RECORD. There are many items in this bill; about 110, I will say to my friend from Iowa, plus another 200 strictly for Pay Act costs.

Mr. GROSS. I am perfectly willing to go ahead this afternoon, and evening if necessary, and get rid of the bill today. What is wrong with today?

Mr. THOMAS. I think it would be impossible. There are 110 items in here. Let us give everybody a chance to be heard.

Mr. GROSS. Now, let me ask the gentleman this question. This bill involves slightly less than $1 billion.

When the gentleman from Texas comes in with the independent offices appropriation bill which will run, I assume, on the basis of past bills of this nature, to $12 billion or $15 billion, will we have general debate time in proportion to what is being consumed here today? Will we take about three times as long on the independent offices appropriation bill?

Mr. THOMAS. Well, when we get into that, we will get my able and your able friend, the gentleman from New York [Mr. OSTERTAG], and we will agree on a reasonable amount of time, and it will be our hope to give everybody a chance.

We want our friend from Iowa to be heard. The day would not be complete without our able friend being here. We want him here, and I know he will be here, and we will go through our paces with him.

Mr. GROSS. I am just delighted that the gentleman from Texas is opening up to more time on legislation on the House floor, and I am sure everybody will expect the same treatment when the independent offices appropriation bill comes to the floor.

Mr. THOMAS. If the gentleman wants a little time from this side of the aisle, I will see that he gets it.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Texas [Mr. Thomas].

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5517, with Mr. Bolling in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the unanimous-consent agreement, general debate will conclude not later than 5 o'clock p.m. today.

The gentleman from Texas [Mr. Thomas] will be recognized to control one-half of the time, and the gentleman from Ohio [Mr. Bow] will be recognized to control one-half of the time.

The Chair recognizes the gentleman from Texas [Mr. Thomas].

Mr. THOMAS. Mr. Chairman, we bring to the Members of the House today the supplemental appropriation bill for 1963.

Mr. Chairman, in the number of bills that it has been my pleasure to work with in my 20-odd years of service I will be frank to say that this has been just about as perplexing as any such bill by virtue of the fact that we have so many small items in the bill which have been requested by so many different agencies of the Government. There are about 100 or 110 items contained in title I alone. In title II there are about 200 items which include the Pay Act increases for practically every agency of the Government.

The bill as originally submitted to the Committee on Appropriations carried a budget estimate for both titles I and II of the bill of a little better than $1.6 billion. However, regardless of the difficulties contained in handling this bill, your subcommittee has done its best.

May I say at this time we lost one of our able and genial and distinguished members who has served for a long time on this subcommittee, the gentleman from Iowa [Mr. Jensen]. The gentleman took himself off the subcommittee and assigned himself to other important duties, and I might say more important duties, because he is now the ranking minority member of the full committee. But, certainly, we have no finer man in the Congress than the gentleman from Ohio [Mr. Bow], who is now the ranking member on the subcommittee.

We also have two new members. One of them is an oldtimer, our distinguished friend, the gentleman from Indiana [Mr. Wilson]. He has certainly performed yeoman service. We also have our able and genial friend the gentleman from Minnesota [Mr. Langen] who has done likewise. We are proud of both of them.

Of course, on the Democratic side we have the oldtimers here, our friend, the gentleman from New York [Mr. Rooney], the gentleman from Ohio [Mr. Kirwan], and certainly our able and genial friend, the gentleman from Massachusetts [Mr. Boland].

We have a lot of items for your consideration which are contained in this bill, and practically everything is agreed to on both sides of the aisle except one or two items. I think it is a fair statement to say that the subcommittee has been just about as unanimous as you are going to get any several men to be who handle a couple of hundred items such as are contained in this bill.

Mr. Chairman, when the subcommittee considered this bill we had a total request of about $1.6 billion. It was our judgment, after consulting with other members of the full committee, to reduce that estimate by around 12 or 12.5 percent. That is about right, is it not, Mr. Bow?

Mr. BOW. If the gentleman will yield, yes.

Mr. THOMAS. So, we worked on the bill rather diligently. The item which gave us all the most trouble is what we commonly refer to as the accelerated public works program. We had a budget estimate for $500 million. The subcommittee reduced that estimate to $450 million. The full committee cut it out.

I think it would be perfectly in order for me to say at this time an amendment will be offered by the distinguished gentleman from Massachusetts [Mr. Boland] to restore not the $500 million but the subcommittee figure as originally recommended, namely, $450 million. Again, I think it would be in order for me to say that in my individual capacity as a Member of the House I will help to defend and support that item.

Mr. Chairman, your committee on both sides of the aisle know just as much about this bill as I do, and I am not going to consume all the time. Let me make one point, and then I will yield the floor to my colleagues. We were committed to take care of the pay increase voted by the Congress last year. The total cost for the pay act in 1963 is slightly less than $700 million. The agencies absorbed almost 40 percent of it. Your subcommittee reduced the remaining request around $22 million. Everybody took a 5-percent cut straight across the board, and the House of Representatives took part of the cut, too.

So by and large we submit to you this is a good bill. If there are any questions I can answer I will be delighted to. If I cannot answer them, both sides of the aisle are here and we will all join together to do our best to help you out.

Now I yield to my able friend from Iowa [Mr. Gross].

Mr. GROSS. You did not apply this 5-percent cut to all the agencies that are in the appropriation bill.

Mr. THOMAS. There may be one to which it did not apply, and that was the White House guards. I am not positive about that, but the amount of money involved is trivial. It applied to the Army, the Navy, the Marine Corps, and everybody else .

Mr. GROSS. I believe you can go further than the White House guards. I am not too sure about that, and I will look it over.

Mr. THOMAS. Look it over. If I am in error, I will correct it.

Mr. GROSS. You did intend to apply it across the board to all as the result of the Legislative Pay Increase Act last year?

Mr. THOMAS. The gentleman is correct.

Mr. BOW. Mr. Chairman, I yield such time as he may desire to the gentleman from Iowa, the ranking member of the Committee on Appropriations [Mr. Jensen].

Mr. JENSEN. Mr. Chairman, I have never been happy with the authority vested in the Deficiency Committee. I have the highest regard for the members of the committee. I have the highest regard for the chairman of that committee, the gentleman from Texas [Mr. Thomas]. He is an able, honorable gentleman of the highest order, as are all the members of the committee. This committee is a most difficult committee to chair.

Let me go back many years to explain how this committee was instituted and the reason for its institution. The Congress many years ago passed an antideficiency law. That law had sharp teeth in it. It provided for heavy fines and jail sentences for any Federal agency head who spent more money in any one quarter than the funds appropriated to that agency for that fiscal year. You can imagine the consternation that arose in many agencies, departments, boards, and commissions of Government. So some bureaucratic dreamer dreamed up the word "supplemental" in lieu of the word "deficiency." As a result, we find since that time that billions of dollars have been appropriated by the Congress on the basis that they were supplementals—not deficiencies. In this bill there are some 100 Presidential budgeted items for agencies of Government in the amount, as the bill comes to the floor, of $988,756,506. A major portion of that amount is not actual deficiencies, but purely supplementals, that have no place in this bill. The bill came to the full Committee of Appropriations in the amount of $450 million more than the bill now before us. A majority of the full Committee on Appropriations struck out $450 million for the accelerated public works program. Remember that this $450 million that was put in the bill by the Deficiency Subcommittee of Appropriations is to be obligated, expended, or committed in the fiscal year 1963, which is the present fiscal year ending next June 30. An amendment was offered by the gentleman from Wisconsin [Mr. Laird] before the full Committee on Appropriations to reduce the bill by $450 million which was the amount in the bill for this accelerated public works program. That amendment was adopted by a vote of 22 to 19.

As everyone knows who has read the newspapers, 5 of the majority members joined 17 minority members to strike this $450 million from the bill.

Mr. Chairman, just what is the need for this great rush to establish projects of every nature in thousands of towns and political subdivisions in these United States? We understand that an amendment will be offered tomorrow to reinsert this $450 million. Other Members who oppose that amendment will, I am sure, give proven reasons why there is no justification for the spending of all our taxpayers' dollars in such a program. There is unemployment in some places, of course; but we are informed that many of these projects have been approved in areas where there is no unemployment.

Mr. Chairman, we will have a bill on the floor of this House before long which will provide that our $1 and $2 bills, greenback currency—if the law is passed—will have no silver backing. Those bills will be scrip, just paper scrip, such as was used in the early thirties to take the place of U.S. currency, because good currency was in short supply at that time.

Mr. SMITH of Virginia. Mr. Chairman, will the gentleman yield?

Mr. JENSEN. I yield to my highly respected colleague.

Mr. SMITH of Virginia. The gentleman made a very important statement when he said that if this silver bill passes there would be no monetary backing for the dollar bill.

Mr. JENSEN. Yes. I have good reason to believe it is a correct statement.

Mr. SMITH of Virginia. The Chairman of the Committee on Banking and Currency in presenting that matter to the Rules Committee stated that there would be no silver backing, but there would be a 25 percent gold backing.

Mr. JENSEN. Maybe so, but the facts are that we are losing our gold at a very dangerous rate, hence such backing might soon be gone too.

Mr. SMITH of Virginia. I am not arguing about it, I am simply stating what was said by the chairman of the committee.

Mr. JENSEN. I cannot buy that kind of argument, because one of these fine days unless we stop this unconscionable spending of the taxpayers' money we will have very little gold backing for any of our currencies.

Mr. SMITH of Virginia. If the gentleman will yield further I want to say that what the gentleman has just said about this extravagant expenditure for everything on the face of the earth we ought not to be spending money for, meets my approval. I could not be in more hearty accord with the gentleman than I am.

Mr. JENSEN. I thank the gentleman, and I have the very highest regard for the gentleman from Virginia, who is one of the best informed Members of this Congress, as to just what will happen to this great beloved Nation of ours and the people therein unless we can put the brakes on this reckless, wasteful spending like that requested for fiscal year 1964 to the tune of $108,800 million. Our spending liberals constantly shed crocodile tears for the ones whom they call our little people. Let us look into the facts and figures. The ultimate consumer of goods pays all the bills in the final analysis. We know that.

They pay, in the final analysis, every dime that is spent by local, State, and Federal Governments.

What do these so-called little people pay? Those so-called little people, who have an annual income of $6,000 or less on an average, consume over 70 percent of all the goods year in and year out. So the so-called little people which the liberals in this Congress and out of the Congress are always crying for, pay for this extravagant program that we of the Congress spend for them to pay. The businessmen, the industrialists, must add their taxes to the price of their goods and services or soon close their doors. Hence the so-called little people pay at least 70 percent that the local and State and Federal Governments spend. Think about that please before you vote, please think about that before you vote to reinstate $450 million in this bill today.

The American people are becoming greatly worried and concerned. The thinking well-informed people of America know that every nation in this world, as far back as history records, that has traveled to the end of the reckless spending, wasting road on which we have been traveling at breakneck speed for the last 30 years, spending the people's tax dollars like drunken billionaires, every one of those nations has suffered untold misery, strife, hunger, cold wars, and everything that is bad for a people.

You say it cannot happen here? Well, it will happen here, and it is happening here this very minute.

President Franklin Delano Roosevelt said during his reign that this Nation could safely afford a $75 billion Federal debt. I am sure that Franklin D. Roosevelt knew that this Nation could never afford a $304 billion debt which we have at this minute, for those to pay who are living, or their children, or their grandchildren, or their great-grandchildren.

Now, of course, we could keep on spending as we have been doing for the past three decades to the end that finally a $5 bill would not buy a loaf of bread, which has been the history of every nation on the face of this earth that traveled the reckless spending road to the end, which we have been traveling on at breakneck speed for nigh onto three decades, and the end of that road is nearer than some people realize.

Mr. Chairman, I will not be a party to that kind of life for you, your children, your grandchildren, to suffer. My friends, if you want that on your conscience, then continue to vote to spend, spend, in order that you help to destroy everything we hold dear in this blessed land of ours. For myself I want no part of it.

Mr. THOMAS. Mr. Chairman, I yield such time as he may desire to the gentleman from Massachusetts [Mr. BOLAND].

Mr. BOLAND. Mr. Chairman, I do not intend to take much time on this particular bill. The report of the Subcommittee on Deficiencies, I think, pretty well indicates the job that has been done by that particular committee.

As the distinguished chairman from Texas has indicated, this is a bill which comes to this committee with some 110 items in it. It embraces practically all of the departments and agencies of Government; some 9 departments and some 12 agencies and the District of Columbia. It is a bill which is necessary primarily because of legislation which was passed in the last session of the Congress which has added additional responsibilities and financial burdens to many of the agencies of Government, particularly the pay increase in the last session. As the chairman has indicated, some $400 million in this bill represents pay increases which were passed by the Congress. This subcommittee has tried to do a reasonable job in asking most of the agencies that came before it to absorb some of the increases. All of the agencies indicated that they could do it, and they have absorbed some additional 5 percent in addition to some of the absorptions which they have already taken care of in their regular budget.

There are some items here which are in controversy. I think it would be very simple for this committee to pass this bill without any difficulty at all if we can get some agreement on some of the smaller items that will be referred to by a great number of Members interested, particularly in the accelerated public works program.

I might add that in this bill there is $30 million which the committee put in at the request of the Civil Service Commission for the purpose of taking care of the increase in annuities for the retired employees. Let me say, Mr. Chairman, that these retired employees have been particularly patient with the Congress. Last year we passed a bill increasing the annuities for retired employees by 5 percent. It was to become effective as of January 1 of this year. We provided no money for them, with the result that none of the retired employees has received any of that increase. This bill puts $30 million into the civil service retirement fund for the purpose of paying the increase for the retired civil service employees, who will receive a 5-percent increase not provided for last year, but provided for in this bill.

There are a number of other areas in which we passed legislation last year for which this bill carries appropriations to implement that legislation. One of these programs is educational television. I think in this bill here we have some $1.5 million for educational television. As the membership is no doubt aware, the complete authorization runs to around $30 million in a 5-year program.

Mr. Chairman, we provide money in this bill for the Office of Education for producing and distributing additional captioned films for the deaf. This comes as a result of legislation passed in the last year which increased the annual authorization for appropriations from

$250,000 to $1.5 million. Under this bill, we provide $345,000 for this activity.

All told, Mr. Chairman, the percentage of decrease which has been recommended by the full Appropriations Committee amounts to, I think it is, 39.8 percent.

Mr. ROONEY. Mr. Chairman, will the distinguished gentleman from Massachusetts yield?

Mr. BOLAND. I shall be glad to yield to the gentleman from New York.

Mr. ROONEY. Is it not the fact that this pending bill also provides $3 million to the Children's Bureau for allotment to the States for the development of day care services, and one-half million dollars for grants for training of child welfare personnel?

Mr. BOLAND. Yes; and all of this is occasioned by amendments to the Social Security Act. Permit me to also say to the gentleman from New York that some of the gentleman's distinguished constituents were down from New York and I think they made a very fine presentation. The gentleman was there and should be proud of them.

Mr. Chairman, all told, as I indicated, the total reduction amounts to 39.8 percent. This is a lot lower than some of us on this side of the aisle hoped for or wished for, and we hope to amend it tomorrow so we can bring it down to about 12 percent instead of 39.8 percent. We think this is a fair reduction and we think would be in line with most of the speeches which have been made on the other side of the aisle for a minimum net budget decrease of 10 percent in both the 1964 budget and this budget here. Ten percent seems to be a rather reasonable cut, but we are willing to go along with a 12-percent cut, and I hope we can obtain some support from some of the Members on the other side of the aisle when the motion is offered to restore $450 million to the accelerated public works program.

As was indicated by the chairman of the subcommittee, the gentleman from Texas [Mr. THOMAS], the amount requested by the Bureau of the Budget amounted to $1,641 million. We provide $988 million in this bill. We hope to add $450 million to it tomorrow, for a total of $1,438 million.

Now, with respect to deficiencies and supplementals, these are necessary, of course, because we have had changes in the law. When you have changes in the law you have to provide funds to implement the changes. Therefore, some committee has to do this work and so this catch-all bill rests with the Subcommittee on Deficiencies. There is some objection, as the ranking minority member of the Committee on Appropriations, the gentleman from Iowa [Mr. JENSEN], says to having a supplemental bill considered by this Deficiencies Subcommittee. But based upon what I know about the Committee on Appropriations, and those who have served on it much longer than I can attest to it. For many, many years the Deficiencies Subcommittee considered both strict deficiencies, requests for emergency appropriations and also some of the supplementals. This was the routine of the Committee on Appropriations for many, many years, until the present chairman of the Appropriations Committee, the gentleman from Missouri [Mr. CANNON], decided to permit each of the subcommittees to consider supplementals dealing with that particular subcommittee. Well, the chairman did not believe this worked too well, and a few years ago he sent all the supplementals to the Deficiencies Subcommittee. This has not set well with everyone of the chairmen of the various subcommittees, but in my judgment I think it has worked well. I think this is a matter of policy which ought to be established by the chairman of the full Committee on Appropriations.

Mr. OSTERTAG. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. Yes; I shall be glad to yield to the gentleman from New York.

Mr. OSTERTAG. The gentleman from Massachusetts serves on the Independent Offices Subcommittee as well as the Deficiencies Subcommittee.

I note on page 11 of the bill, under the Civil Aeronautics Board, there is an item of $3.3 million for payment to air carriers which is a matter that is ordinarily considered under the independent offices appropriation bill.

Is that the subsidy money which makes up the difference as between the amount appropriated and the Civil Aeronautics Board requirements for that purpose?

Mr. BOLAND. That is the subsidy, and that makes up the difference of what the Civil Aeronautics Board has determined to be the proper subsidy to airline carriers throughout the United States.

Let me say that this subsidy goes only to the Hawaiian carriers, two lines in Hawaii, and just to the domestic local carriers such as Allegheny, Pacific, Freemont, and Bonanza. As the gentleman from New York knows, none of the subsidy goes to the large trunk carriers.

Mr. Chairman, as was indicated, there will be a motion made tomorrow to restore the $450 million for the accelerated public works program.

This was a request from the Bureau of the Budget for $500 million. Your subcommittee reduced that by $50 million, brought it to the full committee, and the full committee deleted the item by a few votes.

We intend to offer this motion tomorrow, and I hope that the majority of the Members of this House will support it. I think the record is clear that it has been a good program. I think the record as delineated by the subcommittee shows the value of it. Many Members of the House are familiar with it. All of them do not like it. There are some deficiencies in it. It is a program which I agree brings headaches to Members of Congress. But this is not the only area in which Members of Congress get headaches. This program has helped to lift the stress of underemployment in many areas. As has been indicated by many Members who have already spoken, this is specifically reserved for areas with high unemployment.

Mr. Chairman, I know there are a great number of Members on both sides of the aisle who want to speak on this particular program, so I reserve the balance of my time.

Mr. BOW. Mr. Chairman, I yield such time as he may desire to the gentleman from Minnesota [Mr. LANGEN].

Mr. LANGEN. Mr. Chairman, as a new member of this subcommittee I rise rather hesitantly with reference to the legislation that is before us; by the same token, I do say with some degree of distinction, of satisfaction, and honor that it has been a real personal privilege and certainly a wonderful experience to have had the opportunity of serving on this subcommittee.

I want to express my personal gratitude to each and every one of the members for the degree to which they have been both patient, understanding, and most helpful to a new member in considering some rather complex items that are before us.

By the same token, having gone through this experience, it occurs to me that this bill comes before us at a very appropriate time. You have had a pretty thorough explanation of what is in it, the degree to which the committee has given consideration to each of these items and responded with appropriations in one fashion or another. But at the same time I think there are some items here that we could well use as a guideline for other determinations that are going to be made by this House during the course of the coming session.

Actually of the amount of money that we have in here a great percentage of it relates to three specific items, items that have been created and generated by this Congress: No. 1, salaries; No. 2, an increase in postal rates; and No. 3, new programs that were enacted during the last session. So we see an instance of where actually Congress as well as Government to some degree is caught here in its own web in that the respective departments find themselves short of money with which to meet their obligations by virtue of these items that were passed during the course of the last session.

These requests tell us quite a little story. I happen to recall the figures for one of them. The Treasury Department, as an example, made a request for $1,700,000-and-some-odd because of the postal rate increase. This is a pretty big figure. Again as a new member of the committee, I was thinking in terms of an increase of 1 cent per letter, and discovered it is their intention to send out 175 million letters between January 15 and July 1 of this year.

And so the high expenditure. But may I recall for you too that this has a reflection as to the entire Nation, and that every business enterprise throughout the Nation that mails out any volume mail is also confronted with exactly the same problem—that of finding the additional money with which to meet the increased rates. In many instances, they involve more than letters such as packages, and other mail, this too runs into large figures. So we find ourselves now faced with the proposition, and we hear talk about it every day, that the economy is lagging and that we have to get some more money back to the people, and businesses, by a tax cut or in some other way. We just got through taking a substantial part away from them.

Most of these business enterprises do not have a deficiency appropriations committee that they can appeal to and say, "Well, now listen, this is our problem." No, they are going to have to do it in some other way and the chances are they are going to have to take it out of the pockets of the general public.

In line with this also, we find there are moneys here in many instances that are essential where the committee had no choice because they are actual obligations of Government that have to be met such as claims against the Government, money for soil bank contracts and other obligations. These are proper considerations provided by this committee.

Then we come to the matter of new programs of which there are several such as trade adjustment assistance, trade adjustment loans and guarantees, civilian industrial technology programs, educational television and public works and there are a few more in addition to those. But, let me refer to just one of these as an example of the problem that confronted the subcommittee. How many Members of this House know about the civilian industrial technology program and what it is going to do? Oh, yes, we have heard of some problems in this field in the textile industry. We do not know how many more there are. We do not know how far this program is going to go or where it is going. We do know there was a request for $1,250,000 to start this program. It was reduced by the committee pretty much on the basis of—well, this is enough to get the program started—with no real background as to how it was going to be spent, where it was going to be spent or the manner in which it might or might not be spent or be beneficial to the business and industries throughout the Nation. I make reference to that because it occurs to me that to make the appropriations for new programs of this kind through the means of a deficiency committee is not the best way to legislate. This certainly is not a criticism of the committee. I should rather compliment the chairman and all the members of the committee for the degree to which they directed attention; but in programs of this kind, it occurs to me that more time is necessary and a greater exploration is necessary and we ought to know on a more substantial basis the degree to which and the manner in which these programs are to be carried out. Frankly, in this particular item, I think we were aware of only one specific field of activity and very much unaware of how that, in turn, is going to be carried out.

Let me say a little now about one of the other items that we know is in great controversy here, namely, the item of the accelerated works program. I suppose if there is any Member in the House of Representatives who ought to be interested in that program, I am one of them because there are any number of projects pending in my district at the moment and any number of counties that are eligible by the same token. I should say in all honesty and sincerity, I should have to question the wisdom of including this kind of money in a deficiency appropriation for a program of that kind. I say so on the basis of experience up to this point.

You know, it is kind of unique, but I had a county in my district approved to become eligible for accelerated public works this morning. They do not have any money for this purpose, but they did see fit to approve another county in spite of that fact. For this I am most grateful. What puzzles me is that if we are to make an appropriation of another $450 million we ought also to know the degree to which these programs are to be carried out, how many new areas are to be added, how many new and different considerations are going to be made, and how many projects in turn, are going to be rejected. Remember, the requests for additional aid at the moment total more than $1,200 million; so we were acting very much in a great shadow when we were talking in terms of the degree to which this program can be applicable in the respective areas.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. LANGEN. I yield briefly to the gentleman from Oklahoma.

Mr. EDMONDSON. The gentleman mentioned the designation of the new county this morning. The fact of the matter is that the Area Redevelopment Administration designates the counties and that there is money aside from accelerated public works under the Area Development Administration for use in the counties. The accelerated public works program is a program falling within the jurisdiction of the Area Redevelopment Administration insofar as the designation of counties is concerned.

Mr. LANGEN. I may say to the gentleman that I was talking about the accelerated public works program, and I am well aware of the provisions that apply to these programs.

Mr. EDMONDSON. There is no designation or qualification other than Area Redevelopment Administration designation.

Mr. LANGEN. Now if I can get back to these new programs, it is my opinion we ought to be better informed as to the exact use of these moneys. I think this House has a real opportunity in this bill to effect better administration of these funds in all the new programs. We could do that were they to be reassigned to the respective subcommittees for consideration that have these subjects assigned to them in the first instance. In my humble opinion, the House has a very important assignment that it can perform tomorrow.

We should look at these new programs in the light of proper administration and expenditure of the moneys, with every consideration for the general economy of the country and not rush too hastily into these new programs.

Mr. THOMAS. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from California, [Mr. HOLIFIELD].

Mr. HOLIFIELD. Mr. Chairman, I rise to direct my remarks to the item of civil defense. The administration asked for and the Budget Bureau approved, $61,900,000 for the completion of the survey of civil defense shelter spaces and the austere stocking of those shelter spaces. They have located heretofore shelter space for about 104 million people. These shelters are in varying degrees of efficiency.

The reason for my concern with this matter is—and may I say I speak from more than a general background and knowledge of the subject because for 7 years subcommittees that I have chaired of the Government Operations Committee and the Joint Commitee on Atomic Energy have studied the problem of nuclear weapons' effect in war, the effect of radiation, and the capability of our Defense Department to offset a nuclear attack. I am not stating anything but the facts when I say that today we stand absolutely naked to a nuclear attack by the Soviet Union. There is no such thing as an effective antimissile missile. If war comes—and we hope, of course, that it does not—intercontinental ballistic missiles from the Soviet Union and intermediate range ballistic missiles, from submarines, or ships, could strike any target in the United States. If we do not have a military defense against this new and terrible military capability of attack and if attack comes, some several million people will perish. Therefore any procedure we can take to save the lives of the people of the United States we should take.

There is only one thing that can save the people in a nuclear attack from complete destruction, and that is shelter. In other words, the interposition between the individual and the radiation of the nuclear weapon of some kind of shielding. The $61 million which is requested is a very small amount. This would merely complete for use the existing types of shelter. It would not be for the purpose of building shelters. It would complete the survey of existing shelters which would serve the purpose of shielding the people from radiation and would permit a small amount of austere stocking of food, medicines, and so forth in the shelters.

In October of 1962, we all well remember that Khrushchev was confronted with an ultimatum by the President of the United States. This ultimatum involved the Cuban situation, the occupation of Cuba with missiles which could reach any part of our heartland. But the removal of those missiles from Cuba did not remove the capability of the Soviet Union for striking the United States. That capability still remains. This Cuban event was played up and it alarmed us because it was within 90 miles of our mainland. But a ship or submarine could cruise within 90 miles on the ocean today with missiles of like effect. You either believe that civil defense is a practical thing or you do not. I know that the Subcommittee on Appropriations is not convinced that civil defense is a valuable adjunct to our total defense picture. I am sorry they do not take a position of going along with the President and with the Defense Department that has advocated this very small sum in relation to the sums we are spending. For instance, we are spending $50 billion a year for a military force that cannot stop an intercontinental ballistic missile or an intermediate range missile from being delivered on any land or military target in the

United States. That is $50 billion. Yet we have an item of $60 million which would give the people the right of survival in case of an attack. You may think, I do not believe an attack will come. I do not know whether an attack will ever come. I hope not. But if it does come we would be in a position in the Congress of not doing our duty in giving those people who are spending $50 billion for defense the right and chance for survival, not insuring their survival but a right to the chance of survival.

Let me call your attention to something else. We are engaged in a great race to put a man on the moon. We are going to pass in this Congress this year probably $5.7 billion. Next year it may be $7.6, the following year it may be $10 billion. I prophesy it will cost $30 billion to place a man on the moon. Yet we are denying the people who are going to have to pay the $50 billion for defense the right to survival for a few paltry millions of dollars. I say that the perspective with which we look at this thing should be changed. I am not against space exploration. I think we should do it. But I think the priority we give to a program that will take from $20 to $30 billion worth of the taxpayers' money out of the budget, which will amount to one-half of the deficit we have this year and next year, I say we should look at this program and look at it carefully, because this space program of $5, $7, or $10 billion a year is going to destroy many programs which are worthwhile and which would give more safety and more service to the people of the United States.

Now, it may be necessary to put a man on the moon, and I might be willing to pay the price if I could pick the man that they would send to the moon, but I say in the face of the needs of this Nation—I am not just talking about civil defense, but I am talking about the many domestic needs of this Nation, in your district and in my district, needs which will not be filled—I say we should look at this tremendous portion of the budget which is going into space. And, I would wish that the Members of this House would study the effect of nuclear weapons and would face the realities of an age in which these weapons might be used. God knows, I hope they will never be used, but when you have in the capacity of one Polaris submarine, more than three times the power of all the bombs that were dropped in World War II, when you have the capacity of a B-52 to carry hydrogen weapons that would be five or seven times the power of the bombs dropped in World War II, and when two great nations are sitting with their nuclear daggers pointing at each other's throat, I say that we should not take the chance of risking nuclear war without giving some protection to the people of the United States.

Mr. HARSHA. Mr. Chairman, I ask unanimous consent that the gentleman from Massachusetts [Mr. Morse] may extend his remarks at this point in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. MORSE. Mr. Chairman, I rise to express my deep concern with the cut made by the Appropriations Committee of $61.9 million requested for additional provisions and equipment for fallout shelters.

The fallout shelter program, which has been initiated and conducted by the Office of Civil Defense in the Department of Defense, is a vital element in our overall defense effort. It is coming to be recognized as essential in the Department of Defense. The Military Operations Subcommittee, of which I was a member in the previous Congress, held extensive hearings on this vital matter, and reported to the House on the importance of the program.

The funds which the committee has denied cover only a part of the necessary civil defense program but it is a part which has to go ahead on schedule. These funds are intended to cover the last quarter of the cost of the survey, marking, and stocking of fallout shelter spaces in existing structures across the Nation; $175 million has been spent in fiscal year 1962 and fiscal year 1963 to identify this shelter space and to procure a large part of the necessary provisions and equipment. It is false economy to cut funds for an austere program which has been developed to use existing resources instead of major construction programs. I am informed that the denial of these funds is likely to throw off the schedule for stocking and activating shelter spaces by 9 months or more. It will upset or damage the cooperation with local governments which has been generated in this program. This fallout shelter program, as initiated and carried forward by the Department of Defense is a minimal step in providing protection for the American people. At least such a minimum must be provided for the population in a world where the possibility of nuclear war can arise so suddenly and threaten us all. I believe a cut in this program is false economy; I believe the program should go forward. If the Congress has doubts, they should be resolved in favor of the American people.

Mr. LANGEN. Mr. Chairman, I yield such time as he may desire to the gentleman from Florida [Mr. Cramer].

Mr. CRAMER. Mr. Chairman, the reason I asked for this time is the fact that, of course, this public works acceleration program, for which there was a $900 million authorization last year, after about 3 years of discussion and dispute in the Public Works Committee and the Congress, came out of the Public Works Committee, on which I serve, and at the time it was before the House for authorization the minority did prepare for consideration of the House minority views in connection with the authorization bill, at which time there was pointed out a number of shortcomings of this approach; the fact that this was not a sound approach; the fact that this would become a political boondoggle; the fact that this was pork barrel, grab bag legislation the likes of which the Congress had never considered before outside of WPA. Many of those shortcomings were brought out in the minority report. The fact is that most of these programs and projects can be and have been, before this accelerated program, considered on the basis of justification and need by the proper committees that have particular jurisdiction over them, but this WPA program is just not being handled and was not expected to be handled on that basis, and the result has been that you have had a pork barrel, grab bag approach, the likes of which this country has never seen since WPA. The legislative committees, the authorization committees that traditionally consider projects public works in nature have been overlooked, and instead lump-sum requests to appropriations have been made. Now, a $400 million lump-sum amount had been requested as a deficiency appropriation, with very few specifics in 1962, and I have the hearings right here. They could not even prepare a program for House consideration, although the other body tried to justify it. They could not even tell you what the justification was. And, I said this before, that this money was going to be spent on leaf-raking projects, projects that if the American taxpayers knew that their tax money was going into the extent of 70-percent grant money for such projects as swimming pools, ski lifts, golf courses, they would naturally say to this Congress that they thought their money was being misspent by the Congress. And that is exactly what happened in 1962. As a matter of fact, as justification brought out in the last session, in the last minute of the Congress in October, this is what the money was to be spent on, and I believe we should give serious consideration to any effort to put this money, $500 million additional, into this deficiency appropriation bill under those conditions. Listen to this. Reading from the Senate hearings in 1962, here is a swimming pool, Grants Pass, in the State of Oregon, $190,000. Here is a fairground expansion, $1,260,000, in Pennsylvania.

Here is another swimming pool in Pennsylvania in the amount of $158,000. Here is an item of park development in the amount of $388,000. Here is an auditorium in the amount of $3.65 million. Here are zoological gardens in the amount of $4,352,332. And you can go right down the list showing truly pork barrel projects submitted as justification for the 1962 $400 million amount.

Mr. Chairman, the administration has gone out and solicited these projects. They have written the cities, they have solicited these projects. They have written letters to the communities asking for lists of projects. As a matter of fact, this program had not even been authorized by the Congress when such solicitations were underway. When we were considering it before the Committee on Public Works, the administration was writing to cities and asking what projects would they like to have built under such a program if it were put into effect.

Mr. Chairman, is it any wonder that $1.2 billion in projects now are awaiting additional appropriations? That leads me to my next point. There is the sum of $1.2 billion for some 6,000 projects languishing now on the shelf waiting not only for this $500 million appropriation request, but there has already been introduced a bill for an additional $900 million authorization in the House and $1.7 billion in the Senate and those bills will come before the Public Works Committee on which I serve. That is why I am concerned about this thing; it is a temporary program being made permanent. We talk about fiscal sanity and fiscal responsibility.

This is the most irresponsible program you can consider especially when it is on a lump-sum basis and when it encompasses such make-work projects.

Now, Mr. Chairman, there is one bill in the Senate which has been introduced which would provide for $1.7 billion more authorization for this program, twice more than its present size. Do you not see what is going to happen if this Congress at this time, in this manner—and this is no manner for it to be considered in a deficiency appropriation bill without proper justification—there is going to be an immediate demand, it has already been announced, for additional authorization. Then the matter will be before the Public Works Committee. There will be another $900 million or $1 billion or $1.5 billion authorization bill before the authorizing Public Works Committee. Then the Appropriations Committee is going to be asked for at least $500 million more this coming fiscal year, 1964. This is an interesting wrinkle. This present request for $500 million does not show up in this next year's $12 billion deficit that has already been planned. It shows up in and increases this year's deficit that we now know is at least $8 billion.

Mr. THOMAS. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. Not at this time.

Mr. THOMAS. If the gentleman does not yield to me now, the gentleman will not have any time left in which to yield.

Mr. CRAMER. If the gentleman from Texas would be kind enough to yield me some additional time, I shall be glad to yield to the gentleman.

Mr. THOMAS. I will yield it to you now, if the gentleman would like.

Mr. CRAMER. I will certainly yield to the chairman of the subcommittee.

Mr. THOMAS. The gentleman from Florida is making an honest and sincere statement according to his own judgment.

But the gentleman has given a lot of conclusions, and they are purely the gentleman's conclusions. The gentleman talks about the waste of money. May I point out to the distinguished gentleman—and he is, he is a very able member of the great Public Works Committee—that the gentlemen's mayor is authorized to act after he has been elected by your people and your city council was voted by your people. These projects cannot be supported unless they spend the money of your local people. It is more or less accidental. If it is wrong, your people will take care of your mayor and your city council who agree to these projects.

Mr. CRAMER. I will say to the gentleman from Texas that that is not true in my hometown. They voted against urban renewal and they would vote against most of these Federal-spending projects in this WPA approach. I am sure. The gentleman just does not know my hometown.

Mr. THOMAS. If the gentleman will yield further, I do not think the gentleman's hometown and the gentleman's lovely city is turning down any Federal money.

Mr. CRAMER. They have turned down urban renewal. They voted against it. They are not asking for this program, either.

Mr. THOMAS. The gentleman does not want me to read a few facts from his area, does he?

Mr. CRAMER. Yes, I would be delighted, because there is not an unemployment area in my district. Go ahead and read some. There is not an unemployment area in Pinellas County, that presently constitutes my district, and therefore cannot qualify under this legislation because it does not have adequate unemployment to qualify.

Mr. EDMONDSON. Would the gentleman yield to have some from Florida?

Mr. CRAMER. I did not say "Florida," I said "my area."

Mr. EDMONDSON. The gentleman is talking about the area, which is Florida.

Mr. CRAMER. My area is Pinellas County, although my district used to be four counties. The day after this became law, the only county in the ARA designated area, namely Pasco County, came off the list as an interesting sidelight. I know there are projects in Florida, but I will say to the gentleman I believe the majority of the Congressmen from Florida and of the people of Florida oppose this program.

Mr. OLIVER P. BOLTON. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman from Ohio.

Mr. OLIVER P. BOLTON. Do I understand the supporters of this bill are insinuating we are voting for or against this because there is going to be public money spent in our districts, in contrast with the question of the principle as to whether or not this program is right?

Mr. CRAMER. The gentleman focuses on the real issue; he speaks as a statesman. I have been attempting to say the same thing in a little different verbiage. I have been attempting to put this thing into some focus with regard to the type of projects that exist. Also, last year we on the minority in our report on the bill listed the programs that this supplements, in effect. Authorizations for adequate public works on a planned basis exists outside this WPA approach, and with prospectuses and approvals by the respective committees involved. The outstanding authorizations at that time totaled $2.5 billion available in those authorizations. Many of them still remain. That is the proper way to handle these public works programs—through existing properly planned and congressionally reviewed basic programs on a program by program authorization basis.

As a matter of fact, the administration was so anxious to get projects that could qualify under this boondoggling WPA program that they not only solicited projects but then they decided, "We are going to have to change our basic foundation and requirements for this program." Many projects thus are not really public works or capital improvements at all.

They have no lasting effect from a construction standpoint and there is grave doubt as to the essentiality of many of the so-called public works which have been approved—I have a list of some of those that may be classified as public works but should the Federal Government pay 70 percent of such local projects?

Many of us were concerned last year over the provision of the Public Works Acceleration Act that permits the President to establish many new Federal grant-in-aid programs, limited only by the ingenuity and imagination of State and local officials and Federal bureaucrats, without benefit of the searching scrutiny which the Congress has traditionally given to the commencement of new grant-in-aid programs when considered on their individual merits. I regret to say that our anticipated fears have now become realities. In the approval of projects for little more than one-half of the $400 million appropriated last year, the administration has, in effect, created new grant-in-aid programs for city halls, fire stations, libraries, county office buildings, courthouses, coroners' offices, children's receiving homes, welfare centers, warehouses, administration buildings, municipal stadiums, police stations, garages, beach boardwalks, storage buildings, ship wharves, maintenance shops, civic centers, swimming pools, and natural gas facilities.

Heaven only knows what other grant-in-aid programs will be commenced if additional moneys are appropriated for this program.

I just happened to think, in answer to the gentleman who raised the question with regard to the local public works—he brought out exactly the point of my argument, that is, that they should be decided, constructed, and financed on the local level. The Congress has consistently turned down broad community public works proposals because Congress did not believe the United States should inject itself into every single type of local public works to the extent of 70 percent participation.

That takes from the local people their right to make these decisions. It crams down the throats of the local communities some of these projects that otherwise they might decide are not as necessary as they might believe or decide, if they saw Federal money dangling as a teaser over their heads. And it is having this further effect. How many of these communities are being detained or deterred in their construction programs by this hope that these additional Federal authorizations will be made with the hopes of these additional appropriations? How many have stood back and waited and said, Let us not do these things even if they are needed. Let us not build these fire stations—let us not build this city hall and let us not do these things that may be needed—these sewer projects and so on because there may be some Federal money available some time in the future, if the Congress authorizes or appropriates more money. That is the danger of making this a permanent program—the danger of dangling this money over their heads. The result is to deter projects and thus decrease employment.

Let us get back to these projects that have nothing to do with capitol improvements, public works, or construction. Listen to this—this is a list of some of the projects on which this money is being spent in a boondoggle fashion:

Cemetery maintenance.

Razing old buildings and structures.

Archeological research.

Pasture improvement.

Shoreline cleanup.

Planting and clearing of trees.

Rodent control.

Exotic plant control.

For snag clearing and storm damage cleanup.

For hazardous tree removal.

For removal of dead trees.

Seeding.

Mr. Chairman, this is under the guise and in the name of public works acceleration program. And you know, they avoided using the name or initials WPA—the Works Project Administration. They avoided using that designation although that is the initials of this program. They changed that around and they are using this designation and call it the accelerated public works program. It should be called the PWAA program—the Public Works Acceleration Act program. But, obviously, that designation carries a connotation of WPA—and that perfectly describes how much of the money is being spent on this leaf raking program.

It is difficult to see how the administration could justify the appropriation of any additional funds in the light of many highly questionable and unnecessary and ineffectual and wasteful projects that already have been identified. Not a dollar ought to be spent merely for the sake of spending it, not when we have a deficit this fiscal 1963 year as is expected between $8 billion and $11 billion and a projected and planned deficit for this fiscal year of 1964 of some $12 billion.

Furthermore, the Committee on Ways and Means is now considering the President's tax reduction and tax reform proposal. If there is to be a reduction in taxes, obviously, there has to be a reduction in needless programs and if there ever was a needless program in many respects, this is it. This spending that is proposed here is needless public spending, and this is the best place I can think of to start eliminating such spending.

This is not a partisan matter either. It is a question of what is in the interest of the people of this country. I do not think it is in the interest of any American for the Nation to continue down the road to bankruptcy. Every Member of this House should be fully aware that if he votes in favor of the appropriation of additional funds for this program, that he is at the same time giving his vote of confidence to this boondoggle program and to its continuation and to its enlargement and to the spending of funds on the type of projects I have just described with 70 percent of Federal grant money. Several bills are now pending to make it a permanent program as I just discussed and I, for one, do not want to be a party to providing one additional red cent for this program. I hope many of you share that view. The right way to handle public works projects, in my opinion, is if there is needed an additional authorization, it should come out of the committee that has jurisdiction over the specifically authorized respective program. It should be considered on a justification basis project by project, and they should be given consideration by the committees most familiar with them, and if more public works are needed, then let the proper authorizing committees come out with specific additional authorizations for these specific programs.

This program has been lauded as one that is solving the unemployment problem. We have had 4 months of it during which time we have spent $400 million at the rate of $100 million per month, but we still have the same number of unemployed. Is not that proof of the fact that this is not the answer? Let me give you one little example of how much it costs per person, per capita to employ him.

Mr. BECKER. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield.

Mr. BECKER. I wish to ask the gentleman, a former member of the Public Works Committee, if it is not a fact that there are literally thousands of projects that have been gone over by the House Public Works Committee and are on the shelf waiting to be included in omnibus bills that could be embarked upon immediately?

Mr. CRAMER. Surely, and that is the way to do it.

Mr. BECKER. As I remember there is something like $12 billion worth of projects that have been gone over by the Public Works Committee that are now on the shelf waiting to be dusted off by the committee, projects that have been justified.

Mr. CRAMER. Certainly. The only thing is that in that way Congress would have something to say about it, whereas in this way Congress does not, for this is just a lump-sum appropriation without adequate project by project justification.

Listen to this. Do you know how many more people will be employed? Our hearings showed that the whole program of $900 million would result in only 125,000 additional employees. That is awful expensive kind of employment on public works projects. That is not going to really help unemployment. The way to help unemployment is to do something to encourage private industry so that private industry can employ more people. That is the only long-range way to do it.

Let me give you one other example. This is one of the projects the Public Works Acceleration Act lists as a "recreational project." It is listed as recreational only as an approved APW project—that is the reverse of WPA. It costs $881,000. This $881,000 for a recreational project is reported to generate some 9 man-years of additional employment or $90,000 per man-year, a totally unjustifiable amount—$90,000 for one person in a year, $881,000 for nine people.

I think it should be borne in mind that this $900 million would result in an increase of 125,000 employees over a 2-year period if all new people are hired. What is happening is that when these projects are let out to contract the contractor already has his employees and is not going to spend time to hire and train a large number of additional personnel. What he is going to do is to work his present employees overtime or maybe put on a few additional employees, unskilled people.

There is not any requirement in the program that they hire new people on a new contract basis. So the result is that people presently employed will get more overtime and the employment of new people will be at a minimum. This pump priming is no way to take care of unemployment.

Certainly it was not the intent of Congress that this amount of accelerated public works funds be used on recreational projects, when there is ample need for more useful projects which would generate much more employment.

The use of the Public Works Acceleration Act to make any substantial improvement in the unemployment picture was doomed to failure from the beginning. Even if the entire $900 million accelerated public works program could have gotten underway and been completed in 12 months, it would have had very little effect on reducing unemployment. The total estimated onsite employment would amount to about 2 percent of the current unemployment rate. An additional like amount of off-site employment is hopefully estimated. There is no assurance that such employment will result or that any major part of the jobs generated will or can be filled from the ranks of the unemployed.

There are many other points involved, but I would suggest that those who have not one get a copy of the Public Works Coordination Act, House Report No. 1756 of the 87th Congress, minority views. This report was signed by everyone on the minority side and is very meaningful and I think enlightening, and, in view of the facts that have transpired since, a correct analysis that this is not the answer to unemployment. It is disturbing to me that last year when this bill was passed some went home and told the folks that they had solved the unemployment problem, that they had it licked. The administration gave that impression. We see now how fallacious those statements were and how the problem has not been met. The sad part of it is there is not going to be any substantial increase of employment, but it is a problem that still lies ahead of us, one which I think this Congress has the responsibility to solve on a sound, long-range basis.

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman from New Jersey.

Mr. JOELSON. If the gentleman feels this program is such a boondoggle, that it is being jammed down the throats of the people, how does he explain the fact that hundreds of communities and counties have been willing to put up 50–50 matching funds at a time when they are caught in a tax squeeze locally?

Mr. CRAMER. That is better than 100 percent local and many projects have been solicited, not volunteered. Naturally, they are going to prefer a project in which they put up only 50 percent if the Federal Government advertises it will put up the other 50 percent. But, on the other side of the issue, how many hundreds of millions of dollars of local public works projects are still on the shelf and going to stay there in the hopes of getting Federal matching funds which otherwise they might have gone into on their own—thus increasing employment.

Mr. JOELSON. That has nothing to do with the necessity for these programs.

Mr. CRAMER. So far as necessity is concerned, the Federal Government went out and solicited many of these projects. I have listed many that are not necessary. Others could be built under existing authorizations. The local and State governments were able to finance them, as well as or even better than the Federal Government, and they are not in debt as much as we are.

Mr. CEDERBERG. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman from Michigan.

Mr. CEDERBERG. I think one of the facts to be remembered is that we have no money in the Federal Government.

Mr. CRAMER. That is just what I said.

Mr. CEDERBERG. We are completely broke. We are going to be required to increase the debt limit probably next month.

When this program was originally adopted, there was a surplus in the Treasury of a half billion dollars. This surplus has melted away now to a deficit of $8 or $9 billion this year. Next year we will have a deficit anticipated to be $12 to $15 billion. We do not have any money to give to the local communities. That is one of the things that makes it difficult for me to understand.

Mr. CRAMER. They suggest we borrow the money at 4 percent, or the present going rate, when the local communities can issue bonds and get it at 3 or 3½ percent.

Mr. JOELSON. Many towns involved are at their limit. They could not possibly have done that with many of these projects.

Mr. CEDERBERG. I would certainly agree that there are many towns that are in that situation, but most of the towns have certain limitations by either state constitutions or local city charters and they have the mechanics to change. The Federal Government is over $300 billion in debt. We are going to have a deficit of $8 billion this year and $10 billion next year. We are borrowing the money on the market at probably a rate of 3 or 4 percent to give to the same people that can get it for less. We give it back to them. I cannot understand that.

I come from a district that has several projects in here, and it certainly is not good politics for me to vote against it. I have a depressed area also. But I will say I have a responsibility to my people to be honest with them and tell them what the Federal situation is.

Mr. CRAMER. It is just indicative of what the philosophy of some people in the Congress here is. After all, some think we do not have a real debt ceiling. It is flexible, it is said. It can be ever increased. The municipalities do have a limitation they say. But ours is flexible. We do not have a debt ceiling. I do not agree with that kind of philosophy. We should recognize that we have one, and for good reason and we should make our spending conform to it.

Mr. CEDERBERG. One of the other things that disturbs me about this program is this: When it was originally adopted, it was to be a 12-month quick program, an accelerated public works program, for the purpose of taking care of our unemployment problem in a hurry. This $450 million is good until June 30, 1964. There are pending requests for additional authorizations. It looks to me as if this so-called accelerated public works program is a permanent program that will probably be with us for many, many years to come, the extent of which we cannot possibly realize. Obviously, all communities have certain needs. For instance, I served as mayor of a city of between 55,000 and 60,000 people.

Now, obviously, the Federal Government can get the money and they are going to say "We will do this." And, I might say that this very city I am talking about has requests now pending before this agency to get $500,000 for a waterline. And, this is a depressed area. There is no legitimate reason why they cannot more economically issue revenue bonds and build this line. And, remember, we do not have any money.

Mr. CRAMER. I would like to answer the gentleman from Michigan by saying, in regard to these bond issues, that most of the sewage disposal projects and transmission lines that he is talking about are financed out of water revenue. The local communities are more able to pay out of water revenues these types of public works programs at 2½ to 3½ percent than the Federal Government is at a 4-percent interest rate. It discourages the local communities from doing their own financing.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman from Illinois.

Mr. McCLORY. As one who has had some experience with State budgets and the problem of trying to balance revenues and expenditures at that level, I might say that in our own State I ascertained that there were more than 50 matching funds projects which were taxing the State resources. And, as the gentleman has so ably brought out, this is undertaking to provide a Federal program with funds we do not have which will, in turn, encourage or coerce local communities and State governments to undertake expenditures that otherwise they would not undertake and that they cannot afford and do not want, and we are inducing them and forcing them to do this with your big Federal handout.

Mr. CRAMER. Another thing, it involves Federal control. I tried to get a more definitive list of recreational projects under this $500 million request, and I was told that they did not have a definitive list yet, because the Government had not decided exactly how they were going to put their new antidiscrimination policy into effect and therefore they could not give me a definitive list in regard to recreational projects. And, there is $25 million worth of recreational projects in that new February 15, $240 million request or list alone. And, that is an indication of the extent to which the Federal Government, if it is going to put money into it, will tell you how to spend the money. They could not give me a breakdown of what was meant by recreation or recreational activities, whether it was swimming pools, ski lifts, or golf courses. They said they could not tell me because they had not finalized the antidiscrimination regulations as yet.

Mr. ROONEY. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman from New York.

Mr. ROONEY. Awhile ago I was not too surprised when I learned that the distinguished gentleman from Iowa, my friend, Mr. GROSS, did not care too much for swimming pools and swimming, but when I now hear that a gentleman from Florida apparently is antiswimming pool and antiswimming, I am a little flabbergasted.

Mr. CRAMER. I will say to the gentleman from New York we have more free beaches and more free swimming pools in Florida than any State in the United States, but we in Florida also believe that these are local responsibilities, and I will guarantee that 90 percent of the people in the State of Florida would not come to the Federal Government asking for 70 percent matching money.

Mr. ROONEY. How about the many applications from the State of Florida under this program?

Mr. CEDERBERG. Mr. Chairman, if the gentleman will yield further, I was sorry, after my last colloquy, that I did not have an opportunity to understand what the gentleman from New Jersey was asking.

I am sorry that we were cut off.

Mr. JOELSON. I did not ask a question. I merely made the point that due to the fact that certain municipalities are depressed areas, they are not in a position to raise the same money on a broad scale as the Federal Government is because we have, fortunately, only pockets of depressed areas. It is the depressed areas themselves that just do not have the sources of revenue to provide for the projects that they need which will not only improve their living conditions, but which as the gentleman knows produce employment. That is why we must have this on a depressed-area approach.

Mr. CEDERBERG. Mr. Chairman, will the gentleman yield further?

Mr. CRAMER. I yield further to the gentleman from Michigan.

Mr. CEDERBERG. In response to that, I think it is certain that there are some areas that are depressed which would probably have some trouble in financing certain of the projects they have in mind under this particular program. But the majority of them—and my home area happens to be one which has a very fine top rating as far as bonds are concerned—I do not see any particular purpose in that regard here. But if they can get this Federal money from a depressed Federal Government—we are more depressed than they are—what we have got to do now is to depress the taxpayer because the taxpayers from this depressed area have to pay their Federal tax, whether the program can be delayed or abandoned for a period of time or not.

Mr. JOELSON. I do not agree with the gentleman that the United States is depressed. I think we have pockets of depressed areas about which we must care. But I cannot share the gentleman's views that the United States is one huge depressed area.

Mr. CEDERBERG. Mr. Chairman, will the gentleman from Florida yield further?

Mr. CRAMER. I yield further to the gentleman from Michigan.

Mr. CEDERBERG. I did not say that the entire United States is depressed. But one of the things involved is this: If we are not so depressed, why do we have to continue these budget deficits year after year? Why do we not have the intestinal fortitude to say we are going to pay our way, if we are not in this situation because it is easier to run a deficit?

Mr. JOELSON. I will answer the gentleman from Michigan if the gentleman from Florida will yield further.

Mr. CRAMER. I refuse to yield further. I will say to the gentleman that it does appear to me that the U.S. Treasury is financially depressed, with a $305 billion debt and we are going to be more so with these kinds of programs.

Mr. GROSS. Mr. Chairman, will the gentleman yield to me, since my name came up here? I regret I was not paying too close attention to the debate. I just wondered which one of the swimming pools the gentleman from New York, [Mr. ROONEY], had me in a while ago?

Mr. ROONEY. If the gentleman will yield, the point was I thought you were afraid to get into one.

Mr. CEDERBERG. The one with the lemonade.

Mr. CRAMER. I will say to the gentleman further that with regard to swimming pools it is my opinion that no community would have asked for money for swimming pools or ski slides or golf courses if the Federal Government had not sent them a letter telling them "If you want these things, we will put up 70 percent of the money."

Mr. Chairman, I do not think any community would have ever had any such demand for Federal money for that purpose. I do not think the various communities in the State of Florida would have wanted that kind of money if the ARA had not solicited these projects.

Mr. FOREMAN. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman from Texas.

Mr. FOREMAN. The gentleman from Florida was talking about this depressed area situation. I am very proud to be from an area, the west Texas area, where we are not in a depressed situation. However, if we keep fooling around helping depressed areas, we are going to make a depressed area not only out of west Texas, but out of the entire country.

I think the thing we need to do is to come out of this depression and start relying upon ourselves and our local communities and our State governments to do this rather than creating new depressed areas.

Mr. CRAMER. I thank the gentleman from Texas for his views.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. CRAMER. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. Is the gentleman from Florida prepared now to back up on the numerous projects which have been authorized in his district for harbor improvement and for navigation improvements and other projects having to do with water resources development in the gentleman's district which involve projects looking toward a Federal expenditure?

Mr. CRAMER. I will say to the gentleman from Oklahoma that I am proud of the fact that since I have been a Member of this House there has been a $16 million harbor built in my district. That is the Tampa Harbor, and it is one of the largest harbors in the State of Florida. But I will tell you this: It was justified. We went to the proper authorization committee and to the proper appropriations committee. We got it done on the basis that it was done on the merits, not as a political proposition or public works boondoggle. We did not ask them to build swimming pools or ski slides and things like that, but things that are and have been properly Federal matters.

Mr. JOELSON. Would the gentleman give us his definition of what is proper for the Federal Government to do in his district and not in other districts?

Mr. CRAMER. I would answer that all districts should be judged on the merits of properly considered projects that are necessary and within properly authorized programs and within our spending means. I was one who stood here and opposed a public works appropriation and public works authorization bill some 3 years ago and 4 years ago and 5 years ago, even though it had money in it for that very harbor project the gentleman from Oklahoma [Mr. EDMONDSON] was talking about in order to try to live within our fiscal means. So my record of fiscal responsibility is on record.

Mr. BOLAND. Mr. Chairman, I yield such time as he may desire to the gentleman from Ohio [Mr. KIRWAN].

Mr. KIRWAN. Mr. Chairman, may I say first that the gentleman from Iowa has again today ridiculed the National Fisheries Center and Aquarium. May I remind the gentleman from Iowa that two-thirds of the U.S. Senate last year voted for this project and two-thirds of this body voted for it. This House voted again just last week to initiate planning for the Aquarium. In ignoring these facts the gentleman from Iowa reminds me of Napoleon. He is about the same height, has the same color hair, and he comes from a town they call Waterloo.

Mr. GROSS. I have not been exiled to Elba yet.

Mr. KIRWAN. You are going up against the same stone wall Napoleon went against. You are already there but you do not know it.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. KIRWAN. No. I did not ask you to yield when you were having a good time about the aquarium. I wanted you to have a good time.

Now in reference to the accelerated public works program I am very concerned that this bill does not carry funds to continue projects to help the unemployed in distressed areas. Sitting back there I was reminiscing about the WPA and the PWA. I want you to look at the record. This is not politics, this is the record.

Since 1930, in the last 33 years, you Members on the other side of the aisle who are opposed to these public works projects to help the unemployed have elected only two Houses of Congress. So the record must be pretty good over here. I think the record is clear that the people want us to do everything possible to help the unemployed and make our country prosper.

Do you remember when Roosevelt came into office? He knew what the people wanted and he never lost a Congress. He knew they expected action to help the unemployed and with action programs he put this country back on its feet.

And we have made progress in the past year in improving business conditions. Production in the steel industry, for example, is up to 80 percent of capacity. Last year along about this time, they were down to about 50 percent. They had been down to about 45 percent. The same is true of other segments of our economy. We are doing better all along the line.

Now I am not saying that the $400 million that has been spent to date on accelerated public works has been solely responsible. But it has played an important part in these distressed areas, along with many other special programs, to get the economy going again by providing employment and purchasing power. Now that we are doing something about the problem, let us not stop the program and let these communities down. Do not upset the apple cart just as they see hope of getting back on their feet.

Last year, Congress authorized this program. We promised we would provide $900 million worth of public works projects to help the unemployed in these distressed areas. Certainly we are not now going back on that promise. To fail to appropriate additional funds for this program would mean drifting back again. We would be saying we have changed our minds, we do not want to take action to help solve the unemployment situation.

As in the past, I think the record is clear that the people expect positive action by Congress. This is the only Nation on earth where we, the people, are the boss. It is not the Congress or the President of the United States. It is we, the people, who are the boss. If we, the people, have elected Representatives to the Congress to do certain things, then the people must be right. I am not speaking politics. I am speaking of the record.

You people on the other side elected only two Congresses in 33 years. So there must be something wrong somewhere with your thinking. And there must be something right with those of us who are in the majority. I believe the recent elections were evidence that the people back home endorse the program and other efforts to help these distressed areas get back on their feet. They are part of America and anything we spend to help them will come back many, many times.

Tomorrow you will be asked to vote for an amendment restoring $450 million to this bill to keep this program going. So I hope when you go home tonight you will give this question careful thought and realize the importance of continuing this assistance to the unemployed in these distressed areas. Certainly the alternative of taking no action is no answer. Certainly the unemployed do not want to go back to the experiences of 1929 to 1931; they will not go through that again. What more need I tell you? That is why I am asking you to do some serious thinking, whether you are a Republican or a Democrat.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. KIRWAN. I yield.

Mr. GROSS. The gentleman said there were 12 million unemployed in 1931. I expect that is correct. I would also remind him that there were 12 million unemployed in 1939.

Mr. KIRWAN. I am talking about our responsibility in Congress to take action to help the unemployed and, I hope, that when you go home tonight and lay your head on your pillow that you do some serious thinking, and that tomorrow you will come here and cast your vote to restore the $450 million to this bill to continue this program.

Mr. THOMAS. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Oklahoma [Mr. Edmondson].

Mr. EDMONDSON. Mr. Chairman, I listened with a great deal of interest as my distinguished and able colleague from Florida on the Public Works Committee spoke for 40 minutes in a plea for economy with regard to this program. To me it was somewhat significant that he had words for economy in one direction, that was in the direction of this accelerated public works program to give work to unemployed people in the depressed areas. He had nothing to say to you over a further cut in the item for telecommunications, a $9 million item on which the committee made a cut of only 10 percent.

He had nothing to say to you about any further cut of the GSA supply fund which is a $25 million item out of a $30 million request; nothing to say to you about any cut on the $3,300,000 payment to air carriers out of a $3,478,000 request; nothing to say about a cut in the conservation reserve program which was funded at $4 million out of a $4 million request.

He is for Uncle Sam making good on his commitment to air carriers; he is for Uncle Sam making good on his commitment to the people who put land in the conservation reserve; he is for Uncle Sam making good on his commitment to people who sell supplies to the Government; he is for standing by the telecommunications commitment. If they are demands of this type he is for them; but when it comes to a commitment made to the unemployed in the depressed areas of the United States, when it comes to making good on our commitment to fund this program with $900 million then he forgets all about full faith and credit.

I say to you that the analysis which he gave of these accelerated public works projects in which he classified them as a bunch of boondoggles is about as unfair a treatment of the facts as I have ever heard from the well of this House. If you want to get the facts about these projects and about what percentage of them can accurately be described as so-called boondoggles, turn to pages A2110 of the daily Congressional Record for Monday, April 8.

Our good friend, the gentleman from Texas [Mr. Patman] put in a lengthy list of pending and approved accelerated public works projects. There are more than 10,000 of them. I challenge you to look down that list for your State and to say with all honesty that there is any sizable percentage in any State which can be said to be boondoggles.

The gentleman from Florida referred briefly to a project or two from Oregon. I think he called off a grand total of maybe 15 or 16 projects that were in his view boondoggles. Out of 10,000 projects he finds 15 or 16, some of them from the State of Florida and some from Oregon. Go down the list of the Oregon projects on page A2125 of the daily Congressional Record. He mentioned one about a ski slide somewhere.

But look at the list on page A2125 of the daily Congressional Record for Oregon, and you will see the following:

OREGON

Halsey, Linn County; sanitation, new.

Gearhart City, Clatsop County; water system, new.

Warrenton, Clatsop County; water system, new.

Seaside, Clatsop County; sanitation, new.

Seaside, Clatsop County; municipal buildings, new.

Seaside, Clatsop County; water system, new.

Seaside, Clatsop County; municipal buildings, new.

Cave Junction, Josephine County, sanitation, new.

Grants Pass Irrigation District, Josephine County; sanitation, new.

Newport, Lincoln County; sanitation, new.

Newport, Lincoln County; water system, new.

Nelscott Sanitation District, Lincoln County; sanitation, new.

These projects, almost without exception in practically every State in the Union, are water development projects. They are projects to give needed sanitation facilities; they are projects to stop pollution of our streams and our lakes. Keep in mind that over 50 percent of the projects are in towns under 10,000. They are projects to make it possible for these towns to have an environment in which they can have some private development, in which they can have some economic development. They are projects that are good projects in which the local people of our country have confidence.

The best test of the good sense of these projects will be the list you will find on these pages of the Record from your own State, from your own community; and in the main, in the very great majority of cases, they are sound, desirable projects, because the people back home who originated them did so from commonsense. The people back home are originating these projects, and they have a commonsense foundation in the needs of the community.

The first requirement for these projects is that they must meet essential public need in the community in order to be instituted.

A second requirement is there must be an unemployment or depressed income situation that will be benefited by the institution of these projects.

The gentleman from Florida says that nothing has been done about unemployment. If the gentleman's plain statement of facts is correct, that unemployment today is not the same as it was last year, then we have some progress in this direction, because we have added about 3 million new people to the eligible list for employment this last year. If we have started holding the line on unemployment, we have made some progress over the previous administration which had seen a steady worsening of the situation during the closing years of the previous administration.

We have a serious problem in unemployment; we have a serious problem in many parts of our country in terms of depressed income and the absence of opportunity.

I want you to hear for just a minute a statement made by one of the most sensible men I know of in Government, a man who has played a great part and a responsible role in connection with this program, Secretary of Commerce Luther H. Hodges, who testified on March 19, 1963:

> The need for this program of accelerating public works is not supported just by unemployment figures. This need is also evident on the backlog of project applications of more than $1.2 billion which are being held by participating Federal agencies. In this connection, I would emphasize that the many projects which would be financed by the appropriation request now under consideration are desirable and justifiable in and of themselves. The completion will fill definite and critical needs in countless communities. These communities will be made better places in which to work and live, and in many instances the public works projects which can be completed under this program will in turn produce a needed boost for private industrial development which can lead to new jobs on a permanent basis. For example, if a community's present sewerage system is inadequate, that community is obviously under a distinct handicap in attracting private investment for industrial development. Or the community whose water mains and pumping capacity are not adequate for industrial fire protection will be left by the wayside when it comes to choosing a site for the prospective factory which must have adequate fire protection and an adequate water supply for industrial operations.

Mr. Chairman, I am very proud of a project in my own district, in a small town, one of the first area redevelopment projects. The community had a very inadequate water supply. The water supply was inhibiting and constricting all growth in the community. A local cannery came around and said, "If you can give us an adequate water supply, we will double the capacity of this cannery. We will add hundreds of new jobs in this community if you give us an adequate water supply." That assistance was given. Today that cannery is engaged in expansion; they are providing hundreds of additional jobs in a community that had limited opportunity because its water supply was limited.

I say when you embark on this kind of a program in your own community by originating projects, with the local people paying half of the cost, and the Government aiding and assisting communities to put the project across and providing essential services to the people, that we are building on the most solid foundation in the world. And, all of you who have voted in the past for aid programs for foreign countries, remember this: This is a program for all America; it is a program for the depressed and the unemployed and the poor and those without opportunity in our own land, and if there is any man in the hearing of my voice who has supported aid programs for foreign countries and for underdeveloped countries who cannot in good conscience cast a vote for these development dollars to spend in the United States, then I am ashamed for his heart and his generosity. This is a program to build a better United States of America and to go into regions where they need help, and I believe we are going to give it to them in the bill we consider today.

Mr. THOMAS. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. STRATTON].

Mr. STRATTON. Mr. Chairman, I have been somewhat disturbed by what appears to be a somewhat partisan slant in the action deleting funds from this legislation for the accelerated public works program, and I rise in support of the efforts which will be made under the 5-minute rule to reintroduce this money in line with the recommendations of the President of the United States. I speak as one who has the honor, although being a Democrat, to represent an overwhelmingly Republican constituency. In fact, Mr. Chairman, as Members are aware, six of the eight counties which I have the honor to represent in this body in the 88th Congress were represented in the previous Congresses and for 40 years prior thereto by our distinguished former colleague from New York State, the former ranking Republican member of the great Committee on Appropriations for many years, Hon. John Taber. Six of the eight counties in this new district that sent John Taber to Congress for 40 years are suffering so great a degree of unemployment that they are eligible for consideration under this bill. And the fact that people and public officials in these six Republican, conservative upstate counties are eagerly pressing for the assistance which the program provides will perhaps help to put this debate into a little better perspective, especially when it comes to talking about boondoggles or make-work or "needless" projects. Mr. Chairman, these counties in New York State are counties where hardly a day seems to go by without one more business closing down and more people—50, 75, or 100—being thrown out of work. And the only program that now exists to help these hard-hit communities has been the accelerated public works program adopted by the last Congress.

We read a lot of statistics in the papers. We even read speeches by the distinguished Governor of our State, who even before the State legislature had completed its work before for the year 1963, was out in the Middle West campaigning for President.

We read Mr. Rockefeller's speeches about how successful business is in New York State, and how he has licked the problem of unemployment. But the fact of the matter is that 26 out of 62 counties in New York State are eligible for assistance under this bill. And, the fact of the matter is that this unemployment is affecting increasingly greater areas that traditionally have been Republican.

Let me take, for example, the lovely Finger Lakes region of our State. We have the so-called Geneva-Canandaigua labor market area up there. In the city of Geneva itself unemployment has reached something like 15 percent or 16 percent. When the accelerated public works program went through we had mayors, boards of supervisors, chambers of commerce—all local intitiative, if you will—knocking on the doorstep of the new agency saying "Can we not become eligible for this program?"

Mr. Chairman, I do not suppose that there are three counties in the entire United States which have filed more applications under this program, applications from good, solid, hard-line upstate independent conservative Republican areas than have the three counties that make up the Geneva-Canandaigua labor market surplus areas.

Mr. Chairman, I do not think the gentleman from Florida, [Mr. CRAMER], or the gentleman from Texas [Mr. FOREMAN] could go up into those areas and tell these people that the effort to help relieve their unemployment is a boondoggle, could tell these people that they do not have any unemployment, or because there is no unemployment in some areas, in the United States we in Congress need not worry about the unemployment in those areas where it does exist. Unemployment knows no party lines.

Mr. Chairman, this is not a matter of trying to cram projects down the throats of the people. I sometimes find it hard to set through all the debates of this House because of the number of projects that the people in these communities in my district are interested in and are pressing to get approved. Why are they pushing these projects? Why are they anxious to get them through? Because it is the only program they have. There is nothing from the State, nothing at all from the State. The only program that gives these counties an opportunity to meet the unemployment problem they face is this accelerated public works program which some Members of the House would now kill by taking away its funds.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. STRATTON. Mr. Chairman, would the gentleman from Texas yield to me an additional 5 minutes.

Mr. THOMAS. Mr. Chairman, I yield the gentleman from New York 5 additional minutes.

Mr. STRATTON. Mr. Chairman, I thank the distinguished chairman of the subcommittee. There has been some talk here on the floor today to the effect that the Federal Government is stepping in and crushing local community initiative. Mr. Chairman, what is actually happening is the precise opposite. Because funds are available in this program, other local funds that would otherwise never have been committed are coming out. The local communities themselves could not underwrite these programs completely on their own. But they are willing to go half way. Therefore, as a result of this program—and I have seen it in county after county in my district—we have more local initiative, more local funds, more local interest in improving our communities than existed before the program went into effect.

Mr. Chairman, what job do we have to do that is more important in this country, if it is not to put people to work and to solve our continuing and nagging unemployment problem? Today we have men and women who cannot find work. We have a program that can help them find work and which has the support of local leaders, the leaders who best know whether the community needs the work help provided by this program. These are the people who are asking for help under this legislation.

Mr. Chairman, today we have a great backlog of applications, at least as far as New York is concerned, because the funds to finance these projects have run out. Are these communities now to be told that because they did not become eligible for help quite as soon as some other community did nothing is now going to be done for them; that because Congress authorized $900 million last year we are going to pull the rug out from under them? I do not think this is the day to do it at all.

We committed the Congress to a program of $900 million. That program was so popular, so much in demand, and had so much grassroots support for it, without regard to party affiliation, that the funds were used up well before the year was through.

Now we have a choice of waiting until the the next fiscal year comes around and putting the money in, or putting the money in under this supplemental appropriations bill, as the subcommittee had tried to do. What we have to do if we really want to put people to work is to keep the momentum of this program going. You cannot let them sit around until the first of July to satisfy some of the technical requirements of budget-making. Here is an opportunity for us to continue this program, to move into communities that are anxious to get help, and give that help. I think the program should be continued. I support the effort to reintroduce the $450 million in funds requested by the administration.

Mr. THOMAS. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Kentucky [Mr. PERKINS].

Mr. PERKINS. Mr. Chairman, I personally feel that we have within our grasp an opportunity to be of service to our country, especially in time of need. If we were discussing the impacted area school bill on the floor today, I doubt that we would have all this argument. I say this as one of the supporters of that legislation all through the years, where we have been giving assistance to areas that obtain most of the defense contracts, where we have in some instances a median family income of $6,000, and $8,000, contrasted here today with counties such as those in the district I represent, and certainly that prevail in districts of many other Congressmen, where the median family incomes run $1,400, $1,500, $1,700, and $1,800 a year.

As I see it, we cannot afford to fail to restore this $450 million, especially since we have in the past supported programs in underdeveloped parts of the world. I represent a section of Kentucky that is depressed, especially the southern part of the district. This legislation was passed primarily for depressed areas. Within the past 6 years we have had in eastern Kentucky two of the worst flood disasters in the history of Kentucky. Those people have been trying to pull themselves up by their own bootstraps in every way possible. Their savings in most instances have been wiped out and the economy in many of these coal-mining communities has for all intents and purposes collapsed. With the program this Congress has already committed itself to, how will they feel if we turn our backs on them after that commitment and fail to restore these funds, especially since progress is being held up in certain areas of this country dependent upon sewage and water and other permanent improvements in many of these communities? That is true in my district. We have in the city of Beattyville, Ky., some 30 low rent housing projects, and some of those units are for the elderly, held up on account of the lack of sewage.

Within the past 60 days, 13 of the counties I represent have been declared disaster areas by the President of the United States.

In another community in Martin, Ky., we have another low rent public housing project of 40 units that is being held up because of the lack of a sewage disposal system. Now these are the facts. In Martin, Ky., the water was 6 feet high in the streets. Every home in the main part of the city was flooded and every business establishment in that community was flooded.

Approximately a year ago the Area Redevelopment Administration made available a $650,000 grant to the University of Kentucky Extension Service at Quicksand, Breathitt County, Ky., for the purpose of establishing a wood utilization center. This center will create many jobs, but this particular community does not have a water system. Representatives from the community and from the University of Kentucky have been in Washington seeking Federal assistance. The median family income in Breathitt County is $1,432 and 76 percent of the people in this county have incomes less than $3,000. The purpose of the Accelerated Public Works Act was to assist communities of this type. If we fail to make available the money, there will be no water system at Quicksand, Ky., in the foreseeable future. The local people just do not have the means to support a project of this type. These are a few of the projects that are dependent upon this appropriation. There are some 40 applications pending in the district that I represent, including 8 administration buildings such as courthouses.

If we cannot give assistance to people in such circumstances, then I certainly think this Congress is being derelict in carrying out its responsibility. We know that this program is being administered well notwithstanding what may be said about it.

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from Massachusetts.

Mr. BOLAND. I compliment the gentleman on his statement. If there is anyone who knows about depressed areas and the unemployment problem, it is the gentleman who is now addressing us in the well of the House. At page 111 of the hearings, I had inserted by the ARA a list of the States and the areas in which this money is being expended. As the gentleman just indicated, the people who are running this program have done a fantastically fair, reasonable and equitable job in a very, very difficult program.

Mr. PERKINS. And they have done a nonpolitical job.

Mr. BOLAND. Yes, they have done a nonpolitical job. There is no question about that and the record bears that out. The record with respect to the distribution of funds among the States clearly shows that those States that have had the largest percentage of unemployment have benefited the most by this program and they include States like Kentucky, the State from which the gentleman now addressing us from the well of the House comes, and the States of Tennessee, West Virginia, Michigan, Ohio, and Pennsylvania. These are the States that have received the most under these programs and these are the States that have had the worst problems with respect to unemployment. I congratulate the gentleman on his statement.

Mr. PERKINS. In southeastern and eastern Kentucky, southwestern Virginia, in the Williamson, West Virginia, area, and particularly in the district of my good friend, the gentleman from Kentucky [Mr. SILER], I can think of millions of people who have been affected by recent floods and where their communities have bonded indebtedness to the hilt. They deserve and expect this assistance and I am certainly hopeful that we will not put the dollar ahead of our people.

This nation cannot afford to expend our substance in idleness, for that would be as wasteful as burning our forests, and sealing our mines. We need to make these communities more attractive for industry. They need sewer systems to dispose of their waste, water lines to permit them to sustain life more easily, other utilities, such as roads and streets. To get these they are willing to put up some of their own money for the results are tangible. The unemployed and underemployed in these communities are given an opportunity to work. The project takes shape before their eyes. A program of this type is our only hope to make these communities, such as we have in the coal-producing sections, attractive for industry.

We need to extend this program further. We need to provide an additional program that will put people to work cleaning up the streams and building country roads, especially in these depressed areas where we have one-third of our people unemployed.

Mr. Chairman, I think this appropriation should be restored. It is good economy to restore these funds.

Mr. THOMAS. Mr. Chairman, I yield to the distinguished gentleman from Mississippi, senior member of the committee [Mr. WHITTEN] such time as he may consume.

Mr. WHITTEN. Mr. Chairman, first may I say with regard to the public works item which has been discussed here today, I have always been a strong advocate of domestic public works. In fact, in 1959 when President Eisenhower vetoed the public works bill of that year because it provided for 67 new starts, I was the author of the successful motion which overrode the President's veto and saved the 67 new starts in public works.

Insofar as the particular program, however, is concerned, it has always been my belief that it would be much better if you had a set of rules in connection with the selection of these projects. As it stands now, as I understand it, the criteria is whether it is a depressed area which in turn is set by unemployment. I respectfully submit that that is only one element to be considered. There are other features such as local tax rate, the tax structure, the assessed valuation of the area, the indebtedness of the county and of the city. The thing that creates most of the problems in a given district is the use of only one yardstick in the determination. Frequently this leads to the area of greatest need being overlooked. Not only that, but the question is raised why one area was included and the other one left out, and that in turn leads to some real explaining, if I may use that phrase. Also, it is apparent that if funds here were restored, four out of five projects which either are or would be approved, could not be financed—and the prohibition by the committee against buying land would eliminate still others.

I repeat I am for public works. I truly believe my successful motion to override President Eisenhower's veto—which was the first time in history that any President had to take that which he had vetoed where the House had first sustained him in his veto—was probably the act of which I am most proud. I repeat what I said then, "the greater the national debt the more imperative it is to look after our own country, develop our harbors, harness our rivers, and improve our country. Here, however, we need some guide rules for fair treatment based on value and need.

THE MISSISSIPPI SITUATION

Mr. Chairman, in Mississippi we are up against a difficult situation. I represent the district in which is located the University of Mississippi. I have been sorely distressed, not only at what has been done to my fine university by the Federal Government but to government itself. I believe in my 21 years here I have been temperate in my remarks. I do not recall ever having any controversy with any of my colleagues which reached personalities, but included in this bill are funds for the restoration of money that was expended for the use of U.S. marshals and Assistant Attorneys General at the University of Mississippi. May I say that we in the Mississippi delegation feel very strongly about it, and we feel we are right that such use was not within the law.

For the record I want to point out several things. One of the first is that the Supreme Court had not rendered a final decision when this action by the Attorney General and the President was taken. The next is that under the law of the State of Mississippi the only police force that any Governor has is the State militia. The State militia was taken from the Governor by the President prior to this movement of Federal marshals into the area. The highway patrol in Mississippi is limited in its jurisdiction to the highways and places adjacent thereto, thus the Governor was without any force to maintain order. Later I shall point out other facts which have not been brought to your attention.

In this bill is an appropriation of $559,000, as requested by the President's proposed supplemental budget, Presidential Document No. 61.

I quote:

> For an additional amount for "Salaries and expenses, U.S. attorneys and marshals," $1,140,000.
>
> This proposed supplemental appropriation includes $559,000 for the cost of enforcing court orders in the University of Mississippi school registration case and $581,000 to cover the cost of pay increases under Public Law 87-793.

In the report of the committee, page 11, is this statement:

> Department of Justice. The Department has included in the bill $1,110,000 for salaries and expenses of U.S. attorneys and marshals. The allowance will require that 5 percent of the cost of pay increases be absorbed.

Then I refer you to pages 561 and 562 of the hearings where facts were developed as to the personnel, equipment, and weapons which were used on that occasion.

May I ask the chairman of the subcommittee or a member of the Committee on the Judiciary whether this is to restore funds that heretofore have been expended or to pay obligations now existing?

Mr. ROONEY. The total amount requested with regard to U.S. attorneys and marshals is comprised of two items; first, the amount of the pay increases, which was cut to the extent of 5 percent, and the amount in connection with the Mississippi incident.

With regard to the Mississippi incident, this is to replenish funds for the U.S. Immigration and Naturalization Service to the extent of $185,880; the Bureau of Prisons, $31,389; the U.S. marshals' appropriation itself, $294,362; the U.S. attorneys' appropriation, $491; the Civil Rights Division, $27,950; the Civil Division, $12,337; and $6,591 for the Criminal Division of the Department of Justice.

This supplemental appropriation would replenish these various accounts in the Department of Justice for the costs of the people they had at Oxford, Miss., during this unfortunate period of time, including equipment, including gasoline for the automobiles, and mileage for the deputy marshals and employees at the usual 10 cents a mile.

Mr. WHITTEN. May I ask a further question. The gentleman mentioned the Immigration and Naturalization Service. May I say that Service advised our House delegation from Mississippi that they supplied a plane, but their plane happened to be available for this use.

Mr. ROONEY. It appears at page 565 of the printed hearings that there were 316 specially deputized enforcement officers from the Immigration and Naturalization Service.

Mr. WHITTEN. This does not apply to the use of the plane that belonged to that Service but applies to the personnel?

Mr. ROONEY. Yes.

Mr. WHITTEN. Does the gentleman have the authority under which funds that had been appropriated for different purposes last year could be diverted to this use, as was done in this case?

Mr. ROONEY. I think that this was a part of the activities of each one of the branches of the Department of Justice.

Mr. WHITTEN. The Immigration and Naturalization Service, may I say, has a different authority.

Mr. ROONEY. I submit to the gentleman they are all law enforcement officers, and that is what they were there for in Mississippi.

Mr. WHITTEN. May I say to the gentleman, the Comptroller General supplied a listing of statutes under which the Federal Government acted. As the gentleman may appreciate we do not agree.

Mr. Chairman, I serve on the Appropriations Subcommittee for Defense. When the Secretary of Defense was before our committee, I questioned him relative to the Mississippi episode. It was developed that the Federal Government used 22,000 soldiers in Oxford and adjacent areas at a time when we had only 6,000 soldiers in Berlin.

I would like to quote from a distinguished military man who rose to the rank of general as to whether these orders were in accord with general law.

I quote:

> I have served in a command status with the National Guard, the Reserves, and 9 years on active duty in three wars. This was practically always in a command status, from a battery on up to a division or posts commanding 35,000 officers and men. Therefore, I believe that I have been fully exposed to the regulations governing command, authority, and the responsibilities of a commander. After reading the Look article (much of the information contained therein, I presume, was given to Messrs. Alsop and so forth by the Attorney General's office), I assume that this is the Department of Justice's position in the matter. It would appear unquestionably that Mr. Kennedy, in making these charges, takes the position that there should have been a divided command at the University of Mississippi. How he expected Governor Barnett to maintain law and order after the President had taken away from his command 11,000 officers and men of the Mississippi Air and Army National Guard, is inconceivable. Had he armed the 50 State patrolmen, he would have set up a separate force on the field along with the 100-odd marshals who were present under arms.
>
> In all of my experience in the military, I have never heard of a divided command authority. The regulations do not even countenance such a situation, but are very explicit in requiring that the senior officer take full command, full authority, and full responsibility. Especially during a riot, anyone should realize that two commanders under such circumstances would be impossible in the employment of armed forces.
>
> I am taking the liberty of forwarding to you photostatic copies of Army Regulations No. 600–20, dated August 11, 1960, subject "Personnel—General, Command," along with changes 4 and 5 which represent the current regulations dealing with command. I believe that these regulations will bear out my point that under any conditions where Federal troops are employed, the overall command, authority, and responsibility rest with the senior officer present. In the case at Ole Miss, this was Mr. McShane who had command over the U.S. marshals and later the National Guard units when they appeared on the field. Later General Billingslea assumed the overall command, including the Army troops who were brought in. In my opinion, in the face of these regulations and the regulations quoted in my previous letter, had Colonel Birdsong with his 50 patrolmen—attempted to exercise any authority or control over the situation in maintaining law and order, he could have been subject to arrest and prosecution for interference with the implementation of Army Regulations No. 600–20.

When the Secretary of Defense, Mr. McNamara, was before our Appropriations Committee I requested him to list the orders issued in connection with the University of Mississippi. I quote them here:

From: DA Wash DC
To: The Honorable Ross R. Barnett, Governor of Mississippi.
Info: CG, Army National Guard, State of Mississippi; CG, Air National Guard, State of Mississippi; CG, USCONARC, Ft Monroe, Va; CG, US Army Three Ft McPherson Ga; COFS USAF; UNCLAS
From: The Secretary of the Army, Cyrus R. Vance.
Subject: Calling Army and Air National Guard units into Active Federal Military Service.

In order to enforce the laws of the United States and to enforce any orders of the United States District Court for the Southern District of Mississippi and the United States Court of Appeals for the Fifth Circuit Court for the removal of obstruction of justice in the State of Mississippi with respect to matters relating to enrollment and attendance at the University of Mississippi, Oxford, Mississippi, the President has exercised the authority vested in him by the Constitution and laws to authorize the Secretary of Defense to call the Army National

Guard and Air National Guard of the State of Mississippi into active Federal service as necessary for that purpose.

I am, in consequence, instructed by the Secretary of Defense to transmit through you his call into the service of the United States for an indefinite period and until relieved by appropriate orders as of and from 0002 EDT, September thirtieth, nineteen hundred and sixty-two, all of the Army and Air National Guard organizations of the State of Mississippi, and all personnel assigned thereto, which the President desires shall be assembled at their respective Army National Guard armories and Air National Guard air bases in the State of Mississippi.

National Guard units so called will be under the operational command of U.S. Army Field Commander, Brig Gen Charles Billingslea, who will issue timely instructions through the commanding officers of the Army and Air National Guard of Mississippi.

Commanding General, U.S. Continental Army Command will furnish necessary administrative and logical support to Army National Guard. Personnel procedures, Section II, Army Regulations 130-10, and paragraph 32, Army Regulations 135-300 will apply.

For Air National Guard units, logistical and administrative support will be furnished by the gaining command. The Mississippi Air National Guard units of appropriate gaining commands are:

153d Tac Recon (Meridian)—Tactical Air Command

183d Aeromod Transp Sq (Jackson)—MATS

238th Mobile Communications Flt—AF Communications Service Personnel procedures are set forth in AFM 45-2.

For your information, the text of the order from the Secretary of Defense is quoted as follows:

"By virtue of the authority conferred upon me by the President under the provisions of Executive Order 11053 dated 30 September 1962, I hereby call into the active military service of the United States, effective 0002, 30 September 1962, all of the units and members of the Army National Guard and Air National Guard of the State of Mississippi, to serve in the active military service of the United States for an indefinite period and until relieved by appropriate orders.

"I further direct the Secretary of the Army to take such action as he deems necessary, utilizing active Army forces or the National Guard units and members named in the first paragraph above, or both, to implement the mentioned Executive Order and this Order, and I hereby delegate to the Secretary of the Army any and all of the authority vested in me by the mentioned Executive Order with respect to the use of such active Army forces and the use of such National Guard units and members.

"Copies hereof shall be furnished forthwith to the Governor of Mississippi and to the commanding officers of the Army National Guard and Air National Guard of the State of Mississippi."

Secret DA 919745. From DCSOPS for Gen Billingslea.

1. (S) You are designated field commander of all U.S. Army Forces, except those assigned to Tent City, but including National Guard units of the State of Mississippi, which may be called to action by the President, employed to enforce Federal authority. You will carry out the provision of EXECUTIVE ORDER No. 11053, dated 30 Sep 62, subject, PROVIDING ASSISTANCE FOR THE REMOVAL OF UNLAWFUL OBSTRUCTIONS OF JUSTICE IN THE STATE OF MISSISSIPPI:

WHEREAS on September 30, 1962, I issued Proclamation No. 3497 reading in part as follows:

"Whereas the Governor of the State of Mississippi and certain law enforcement officers and other officials of that State, and other persons, individually and in unlawful assemblies, combinations and conspiracies, have been and are willfully opposing and obstructing the enforcement of orders entered by the United States District Court for the Southern District of Mississippi and the United States Court of Appeals for the Fifth Circuit; and

"Whereas such unlawful assemblies, combinations and conspiracies oppose and obstruct the execution of the laws of the United States, impede the course of justice under those laws and make it impracticable to enforce those laws in the State of Mississippi by the ordinary course of judicial proceedings; and

"Whereas I have expressly called the attention of the Governor of Mississippi to the perilous situation that exists and to his duties in the premises, and have requested but have not received from him adequate assurances that the orders of the courts of the United States will be obeyed and that law and order will be maintained:

"Now, therefore, I, John F. Kennedy, President of the United States, under and by virtue of the authority vested in me by the Constitution and laws of the United States, including Chapter 15 of Title 10 of the United States Code, particularly Sections 332, 333, and 334 thereof, do command all persons engaged in such obstructions of justice to cease and desist therefrom and to disperse and retire peaceably forthwith;" and

Whereas the commands contained in that proclamation have not been obeyed and obstruction of enforcement of those court orders still exists and threatens to continue:

Now, therefore, by virtue of the authority vested in me by the Constitution and laws of the United States, including Chapter 15 of Title 10, particularly Sections 332, 333, and 334 thereof, and Section 301 of Title 3 of the United States Code, it is hereby ordered as follows:

Section 1. The Secretary of Defense is authorized and directed to take all appropriate steps to enforce all orders of the United States District Court for the Southern District of Mississippi and the United States Court of Appeals for the Fifth Circuit and to remove all obstructions of justice in the State of Mississippi.

Section 2. In furtherance of the enforcement of the aforementioned orders of the United States District Court for the Southern District of Mississippi and the United States Court of Appeals for the Fifth Circuit, the Secretary of Defense is authorized to use such of the armed forces of the United States as he may deem necessary.

Section 3. I hereby authorize the Secretary of Defense to call into the active military service of the United States, as he may deem appropriate to carry out the purposes of this order, any or all of the units of the Army National Guard and of the Air National Guard of the State of Mississippi to serve in the active military service of the United States for an indefinite period and until relieved by appropriate orders. In carrying out the provisions of Section 1, the Secretary of Defense is authorized to use the units, and members thereof, ordered into the active military service of the United States pursuant to this section.

Section 4. The Secretary of Defense is authorized to delegate to the Secretary of the Army or the Secretary of the Air Force, or both, any of the authority conferred upon him by this order.

THE WHITE HOUSE, *September 30, 1962.*

2. (S) In carrying out your duties, you will be directly responsible to the Chief of Staff, United States Army. You will establish your headquarters initially at Memphis NAS, Tennessee. Direct liaison is authorized with USAF and US Navy agencies and with the local representative of the United States Attorney, the Assistant Attorney General, Mr. Oberdorfer in all matters connected with your duties as field commander.

3. (S) You will assume command of such Regular Army forces allocated for this operation upon their arrival at Columbus and Memphis or at such other arrival point as may be designated. You will assume command of all National Guard forces which are ordered to active duty in connection with the execution of the President's Executive Order. In this respect, you will, on approval of the Dept of the Army in each instance, order into the area(s) of operations only those units of the National Guard of the United States called into the service of the United States which you require for the performance of your mission. You will direct the remaining National Guard units to remain at their home areas, subject to your orders.

4. (S) In carrying out your assigned mission, you will use the minimum force necessary.

5. (S) Direct communication with the Department of the Army (DCSOPS) is authorized and directed. To facilitate this measure, the Chief Signal Officer will establish direct line telephone facilities between your Field headquarters and the Office of the Director of Operations, ODCSOPS.

6. (S) Major General Creighton W. Abrams, Jr. is designated as the personal representative of the Chief of Staff for this operation. While not in the chain of command, he is authorized to issue orders in the name of the Chief of Staff.

7. (S) Necessary staff, logistics and administration support will be provided to you by CG, Third Army.

8. (S) You will insure that this headquarters is kept fully informed of the operation through the submission of reports as follows:

a. Telephonic spot reports every two hours on the odd-numbered hours.

b. Interim telephonic reports on major changes which warrant the immediate attention of this headquarters.

c. Written periodic reports covering each six-hour period, ending 1700 hours local time and transmitted so as to reach this headquarters by 0400 hours the following day.

d. You will be informed of any changes in these reporting requirements.

To: CG XVIII AIRBORNE CORPS OXFORD MISS; CGUSCONARC FT MONROE VA
Info: CGUSARMYTHREE FT MCPHERSON GA; CGUSARMYTHREE (REAR) MEMPHIS TENN; COFS USAF; UNCL From DCSOPS.

1. You are directed to redeploy to home station, effective 101400Z Oct, the following units:

Hq XVIII Airborne Corps.
Hq 101st Airborne Division.
1st Battle Group, 327th Infantry.

1st Battle Group, 501st Infantry.
503d MP Battalion.
Hq 82d Airborne Division.
1st Battle Group, 187 Infantry.
82d Signal Battalion.
Appropriate support elements.

2. CG XVIII Airborne Corps will pass command of all operations under his command to the CG, 2d Infantry Division, Brig Gen Charles Billingslea, at a time agreed upon by the two commanders. This time will be reported to the DA. The CG, 2d Infantry Division, Brig Gen Charles Billingslea, will be directly under command of the Chief of Staff, United States Army, General Earle C. Wheeler. Continuous reliable telephone and teletype communications will be sustained between the DA and the command post of the CG, 2d Infantry Division. The CG, 2d Infantry Division will assure continuous, reliable, adequate communications between his command post and all operational elements immediately subordinate to his headquarters. This will include appropriate and adequate communications between the commander and his command post and/or his subordinate elements whenever he is absent from the command post. Adequate aviation support will be provided the CG, 2d Infantry Division.

Secret DA919746 from DCSOPS for Gen Billingslea. Ref DA 919745, the following additional instructions are provided:

1. (FOUO) The following fragmentary order is based on assumed Army missions resulting from expected Executive Orders. Although the mission and tasks may alter slightly, the general concept of the operation should remain firm.

2. (S) SITUATION:

a. (FOUO)) Mississippi State official(s) and police prevent the enrollment and attendance of Mr. Meredith at the University of Mississippi, Oxford, Mississippi.

b. (S) SECRET.

3. (S) MISSION:

a. (S) SECRET.

b. (FOUO) DA takes all appropriate steps to enforce any orders of the United States District Court for the Southern District of Mississippi for removal of the obstruction of justice in the State of Mississippi with respect to matters relating to the enrollment and attendance of Mr. Meredith at the University of Mississippi located at Oxford, Mississippi.

4. (S) TASKS:

a. (FOUO) Concept of Operation: This operation will be a two-phase operation:

Phase I: (S) Secret.

(FOUO) Removal of all obstruction that interferes with the enrollment and attendance of Mr. Meredith at the University of Mississippi.

(FOUO) Phase II: Maintenance of law and order upon completion of Phase I. In this operation the Army will use minimum strength and force to accomplish its mission. This does not preclude the use of the entire Task Force Oxford, if necessary.

(FOUO) b. Task Force Oxford—General Billingslea, Commanding.

(FOUO) (1) Remove all obstruction interfering with enrollment and attendance of Mr. Meredith at the University of Mississippi.

(2) (S) SECRET.

(FOUO) (3) Be prepared for assignment of any National Guard units that may be called into the service of the United States. In this respect:

(FOUO) (a) If situation permits, have units perform duties at home station.

(FOUO) (b) Plan for the phasing-in of National Guard units and the eventual release of all Regular Army units from the Oxford, Mississippi area. Timing on this will be determined by the situation.

(FOUO) c. DA Agencies (omitted).

(FOUO) d. Coordinating Instructions:

(FOUO) (1) For the purpose of this operation, it is desired that minimum strength necessary be employed. If a squad can do the job, do not employ a platoon. Accordingly, to assure successful completion of the mission, reserve forces must be responsive to any degree of escalation requiring more troops.

(FOUO) (2) For the purpose of this operation, it is desired that minimum force necessary be applied. Normally, force will follow this priority; unarmed rifles (no bayonets); unarmed rifles (fixed bayonets with sheaths on); tear gas (ON); unarmed rifles (fixed bayonets, unsheathed); loaded rifles. Similar: priorities for carbines and pistols. A desire for minimum force must not jeopardize successful completion of mission.

(FOUO) (3) Whenever possible, Federal marshals should take action when civilian personnel (ring leaders, etc.) should be taken into custody. When it becomes necessary for Army personnel to take this action they will immediately seek a Federal marshal to take over such custody.

(FOUO) (4) The Army mission calls for removing the obstruction to justice. It does not require the physical or actual escort of Mr. Meredith; (S) Secret.

(FOUO) The Army provides only the assurance that no one will interfere with the Federal marshals carrying out the court orders. Federal marshals will do the actual apprehension and escorting; the Army clears the path. This policy will apply to any subsequent missions resulting from Executive Order(s), unless directed otherwise by DA.

(FOUO) (5) Riot Control Gas (CS) or (CH) may be used when its use is clearly required to accomplish the mission and lesser efforts would not suffice. Authority to use CS or CH is delegated to Brigadier General Billingslea, who is not authorized to further delegate this authority.

(FOUO) 5. (U) Administration and logistics:

(FOUO) DA furnishes PAG and CINFO support as previously announced.

(FOUO) 6. Command and signal:

(FOUO) a. Command: When Gen. Billingslea assumes command of Task Force in objective area, command lines are from Task Force to DA.

(FOUO) b. Signal: DA supports as previously announced.

1. You are designated to replace Colonel Lucien Keller as field commander of all U.S. Army Forces in Oxford, Mississippi (USAOX).

2. References above pertain to responsibilities and authority assigned to Colonel Keller as COUSROX. Colonel Keller will pass command of all operations under his command to Colonel Hodges at a time agreed upon by Colonel Keller and the Chief of Staff, General Wheeler. When this passing of command takes place, the responsibilities and authority stated in referenced messages will be transferred to Colonel Hodges. Portions of these references that appear to be past history remain as guidance for any subsequent event similar in nature. SCP 4.

Mr. Chairman, we have had further troubles in our fine State, and it is certainly believed, and there is much evidence to support the fact, that this agitation and disturbance has been for the purpose of reaping certain benefits in other sections of the United States. In my judgment, as I have said many times, once any government takes into its hands the absolute control, uses all services and all money and, as Secretary McNamara says, spends $5 million, certainly they never stop short of going the whole hog, and I hope we can, when this item is reached in the reading of the bill, delete these funds from this measure.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Iowa.

Mr. GROSS. General Walker was arrested by the Federal Government when he put in an appearance in Oxford, Miss. I am not in a position to say whether he should or should not have been there, but he was arrested. Does it not seem to the gentleman that it is strange no arrests have been made since by the Federal Government of anyone coming into the State of Mississippi for the purpose of creating a disturbance? Is it not strange that no one else has been arrested on the same basis as General Walker was arrested?

Mr. WHITTEN. May I say to the gentleman from Iowa that professional agitators, people who admittedly went there to create trouble, who have said they meant to stay in Greenwood, Miss., until the Federal Government sent troops, have not only gone without Federal arrest but have had the help of U.S. attorneys. They were and are on the opposite side from that which General Walker was charged with taking. These people, trying to incite local people to riot have gone free of arrest by the Federal Government. It appears there are two rules—not only in Mississippi but here in Washington. While I know others disagree, I am convinced that sending troops to Oxford, prior to final court decision by the Supreme Court, was beyond the authority of any Attorney General or President.

Mr. GROSS. I cannot help but wonder whether there are two standards of justice and law enforcement on the part of the Department of Justice.

Mr. WHITTEN. Mr. Chairman, ours is a small State. To lose its vote by reason of supporting present agitators who are doing their best to force the Federal Government to send more troops there, would not hurt any national campaign too much, if thereby appeals could be made to the large minority votes of other States.

Truly we must be proud of the officials of Greenwood, Miss., and of Leflore County who have withstood these efforts to create riots and every other thing which would give excuse for a second movement of troops into Mississippi.

These officials sincerely feel that the Federal Government has made real efforts to support those who would incite to riot the people in the area.

The mayor has pointed out that the initial cause of the trouble at Greenwood has never been listed, beginning with the night of February 27 when a car occupied by five Negroes reportedly tried to run down some white youths who were walking alongside a highway.

Arrests were made and charges of felonious assault were lodged against the Negroes involved. They are now free on bond awaiting the action of the Grand Jury. This episode has either not been mentioned, or has been watered down in news reports.

The city cites events beginning with activist Negro Samuel Block's report that on different occasions he had been shot at, beaten, and had his Greenwood office set afire by white persons. The statement said each of the incidents had been investigated by the Federal Bureau of Investigation, and that in each case no evidence was found that indicated Block's reports to the Justice Department were true.

In the case of Block's reported beating, immediately thereafter Block was engaged in his usual activities, and was observed by many persons to have no sign of injuries.

Full investigation proved his charges to be wholly untrue, but the false picture created by the giving of nationwide publicity to Block's statement has never been corrected. The FBI investigated the matter, and it is our belief that the Department of Justice has full knowledge that Block's accusations were not true.

On the night of March 26, when an unidentified person shot into the house of a Negro here, the mayor said:

> It was known to everyone here, including representatives of the Justice Department, that the Negro organizations presently in Greenwood were deliberately framing criminal charges against white people for crimes against Negroes.

Through good fortune or advanced planning, no one was hurt in the shooting.

On the subject of the city's dispersal of groups of Negroes marching on the Leflore County Courthouse with the use of one police dog, city officials said:

> This action is not designed to prevent or impede voter registration. Little effort has been made to explain to the American public that there is no plausible reason for the marches.
>
> In fact, the groups dispersed are advised by the police that they can proceed to the courthouse in an orderly fashion if they desire to do so.
>
> It is difficult for us to comprehend why the Justice Department should dictate to us what should or should not be done to preserve safety on the streets of Greenwood when it is common knowledge that they either cannot provide or do not provide protection for the people using the public streets of Washington, the headquarters of the Justice Department itself.
>
> As yet no one has been seriously hurt in Greenwood. We have never had race riots in Greenwood and we want none now.
>
> If a crime occurs in a community, it does not follow that the community is peopled by criminals. We make no claim to perfection, but we join with most civilized people in being unalterably opposed to violence.

Mr. Chairman, who would have believed this could have happened in the United States? The use of Federal might may suit some people in this instance, for they may believe the end justifies the means. But they are wrong. Power once used will continue to be used—and I would point out here, for the executive department through the Department of Justice, to intervene in private suits in the courts, obtain the decree sought from the Court, and then use the military to enforce the decree, can only mean the executive and the judiciary are working hand in hand, and the balance of power—legislative, judiciary, and executive has gone by the boards.

Remember, no other democracy ever survived under such use of power. Thus are dictatorships made.

Mr. LANGEN. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. KYL].

Mr. KYL. Mr. Chairman, a short while ago the gentleman from Ohio, after quoting indisputable authority, suggested that we should get our think factory working in regard to this bill. Now, this Member will confess that as he enters his third term in this body he almost gets to believing that he thinks better than he did when he came, probably because he finds himself agreeing with certain esteemed colleagues. Then all of a sudden he realizes that he really is not thinking better at all, but that he just has a little higher regard for a poor opinion. Some of the Members perhaps remember the old Earthworm Tractor stories that used to run in the Saturday Evening Post. I suggest that there is some comedy of errors going on in the public debt acceleration program which makes the hero of the Earthworm Tractor stories, Mr. Elmer Botts, look considerably like Ralph Waldo Emerson.

I know about one program, and I want to relate a few facts concerning it.

The gentleman from Oklahoma stated a moment ago that there are two primary criteria for this public works acceleration program. First, that it must meet a need in the community and, second, it must make jobs.

Mr. Chairman, no doubt these are fine criteria. But I would ask, Mr. Chairman, to prove Robert Burns' old observation that "the best-laid schemes o' mice an' men Gang aft agley."

In the Fourth Congressional District of Iowa there are two counties which are labeled depressed areas. They did not ask for this designation. One of these counties we shall refer to hereafter as county A. It asked for $379,000 to perfect a waterworks extension. It is labeled "APW-41." The reason this extension was needed was the fact that there was an industry moving into the community which would employ 1,100 people. That is making jobs, you see. Everything was "go" on this project. All of the engineering was completed. It was ready, and it could have an accelerated public works designation. The industry, incidentally, was not attracted by ARA or APW. So, these people made application and, as I say, it was the first one presented in the region. The regional office said of this project, "These papers are finest we have seen. This is a wonderful project. This is it. This is a good one. We will see that it goes through immediately."

So, it came to Washington, and after a time I called some of the people downtown in the Department. I said, "How are we moving on APW-41 for county A in Iowa?" They said, "We have to turn this project down because under our fair distribution formula"—a formula, incidentally, which the regional office did not know existed at that time—"under our fair distribution formula we cannot approve a program for more than $200,000."

Mr. Chairman, being someone who wanted to get some of the goodies for his own district, I said, "Why can we not reduce the amount of the request to $200,000 and let the home folks supply the rest?" They said they would check this, which I assume they did, in a period of about a week. The answer came back, "No; we cannot do this."

Incidentally, in spite of the fact they cannot approve project 1 because it was over $200,000, this same county submitted a request for another program to the regional office and was advised to take it home and make it bigger because it was not big enough. It answered the local purpose, but this one was not big enough.

On March 15 our office received a list of approved public works projects, as your offices did, and included here was the project for county A listed as Grade and Base Coarse, and note the amount—$385,000.

Mr. Chairman, we did not get our waterworks to the factory which was going to employ 1,100 people, but somewhere there was this program which had been approved to grade and put on a base coarse costing not $200,000, but $385,000.

Well, I immediately called the Department.

Mr. Chairman, to my amazement, or I guess I really was not amazed, nobody in the Department knew where this project was or what it was or whether it had been approved. But after about 10 days they found it, not in ARA, not in Accelerated Public Works, not through any request anyone had made from the district, but in the Bureau of Public Roads. Somebody said this has to satisfy a local need, people have to ask for it. These people at home in the county office, in the city office, the OEPD people, nobody knew anything about it. But here it was on the books.

Mr. Chairman, to make this long story short, we finally found that this project is to grade and improve 4.9 miles of road leading to an Iowa State Park. But the road is not even located in county A, or any other depressed county. It is in a county that has never received such a designation.

Mr. Chairman, the industrial plant is being built without the benefit of this money. I suppose this means that the county will no longer have a depressed status, and I might suggest that there are some who will not be greatly disappointed.

Mr. Chairman, after listening to a lot of the debate on the floor this afternoon, I would say that it is quite obvious that there are many Members here who are concerned directly with unemployment, but it is very obvious that the unemployment which concerns them most is their own.

Mr. BOLAND. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. MOORHEAD].

Mr. MOORHEAD. Mr. Chairman, I am taking the time of the Committee this afternoon because there are two items in this bill that disturb me.

The first is the subject of civil defense. This afternoon the Committee heard the distinguished gentleman from California, the chairman of the Joint Atomic Energy Committee, the chairman of the Military Operations Subcommittee of the Government Operations

Committee, a subcommittee on which I have the privilege to serve, a gentleman who knows whereof he speaks, urge that we give greater attention to civil defense. This program is also supported by the very distinguished Secretary of Defense, Mr. McNamara.

What I am saying is that this program is one that is supported by people who know whereof they speak.

I remember at the height of the Cuban crisis last October people coming to me, not in panic but asking for advice, saying, "What do I do—where do I go—in the event of an attack?" I think at that time we learned in a time of crisis when we had to take action we could not take any drastic action for fear of developing a panic in our people. Now the crisis is over and we do not act.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. There are many in this body who share the concern the gentleman has expressed about this civil defense item and who are very hopeful that the Committee on Appropriations will take a long further look at it when additional evidence has been presented on the impact of this cut on the program now underway.

Mr. MOORHEAD. I thank the gentleman for his comments. I think the gentleman would be interested to know that the military operations subcommittee in a report issued last summer said:

> If a crisis should occur that threatens imminent attack, the people of this country will inquire in a single and loud voice what the Government has done to protect them. A wise administration—and a wise Congress—will not be caught unprepared.

I hope we have that wisdom.

The second point that disturbs me here is, of course, the cut—no, not the cut, the abolition of the accelerated public works program. I come from a depressed area. Unemployment in the city of Pittsburgh is over 11 percent. We have been working hard to rebuild our city to make it a lovely place, to give ourselves a new economic base for the future. We have been working, but we cannot do it all by ourselves because we are in a depressed area. Under this program we have been able to achieve new water facilities and sewage facilities, and street improvements, all of which are essential if we are to build a new economic base for future growth and future contribution to our country.

We were able to acquire a new library addition, a new public safety facility. All of these are essential for a healthy economy in a community. Not only did this program provide a base for our economic development in the future, but it also provided the economic support in immediate man-months of work to tide some of our unemployed over the period when our economy will be working out.

In Pittsburgh alone the programs approved amount to over 2,300 man-months of work. The total in Allegheny County is over 4,800 man-months of work. In addition to these programs which will result in employment, we managed to build a new hospital and make additions to existing hospitals to provide for the needs of our people.

With the exception of the tax bill, I believe there is no program which will face the Congress this year, that is more important to cure unemployment. I urge my colleagues to vote to replace the money cut from the accelerated public works program.

Mr. BOW. Mr. Chairman, I yield 10 minutes to the gentleman from Wisconsin [Mr. LAIRD].

Mr. LAIRD. Mr. Chairman, I take this time to support the action of the full House Committee on Appropriations in reducing the funds for the accelerated public works program by $500 million from the request made by the President.

Last year, when the accelerated public works program passed the House of Representatives, it is true that there was an authorization for $900 million in this particular area. But, only 2 weeks ago we heard here on the floor of the House of Representatives, the gentleman from the other side of the aisle say "Well, now there is no need to worry about this authorization for military procurement in the amount of $15,890 million because, after all, this is just an authorization bill and the Committee on Appropriations will have an opportunity to work its will later on on this program when the appropriations request is before the Committee on Appropriations and also later when it comes to the floor of the Congress." The story then was—not to worry about this increased authorization because an authorization, after all, is just an authorization and the Committee on Appropriations must work its will on this program.

When this particular request came before the Committee on Appropriations last year, the committee did not appropriate for fiscal year 1963 $900 million authorized for this program or the $500 million requested by the President. The Committee on Appropriations appropriated only $400 million. No commitment has been made to any community in the United States that an additional $500 million will be funded in this total authorization for 1963. Let me further state that in the bill and in the amendment proposed by the administration, the $500 million was not made available for fiscal year 1963. This appropriation was requested for obligation through fiscal year 1964. Mr. Chairman, the language which was inserted in that bill by the Bureau of the Budget, I am sure was subject to a point of order here on the floor of the House of Representatives because you cannot insert in a deficiency appropriation bill a provision authorizing the obligation of these funds through fiscal year 1964. This has to be considered under the regular appropriation procedure and in the regular funding bill for fiscal 1964.

Mr. Chairman, this is not an easy vote for the Members of the Congress to make. Many Members of the Congress feel that the manner in which they are judged here in the Congress is by how much Federal money they bring back to their particular congressional districts. I have areas in my congressional district which qualify under the accelerated public works program. It may not be an easy vote for any Member of the Congress to make, but if we are going to be serious about reducing the funds in the new obligational authority budget of the President, and the new obligational authority budget of the President is for $108 billion—if we are going to be serious in making reductions in this budget, we must be willing to face up to tough votes.

We must be willing to face up to question of what are the responsibilities of the Federal Government, what are the responsibilities of the State government, and what are the responsibilities of the local government in this year 1963 and as we face fiscal year 1964.

The President of the United States has told us, and leading economists throughout the country have said, that if we are going to get this economy moving again the No. 1 priority which we as a Congress face is a tax reduction in this year 1963. The position of some of us on both sides of the aisle, of the minority party as well as of the majority party, has been: "Yes, a tax cut; but before we can have this tax cut it is necessary for us to make substantial reductions in Federal expenditures and substantial reductions in the President's new 1964 obligational authority budget of $108 billion."

It seems to me that this is the time, this is the test, this is the most important test we have had in this session of Congress. Are we willing to stand up here and agree with the President of the United States that the No. 1 priority as far as our economy is concerned is to try to stimulate the private sector of our economy through tax reduction at the corporate and individual level? And if you believe in tax cuts at the corporate and individual level it is necessary for us to do something about the $12.8 billion deficit which is anticipated under this particular budget for fiscal year 1964. It is necessary for us to do something about this budget of our President.

We cannot stimulate our economy, we cannot get our country moving again by going in two directions at the same time. Increasing spending and making tax cuts at the same time just does not make sense.

Let us see if we can get our country moving again by the use of this particular Federal spending program.

As of February 15 the total Federal obligations under this program were $244 million. The number of projects approved under the accelerated public works program were 2,060. The man-years of employment that were provided by these 2,060 projects that had been approved was a total of 29,921 individuals put to work. Thus in spending almost one-fourth billion dollars on this program we were only able to employ seven-tenths of 1 percent of the unemployed. These are very unsatisfactory figures. The total Federal cost per man-year of employment under this program was $8,150.

On the basis of program experience through February 15 reflected in the foregoing figures, it would require a Federal expenditure of $32,620 million under this program to put 4 million people to work.

The total cost of this program including local contributions for each job that has been provided has been estimated at $10,225 for every job created under this particular program.

All we need do is look at the testimony before the Joint Economic Committee where the leading economists of this country told us that we could secure more job opportunities, we could go in the direction of getting this economy of ours moving again if we are willing to reduce Federal spending and taxation. If we are going forward with spending programs at an ever-increasing rate, getting into the area of local and State responsibility, we cannot pursue a course of Federal tax reduction in the next fiscal year. It may be good politics to "ride both these horses" at the same time but it is very poor economics.

All of you who believe that it is time to get our economy going, that we can do it through the private sector instead of Government handouts from Washington, D.C., must face up and vote for economy in our first big test tomorrow. We should vote for this reduction of $500 million in the President's new obligational budget. We can make reductions, we can have tax cuts, but only if the Congress exercises its responsibility under our Constitution of controlling the pursestrings and the runaway spending represented in $108 billion new obligational authority of the executive branch. We must not pass on to our children and grandchildren these ever-increasing Federal deficits. This is a real opportunity that we have tomorrow, and I hope that the House of Representatives will sustain the action of the full Appropriations Committee.

Mr. THOMAS. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from California [Mr. Roosevelt].

Mr. ROOSEVELT. Mr. Chairman, I wish to go back to an item in this bill which was previously referred to by my good friend and colleague from California [Mr. Holifield]. It has to do with the stocking of the shelters under the civil defense program.

Some of you will remember that at the time of the Cuban crisis there was a wave, particularly in those areas where there are important military installations, either direct or indirect, of fear that manifested itself in many ways among the general population. In my area, for instance, through an unfortunate remark, a great many people swept the shelves of the food markets in the belief there would be a shortage of food and an inability, therefore, to survive if an attack came about. But above all else, people kept pushing on the phone asking where should they go. When they were told where they should go if they lived in an area marked for public shelter, they were then informed that many of these shelters were not stocked with food or medical supplies or water containers or the sanitation kit. These would make them livable for a number of days. If so, perhaps they might be able to survive and to save their lives.

I want to make it very clear this program is in no way an answer to an atomic attack. It means if the attack happens to be a sufficient distance away that your chance of survival is increased. At the present time, at least, we have shelters identified for 104 million American people. We believe we can have 70 million more places by September 1963. But of these 104 million people, there are only 42 million of them that we are able now or have on order enough supplies to assure them that their shelters will be stocked. The request that was made in this budget was to at least give us an amount of $61.9 million to keep the program going, and to supply the necessary needs of another 23 million Americans.

That was taken out of the bill, in the good judgment of the committee, because the committee felt perhaps a little more time would reveal additional information. But nothing is going to reveal more information on this program until, and God forbid, there should be an actual attack. On the other hand, if this money is not forthcoming, it means there will be 5, 6, or 7 months' delay in not only providing for these 23 million, but loss in the faith that our communities have that the Federal Government really means to go through with this shelter program.

Mr. Chairman, while I understand the pleas for economy that are being heard on many sides, when it comes to a case of national defense and, above all, giving a man, woman, or child a chance to survive a horrible war that might face us in the future. This is indeed the kind of economy I do not think any Member of this Congress, if he really understands the facts, wants to undertake.

When you think of the billions of dollars that we spend in national defense, perhaps we underrate the fact our opposition would like to be sure that our population would panic before an attack. Without panic maybe they would not be so ready to attack. This kind of defense we provide in part by the $61 million requested to finish marking and stocking public defense shelters.

I certainly hope, Mr. Chairman and my colleagues, that a way can be found to put this item back into the supplemental appropriation bill.

Mr. MINISH. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. MINISH. Mr. Chairman, I note from the committee report on the shelter supplemental request that it states that we should not approve more funds until more experience is obtained with this program.

I would like to ask: How much more experience do we need?

The national shelter program started in 1961. Hundreds of professional architects and engineers were trained in the special techniques of analyzing buildings for radiation protection. They surveyed the Nation and located 104 million shelter spaces in existing structures. Department of Defense field estimates are that 70 million of these spaces can be made available in a year if there are sufficient supplies for them.

We have already invested $111 million for supplies for nearly 47 million shelter spaces, about two-thirds of the 70 million spaces the Defense Department estimates can be made available for public use. The supplemental request is to keep the pipeline flowing so that we can complete the final third of the project and provision shelter spaces for 70 million persons.

The Defense Department has set up an intricate logistical system of procurement and transportation schedules affecting more than 3,600 business establishments to produce and deliver the emergency shelter supplies to local communities. Some 5,000 county and municipal governments are, or soon will be, engaged in a job of installing and managing the supplies. Special training courses have been underway for months to prepare local officials for making the best use of public shelters in a nuclear emergency.

I ask again, How much more experience do we need? You do not gain experience in any venture by standing still. It seems to me that we have more than enough experience with this national shelter program to justify continued movement ahead. This is no time to stop.

Mr. LANGEN. Mr. Chairman, I yield 10 minutes to the gentleman from Iowa [Mr. Gross].

Mr. GROSS. Mr. Chairman, I had intended to respond to the gentleman from Ohio [Mr. Kirwan] with respect to his fishpond. I do not see him on the floor at the present time, so I will defer that until tomorrow, and hope I can find time then to reply to him on that issue.

Mr. Chairman, I want to compliment the gentleman from Minnesota, Mr. Langen, for the comments he made concerning this bill wherein he said there are entirely too many new programs being financed in a deficiency appropriation bill. I am surprised the committee would bring in a bill providing money for so many new programs. This should be left to the regular appropriations procedure.

I should like to question the chairman of the subcommittee concerning the item to be found on page 8 of the report in connection with the Small Business Administration. Why did you defer that appropriation? Preliminarily to the gentleman answering the question, I would point out to him that Congress passed—I did not vote for it, but passed the free trade bill known as the Trade Expansion Act, which is bound to do injury to business in this country, yet this bill provides no money to take care of the damages. Why?

Mr. THOMAS. That is a good question, and we will give you the best answer we can. We are not against the Trade Act. The reason we deferred it to the regular committee was, there was not one single request for funds from small business.

Mr. GROSS. Well, does not the gentleman agree that there is going to be damage; there is going to be injury, to business in this country from the Trade Expansion Act?

Mr. THOMAS. That is correct. We anticipate that. Of course, this bill is only good to June 30, and in view of the fact there was not one requst made for money, we decided to pass it over to the regular bill. We are not against it at all. We are for it.

Mr. GROSS. I would like to question the gentleman from New York [Mr. ROONEY] concerning the appropriations for international organizations and conferences and contributions to international organizations. Can the gentleman tell me how much was appropriated to the State Department in the regular appropriation bill last year for these purposes?

Mr. ROONEY. Which item is the gentleman referring to?

Mr. GROSS. I am talking about contributions to international organizations, missions to international organizations, and international conferences and contingencies.

Mr. ROONEY. Oh, I imagine the contributions to international organizations are in the vicinity of $60 to $65 million.

Mr. GROSS. And that was not enough to cover the expenses of those who junket all over the world; is that correct?

Mr. ROONEY. I wonder if the distinguished gentleman would kindly rephrase his question.

Mr. GROSS. And $60 to $65 million was not enough to take care of the expenses of those who traveled all over the world in 1 year?

I would call your attention to this language on page 634 of the hearings:

> U.S. participation in international conferences during fiscal year 1962 increased markedly to 474 conferences as compared with 381 during fiscal year 1961. With emphasis on a more positive and aggressive foreign policy, as exemplified by a number of major programs recently initiated or supported by the United States; namely, (1) the Alliance for Progress; (2) the United Nations decade of development; (3) the peaceful uses of outer space; (4) the Organization for Economic Cooperation and Development; and (5) the trade expansion program.

And so forth. Is this where the money is going, and how much more? How many more conferences are going to be held? There were 474 last year as compared with 381 international conferences the year before.

Mr. ROONEY. Of course, I am sure the gentleman understands that this is a supplemental bill. It covers only the period until this coming June 30.

There were a considerable number of requests. I believe there is language in the report which indicates that the committee has approved funds with regard to only two of these requests. We say that "the committee recommends an appropriation of $315,000 for International Conferences and Contingencies, a reduction of $440,000 in the budget estimate."

That is a pretty good reduction. This would provide $250,000 for expenses incident to organizing and holding a World Food Congress in the United States, and $65,000 for the International Secretariat on Middle Level Manpower, to wit, the Secretariat of the International Peace Corps.

Mr. GROSS. While I still do not have an answer as to why they cannot live within their regular budget in the matter of international conferences, it leads me to another question——

Mr. ROONEY. If the gentleman will yield further, I should like to point out that these are two items that justifiably, as they say, were not foreseen at the time of the regular bill a year ago.

Mr. GROSS. Well, of course, the Peace Corps did not publicize what they were up to when they staged a conference in the plush Rockefeller Hotel in Puerto Rico last October. They did not let anyone in on that secret.

Mr. ROONEY. They tell me that that is a pretty nice hotel.

Mr. GROSS. Yes; so I have heard. It is at the rate of $56 a day per person during the winter season.

Mr. ROONEY. I understand they had special reduced rates.

Mr. GROSS. Yes, about $26 a day, which is still pretty fancy living for members of an organization that is supposed to be down to earth and operating at the common man's level.

Mr. ROONEY. This was a meeting of a group of representatives of many nations who were there for the purpose of creating an International Peace Corps so as to take some of the load off the backs of the American taxpayers.

Mr. GROSS. Of course, the gentleman knows that that seldom is the case. I have heard that for 14 years; how foreign governments are going to get off our backs. It just never happens that way.

Mr. ROONEY. I believe it is the case here, and if my memory serves me right, we had some testimony in this respect which indicated the number of nations interested in having their own Peace Corps to go into underdeveloped nations. The amount of money that this has saved to date, I do not know. I believe it is in the printed hearings.

Mr. GROSS. Can my friend, the gentleman from New York [Mr. ROONEY] help me with the title of this organization?

Mr. ROONEY. I am trying to help the gentleman.

Mr. GROSS. What is the meaning of "middle level manpower"? Can the gentleman help me out with this?

Mr. ROONEY. The gentleman knows that I am always very frank. I must say I do not know myself. I do know that it is a nice name for a meeting that concerned the subjects referred to—I am probably showing my ignorance here, and I should know better, and I hope no one will hold this against me—but the fact is that I just do not know. However, it does have to do with forming an International Peace Corps.

Mr. GROSS. I wonder how high or how low "middle level" is?

Mr. ROONEY. I think it would be in the middle.

Mr. GROSS. Is R. Sargent Shriver, Director of the Peace Corps, one of the middle level or is he above or below? Where does he fit?

Mr. ROONEY. He is at a fine level, let me say.

Mr. GROSS. That still does not tell me the meaning of "middle level manpower." But what this would do, as I understand it, is establish an International Secretariat for the Peace Corps. That is about correct, is it not?

Mr. ROONEY. That is so.

Mr. GROSS. This $65,000, in other words, would put them in business officially. They are already in business unofficially by dipping into a contingency fund of some kind. They already have their hands in the till for $150,000, as I understand it, but this would put the stamp of approval on it as far as Congress is concerned from the money standpoint.

Mr. ROONEY. This is a nonrecurring item. The gentleman knows we cut this item from $80,000 to $65,000.

Mr. GROSS. There is no legislative authority for the Secretariat of the International Peace Corps, is there?

Mr. ROONEY. Yes, I believe there is.

Mr. GROSS. Where would that be found?

Mr. ROONEY. It is right here in the hearings. I was previously under the same impression as the gentleman. I asked this same question during the hearings, and now I understand my impression was not the proper one.

Mr. GROSS. I do not question their authority to get $150,000 out of some fund because Congress has delegated unconscionable authority to the President to spend millions in any way he chooses, but I question the legislative authority to create the organization.

Mr. ROONEY. The gentleman will find in the printed hearings beginning at the top of page 646 the authority for making this appropriation.

Mr. GROSS. I thank the gentleman.

Mr. THOMAS. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Minnesota [Mr. BLATNIK], who is chairman of one of the Committee on Public Works subcommittees and very knowledgeable in these affairs.

Mr. BLATNIK. Mr. Chairman, may I make reference to some statements made earlier—I thought very unfairly—blanketing the whole program as a boondoggle, and making very casual and careless reference to swimming pools, golf courses, and ski slides, and intimating, without saying, that these items characterize the entire program.

There may be a few such projects. But the record of performance and accomplishments of the first $400 million of this accelerated public works program is a good and sound one. Let us look at the summary figures of the total of $400 million authorized last October.

There is the largest amount of $76 million, which is 25 percent of the total, that went for water and sewer works in 451 projects. The next three items are first, water pollution plants, $44 million, distributed over 300 projects, making 15 percent of the total; second, $41 million for hospitals and health facilities, accounting for another 15 percent; and third, badly needed streets and roads, for 15 percent more. The categories I have just cited account for 72 percent of the accelerated public works funds.

Twenty-eight percent of the money went for direct Federal projects, and very properly so, because they were geared so that in 1 month practically all the money assigned to them could be committed and thus provide justifiable employment quickly. We have to remember that most municipal projects took time for planning, engineering, and making out the applications, time that ran to 2 or 3 months before they could get underway with construction.

In the meantime the coldest winter in the last third of a century blanketed almost half the northern United States. I believe you know that, whether you are from the North, the Northeast, the Northwest, the central part of the country, or even down in the South.

When someone calls this a boondoggle, I think of my hometown right in the heart of the iron range, the Mesabi iron ore country, that produced the iron to win World War I, World War II, and the Korean war. Twenty-six percent of the able-bodied workers, the miners, mostly family men, in my hometown were unemployed last winter.

I visited their homes. Most of these men are veterans. Most of them have had combat experience. They were 20, 22, and 24 years old when they were in combat. Now they are 40, 42, and 44 and 45 years of age. I went into their homes. I recall a child that I had seen 3 years ago who was in the fourth grade. Now he is in the seventh grade. He is wearing the same old mackinaw with the sleeves up at his elbows, torn and ragged.

I think it is an insult to these fine Americans who are in distress to imply they want to boondoggle. They are trapped in these hard core unemployment areas all over the country, whether the economic distress is due to technology or to depletion of resources such as iron ore in my case, or timber, or agricultural submarginal lands. They are trapped.

They cannot sell their homes, they cannot rent them, they cannot give them away. There is nowhere for them to go. And, yet, there are those who today would call this kind of program to help such people a boondoggling program.

In considering the problems of the country, we need to give the highest priority to the labor market and to this national problem of unemployment. We are not going to save any money. We will, however, pay a heavy price in human values if we do not do something soon. Unemployment is not going to disappear by itself. Either we give men productive and vital work, in which they contribute to their country by building sorely needed public facilities, or we pay them for not working, by doling out unemployment compensation, putting them on relief, or signing them up for the food stamp plan.

It is the relief measures that are the most expensive items. For unemployment compensation benefits alone from 1960 to 1962—the last 3 years—this country paid out $10.5 billion. Under the accelerated public works program we are proposing to use less than one-tenth of that sum to give work to our jobless men.

Our relief measures are beginning to show the wear and tear of long-term unemployment. I would like to quote an excellent article written in the Washington Post of Sunday, April 7, 1963:

> The Nation's unemployment compensation program is in trouble.
>
> Reserve funds for jobless benefits have fallen to dangerous levels in nearly half the States.
>
> All this comes at a time when employers are paying substantially less in unemployment taxes in relation to total wages than they were at the program's inception in 1939. And it comes at a time when high unemployment is making added demands on the system.
>
> Pennsylvania, which not only has one of the highest unemployment rates in the Nation but also has the second highest average payroll tax, is the worst off. Its solvency rating is only .34.
>
> And whereas it paid out $253 million in jobless benefits last year, it had only $149 million in reserve on December 31. And a large part of this represented a loan from the Federal-State emergency loan fund.
>
> (By contrast, the 7.67 solvency rating of the District of Columbia tops that of all 50 States.)
>
> Ohio is only a bit better off than Pennsylvania. It disbursed $175 million last year but had only $124 million in reserve at year's end.

The distinguished chairman of the Committee on Public Works, the gentleman from New York, Mr. CHARLES BUCKLEY, has commented earlier today on the need for the accelerated public works program, citing the editorial from the New York Times for Tuesday, April 9, 1963. I, too, would like to quote from this perceptive editorial:

> Rejection of a $450 million public works bill has been hailed as a victory for the "economizers" of the House Appropriations Committee.
>
> It is the worst sort of economizing, however, to eliminate prospective jobs for perhaps half a million unemployed in depressed areas across the country. Furthermore, failure to restore the funds will encourage hasty ax-wielding on other programs to create jobs and better utilize the Nation's resources.
>
> There may be many areas where reducing the amount of Government spending would be constructive—in the race to put a man on the moon, for example. But the accelerated public works program is not one of them. To provide jobs for the unemployed is not the equivalent of giving them a handout. To create better hospitals, streets, and other public facilities is not throwing money away.

In short, Mr. Chairman, we have here a most prudent use of limited funds.

In summary, Mr. Chairman, the unemployment problem is an ever-worsening crisis. We have the evidence and the legacy of the three great Eisenhower recessions—a definite pattern in which it has taken us longer to recover from the successive recessions, each of which have left us with a higher total of unemployment than before. I predict that if we continue to neglect and defer this problem, we will encounter ever-increasing difficulties. We will subject ourselves to unnecessary frustrations and heartaches. Through a shortsighted failure to utilize effectively our manpower, we will inevitably slow down economic growth. We will see the day when it will be a good deal more difficult to put able-bodied men on jobs than it will be to put men on the moon.

The CHAIRMAN. The time of the gentleman has expired.

Mr. THOMAS. Mr. Chairman, may I inquire as to the time?

The CHAIRMAN. The gentleman from Texas has consumed 1 hour and 32 minutes and the gentleman from Ohio has consumed 1 hour and 34 minutes.

Mr. THOMAS. Mr. Chairman, a parliamentary inquiry. Is my understanding correct that at 5 o'clock the Committee will rise?

The CHAIRMAN. General debate concludes at that time under the previous order of the House.

Mr. THOMAS. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from New Jersey [Mr. JOELSON].

Mr. JOELSON. Mr. Chairman, I am not going to attempt to be emotional. In fact, I am going to try not to be. But, I would like to recall to the Members of this House that we are dealing today not with numbers and not with figures. We are dealing with the destiny of human beings.

This is the first test that we in the 88th Congress have had as to whether or not we are willing to face up to our responsibility and do something for these people. We have more to do in the spring of 1963 than fight the crabgrass. We have to fight the indifference that consigns people to the economic scrap heap.

While we hear talk of States' rights and local rights, meanwhile unemployed human beings are left to fend for themselves and lose their dignity and self-respect as a result of their inability to provide for themselves and their families.

We have heard talk about boondoggles and leaf-raking programs. Of course, the fact is indisputable that in every one of these projects, local communities, Republican communities and Democratic communities alike, have to put up matching funds. In most of these cases, the people in these hard-pressed communities, in distressed areas, if you please, are willing to say we will match the U.S. contribution dollar for dollar despite the fact that locally we are in deep economic trouble. This is not a boondoggle. This is decency and industry and caring about the towns we live in and the people who live in these towns.

In concluding I would like to quote something that my colleague, the gentleman from Illinois [Mr. GRAY] said, I think it was last year, on this same subject here on the floor. He said that many here in Congress when they talk with the unemployed are like an Elvis Presley record. Before election they say, "I wants you, I loves you, I needs you;" but after election they turn the record over and it says: "See you later, Alligator."

Those people want us to see them now; they want us to match our talk with action, and the time to do it is here and now. For that reason I urge support of the amendment that will be offered subsequently to put back into this appropriation bill money for humanity, money for the American people to go forward.

Mr. Chairman, I yield back the balance of my time.

Mr. BOW. Mr. Chairman, I yield myself 15 minutes.

The CHAIRMAN. The gentleman from Ohio is recognized.

Mr. BOW. Mr. Chairman, the committee has cut 39.8 percent from the 1,641,507 requested.

However, I have reserved on certain items.

When we refer to supplemental appropriations, it seems to me that we should be providing funds for programs now in existence, rather than begin to fund new programs.

In my opinion, all new programs should be reviewed in depth by the regular subcommittees of the appropriations committee.

If you read the record of the supplemental hearings, you will find that there is little justification for the new starts on many new projects. Bear in mind that there will be only about 2 months between the time this bill becomes law and the end of the fiscal year for which we are not appropriating. You must conclude either that these funds for new projects cannot be used in fiscal 1963, or we are inviting reckless spending with inadequate justification to obligate by the end of the fiscal year.

New starts should be considered on a priority basis and should be considered in competition with the other demands in the regular appropriation bills, always having in mind the overriding considerations of our financial situation.

May I outline some of the new starts in the bill before you.

DEPARTMENT OF COMMERCE

Office of Trade Adjustment: On page 2 of the report, the committee allows $25,000 for administrative expenses. New items for this program were deleted elsewhere in the bill.

Civilian industrial technology: The committee allows $500,000 for this new program, a reduction of $750,000 from the budget estimate. Where is the urgency in starting this program under a supplemental appropriation? Is this the time or the place to lay the foundation for a highly controversial program which may grow into another gigantic Government research effort?

The very industries that are supposed to be helped by this new proposal are strongly opposed to it, with one or two exceptions.

First. None of the 110 national trade and professional associations in the construction industry were consulted by the Department of Commerce before formulation of its proposed program. The program proposal therefore presents a dangerously one-dimensional view of the building industry and its present needs and capabilities.

Second. The proposed program as presented in the budget request is indefinite, unclear and contradicts statements on the aims and purposes of the building research and development program as enunciated by Department of Commerce spokesmen.

Third. The proposed program threatens to tamper with the delicate free enterprise mechanism of America's largest domestic fabrication industry.

Fourth. The program, if set in motion, would compete with private industry research efforts.

Fifth. The proposed new program should be evaluated by appropriate committees of the Congress such as the Interstate and Foreign Commerce Committee in the House and by the Commerce Committee in the Senate and should not be initiated by the highly unusual procedure of a deficiency appropriations request. This is an attempt to prevent debate on the merits of the proposal during the regular appropriations process.

Sixth. The construction industry and its 110 national associations are presently evaluating the proposed Department of Commerce program to determine whether there is a proper role for the Federal Government in building research and development. Until the associations in the $80 billion construction industry have had an opportunity to meet and discuss the proposed subsidy program for building research, the program proposed should be rejected.

Aside from the textile industry and one or two letters we have received from manufacturers of chinaware, I do not know of any private industry that seeks to have the Government intrude into this field. They are opposed to it. Yet we propose here to launch the program on the basis of the very limited testimony that it was possible to receive in the course of hearings on this huge supplemental appropriation bill.

Transportation research is the next item: $625,000 is allowed for this new start. The Department asked **$1,250,000.** How can they possibly use these funds in the 2 months or less that will be left in the fiscal year?

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Office of Education: $345,000 is recommended of the $600,000 requested for the new program of films for the deaf.

Public Health Service: $5,430,000 is in the bill for mass inoculation, a reduction from $12,600,000 requested. Also, the bill includes $500,000 of the $1,500,000 requested for the new programs in behalf of migratory workers.

Children's Bureau: $3,500,000 is authorized for the start of the new program for day care centers, a reduction of only $150,000 from the budget estimate.

Educational TV, another new start: $1,500,000 is recommended to initiate grants for construction of educational television broadcasting facilities. I should like to say just a word about that item. These are grants to build educational television. Many Members of the House are in favor of educational television. But I have some concern about that from this standpoint. I asked them in the hearings: After you make these grants, after you build this television network, who is going to operate it, who is going to pay for it?

The answer to me was, the local communities, the local school boards. They tell us this educational TV will cover 90 percent of the people of the country.

I am fearful, Mr. Chairman, when we establish it, when we get it ready for operation, there will not be any local money to operate the educational TV. Where will they come? They will come to the Congress of the United States for funds to operate a television network covering 90 percent of the people, operated by the Federal Government. That is my concern, regardless of what administration may be in power. The opportunity of thought control, the opportunity for broadcasting programs to the people by the Government, it seems to me is a very dangerous thing.

DEPARTMENT OF THE INTERIOR

National Park Service: $5 million to initiate land acquisition at the Point Reyes National Park. The regular Interior Department appropriation bill already passed the House carries an appropriation for $2 million for this purpose.

Office of Territories: $7,290,000 for schools, hospitals, utilities, and transportation.

DEPARTMENT OF LABOR

Trade Expansion Act, $100,000. One item has been approved, some have been disapproved. They are concerned now about two industries—china and earthenware and whisky. Each has lost about 1,000 employees since passage of the act, although there have been no changes in tariffs.

Mr. Chairman, the Public Works Acceleration Act—Public Law 87-658—was approved on September 14, 1962. This act authorized the appropriation of $900 million for the accelerated public works program. On October 13, 1962, Congress passed the public works appropriation bill for the fiscal year 1963 which included $400 million for initiating the accelerated public works program program. This was less than half the full $900 million the administration had requested. This $900 million request was not considered by the House but went directly to the Senate.

The Senate Appropriations Committee in its hearings was highly critical of the lack of budget justification for any specific project. The Senate committee in its Report No. 2178 called attention to this failure to present proper justification for each project to be funded by the accelerated public works program in these words:

> In recommending an appropriation of $500 million the committee notes that this is a new program for which firm estimates are not available. The witnesses testifying before the committee presented lists of public works projects which they considered eligible for allocations under this program. They pointed out, however, that many States and communities are not yet even aware of this legislation, much less have they been able to prepare project requests that might qualify under this act. Accordingly, the witnesses cautioned that it should be clearly understood that these lists do not represent an approved program nor could they give the committee any assurance that any individual project would be approved. The committee felt, therefore, that it would be desirable to provide a partial appropriation which would permit this program to get underway at the maximum possible rate for the next 4 months, with the understanding that the administration can submit a supplemental estimate in January at which time they should be in a position to support a definite program, with specific recommendations for projects to be undertaken and justifications therefor.

The Senate committee also specified the type of projects that should be included in the program in these words:

> Since the purpose of the Public Works Acceleration Act is to provide additional employment in depressed areas, the committee believes that the projects to be approved by the various administrators under the favored terms of the new authorization should be those projects for which the local communities or other political subdivisions are unable to meet the cost-sharing requirements under the agencies' regular programs. An example of the type of program the committee has in mind would be the public facilities loan program.

It is amply clear from the Senate report language and the conference report language which was accepted by both Houses, that the appropriation of additional funds over and above the $400 million initially provided was dependent upon the presentation of specific recommendations and justification for each of the projects in the remainder of the program. This has not been done.

In fact, the administration has made no attempt to comply with this specific requirement of the law as it now stands. Actually, the committee should have refused to schedule any hearings on the supplemental request for the additional $500 million until the administration presented a firm program with specific descriptions and justifications for each project included therein.

The actual presentation to the Deficiency Subcommittee has been nothing more than a list of several thousand project names with the most meager indication of what each project was. It was nothing more than a continuation of the same emaciated and inadequate initial presentation to the Senate at the time of the original request for funds for the accelerated public works program.

Here are a few examples of the kind of descriptions of the projects given in the accelerated public works program presentation: Repair building, recreational facilities; construct building, recreation facilities; recreational facilities; Hawaii Volcanoes recreational facilities; land treatment; Chesapeake & Ohio Canal; interceptor; flood control; courthouse; concrete raceways; city hall; activation of vessel; zoological gardens; swimming pool; cultural center; fairgrounds extension; nursing home.

There is no need for Congress, if it is to be a rubberstamp for these billion dollar public works acceleration programs on which no specific justification is presented for the projects to be covered. Why not just hand the key to the Treasury over to the administration with a request to please let us know at some future time how they spent the taxpayers' money? Of course, we might have to raise the debt limit several times a year, but at least it would keep the bureaucrats happy up until the time this Nation went the way of all profligate nations of the past.

Mr. BLATNIK. Mr. Chairman, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Minnesota.

Mr. BLATNIK. I appreciate it and I thank the gentleman. May I say at the outset there is no Member of the House for whom I have greater respect than the gentleman from Ohio. He is not only a gentleman but a man of integrity who always gives his own deep thought to the opinions of others and expresses his with equal force and conviction. And, I appreciate this time.

The point the gentleman made about making capital investments in plants is sound. The point the gentleman made about the burden of fiscal deficits on the economy, we agree with that. But, to clear the record on that point, you see we are in a box. The decision here is not whether we save half a billion or spend it, because if we do not use it for public works, then we have to pay for unemployment compensation and relief. In 1960 we have spent $3 billion for unemployment compensation; in 1961, $4.1 billion; last year $3.1 billion, for a total of $10.5 billion in 3 short years for unemployment compensation. And, to that you must add welfare costs, aid to dependent children, food stamp plan, county and municipal, relief and welfare costs. One county in my district last year spent $12 million for relief alone.

Mr. BOW. How much has that been reduced since this program has been in effect, with this $400 million we have already spent?

Mr. BLATNIK. The program is just starting. We have only had 4 months of it.

Mr. BOW. I cannot yield further. My time is running out, and I should like to make one further point, one further reason I am opposed to this program. Here are the proposed projects. This is what the Committee on Appropriations had before it in the consideration of this budget request.

Mr. ROONEY. I wonder if the distinguished gentleman would show that to the gentleman from Florida who said we did not have any information about this program.

Mr. BOW. I agree with the gentleman from Florida, there is no information. There are names of towns and there are titles of what they are going to do, but there is not one bit of information in here. I know the gentleman from New York so well. I have served with him now for a number of years. He has been my chairman, and I know what he demands of witnesses who come before that committee for justification of projects. There is not a single word of justification in these projects. Do you know what these projects really are, except by some title? There is nothing in there, and may I point out to the gentleman from Minnesota who spoke here the other day in which he expressed some amazement with our committee when he stated as follows:

> To be frank, Mr. Speaker, I am deeply shocked at the action of the House Committee on Appropriations, and I say this advisedly, with full respect for the members of the committee on both sides of the aisle. The Congress made a serious commitment, on the basis of which distressed municipalities and governmental subdivisions throughout America went ahead and planned to raise additional local funds for over 6,000 essential public works projects.

Then the gentleman rightly said that the conference committee said to come back with a supplemental in January. But what did they say? They said, with the understanding that the administration can submit a supplemental estimate in January, at which time they should be in a position to support a definite program, with specific recommendations for projects to be undertaken and justifications therefor. Now, here was an admonition to the administration as to what they should come before the Appropriations Committee on supplementals. Not a document with the list of the cities, simply saying "We are going to build a bridge here, we are going to clear brush there, we are going to build a boat dock there"; not that sort of thing. That is not a justification before the Appropriations Committee. They said "Support a definite program with specific recommendations for projects to be undertaken and justified."

I ask you this: Look at this record. Search the record as you may. Find a justification. There are none there. There are no justifications. If this were any other kind of program and your Committee on Appropriations authorized up to $450 million, you would read us out of this House as incompetent and not doing our job.

Mr. Chairman, I repeat what has been said here before, the Constitution of the United States places upon this Congress a responsibility for appropriations. Under that we certainly have a responsibility to know what we are appropriating and what it is for.

Now, someone could very well ask me the question, "Well, all right, had they come up with justifications spelling out in detail these projects, had they justified these as being good projects, would you be for it, or against it?"

Mr. Chairman, if they were properly justified under an authorization which this House had passed, I would support it. But I want to see them properly justified under justifications such as we have in other areas. To me this idea that all of these projects have now been put in the Congressional Record has but one purpose, and that is not to advise you. We could have found that. But to try to put upon every Member of Congress the opportunity to see whether they are in his district or not, are we beginning to appropriate on the basis of money for our districts, or are we going to appropriate on the basis of what is best for the United States?

Mr. THOMAS. Mr. Chairman, we have six speakers remaining on our side. In looking at the clock I note that we have 18 minutes left. If I may, I yield to our speakers 3 minutes each.

Mr. Chairman, I yield 3 minutes to our able and distinguished friend, the gentleman from West Virginia [Mr. Staggers], who is one of the able and senior members of the Committee on Interstate and Foreign Commerce.

Mr. STAGGERS. Mr. Chairman, I have listened to a great deal of the debate on this issue. It seems to me it has deteriorated from the question of whether it is worthwhile or not into a partisan issue almost entirely. I do not believe that is a good atmosphere in which to try to pass legislation.

Mr. Chairman, I agree wholeheartedly with the gentleman from Ohio who preceded me in saying that unemployment is the No. 1 issue that faces America today. It has wrecked governments down through the years, many of them today around the world. The situation is serious in many localities in this land.

If this $500 million is not restored in this legislation we are not keeping faith with the communities across America who have spent their own money for planning, and who could ill afford it, to complete sewers and bring in wholesome water and complete highways and navigational aids that industry might be introduced into these depressed areas.

You say, "That is not our fault, it is theirs." It is the fault of the Congress of the United States, and it affects every Member in America. To me it depends a great deal on your outlook on life, your financial attitude and your financial outlook on things, as to whether we take a material or a human outlook as we legislate in the Congress. I prefer we take the human element.

I say if we do not restore this we are not keeping faith with the small communities across America who have spent their money planning and getting ready for the $500 million which they had every reason to expect. I believe I expected it to come almost automatically, and I am sure the communities across America expected that.

I have heard Members here say, "There is nothing coming into my district." That should not be the criterion. It should be, Will it help people in this land? If it helps one or two or three districts, that should be the criterion, not whether it comes into my district in West Virginia. If we legislate that way we are not legislating for the land but only as individuals.

Mr. Chairman, it cannot be repeated too often and too loudly that unemployment is the most menacing threat to the Nation today. Many of our other problems, especially the rising crime rate, stem directly from continued unemployment. How can we expect a citizenry which is normally honest and peace-loving to refrain from violence when opportunities for a job elude every attempt they make? Inability to find work that will sustain a family is the condition which has wrecked governments in the past, and is wrecking governments all over the world today. Unemployment is particularly frustrating when it is scattered widely through sparse populations. A large group of unemployed located in a single small area attracts public attention. The necessity for curative measures is only too evident, and something is done about it. But when comparatively small numbers of the jobless are scattered over a whole State, their hopelessness is more or less concealed by what seems to be a general prosperity. Their plight is easily overlooked as relatively unimportant. Such is the condition in my State of West Virginia.

West Virginia has accepted with enthusiasm and commendable energy every project and program offered by the Federal Government to improve industry and employment. Through the redevelopment program a number of new industries have been brought into the State and are beginning operations. Some of these use State natural resources hitherto undeveloped. All of them are small of necessity and employ limited numbers of workers. It has been testified before congressional committees that West Virginians are taking advantage of retraining programs and fitting themselves for totally new kinds of jobs. In short, wherever there was an opening toward a more prosperous life, West Virginians have hurried toward it.

One program was of peculiar promise to West Virginia, that providing for accelerated public works. It is known and admitted that the public works program has been delayed in West Virginia because of inadequate funds. The development of the State awaits the completion of highways, navigation systems, sewers, waterworks, and other public facilities. These will open up the State to industry, and in the process of construction will furnish employment to small groups of workers dispersed here and there through the countryside, thus helping to eliminate a problem which is hard to visualize because its dimensions are inconspicuous.

The $900 million authorized last year for this purpose filled a real need. Less than half of the amount was appropriated last year, with the tacit understanding that the remainder would be added this year. In that hope, West Virginia prepared and submitted a number of projects. The rejection of the expected $500 million appropriation would doom all those projects to further delay. We must restore that appropriation to the pending bill. We argue with heat and passion over a $6 billion appropriation which would go to some single large industry and to the thousands of workers who are employed in that one industry. We need equal heat and passion over an appropriation that will total only a small fraction of that expenditure, but that will take up the slack in employment which is bedeviling obscure and remote corners of every State in the Union.

Mr. THOMAS. Mr. Chairman, I yield 3 minutes to the gentleman from Montana [Mr. Olsen].

Mr. OLSEN of Montana. Mr. Chairman, I join in support of the announced proposal that will be made to restore $450 million to the appropriation bill. I am very much surprised today to hear again the old Hooverisms of 30 years ago, that unemployment is only a local problem, that it is a local problem only, that relief for the hungry, the unemployed, the poor, and the sick, is a local program, that it is not a national problem.

I submit that the proposition was established a long time ago that this is one country, that unemployment, that financial distress, that relief of sickness, that relief for those in poor health, that relief for the hungry is local, State, and national in scope, and that we must treat it together as one country.

I have found that some distressed areas are in such a great state of shock that they find it difficult if not impossible to plan for the future without encouragement, and I mean financial encouragement. They find they just cannot levy any more property taxes to support bond issues to renew public facilities so as to provide employment. They absolutely have to have some financial encouragement from some other place.

Mr. ROONEY. Mr. Chairman, will the gentleman yield?

Mr. OLSEN of Montana. I yield to the gentleman from New York.

Mr. ROONEY. I wonder if the gentleman from Montana would give his opinion with regard to this: If some program such as this accelerated public works program had been requested during the Eisenhower administration, is it possible there would not have been the two serious recessions we had during the second part of the Eisenhower administration?

Mr. OLSEN of Montana. In answer to that question, I think the serious recessions during the Eisenhower administration could have been averted and that the unemployment problem could have been controlled. I submit that now we can, as we have I think, slow down unemployment or the acceleration of unemployment, if we have not stopped it, and with this program we can reverse the trend and make some progress against unemployment.

The CHAIRMAN. The time of the gentleman from Montana has expired.

Mr. THOMAS. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from California [Mr. Cohelan].

Mr. COHELAN. Mr. Chairman, I take this time to express my unrestrained joy and gratitude to the distinguished subcommittee chairman, the gentleman from Texas [Mr. Thomas], and to the members of the committee for their fine work in bringing in the supplemental appropriation for that magnificent project which I had the honor to coauthor, the Point Reyes National Seashore.

As many of you know, a good deal of land speculation has been going on at Point Reyes—speculation which has not only been inflating land values but which has also been destroying a precious natural resource—and these funds will enable us to get underway with this important project.

On the other hand, I feel sure that the chairman will forgive me if I chide him a bit over another item in the bill which concerns me greatly and which is a relatively small amount, it would seem to me, compared to some of the sums of money involved in this bill. I am referring to page 5 in the committee report where the committee states it has approved $500,000 of the $1,500,000 requested to assist local and State groups improve the sadly neglected health of our domestic migratory agricultural workers.

Mr. Chairman, since the time is short I would ask my colleagues most sincerely to read the hearings, pages 362–369 because the chairman and the committee have done a splendid job, and it would seem to me after reading the hearings that there is ample justification for including the full amount requested. Accordingly, I would like to ask the subcommittee chairman if he would be good enough to explain why we do not fully fund the request of $1,500,000 for this program.

Mr. THOMAS. This is a new program and you have 60 days left. On the basis of 60 days, we thought $500,000 would be ample to get the job done.

Mr. COHELAN. I thank the gentleman. I want to point out again that I have been keenly interested in this program and I urge that it be fully funded as soon as is reasonably possible.

I have introduced virtually a bushel of bills on aid for American migrant workers. I have also, as you know, for several years been opposing the extension of Public Law 78 for reasons I will amply develop later this session.

But it seems to me it would be a shame to permit the continued extension of the bracero program if we cannot at least provide the funds necessary to adequately implement the sole bill passed in the last Congress to help domestic migratory workers.

As the record pointed out last year when we considered S. 1130—the medical services for migrant farm families bill—migrant families have little access to health care, yet they have even greater needs than other low income groups. These needs not only cause personal misery and suffering, they also create fiscal problems for local hospitals and health facilities, both public and private. In addition, migrant families are frequently either barred from local medical services by local residence requirements, or these facilities are unavailable at times and places which would enable the people to avail themselves of the services.

The Division of Community Health Services has stated that within 30 days after funds become available under this legislation, migrant family health clinics will be in operation in a number of areas. Needy migrant workers, mothers, and children will be able to receive health services not previously possible. Furthermore, a major focus of this program is to help migrants understand and assume greater responsibility for meeting their health needs, and this certainly is a goal in the common interest of us all.

Considering these factors, and also the additional point that the State of California alone has submitted a request for $490,000 under this act—an amount which falls just short of the total amount reported by the committee—I would like to urge again that the full amount requested be approved as promptly as possible.

Mr. Chairman, the committee's hearings make the very important point that the imperative need for a health program for domestic migrant agricultural workers is made even more clear by the fact that health services are being made available for the thousands of foreign agricultural workers who come to the United States each year. The agreement under which these workers enter our country provides medical care for on-the-job accidents under workmen's compensation and off-the-job health insurance at a reasonable cost to the worker—benefits which are not accorded in the great majority of instances for our own migrant farmworkers.

Mr. Chairman, this point and others discussed in the committee's hearings have great relevance for the proposed extension of Public Law 78 which, as I understand it, we will be considering shortly. I hope that my colleagues will review them carefully and bear them in mind when we discuss that proposal, for Public Law 78 is a measure which I believe to be morally unacceptable to the basic tenets of our society, which is contrary to our free enterprise system, and which is certainly inconsistent with our attempts to combat the very serious problem of unemployment and underemployment with which we are confronted today.

Mr. CLAUSEN. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. CLAUSEN. Mr. Chairman, after hearing the lengthy discussion on the bill—H.R. 5517—to provide supplemental appropriations for the fiscal year ending June 30, I am delighted to observe the bipartisan acceptance of the $5 million item for the land acquisition program of Point Reyes National Seashore located in Marin County.

I should like to commend this honorable body for its attitude toward the early acquisition of the land within the confines of the park area. It is for this reason that I take this opportunity to include in the RECORD my views as to why this action at this time is most appropriate.

First of all, this project has been accepted into the sphere of Federal responsibility by the action of the 87th Congress. In joining this honorable body, I want to simply point out reasons why early acquisition is essential. Since authorization of this project, there has been an expanded speculation program initiated by investors. In view of this, it appears to be in the best interests of the Federal Government to appropriate funds for early acquisition. Due to this speculation, the land values are certain to increase with subsequent higher costs to the Federal Government as time lapses. Furthermore, the present land owners who are affected by the project are concerned about their own personal future plans which obviously are dependent upon the payment for their properties before any positive future plans can be made. It is only fair that their considerations be recognized.

Also, in endorsing this project, I concur with the Members of the 87th Congress who recognized the great value in establishing a national park immediately contiguous to a major population area and promoted conservation in an area where a maximum number of our population can enjoy it.

Early acquisition should then encourage developments in areas adjacent to the parks, thereby expediting recovery of the lost tax base by the local units of government.

Mr. THOMAS. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Tennessee [Mr. FULTON].

Mr. HECHLER. Mr. Chairman, will the gentleman yield?

Mr. FULTON of Tennessee. I yield to the gentleman.

Mr. HECHLER. Mr. Chairman, I strongly support the restoration of $450 million for the accelerated public works program.

Mr. Chairman, the hour is late and I shall not take much time, but I wish to register my hearty approval of the efforts to restore 450 million for the accelerated public works program.

I was very interested in the earlier remarks of the gentleman from Florida [Mr. CRAMER] concerning swimming pools, ski slides and other recreational projects. At the time the original authorization bill was being debated in the last Congress, the gentleman from Florida made a similar speech casting ridicule on applications of this nature. He was assured by the sponsors of the bill that the central purpose of the bill was to enable communities to provide badly needed public facilities which would also provide jobs.

It seems to me that the remarks of the gentleman from Florida both last year and this year serve a very useful purpose. Let me furnish a very practical example. As soon as the appropriation was voted for the bill last year and Congress had adjourned, I addressed letters to the mayors of every community in the 13 counties of my congressional district, as well as to the county officials and civic leaders, apprising them of the nature of the legislation—emphasizing that recreational projects were given a low priority. Then I set up a series of meetings in the county seat of every county of my congressional district, enabling officials from the Community Facilities Administration, Department of Health, Education, and Welfare and other agencies to explain the accelerated public works program and to answer questions by local officials.

At many of these meetings, the local people asked: "What about a swimming pool? What about a playground? What about a hunting or fishing lodge?" These all represent activities we West Virginians love to engage in, being an outdoor people. But invariably I told the people at these meetings about the wonderful speech of the gentleman from Florida, and how he had made us promise not to use the bill for any of this type of project. And as a result, we had maybe two or three applications out the hundreds we received for recreational projects, but invariably the Community Facilities Administration would simply write "Recreational" across the face of them and not even move such applications out of the Regional Office. As a result, all of our approved projects have been for libraries, street paving, storm sewers, sewer lateral lines, sewage disposal systems, hospitals, and health centers.

Therefore, I think the fears of the gentleman from Florida are groundless. All over the Nation, critically needed local projects are moving forward, jobs are being provided, and I hope that the $450 million will be voted to continue this worthwhile program.

Mr. FULTON of Tennessee. Mr. Chairman, it is my privilege to serve Nashville and Davidson County, Tenn., the historic Hermitage district, home of Andrew Jackson. Andrew Jackson, one of the great names in American history, who, if he were sitting in this body today would, I am sure, have no reservations about the funds under discussion and their necessity.

Andrew Jackson would know that the Hermitage district today does not qualify for these moneys, that our economy is strong and diversified; that our unemployment is well below the national average.

If "Old Hickory" sat here today and were a man of narrow vision who could see no farther than the boundaries of his own district, he might well say "My people do not need these funds, so why should I put myself on the political limb by urging this appropriation?"

But General Jackson was a much bigger man. Andy Jackson could and would see far beyond his own district; he would see that in Tennessee alone 62 of our 95 counties are listed as depressed areas and need these funds, in many instances, for their very survival.

Andrew Jackson not only could but did see far beyond the fertile valleys of middle Tennessee and what he saw he understood. It was because of this vision, this compassion and understanding for all the people that Andrew Jackson was elected to the highest office in the United States.

Today I would ask you, in the great tradition not only of Andrew Jackson but of our frontier forefathers who always had a helping hand for their neighbors, to restore this appropriation.

In the great midlands of our Nation with their lush fields of grain there are few depressed areas such as we have in many parts of the South.

In the upper Middle West, the home of the world's finest dairy producers, there are few depressed areas such as the blighted coal regions of Tennessee, Kentucky, and West Virginia.

But we all have our problems. With the farmers, it is overproduction and they need Government aid in the form of price support. The dairy farmer has his problem. In our oil-rich Southwest the producer is aided with tax relief through the depletion allowance.

We all have situations which may be particular to our own areas but we cannot solve them by ourselves.

Only by aiding one another in the tradition of our forefathers have these problems been met and eased.

We spend billions of dollars on foreign aid to help other nations each year, and I do not question the worth and need of these foreign peoples.

But this issue before us today is to help our own people who, I say unequivocally, are as deserving as any nation on God's earth. If we can spend $4 billion to help others why can we not spend $450 million to help our own.

Gentlemen, we have an obligation and a trust here. This program was launched in the last session of Congress. I was not a Member at that time but had I been, I would have voted for it.

I hope the Members of this great and dignified body will not waver in their trust and will not fail to carry out their duty to the people of the United States of America.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. FULTON of Tennessee. I yield.

Mr. FLOOD. Mr. Chairman, I want to associate myself with the remarks of my friend from Tennessee [Mr. FULTON]. My views on this subject are well known. Rather than take the time of the House myself I have left it for others. I commend the gentleman on his statement and thank him for yielding to me.

Mr. MONTOYA. Mr. Chairman, the House Appropriations Committee struck $500 million for the accelerated public works program from the supplemental appropriations bill which we are today considering. I believe these funds must be restored.

In February, there were 4,918,000 unemployed, approximately one-half of whom reside in areas eligible for assistance under the accelerated public works program. By restoring this $500 million, we would be able to give on-site employment to about 60,000 of these individuals for 1 year. In addition, related service industries would absorb a portion of these unemployed; thus, nearly 10 percent of those out of work in economically depressed areas would be gainfully employed.

It is my undertsanding that a backlog of over 6,200 essential and urgent public works projects has accumulated in the Area Redevelopment Administration. Additional applications for grants-in-aid from States and local communities are continuing to be received—New Mexico alone has over 50 applications pending.

The Public Works Acceleration Act authorized an appropriation of $900 million; $400 million of this sum was appropriated and within 5 months had been allocated. The additional $500 million appropriation which we are now considering is of paramount importance and is extremely vital if we are to continue this worthwhile program.

A great portion of the State of New Mexico has been designated a labor surplus area by the Department of Labor. Fourteen counties and nine Indian pueblos have been declared economically depressed areas and eligible for assistance under the Area Redevelopment Administration. In addition, many of our communities are in dire need of Federal assistance to implement public works projects necessary for the continued health of our citizens. Because of limited bonding capacity, capital resources and tax revenues, these communities must have Federal assistance in order to initiate and complete these vitally needed public works projects.

I would like to point out that over 80 percent of the accelerated public works funds expended in the State of New Mexico was not used for community improvements, but was administered by the Bureau of Land Management, the Bureau of Indian Affairs, the Forest Service and other Federal agencies. The $500 million appropriation which was deleted from this supplemental is needed for community improvements such as sewer projects, storm drains, municipal gas systems, municipal water systems, and other such projects.

As I stated before, communities in New Mexico have over 50 applications for Federal assistance pending. Due to lack of funds, no action has been taken on these applications. I do not want to take up too much time by enumerating each in detail. However, I would like to cite a few examples of the conditions which exist in some of our New Mexico communities which have applied for assistance under the accelerated public works program and which have already made arrangements to sell revenue bonds for the necessary matching funds. The following examples are merely representative:

The city of Raton is facing a critical water shortage because of the inability of the present 12-inch transmission line to deliver water to the city. The present water line to the filter plant from Lake Maloya is not adequate to supply the city's needs. At one time, the level of water in the city's reservoir was so low that the city was in great danger. If a fire had broken out, the citizens would have been unable to fight it. Raton's application for assistance has been held up due to lack of funds.

Last November Bernalillo applied for assistance to construct a central drain along the main street of the town because each year serious damage to property results from floods during heavy rains. This application has also been held up because the appropriated funds have already been expended.

In Santa Rosa, N. Mex., the municipal water system has been condemned by the New Mexico State Health Department. The community is allowed to continue the use of this system on a day-to-day basis pending the construction of a new municipal water system. Their application has been pending since last October. Santa Rosa has a very limited bonding capacity, and if a new municipal water system is to be constructed, Federal assistance is absolutely necessary.

The villages of Moriarty and Williard and the town of Estancia applied for Federal assistance for construction of a natural gas system for their communities. These applications were forwarded last November to the community facilities administration for action; however, here again, no action was taken because the funds appropriated had already been allocated.

The city of Espanola applied for assistance several months ago for badly needed water works and sanitary sewer improvements including a water well and storage tank and a new sewer treatment plant. The completion of this project is essential to the continued health of the entire community, but unfortunately, the city's application has not yet been approved.

I think you will agree that our need for Federal assistance under the accelerated public works program is great in New Mexico. This situation is not unique to my State alone—other States throughout the country have communities which have a limited bonding capacity and low tax revenue where Federal assistance is vital if needed community improvements are to be undertaken.

I strongly urge the Members of the House to restore this $500 million appropriation to the supplemental under consideration in order that these vitally needed community improvements can be initiated under the accelerated public works program.

Mr. GRAY. Mr. Chairman, the Public Works Acceleration Act has two main purposes. Let me quote from the act itself:

> Action by the Federal Government is necessary, both to provide immediate useful work for the unemployed in these communities through improvement of their facilities, to become more conducive to industrial development and to provide better places in which to live and work.

Other speakers have mentioned the "immediate useful work" which will be provided by this appropriation if it is restored to the bill. These jobs are important but they are only one side of the coin. The other side is the creation of public facilities which will help these communities attract industry and be better places to live.

I strongly urge the restoration of the $450 million for accelerated public works because I believe that only through industrial development can we permanently solve the problems of these hard-hit areas.

No industry wants to move into a slum, whether rural or urban. If a community has a dilapidated city hall or courthouse, or an inadequate hospital, or streets in poor condition or a water system unable to supply adequate fire protection or a polluted stream, then it may well lose, or have already lost, a prime industrial prospect.

The accelerated public works program is not a leafraking program. It is a public works construction program which has already created $400 million worth of public facilities from its 3,756 individual projects. And it is not a giveaway program. Communities generally have to put up 50 percent of the cost of a project. In the most extreme cases of severe unemployment the community still has to put up 25 percent of the cost of the project.

So these are not frivolous projects. These are the projects necessary to a decent standard of community living—water and sewer and gas systems—waste treatment plants—incinerators—city halls—hospitals—in short, all of the things American industry looks for when evaluating a community prior to making a decision about a new plant.

And you can readily agree that a community saddled with high and persistent unemployment—these communities cannot afford the full cost of these local public works. In other words, Mr. Chairman, if we do not restore these funds the projects will never be built.

For a permanent solution to the problem of the distressed areas I urge the House to restore the appropriation for accelerated public works.

Mr. MATSUNAGA. Mr. Chairman, despite bright prospects brought on by the latest unemployment figures, unemployment remains a most serious stymie to our economic growth. There remain throughout our Nation pockets of sustained and severe unemployment and underemployment. It is at these pockets of economic depression that the Area Redevelopment Act of 1961 and the Accelerated Public Works Act of 1962 are aimed. The Accelerated Public Works Act has been providing the vital, short-term, immediate relief necessary to carry forth the long-range objectives of the Area Redevelopment Act.

The Accelerated Public Works Act authorized $900 million to combat the persistent high level of unemployment in depressed areas while at the same time providing for the construction of essential public works. With the full authorization appropriated we can provide jobs for 10 percent of the unemployed in the 1,228 eligible depressed areas.

The $400 million appropriated already has been allocated to 3,756 projects covering every State and almost all congressional districts. Work on these projects has made a significant dent not only on our local unemployment rate but on the tremendous backlog of public works projects we have.

I strongly support the restoration of the accelerated public works funds necessary to continue action on this program which has already contributed greatly to the reduction of unemployment and to the stimulation of our national economy. Without the additional funds, Hawaii, along with the rest of the Nation, will suffer an irreparable setback.

Mr. DINGELL. Mr. Chairman, less than 6 months ago millions of Americans learned with a shock that the possibility of nuclear warfare is virtually on our own doorstep.

The civil defense office in my hometown was flooded with questions from worried citizens who wanted to know what they should do if those Cuban-based missiles started coming our way. There was also a certain amount of anger that the civil defense program was not more advanced than it was.

Actually, even at that time the program was quite far along. The Defense Department had surveyed hundreds of thousands of buildings throughout the United States and had located fallout shelter space for millions of citizens. Thousands of building owners had signed agreements to make space in their buildings available for public shelter in an emergency. A huge operation, largely volunteer in character, was starting in many communities to post shelter signs on the surveyed buildings and to stock the buildings with emergency provisions purchased by the Federal Government.

We have heard a good deal about Cuba since those days last October when Cuba was about the only thing we were worrying about. We have heard less about civil defense—probably because the crisis has faded, the Communist finger does not appear to be quite so close to the trigger. In fact, the latest news on civil defense came last week when our Appropriations Committee refused an administration supplemental request of $58.9 million to purchase additional supplies for public shelters and $3 million to update the shelter survey completed earlier this year.

I do not question the desire on the part of the committee to economize in Federal expenditures. I am in full sympathy with this. But I wonder how we can so easily forget the great danger we faced only 6 months ago when we wished we were much better prepared on the civilian front than we were. And I would simply point out that wishing for protection during a time of crisis does not bring it into existence. That must be done now—today—and in the months ahead, long before any crisis.

The subcommittee that recommended against the civil defense supplemental request stated in its report that we have enough shelter supplies on hand or on order "adequate for the time being"—those are the exact words in the report: "adequate for the time being."

Most things we do are adequate for the time being—if we are not too concerned with the future. But adequate civil defense requires action now and in the months ahead if we are to be prepared for another Cuba.

In my view, we cannot develop a nationwide shelter program, with all its complex ingredients of purchasing, production, transportation of supplies and the like, if we are going to judge when to move on any of these matters only on the basis of adequacy for the time being.

I urge the Appropriations Committee to review the need for funds to avoid interruption of the shelter supply line and to take such action as is necessary when it is necessary.

Mr. STAEBLER. Mr. Chairman, I rise to urge the restoration of the full amount of $450 million recommended by the subcommittee for the accelerated public works program.

There are more than 1,200 areas in the country which are eligible for projects under this program. Some of these are rural counties with many small towns. Some are metropolitan areas of substantial unemployment.

In the rural areas the problem is generally underemployment and low family income. The median family income for the Nation is $5,660 as determined by the Bureau of the Census in 1960. Yet more than 170 of the areas eligible for accelerated public works have median family incomes of less than $1,800 per year. You can imagine the standard of living that these people must have.

In the urban areas the problem is generally that of unemployment. The national average of unemployment today is about 5.6 percent of the work force. Many of the areas eligible for accelerated public works have unemployment rates in excess of 20 percent. The national unemployment rate during the depths of the depression in 1933 was 24.9 percent. Gentlemen, there are areas in these United States that have unemployment rates in excess of those during the worst part of the great depression.

Why are these areas suffering so? Are their people lazy or irresponsible? Are they content to live on Federal surplus foods?

Mr. Chairman, for most of the areas eligible for accelerated public works, the problem has existed for decades. These are the areas whose economies have been unable to keep pace with the rest of the country. These areas are victims of changing times, changing consumer tastes, new technologies, depleted natural resources, wornout soil or overreliance on a single declining industry.

Mr. Chairman, if you feel as I do that unemployment rates of 26.1 percent in Benewah and Shoshone Counties in Idaho; of 24.4 percent in Livingston County, La.; of 27 percent in Mora County, N. Mex.; of 26.4 percent in Graham County, N.C.; and 27.9 percent in Crawford County, Mich., are too high for America I ask you to vote to restore these funds for accelerated public works to create jobs for these people.

Mr. RYAN of Michigan. Mr. Chairman, the action of the House Appropriations Committee eliminating funds for the continuation of the accelerated public works program is a blow to those areas of the country which have unemployed.

This action is especially harsh on those areas such as the Detroit metropolitan region which have fallen victim to the vast changes in our technology and a changing market structure. For over 6 years, Detroit has been classified as a depressed area. This is a matter of deep concern to all of us. Our mayor has moved to utilize the tools for hastening our recovery through the Area Redevelopment Administration, the Accelerated Public Works Act, and the Manpower Development and Training Act.

As a result of continued unemployment, much needed public works have lagged since our ability to finance them was limited. Under Accelerated Public Works Act, Detroit has been able to move up much needed sewer and water projects. Other important pending projects are in the fields of health, fire protection, and the like. Obviously, with the current $400 million appropriation exhausted, all other communities throughout the Nation who are in the same situation, are depending on the supplemental appropriation of $500 million recommended by President Kennedy to complete the program which Congress authorized last year.

The funds provided to Detroit and surrounding communities under the initial public works appropriation means more than 860,000 man-hours of work for residents of the metropolitan area. Pending projects under accelerated public works will generate more than 2 million man-hours of labor. I urge you to include $500 million to carry on this important program when the matter comes before the House of Representatives for a vote.

Mr. WHITE. Mr. Chairman, reinstatement of $450 million for accelerated public works in the supplemental appropriation bill is imperative to provide employment, as well as permanent improvements, in communities where depressed economic conditions exist.

In 11 of the 19 counties of the First District of Idaho, which I represent, community facilities projects were planned in good faith with careful analysis by responsible officials who relied on accelerated public works consideration and grants. Some of the project estimates were prepared with engineering aid and in some cases bond issues were passed to provide what was intended for matching funds. Many of these projects are pending because funds for grants were exhausted before the applications were processed. Pending projects include waterworks, sewerage, replacing wooden water mains, post office buildings, street improvements, community buildings, recreation site preparation, and highway and trail construction, all of which are projects of permanent benefit.

The unemployed in these areas of Idaho are not out of work of their own volition. Depressed conditions in the lumber and mining industries are responsible for the layoffs in most instances. If these people are not to be assisted with employment that contributes to their welfare and to the improvement of the economy in the communities where they reside, they have no alternative but to apply for unemployment compensation.

Since the inception of the program, a total of 3,275 man-months of work have been allotted in projects for the State of Idaho through the accelerated public works. This employment has been of inestimable benefit to the morale of the people concerned and has resulted in accomplishments of genuine worth; however, additional Federal aid is sorely needed to implement additional projects. The accelerated public works is an exemplary system of aid without waste and it is a plan especially well adapted to small communities. Considering the benefits that have accrued from the program, it is deplorable that there is partisan opposition to continuance of the plan in an attempt to discredit the administration which initiated accelerated public works.

In the sincere belief that many blessings will result from continuance of the accelerated public works program, I urge my colleagues, who are interested in a measure that is both utilitarian and humanitarian, to support the supplemental appropriation bill.

Mr. TOLL. Mr. Chairman, in my March newsletter to my constituents I set forth a list of Philadelphia projects under the accelerated public works program. I received a report from the office of the Administrator for public works acceleration on an up-to-date list of all projects cleared by the Area Redevelopment Administration and announced by the participating agencies as of March 1, 1963. They total $5,153,000 in accelerated public works funds and will provide an estimated 7,569 man-months or 630 man-years of onsite employment. If Congress approves President Kennedy's request for a supplemental appropriation of $500 million, it may be anticipated that additional projects will be approved for Philadelphia.

The funds approved for Philadelphia include a direct Federal project now in progress at Independence National Park; a new maternity building for the Albert Einstein Medical Center, a project under the Public Health Service of the Department of Health, Education, and Welfare; a number of projects under the Community Facilities Administration of the Housing and Home Finance Agency such as the Center Building for the Trade and Convention Center; a project involving the Fox Chase Pumping Station and the Torresdale Pumping Station; stream drainage at the North Philadelphia Airport; an intercepting sewer at Byberry Creek, and other projects which benefit other sections of Philadelphia.

The Accelerated Public Works Act of 1962—Public Law 87-658—authorized $900 million for construction of needed community facilities such as hospitals, streets, water and sewage systems, public buildings, and so forth. Prior to adjournment last October, $400 million was appropriated under the act to begin work on these projects and to provide jobs in areas of substantial unemployment, including Philadelphia. Thus far the program has been highly successful.

I feel that the Members should support President Kennedy's request for the remainder of the funds authorized by the 87th Congress for such a worthwhile program.

Mr. THOMAS. Mr. Chairman, I yield the remainder of my time to our distinguished colleague from California [Mr. VAN DEERLIN].

Mr. VAN DEERLIN. Mr. Chairman, it was cheering news for most of us last week, to learn that the Nation's unemployment ratio had dropped by half a point—that it was once again below 6 percent.

But many areas of serious unemployment persist. One of them is my home county of San Diego. The most recent report showed our jobless ratio still perilously near 8 percent.

San Diego's skilled labor pool has contributed much to America's fame, and to America's security. My community built the little monoplane that carried Charles Lindbergh to Paris. A third of a century later it built the giant Atlas that has sent American astronauts into orbit.

Today, San Diego is in trouble. But the trouble is not of our making. It is the result of a war effort that left our community in the same category as a war casualty. For the trouble stems from the phaseout of conventional aircraft production, and from completion of contracts for the Atlas missile, gigantic efforts undertaken in times of crisis to help insure the safety of a Nation.

Our efforts were successful, as the victory in war and our new superiority in the missile race can attest.

But this success had its price, a price paid by the cities. For with the crises past, the need for defense production all but ended and with it, the need for the workers' services.

They had come in time of the Nation's need, and the city had received them. They came at their country's call to work. Now, their call is to their country to help them keep working.

This is what the accelerated public works program is all about.

Our people's skills—in San Diego and elsewhere—will continue to help build America—I promise you. Meanwhile, I ask that the House help us absorb the bumps of change—help us by your votes tomorrow, to extend this very practical program for speeding public works.

The CHAIRMAN. The time of the gentleman from California has expired, all time for debate has expired. The hour is 5 o'clock. Under the previous order of the House the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. BOLLING, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5517) making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND REMARKS

Mr. THOMAS. Mr. Speaker, I ask unanimous consent that all Members may have 3 legislative days in which to extend their remarks in the RECORD on the bill under consideration.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

COMMITTEE ON WAYS AND MEANS

Mr. MILLS. Mr. Speaker, I ask unanimous consent that the Committee on Ways and Means may have until midnight Friday, April 12, next, to file a report on the bill H.R. 4655.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

COMMITTEE ON LABOR

Mr. ROOSEVELT. Mr. Speaker, I ask unanimous consent that the Subcommittee on Labor may be permitted to sit during general debate tomorrow afternoon.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

HOUR OF MEETING TOMORROW

Mr. ALBERT. Mr. Speaker, I have conferred with the minority leader and there was an understanding—I think the gentleman from Ohio is aware of it—that it would be agreeable to come in at 11 o'clock. Therefore, I ask unanimous consent that when the House adjourns today it adjourn to meet at 11 o'clock tomorrow morning.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

Mr. GROSS. Mr. Speaker, reserving the right to object, why?

Mr. ALBERT. We would like expeditiously to dispose of this matter. We have only finished general debate. I understand there are over 100 items in the bill. We would like to expedite consideration of the bill as much as possible by meeting at 11 o'clock. We can get into consideration of the bill under the 5-minute rule by noon tomorrow. We have other bills, and we want to dispose of them before Friday, if possible, and as soon as possible.

Mr. BOW. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Ohio.

Mr. BOW. I should like to say that the minority leader, the gentleman from Indiana [Mr. HALLECK], did speak to me about an agreement with the distinguished majority leader to come in at 11 o'clock. I agreed with him to come in at that time.

Mr. GROSS. Further reserving the right to object, it seems to me that having finished general debate this bill ought to be handled easily tomorrow afternoon.

Mr. ALBERT. We have four other bills on the program for this week, and we would like to expedite consideration of this and all the other bills.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

PUBLIC WORKS

The SPEAKER laid before the House the following communication, which was read, and referred to the Committee on Appropriations:

COMMITTEE ON PUBLIC WORKS,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 6, 1963.

The Honorable JOHN W. MCCORMACK,
Speaker of the House,
The Capitol, Washington, D.C.

MY DEAR MR. SPEAKER: The Committee on Public Works of the House of Representatives approved on March 5, 1963, a prospectus for the construction of 87 small public building projects under the Public Buildings Act of 1959 which qualify for construction under the Public Works Acceleration Act, which were transmitted to this committee from the General Services Administration. (See attached list.)

Sincerely yours,
CHARLES A. BUCKLEY,
Chairman, Committee on Public Works.

The SPEAKER laid before the House the following communication, which was read and referred to the Committee on Appropriations:

COMMITTEE ON PUBLIC WORKS,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 4, 1963.

The Honorable JOHN W. MCCORMACK,
Speaker of the House, The Capitol,
Washington, D.C.

MY DEAR MR. SPEAKER: Pursuant to the provisions of section 7(a) of the Public Buildings Act of 1959, the Committee on Public Works of the House of Representatives on April 4, 1963, approved prospectuses for the following public building projects, which were transmitted to this committee from the General Services Administration:

BUILDINGS PROPOSED FOR CONSTRUCTION

Location and type

Alabama:
Cullman, post office and Federal office building.
Tuscaloosa, courthouse and Federal office building.
Alaska: Tok Junction, border station.
Arkansas: Hope, post office and Federal office building.
California:
Blythe, post office and Federal office building.
Harbor City, post office and Federal office building.
Jackson, post office and Federal office building.
San Bruno, records center.
Van Nuys, Federal office building.
Colorado:
Glenwood Springs, post office and Federal office building.
Leadville, post office and Federal office building.
Connecticut:
Bridgeport, courthouse and Federal office building.
Windsor Locks, post office and Federal office building.
Florida:
Cross City, post office and Federal office building.
Ocoee, post office and Federal office building.
Umatilla, post office and Federal office building.
Georgia:
Acworth, post office and Federal office building.
Americus, post office and courthouse.
Chatsworth, post office and Federal office building.
Toccoa, post office and Federal office building.
Indiana: Evansville, courthouse and Federal Office Building, post office and Federal Office Building.
Kansas:
Scott City, post office and Federal office building.
Wellington, post office and Federal office building.
Kentucky:
Covington, Internal Revenue Service Center.
Olive Hill, post office and Federal office building.
Paris, post office and Federal office building.
Louisiana:
Crowley, post office and Federal office building.
Opalousas, post office and courthouse.
Thibodaux, post office and Federal office building.
Maryland:
Centreville, post office and Federal office building.
Prince Frederick, post office and Federal office building.
Suitland, central heating plant.
Massachusetts:
Boston, records center.
Boston-Lawrence, Internal Revenue Service Center.
Marlboro, post office and Federal office building.
Milford, post office and Federal office building.
Springfield, post office and Federal office building.
Michigan:
Detroit, Federal office building.
Grand Haven, post office and Federal office building.
Minnesota: Fort Snelling, Federal office building.
Missouri:
Crystal City, post office and Federal office building.
Montgomery City, post office and Federal office building.
New Hampshire: Berlin, post office and Federal office building.
New Jersey:
Avenal, post office and Federal office building.
Burlington, post office and Federal office building.
New Mexico: Raton, post office and Federal office building.
North Carolina:
Cary, post office and Federal office building.
Jacksonville, post office and Federal office building.

Raleigh, post office, courthouse and Federal office building.
Waynesville, post office and Federal office building.
North Dakota:
Fargo, post office and Federal office building.
Pembina, border station (revision).
Ohio:
Canton, post office and Federal office building.
Mantua, post office and Federal office building.
Oklahoma:
Elk City, post office and Federal office building.
Hugo, post office and Federal office building.
Oregon:
Baker, post office and Federal office building.
Enterprise, post office and Federal office building.
Portland, Federal office building.
Prineville, post office and Federal office building.
Pennsylvania:
Dallas, post office and Federal office building.
Irwin, post office and Federal office building.
Tennessee: Oak Ridge, Federal office building.
Texas:
San Antonio, post office and Federal office building.
Sulphur Springs, post office and Federal office building.
Vermont, St. Johnsbury, post office and Federal office building.
Virginia, Chester, post office and Federal office building.
Washington:
Colville, Federal office building.
Vancouver, Federal office building.
District of Columbia:
Federal office building, Department of Labor building.
Courthouse, (Tax Court).
Total: 71 buildings.

ALTERATION PROJECTS (EXTENSION AND/OR CONVERSION)

California, Calexico, border station.
Massachusetts:
Cambridge, post office and Federal office building.
Springfield, courthouse and Federal office building (revision).
Michigan, Detroit, Roosevelt Park Annex.
North Dakota, Fargo, post office and courthouse.
Ohio, Canton, post office and Federal office building (revision).
Vermont, St. Albans, post office, customhouse and Federal office building.
District of Columbia, Federal office building, National Science Foundation building.
Total: eight projects.

ALTERATION PROJECTS (REPAIR AND IMPROVEMENT)

Alaska, Anchorage, post office and courthouse.
California, San Francisco; 49 Fourth Street building.
Colorado, Pueblo, post office and courthouse.
Florida, Fort Myers, post office.
Georgia:
Atlanta, Federal annex.
Gainesville, post office and courthouse.
Illinois, Chicago, customhouse.
Maryland:
Baltimore, customhouse.
Suitland, Federal office building No. 3.
Suitland, Federal office building No. 4.
Massachusetts, Boston, appraisers stores.
Minnesota, St. Paul, post office and customhouse.
Missouri:
St. Joseph, post office and courthouse.
St. Louis, Federal office building, 208 North Broadway.
St. Louis, post office.
New Jersey:
Newark, Federal office building, 20 Washington Place.
Newark, post office and courthouse.
New York:
Albany, post office, courthouse and customhouse.
Brooklyn, Federal office building, 210 Livingston Street.
Brooklyn, post office and courthouse.
New York, appraisers' stores, 201 Varick Street.
New York, Federal office building, 252 Seventh Avenue.
New York, post office, Grand Central Annex.
New York, post office, Morgan Annex.
North Carolina: Asheville, Federal building.
Oregon:
Klamath Falls, post office.
Medford, post office and courthouse.
Portland, courthouse.
Pennsylvania: Philadelphia, 128 North Broad Street.
South Dakota: Sioux Falls, post office and courthouse.
Tennessee: Memphis, post office, courthouse and customhouse.
Utah: Clearfield, Naval Supply Depot.
Virginia:
Arlington, temporary building No. 7.
Arlington, heating, refrigeration, and sewage disposal plants.
Washington: Seattle, courthouse.
Wisconsin: Milwaukee, 342 North Water Street.
Washington, D.C.:
Central heating and refrigeration plant.
Treasury Annex.
101 Indiana Avenue NW.
1626 K Street NW.
24th and M Street, building.
Total: 41 projects.

Sincerely yours,
CHARLES A. BUCKLEY,
Chairman, Committee on Public Works.

ITALY

Mrs. KELLY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from New York?

There was no objection.

Mrs. KELLY. Mr. Speaker, my admiration for the people of Italy compels me to speak today about some of the great decisions facing their nation. These decisions affect not only the future of Italy but also the future of the entire free world. They are, therefore, of deep concern to all of us—to all who are united by the common endeavor of enlarging the horizons of freedom, of striving for lasting peace and security in the world.

My admiration for all that Italy represents does not spring solely from my work as chairman of the Subcommittee on Europe of the Committee on Foreign Affairs. Its origin goes back to my college days when, as a history major, I devoted considerable time and effort to the study of our Western civilization. In the process, I became very conscious of, and deeply impressed by, Italy's contribution to the heritage of the Western World.

I hesitate to dwell on this subject—yet I believe that it is worthwhile for all of us to recall that during a good portion of the past 2,000 years, Italy was the temporal, the spiritual, the intellectual, and the artistic center of our Western civilization.

Even a partial list of Italy's contributions to our heritage will astound any student of history.

In literature, Italy gave us Dante, Petrarch, Tommaso, Da Todi, Tasso, Manzoni, and many other poets and writers;

In philosophy, Thomas Aquinas, Ambrose of Milan, Anselm of Canterbury, Anthony of Padua, Boethius, Bonaventure of Albano, Cajetan, Bellarmine, Gregory the Great, and Augustine of Canterbury;

In science, Galileo, Michaelangelo, Da Vinci, Achillini, Cassini, Cavalieri, Colombo, De Rossi, Marconi, Grimaldi, Secchi, Torricelli, Volta, Marconi, and Fermi;

In architecture, Bernini, Michaelangelo, Campello, Palladio, Bramante, Brunelleschi, Pisano, and Vignola;

In sculpture, Verrocchio, Della Robbia, Donatello, Ghiberti, Bernini, Canova, Michaelangelo, Brunelleschi, Pisano, and Cellini;

In painting, Fra Angelico, Fra Bartolommeo, Bordone, Botticelli, Correggio, Giotto, Perugino, Del Sarto, Titian, Vasari, Veronese, Verrocchio, Da Vinci, and Tintoretto;

In music, Palestrina, Cherubini, D'Arezzo, Donizetti, Verdi, Puccini, Leoncavallo, Rossini, Scarlatti, and Martini;

There are, of course, many others—some equally as great as those I have named—but it would take too long to mention them all.

While Italian artists, writers, composers, scientists, and explorers occupy a place second to none in the history of our culture, there is one other field which deserves special mention. I refer, of course, to the field of law. The Jus Gentium, and the Justinian Code, form a vital part of our heritage and continue to influence our legal concepts and forms to this very day.

The Jus Gentium was a uniform code of laws which applied to the subject peoples of the then-known world, brought together under the Pax Romana. Unique in concept, and propagated for several hundred years by the Latins of Italy, Jus Gentium became integrated with our Western social, political, and legal development, persisting with the centuries even to today. And the Justinian Code, embodying the authority of Roman law and the opinions of the ancient Roman jurisconsuls, provides the broad legal bases of our Judaeo-Christian civilization in the West. Every lawyer, every legislator, is undoubtedly aware of these facts.

Having contributed so much to the enrichment of the Western civilization, Italy has a large stake in the preservation of that heritage—a heritage which is today being buffeted on all sides by the tides of nationalistic, totalitarian communism.

In the years which have elapsed since the end of World War II, Italy, through its participation in NATO and in other undertakings of the Atlantic Community, has worked actively to preserve, and to add to that heritage. More recently, however, Italy appears to be approaching a crossroads at which she will decide whether to continue in its present direction, or to turn off from the main road of the collective defense of the free world.

The reason for saying this is self-evident. Only last year, and for the first time since Italy became a member of NATO, the government of that country made a decision, and initiated a course of action, which may ultimately alter Italy's participation in the common defense system of the Atlantic community. Through the so-called "opening to the left," the majority coalition in Italy undertook to bring the Italian Socialist Party into a meaningful participation in the government of that country.

I have been very apprehensive about the outcome of this experiment, not because I want to interfere in the domestic political affairs of Italy, but because I am concerned about their effect on the security of the free world. My apprehension springs from the neutralist leanings of the Italian Socialist Party, and the kinship which exists between some elements of that party and the Italian Communists. If these elements should acquire a position of greater authority in the Italian Government, there is no doubt in my mind that they would bend their efforts to the task of vitiating Italy's participation in NATO, and Italy's commitments to other vital free world undertakings.

What would happen, for instance, if the communications systems in Italy were to fall under the authority of a Government minister whose sympathies are with the leftwing Socialists—or even with the international Communist movement?

What would happen if internal transportation, or labor affairs, or the direction of the nationalized sector of the Italian economy—or Italy's external economic relations were to fall under the authority of a government official with such leanings?

Even more to the point, what could happen if the control over Italy's armed forces, and over Italy's participation in the collective defense arrangements of the free world, were to fall into such hands?

I am certain that I need not point out that such developments could seriously undermine the collective security of Western Europe and of the entire free world.

It is for this reason that I would rather see the Christian Democratic Party of Italy—a party that has an outstanding record of working for Italy's progress and for the security of the free world—I would feel much better if this party were to have a large working majority in the Italian Parliament.

Will this happen, or will the Socialists gain more authority in Italy's governmental affairs? The answer to this question will become apparent shortly.

In a few short weeks—to be exact, on April 28—the people of Italy will make their decision. In a free, democratic election, the first such election since "the opening to the left," the people of Italy will determine the complexion of the next government of their country, and thereby decide upon the course which Italy will pursue in the future.

This is why I say that Italy today stands at the crossroads of history. In the interest of preserving the western civilization to which she has contributed so magnificently, and in the interest of the cause of freedom in the world, I hope and pray that the great Italian nation will make the right decision, and take the right road. I know that freedom-loving people everywhere share these sentiments.

SGT. NOBLE FRANK SMITH

Mr. **ARENDS**. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The **SPEAKER**. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. **ARENDS**. Mr. Speaker, this is a believe it or not. They say that the truth is stranger than fiction. What I am about to tell you is the truth. It is not fiction. It is not just indescribably strange. It is unbelievably preposterous.

Our State Department has been endeavoring to collect from Marine Sgt. Noble Frank Smith the sum of $1,421.92 as repayment for subsistence and medical assistance given his wife and newborn child, through the Swiss Government, when the Japanese took Shanghai, China.

When war broke out Sergeant Smith was ordered to the Philippines, having to leave his family behind in Shanghai. He is one of the heroes of Bataan. While he was risking his life, and enduring untold hardship in the Bataan Death March and as a prisoner of war of the Japanese, his wife and child were also enduring great hardship in Shanghai as internees of the Japanese.

Now—18 years later—this great big, generous Government of ours, through our State Department, bills the Smiths—now a family of five, farming in Onarga, Ill.—for financial help given the mother and first-born child in China. It is preposterous. And it should be added that the amount sought to be collected is at the exorbitant wartime rate of exchange.

What makes this even more preposterous is how in contrast this great, big generous Government of ours, at the insistence of our benevolent State Department, awarded $400 million to the people of the Philippines to pay property damage claims arising from the War. Many of you will recall how our State Department officials wept, and wept some more, for the Philippines in prevailing upon the Congress last year to appropriate $73 million to settle questionable property damage claims.

It was not enough that we helped the Philippine people get their country back from the Japanese. We paid them for the damage our Armed Forces did to their property in the process. This was for rehabilitation purposes. And we even paid them $73 million more long after rehabilitation.

It was a debt of honor, argued the State Department, to a loyal and trusted friend. Our sense of justice and fair play demanded that it be paid.

But there has been forthcoming no such frantic appeals for Marine Sergeant Smith.

And so, we have this paradox. Our State Department demands that we pay the Philippine people for war property damage. Our State Department demands Marine Sergeant Smith pay for the meager assistance given his family while he was fighting in the Philippines.

On March 22 I wrote the Secretary of State about this $1,421 claim against Marine Sergeant Smith. He responded under date of April 5 to the effect that for the present the Department is taking no further action on this case, pending possible action by the Congress. The State Department makes no recommendation.

I have introduced a bill to relieve the Smiths of the claimed indebtedness. I am urging that this measure be promptly enacted. This is the least we can do. A claim of this character should never have been asserted, in the first place, if there had been a proper screening and a disposition on the part of the State Department that such liabilities be set aside.

ANNIVERSARY OF THE SURRENDER OF BATAAN PENINSULA

Mr. **RHODES** of Arizona. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The **SPEAKER**. Is there objection to the request of the gentleman from Arizona?

There was no objection.

Mr. **RHODES** of Arizona. Mr. Speaker, a young native from the Philippine Islands, Mr. Sotero Cabahug, Jr., has worked as an intern in the office of the Republican policy committee since the beginning of this session of Congress. Mr. Cabahug is a very capable student of political science. He is also the deputy secretary general of the Nationalista Party of the Philippine Islands. We have all appreciated his keen intellect and the fine work he has done.

Today is the 21st anniversary of the fall of Bataan. He remembers that day. Mr. Cabahug has prepared his own remarks relating to this day, and I include them at this point in my remarks:

> On April 9, 1942, the United States lost a battle.
>
> On this day, the heroic American and Philippine defenders of Bataan Peninsula in the Philippines laid down their arms to an enemy superior in numbers and in arms.
>
> They had held the enemy at bay for more than 3 months. They had stemmed the tide which had engulfed all the rest of southeast Asia. While everywhere else in the Far East it seemed that nothing could stand in the way of the enemy's might, these soldiers stood their ground as all the world watched in awe and admiration.

World War II belongs to the pages of history now. The wounds it inflicted have already healed. Even its savagery has been forgotten. This is as it should be, if humanity is to survive its own follies.

Yet, in this complicated day and age of cold war diplomacy, nuclear stalemate and disarmament talks, foreign aid and neutralism, it might be well for us to remember not the bitterness generated by that conflict, but the gallantry and courage of the men who fought in it, of the Americans and Filipinos on Bataan, men of different races and creeds who fought and died side by side in defense of a common ideal—human dignity.

There are many words and phrases which today may sound trite and platitudinous to many people. But it may well be on our willingness to give these words and phrases meaning and significance that democracy's survival depends.

Today let us relive the epic stand on Bataan by recalling the last message emanating from the "Voice of Freedom," a makeshift radio station operating on the island bastion of Corregidor, just before it went off the air and was forever silenced by defeat.

It is an inspiring message, and with its reading I pay tribute to the gallant defenders of Bataan and Corregidor:

"Bataan has fallen. The Philippine-American troops on this war-ravaged and bloodstained peninsula have laid down their arms. With heads bloody but unbowed, they have yielded to the superior force and numbers of the enemy. The world will long remember the epic struggle that Philippine and American soldiers put up in these jungle fastnesses and along the rugged coast of Bataan. They have stood uncomplaining under the constant and gruelling fire of the enemy for more than 3 months. Besieged on land and blockaded by sea, cut off from all sources of help in the Philippines and in America, these intrepid fighters have done all that human endurance could bear. For what sustained them through all these months of incessant battle was a force that was more than merely physical. It was a force of an unconquerable faith—something in the heart and soul that physical hardship and adversity could not destroy. It was the thought of the native land and all that it holds most dear, the thought of freedom and dignity, the pride in these most priceless of all human prerogatives. The adversary, in the pride of his power and triumph, will credit our troops with nothing less than the courage and fortitude that his own troops have shown. All the world will testify to the almost superhuman endurance with which they stood up until the last in the face of overwhelming odds.

"But the decision had to come. Men fighting under the banner of an unshakable faith are made of something more than flesh, but they are not made of impervious steel. The flesh must yield at last, and endurance melts away. And the end of the battle must come.

"Bataan has fallen, but the spirit that made it stand—a beacon to all the liberty-loving people of the world—cannot fail."

MASSIVE U.N. AID TO COMMUNISTS CONTINUES—AMERICAN TAXPAYERS PAY LION'S SHARE OF BILL

Mr. HALL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter and tables.

The **SPEAKER.** Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. HALL. Mr. Speaker, I have been investigating the foreign aid operations of the United Nations for 2 months, including the U.N. Special Fund grants to Red nations for large projects. What I found was disheartening, as I have told this House.

Now I have turned my attention to the other technical assistance programs operated by the U.N. and subsidized 40 percent by American dollars. These programs, the expanded technical assistance program and the regular technical assistance program, deal with training projects of smaller individual scope than Special Fund projects.

I regret to inform the House that the U.N. policy of providing American dollars to aid Communist nations operates every bit as effectively in the assistance programs as it does in the Special Fund. It is my unpleasant duty to document that shameful record here today.

My colleagues, under its programs of technical assistance, the United Nations has scheduled 87 projects in 6 Communist bloc nations in the next 2 years. The projects will cost the U.N. $3,110,423.

American taxpayers are to pay 40 percent of the cost of these Red aid projects to the tune of $1,244,169.

From past experience we would have expected the U.N. to extend this aid to Cuba, Poland, and Yugoslavia, but the shocking thing about the training projects is that they also will involve Red—Bury the West—Albania, Red Bulgaria, and the U.S.S.R. itself.

The aid programed for the Red bloc is $838,776 more than the bloc contributed to the expanded technical assistance program in 1962. Cuba gave nothing last year, Albania $2,000, Bulgaria $17,647, Poland $100,000, Yugoslavia $152,000, and the U.S.S.R. $2,000,000. In 1962, the United States gave $18,498,207.

Among the more ambitious of the projects are ones that would provide training in Albania for technical education, in Poland for general atomic development and for telecommunications, in Yugoslavia for nuclear reactor design and construction and for industrial development, in Cuba for educational services, in Bulgaria for small-scale industry, and in the U.S.S.R. for such things as aerial surveys and oceanography.

The projects, listed in U.N. documents marked for limited distribution, include none involving the United States.

Once again, the U.N. has acted without asking the long-suffering American taxpayers. It has placed Americans in the impossible position of paying to help make communism work. Worse yet, the U.S. State Department blandly informs me that the United States has not even bothered to object to these projects—even the ones in Cuba.

In view of the fuss the administration raised about the first revealed Special Fund farm aid to Cuba and the hogwash logic about "no U.S. dollars being used," it is amazing to me that there has been no further objection to, or rationalization of, these other U.N. projects.

Can it be that the Department of State does not know about them? Or perhaps they hoped the American taxpayers never would find out about them. Maybe the Congress will find soon a solution better even than objection.

PROJECT BREAKDOWN

Mr. Speaker, here is a breakdown of the 87 projects:

Yugoslavia: 27 projects under the expanded technical assistance program and 2 projects under the regular technical assistance program with a total cost of $1,001,143.

Albania: 2 expanded technical assistance program projects costing $70,000.

Cuba: 15 projects from expanded technical assistance program and other U.N. associated agencies at a total cost of $1,179,080. Eleven of these projects I revealed here on March 6. Four are revealed for the first time today.

Poland: 28 projects under the expanded and regular programs at a cost of $277,200.

Interregional: 12 projects each including a number of countries and costing a total of $583,000—8 involving the U.S.S.R.—$448,000; 2 involving Yugoslavia; and 1 each involving Poland—$60,000; and Bulgaria—$30,000.

PROJECT DESCRIPTIONS

Mr. Speaker, I will provide in the Record details of these projects. Typical of the subjects for training are these:

Yugoslavia: Nuclear reactor construction, metallurgy, shipbuilding, chemicals, tourism, farm production, livestock production, aircraft fatigue, aerodynamics, ultrasonics measuring, restoration of monuments, airport management, sterilization by radiation, X-ray diffractometer, electronic switchboards, prophylactic problems.

Albania: Technical education, cancer control, meteorology.

Cuba: Scientific and technological education service, pisciculture, soil survey, dietetics training. These 4 projects are in addition to 11 Cuban projects revealed on March 6.

Poland: General atomic energy development, diesel engines, aluminum industries, roller bearing production, pistons, high-speed gears, hydraulic pumps, microwave techniques, language training, coaxial cables, space telecommunication ground stations.

Bulgaria: Small scale industry.

U.S.S.R.: Oceanography, aerial surveys, pest control, grain storage, nutrition, reforestation.

STATISTICS

Mr. Speaker, the technical assistance programs normally involve grants to fellows who study in the fields designated.

It is my judgment that the study fields designated by the all-knowing United Nations are not the sort of things Americans should be paying to teach enemies of the free world. Nor should Communist countries be paid to serve as hosts for such study.

It appears that the President should recall his Clay Committee on Foreign Aid and have it conduct an extensive investigation of the aid programs of the United Nations which Americans subsidize so heavily.

The total 1963-64 program of the U.N. expanded program of technical assistance is $83,419,000. The 40-percent U.S. share of that comes to $33,367,600.

Since the U.N. first got the idea of giving away aid, in 1951, the United States has contributed $205 million to expanded technical assistance programs alone at rates varying from 40 to 60.65 percent of the total expanded technical assistance program budget.

Total expanded technical assistance program grants from 1951 through those planned for 1964 come to $431,488,000—an impressive amount of giving for an organization kept from bankruptcy only by handouts from American taxpayers, whose own Nation is deeply in debt.

Mr. Speaker, I have discussed this U.N. problem at length in my office with Assistant Secretary of State Frederick G. Dutton and with Mr. Richard N. Gardner, Deputy Assistant Secretary of State for International Organization Affairs. Mr. Dutton and Mr. Gardner have provided details about some selected U.N. technical assistance projects in Communist-bloc nations. I will insert this listing with my remarks in the RECORD.

And, Mr. Speaker, I wish to have printed at this point in the RECORD a number of tables concerning U.N. aid. Some of the tables were prepared by my staff, others are from United Nations budget documents.

PROJECT DESCRIPTIONS FROM U.N. DOCUMENTS—PROVIDED BY THE U.S. DEPARTMENT OF STATE

YUGOSLAVIA

UNTA 294-57 industrial development and productivity:

Under the headings of "Ferrous and Nonferrous Metallurgy," "Metal Industry," "Motor Industry," "Machine Building," "Ship Building," "Electrical Industry," "Chemical Industry," "Wood and Pulp Industry," "Rubber Industry," "Food Industry and Productivity," a total of 99 fellowships have been requested.

Four short-term experts are requested in 1963: Motor vehicle headlamps (2 months); toolshop work organization (2 months); organic benzene intermediates (3 months); and production of paints (3 months). In 1964 an expert in machine production is requested for 5 months.

Demonstration equipment for the Institute for Light Metals Research, the Metal Industry, the Motor Vehicle Industry, and the Wood Institute Industry has been requested for 1963. In 1964 equipment for the Metal Industry and for the Institute of Chemistry at the University of Zagreb has been requested.

ILO 124-53 manpower organization including vocational training:

Short missions are provided for an expert in training methods and expert-instructors for the Zagreb Training Center. In addition, short missions are foreseen for experts to advise the Government in the training of skilled personnel in specific industrial processes such as production methods for cut strips cores for transformers in electrical industry, repair of cooling installations, serial servicing of motor vehicles; one 4-month fellowship will be awarded to study abroad methods for assessing training need for skilled workers; demonstration equipment will be provided to help in the preparation of teaching aids for vocational training and in-plant training.

Some 127 worker-traineeships for a total of more than 500 man-months will be awarded to enable foremen and skilled workers to improve their training abroad in various specialties of activities such as metallurgy, generation of electric energy, metal industries, electrical industry, chemical industry, paper and pulp industry.

UNESCO 679-63/64 Universities—Technical Sciences:

For some years EPTA assistance has been provided for the reform of the entire national educational system. At this stage the concentration is on the reform and modernization in university research and teaching and 23 fellowships in technical fields such as organic chemistry, biology, physics, and mathematics are required.

ICAO 16-61 air transport: The program provides 4 fellowships for advanced training in the organization and management of airports, flight simulators, and servo systems and their applications.

ITU 359-57 telecommunications: Six fellowships will be awarded for advanced training in various telecommunication problems.

WMO 402-57 meteorology: Four fellowships are requested for training in specialized fields of meteorology.

IAEA 634-70 reactors: The Government has requested 8 fellowships in reactor physics and 8 fellowships in reactor design and construction.

POLAND

UNTA 152-61 natural resources development and power: The post for an adviser on research in geophysics was postponed from 1962, since the preferred [sic] candidate was not available earlier. Under this project the Government has also requested 11 fellowships in various fields concerned with the use of national resources or power production.

UNTA 189-60 industrial development and productivity: In order to meet the requirements of the Polish Industry for trained specialists and engineers, the Government has requested 64 relatively short fellowships in various industrial fields.

UNESCO 48-63/64 (418-61/62) language training center: The language teaching center of the University of Warsaw wishes to complete the project initiated by the expert attached during 1961-62. Two language laboratories recommended by the UNESCO expert are to be supplied with equipment and two will study laboratories abroad.

ITU 43-62 telecommunication: Three fellowships in 1963 and two in 1964 will be awarded for the advanced training in telephony, cables, and radiocommunications.

WMO meteorology: In order to enable the Meteorological Service to make hydrometeorological forecasts the Government has requested the services of an expert in the field of weather radar to advise on the installation of a Decca type weather radar. Demonstration equipment will also be provided. Additionally, provision is made for fellowships both in 1963 and 1964 in the fields of radar maintenance and the application of radar to meteorology.

IAEA 634-120 general atomic energy development: The Government has requested four fellowships in various fields related to atomic energy.

ALBANIA

UNESCO 156-61/62 technical education: The technical faculty of the National University in Tirana has been establishing courses and laboratories in the technical aspects of radio broadcasting and radio communications. Some equipment was provided under expanded program technical assistance in 1961-62 and the government has requested some additional laboratory equipment in 1963-64, together with two fellowships for studies of electronic computers.

WHO 76-61 cancer control: Continuing a project which formed part of the 1961-62 program, the government has requested equipment for treatment of cancer with radioactive materials in a center being established in Tirana, together with a short mission by a consultant to help in putting the equipment into operation.

WMO meteorology: Albania does not as yet have a meteorological station at a high mountain location and the Hydrometeorological Service has requested equipment for one such station, together with fellowships for training in the installation and operation of this equipment.

TABLE 1.—*U.N. projects in Cuba (long term), expanded technical assistance program—1963-64 program*

INTERNATIONAL REGIONAL

ILO 165–53 cooperation and small-scale industry: Two seminars, one in 1963 and one in 1964, will permit further training on cooperative education and related subjects to be given to principal and senior teaching staff of cooperative colleges and training institutions and to top-ranking officials of cooperative departments responsible for educational planning and organization. These seminars will be organized jointly by the Danish Government, FAO, and ILO.

FAO 14–64 training in basic veterinary bacteriology: The purpose of this training center is to train participants in all matters concerning bacteriology as it relates to animal disease diagnosis and control.

FAO 15–64 Karakul sheep production (U.S.S.R.): The course consists of lectures, practical studies of Karakul sheep, raising under desertic conditions, management, feeding, genetics, and slaughter methods.

Participating countries are expected to include: India, Pakistan, Iran, Yugoslavia, Afghanistan, Israel, Sudan, Iraq, Turkey, and possibly one or two others.

An extended series of exercises in the selection of fur for the various qualities and colors used in the Soviet market and in the export trade are given to the students, and educational and practical trips are made to the warehouses, slaughter centers, and tanneries of Uzbekistan in order to demonstrate Soviet techniques. A thorough study of pasture improvement methods and fodder conservation practices recommended by Soviet fur-raising specialists is also given to the participants.

The information gained by the participants is useful to governments interested in raising Persian lamb fur in the desertic areas of their countries. Many of the techniques are also useful in countries which raise fat-tail sheep under dry conditions for meat, milk, and wool.

FAO 62–63 training course and study tour on fisheries biology and oceanography (U.S.S.R.): The general purpose of this training center and study tour is to acquaint senior fisheries scientists from various countries, mainly of southeast Asia and Africa, with the organization and conduct of marine and freshwater research and of the application of its results for development and management of fisheries. Visits will probably be made to: Leningrad, Sebastopol, Astrakhan and possibly Murmansk, all of which are centers of marine or inland fisheries laboratories of various kinds. The language of training will be English.

FAO 66–63 seminar on aerial forest surveys (U.S.S.R.): A training center on aerial forest inventory was organized by FAO in 1960 in Malaya and oversubscribed. It was therefore suggested that another regional center be organized to which, in particular, the chiefs of the forest inventory services of the countries mentioned below should be invited to exchange views on recent experience and discuss new technical developments so that they would be enabled to organize short training courses in their countries.

Participating countries are expected to include: Indonesia, Korea, Japan, Malaya, Thailand, Burma, Pakistan, Ceylon, India, Iraq, Iran, Syrian Arab Republic, and Turkey.

In most of the above-mentioned countries, forests cover about two-thirds to three-quarters of the total land area and forest products take a predominant place in exports; however, large areas of the forests have remained unsurveyed so far, because costs of surveys by traditional methods prevented their inventory, and this has resulted in insufficient or irrational forest utilization. Modern inventory techniques have overcome these difficulties and brought forest surveys within economic reach for all these countries. Yet, knowledge of modern use of aerial photography, mathematical-statistical sampling methods and data processing is not yet adequate and rapid progress has been made in all these fields in the most recent years.

FAO sunn pest control study tour (U.S.S.R.): Various problems and techniques for bringing the sunn pest under control are to be studied through lectures and field visits.

FAO grain storage study tour (U.S.S.R.): Losses of grain in storage are of considerable economic significance in the developing countries. Participants would be given an opportunity to study various techniques for grain storage used under different conditions.

FAO mechanization of sylviculture and reafforestation study tour (U.S.S.R.): In many parts of the world, especially in semiarid areas, programs for reafforestation are in various stages of study and implementation. Through lectures and field visits, participants will have a chance to study and evaluate a number of factors and techniques in relation to possibilities for mechanization of this work.

FAO irrigation and drainage study tour (U.S.S.R.): Participants from countries in various regions where irrigated agriculture is of considerable scope will study the solutions of a variety of irrigation and drainage problems in the U.S.S.R.

FAO study tour on food consumption and nutrition data (U.S.S.R.): Through lectures and field visits, specialists from a number of countries will study some problems and techniques in the analysis of nutrition levels and deficiencies.

ATTENTION TAX TRIMMERS AND BUDGET CUTTERS

Mr. RYAN of New York. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. RYAN of New York. Mr. Speaker, the Accelerated Public Works Act of 1962 authorized $900 million for construction of community facilities, and before Congress adjourned last fall we appropriated $400 million to begin the projects. Today and tomorrow we will be debating the supplemental appropriation bill from which has been eliminated the President's request for the remaining $500 million authorized under the act. I urge my colleagues to consider the economic consequences of this cut when an amendment is offered to include the unappropriated funds. The purpose of the act is to combat unemployment is economically distressed areas and to stimulate the sluggish economy.

In considering the condition of our economy and the impetus which programs of this type will provide, I call the attention of my colleagues to a brilliant analysis of the implications of our fiscal and economic policies by Prof. Robert Lekachman, chairman of the Barnard College Department of Economics, in the April 1963 issue of Commentary, entitled "The Tax Trimmers."

Mr. Speaker, the state of our economy and the continued high level of unemployment call for immediate and imaginative action to help lift our economy out of its doldrums. As Professor Lekachman points out:

> Poverty has become a permanent condition for a very large slice of the urban population.

To attack this problem, he stresses, requires substantial increases to finance schools, hospitals, homes, and social programs. By providing the full appropriation for the Accelerated Public Works Act, we will be helping to reduce unemployment and stimulate the economy.

Professor Lekachman's article follows:

THE TAX TRIMMERS

(By Robert Lekachman)

Like last year's Trade Expansion Act, President Kennedy's only consequential legislative proposal for 1962, the new tax bill, is a long, intricately detailed affair which—as is usually the case with tax measures—promises to be a lawyer's delight and a layman's labyrinth. The President has followed the precedent of the Trade Expansion Act in another respect, too. Just as last summer he mobilized well in advance of the congressional season an extraordinary range of sentiment in support of a more liberal trade policy, so this year he has won the backing of a similarly broad coalition for the notion that tax reductions will serve the cause of economic growth, high employment, and unmarred prosperity. Here, however, the parallel ends, for while last year's allies remained united through the passage of the Trade Expansion Act, this year's coalition—which comprises the chamber of commerce, the Committee for Economic Development, the AFL–CIO, and a large body of independent economic and editorial opinion (including that of Walter Lippmann)—is now quarreling not only about the distribution of the tax benefits, but also about the advisability to tying tax reforms to tax reductions.

The President's total program of tax cuts and tax reforms involves, at least at first glance, some impressive numbers. At the completion of all the stages of the 3-year sequence of reductions and reforms, gross reductions would total $13.6 billion and the reforms would recover some $3.2 to $3.3 billion for the Treasury, making the net reduction in the tax burden more than $10 billion, much the largest single diminution of tax liabilities in recent history. In 1965 corporations would surrender 47 percent of their profits instead of the 52 percent which they now pay, and levies on the first $25,000 of profit would drop from 30 to 22 percent—a benefit to small companies. Individual income, now taxed at rates which rise from 20 to 91 percent, would enjoy a more humane progression from 14 to 65 percent.

If all the reforms should be enacted, the bulk of the program's benefits would go to earners of small income. However, the dramatic slash of top incremental rates would in all probability also do something to still the clamor over the adverse effects on incentives of present "confiscatory" rates. Moreover, since in real life very few people actually pay taxes at such rates, the Treasury would lose comparatively little revenue from the substitution of 65 percent for 91 percent as the highest marginal rate. Thus, though the President's program marks no step forward toward greater equality of income distribution, it at least does offer something for all income groups.

If the President had stopped here, with the tax cuts alone, he might have had a proposal of almost universal appeal. But, possibly to his present sorrow, pressure within his own administration and in Congress led him to put forward the complicated and controversial reforms as well. For if the tax cuts are to be taken as the major triumph of the Heller wing of the administration, the reform aspect of the program can equally be taken as the major achievement of the Surrey-Dillon-Caplin school of thought at the Treasury, backed by WILBUR MILLS, chairman of the House Ways and Means Committee.

Whatever the merits of the proposed reforms and whatever the political considerations which argued for their submission to Congress at this time, there is no doubt at all that they have stirred up not one but a cluster of hornets' nests—and the insects sting just as hard when they are in the wrong as when they are in the right. The reform which now seems most likely to fail is the proposal that taxpayers only be permitted to deduct for interest payments, medical expenses, and charitable contributions that exceed 5 percent of their income. This provision afflicts mose severely middle- and upper-income groups, for it diminishes the tax savings of homeowners burdened by heavy property taxes and mortgage payments.

It seems odd politics to affront homebuilders and home buyers and to be gentle at the same time with oil-wealthy Texans and Oklahomans who benefit so greatly from the mineral depletion allowances. But if the President has feared to make an all-out assault upon the oil interests, he has not hesitated to fight other battles. Thus the Treasury proposes to apply ordinary income-tax rates (instead of the 25-percent capital gains tax) to the profits realized from the exercise of stock option rights by executives. Moreover, the dividend credit and exclusion—an Eisenhower benefit to the stockholder, under which the first $50 of dividend income may be excluded from the taxable total—is to be terminated. Other changes are designed to curb some of the grosser tax benefits of oil well ownership, limit the favorable depreciation treatment of real estate, tighten the rules which govern personal holding companies, and revise the treatment of capital gains. In general these alterations would increase Treasury receipts, and the 5-percent deduction floor would provide the bulk of the added revenues. Certain other reforms, however, would cost the Treasury money. These include broadened income-averaging arrangements, more generous child-care allowances for working mothers, and slightly more favorable terms for the elderly.

For the most part these reforms are desirable. In many instances they are the culmination of years of agitation by tax attorneys and teachers of tax law. There is little doubt that their enactment would increase the equity of the tax system and move us closer to the democratic goal of equal treatment for individuals in identical situations. And it should be plain that the equity and efficiency gains of the reforms are considerably more important than the $3.2 or $3.3 billion of additional revenue which they would raise.

Apart from this, it is the minor glory of the President's approach that after hinting in his famous Yale speech and in press conference comment that a deficit should be planned as an instrument of national economic policy rather than deplored as a moral lapse on the part of thriftless politicians, he has at last expressed the idea in boldly concrete terms. Mr. Kennedy's hopes for the impact of his policy are not small. He expects an increase in total output and economic growth * * * by an amount several times as great as the tax cut itself, reduced unemployment, stable prices, improvement in the balance of payments, higher standards of living, and expanded investment. And if Congress fails to rise to the occasion, then, says the President, an even larger deficit will follow in the wake of sluggish economic activity, a renewed recession, and curtailed tax revenues.

It is to Mr. Kennedy's credit as an educator that he should finally be trying to persuade Americans that the conduct of a Nation is not comparable to the financial management of a household. But the educator has not dismissed the politician in the President's calculations. His political arithmeticians have computed a deficit for the fiscal year 1964 of $11.9 billion—slightly below the record Eisenhower deficit of 1959—and they have with similar deference to political numerology, if not to economic sense, kept the administrative or conventional budget just under $100 billion.

But this is not all Mr. Kennedy has done to lull the fears of the timid. He has offered a pledge, reaffirmed in congressional testimony by his new director of the budget, Kermit Gordon, that public expenditures for nondefense programs will be held at or below present levels. And finally, he has uttered some soothing private enterprise noises. The loudest of these affirms that a massive increase in Federal spending could also create jobs and growth—but in today's setting, private consumers, employers, and investors should be given a full opportunity first.

In short, the President intends to give a cautious whirl to Walter Heller's pet argument that the American structure of progressive and corporate taxes impedes economic recovery. Heller's case runs likes this: During recoveries, personal income naturally rises, but because individual tax rates are progressive, larger and larger percentages of these increases are taken by the Internal Revenue Service. Of the parallel expansions in corporate profits, less than half remains at the disposal of the corporations that earn them. The consequences are a restriction of consumer and business spending, a tendency for tax receipts to increase more rapidly than economic recovery, and a probability that the Federal budget will approach first balance and then actual surplus well in advance of full recovery. As Heller sees recent history, the economy has behaved in much this way during recent recessions. If, as critics might take note, no surpluses have actually developed, this is because the tax brake choked off recovery too early for the full tendencies to work themselves out during the course of a whole fiscal year—the usual unit of record. "If," says the President, "the tax brake on our economy is not released the slack will remain, Federal revenues will lag, and budget deficits will persist."

So much for the program and its justifications. Is it an adequate program according to the administration's own lights? Is it the program which best answers the country's economic needs? Will it really renew vigorous economic growth and reduce unemployment to the interim target of 4 percent? So far as the remainder of 1963 is concerned, the prospects seem exceedingly poor that the tax program, even if it were to be passed according to the administration's schedule, would seriously influence economic activity. In fact, increases in social security levies and in State and local taxes are likely to collect more additional tax dollars than the Federal reductions would release. Really noticeable benefits would not reach taxpayers until 1964, and the full effects of the program could not be realized until 1965. Whether circumstances will justify tax cuts then is anyone's guess.

In sober truth more economists are willing to subscribe to the idea that a quick tax reduction would have an immediately stimulating effect than are eager to embrace the Heller-Kennedy doctrine that taxes are the root of all economic evil. Paul Samuelson, an administration adviser with a supporter of the President's tax program, nevertheless has confessed doubts. In a U.S. News & World Report interview (February 18, 1963), he observed that the "stifling effects of our tax system have been overplayed," and added, "I do not think that tax reforms are going to do a great deal to improve the rate of progress." As Samuelson and many others have noted, all the great expansions since the end of the Second World War occurred in the face of an even more burdensome tax system than the current one, while the recessions of 1958 and 1960 and the incomplete recoveries which followed each of them came after, not before, the Eisenhower tax reductions and reforms of 1954.

It should also be noticed that the Kennedy tax cuts promise in their present form to be effective agents of high economic growth only on the assumption that some extraordinarily chancy conditions are satisfied. The most important of these is that the economy will go on expanding at its present moderate rate—and the Economic Report of the President does in fact predict continued improvement during the whole of 1963. But as the Council of Economic Advisers observes, the present recovery will be 34 months old if it endures through December 1963 (just 1 month short of the longest postwar expansion), and there is very little in the pace of the present advance or in the plans of Government which bolsters the hope that expansion will break past records. The upshot is that if the upturn were actually to end in 1963, the administration's tax program would do literally nothing to stimulate economic activity at exactly the time when the need would have become most pressing. Last summer the evidence of impending recession was almost sufficient to persuade the President to request an immediate tax cut, unencumbered by tax reforms. It can scarcely be said that the economic picture is much brighter today than it was last July.

Yet even if the cautious optimism of the Council of Economic Advisers turns out in the end to be justified, the state of the labor market and the changes taking place in the size of the labor force seriously diminish the efficacy of tax reductions as unemployment therapy. This year's labor force is likely to be 1,200,000 larger than last year's—an increase of perhaps 500,000 in excess of the year-to-year changes in the size of the labor force during the 1950's. The Council of Economic Advisers' own arithmetic implies that we shall be fortunate indeed if unemployment does not increase between now and next December. It is worth looking at the figures the Council gives:

1. To reduce unemployment from its present 5.6–5.8 range, the economy must create 1.1 million new jobs.

2. If business improves, and the prospect of finding jobs once again becomes real, another 800,000 men and women will return to the labor market.

3. An additional 1,200,000 jobs will be needed for the newcomers to the labor force.

4. Although the Council oddly omits a numerical estimate, a substantial number of jobs will also be needed to accommodate factory and office workers being displaced by technological change.

Even without the inclusion of the fourth category, 3.1 million new jobs are needed to bring the economy within sight of the 4 percent unemployment target—and the target itself is unsatisfactory. What is called for, then, is a 4.7 percent expansion of employment. Yet job expansion actually reached this figure only in the boom year of 1955.

From all this it seems plain that the President has tacitly written 1963 off. The staging of the tax cuts, the willingness to combine reform and reduction, and the caution of the administration's economic forecasts for this year, point to 1964 and 1965 as the testing years. Though Kennedy supporters may well squirm at the sight of a liberal President's willingness to live during the third consecutive year of his term of office with high rates of unemployment, an economic boom in 1964 and 1965 would do much to ease their pain.

What about 1964 and 1965? Applying the simplest and most primitive of Keynesian doctrines—which discerns in deficient aggregate demand the source of business debility—the administration program in effect (if not in statement) rests its 1964 and 1965 hopes on its capacity to stimulate spending. Military and space programs will add some $4.5 billion to Federal spending, while the tax reductions are designed to encourage both personal consumption and business investment, the second and third components of the aggregate demand for goods and services.

If consumers cooperate by spending the bulk of their tax savings, and if investors feel more buoyant because their corporations can retain more of the proceeds of investment and they themselves can keep larger portions of dividend income, the increase in national income will amount to some multiple of the tax reduction. In time increased consumer spending will strain existing plant facilities and further investment will be necessary for capacity expansion: This is the economist's acceleration process. Guesses about the values of the multiplier and the accelerator have more to do with the phychological condition of the guesser than with anyone's ability to estimate future consumer and investor behavior. The favorite current guess, however, is that a $10 billion net reduction in taxes should, through the combined effects of the multiplier and the accelerator, increase gross national product by about $30 billion, or a factor of 3.

Is this enough stimulation to get the economy moving and to bring unemployment down to 4 percent? The Economic Report of the President estimates that we have at the moment sufficient unused capacity to produce between $30 and $40 billion of additional goods and services. Other students of the problem advance much larger numbers—as high as $70 billion. Now, if the $10 billion tax cuts were made available immediately, if the lower of the estimates as to unused capacity were accepted, and if the combined value of the multiplier and the accelerator really turned out to be 3, then this tax cut could probably eliminate most of our currently unused capacity, although it would still not fully meet the administration's employment goal. But: the $10 billion tax cut will not be realized until 1965, and by then, even at current rates of investment, industrial capacity will be much larger and the labor force will comprise at least an additional 2.5 million workers. In default of a sudden leap in economic growth, therefore, the President's program is simply too small to accomplish its aims. It would seem that there is considerable accuracy in Leon Keyserling's charge that the administration has sent a pygmy to do a giant's job.

In 1964 and 1965, when the tax program builds to its climax, it will appear either irrelevant or inadequate. In the unlikely event of a genuine boom, tax reductions will not be needed to enlarge demand. Indeed they might have the undesired effect of increasing inflationary pressure and endangering the balance of payments. If, as is much more likely, 1964 and 1965 are recession years, then the amounts to be released are simply much too small seriously to mitigate a recession.

There is something to be said for a rapid reduction of taxes once and for all in 1963 and the simultaneous jettisoning of the tax reforms. Such seems to be the present mood of the Committee for Economic Development and the AFL–CIO.[1]

There is, however, almost nothing to be said for a tax reduction largely postponed until 1964 and 1965. Hence the President's program seems little more promising as a longrun measure than it does as a 1963 attack upon economic sluggishness. This is a pity; much would be gained from a successful peacetime experiment with Keynesian tools. At the least, public sophistication in modern economics would be enormously enhanced. As it is, a good Keynesian might well prefer no experiment to an experiment doomed to failure because of excessive timidity on the part of the experimenter.

What has been said so far is designed to demonstrate the inadequacy of the Kennedy tax program as an exercise in fiscal policy. But even a better fiscal policy would not suffice to meet the economy's basic difficulties, for these difficulties belong only in part under the rubric of deficient aggregate demand. The ailments of our economy in increasing measure are structural, not fiscal. They have to do with the matching of people and skills; technological displacement of workers; inadequate education; inequitable distribution of income; urban poverty; and the allocation of national resources between the public and private sectors. The symptoms are not unknown. Take, for example, technological displacement. The argument is probably fruitless whether or not automation really amounts to a qualitative departure from the incremental changes in technology which have become more or less routine since the industrial revolution began. Whoever is right on this point, the facts are sufficiently grim. Solomon Fabricant of the National Bureau of Economic Research has estimated that between 1889 and 1953 physical output per man-hour increased in the United States at an average annual rate of 2.3 percent. In other words, in 1961 it was possible to produce 1960's gross national product with 1.5 million fewer workers. Thus if productivity increases simply at its historic rate in the coming years, at least 1.5 million workers will be displaced annually. Here is one possible figure to fill in the blank left in the Council of Economic Advisers fourth category of job needs cited above.

No doubt a buoyant economy can soften the impact of such displacements, but ours has not been a buoyant economy. Rather it has been an economy which during the last 5 years has had average unemployment rates of 6 percent. Not only that, but between 1948 and 1958 the average duration of unemployment rose from 10.3 to 14.3 weeks. In consequence, between 1958 and 1962 the country probably lost at least $170 billion of goods and services which might have been produced by available manpower and factories.

---

[1] Indeed the President's own comments at the now famous February symposium of the American Banking Association gave powerful support to the tax cut now, tax reform later, school of thought.

Much of this problem of unused human labor and talent is a problem of the cities. School dropout rates are disconcerting, and vocational education has not adjusted to changing technical needs, all too frequently becoming a dumping ground for the backward and the delinquent. After a generation of gestures to public housing and urban redevelopment, slums still disfigure every sizable American city.

Almost unnoticed in our split-level economy, poverty has become a permanent condition for a very large slice of the urban population. As Herman Miller demonstrated in a striking article in the New York Times magazine (Nov. 11, 1962), literally nothing of consequence has happened to the distribution of income in the United States since 1944 except a moderate improvement in the position of the second richest fifth of income recipients. In 1944 the worst paid fifth of the population received 5 percent of the national income, and they are still stuck at this share. The top fifth, which enjoyed over 45 percent of the national income in 1944, has maintained its position. Even in the 1960's, to be in the bottom fifth of the income distribution is to be poor in the old-fashioned sense of the word. Individuals in that category in 1960 earned on the average less than $2,800 annually, about $55 a week, a trifle over the national minimum wage level. Moreover, in the last decade the gap between the earnings of whites and Negroes, once thought to be narrowing, has changed not at all. At the beginning of the 1950's non-whites earned about three-fifths as much as whites; they are no better off today. Thus, the revolution in income distribution of which economists used to write has long since ground to a halt.

The situation of the poor is the consequence of a double failure. For one thing, market forces have not been strong enough to draw the unskilled and the ill-educated into the labor force—whereas in times of really high prosperity industry itself assumes a good deal of the burden of training workers who initially lack the skills or fall short of the standards which employers consider desirable. The second failure is public. It is a failure really to enforce antidiscrimination policies in employment, residential desegregation in housing, and racial desegregation in urban schools. It is a failure to grapple with the uncomfortable fact that the unskilled and the ill-educated stand diminishing prospects of employment. It is a failure, finally, to take the city into account. If we are not to maintain a large proportion of our urban population in angry idleness, we must do something substantial with vocational training of the young, retraining of mature workers, education in general, urban redevelopment, minority housing, and social welfare. The Domestic Peace Corps is a gesture of good will, but it by no means constitutes a determined assault on our complex social and economic problems.

The real inadequacy of the President's tax emphasis is revealed in these needs. It may well be that our cumbersome Congress is capable of handling only one major legislative program a year, and indeed, the administration's strategy appears to accept this limitation as a fact of life. In 1963, then, the Kennedy administration has traded for a timid tax program its chance to make a concerted attack upon the problems of the cities in which most Americans live.

A serious program of this nature, however, requires substantial increases in public expenditures rather than tax reductions. It implies liberal financing of schools, hospitals, houses, recreation, and social agencies. The diagnosis of the poverty of the public sector of the economy offered by Galbraith in 1958 in "The Affluent Society" is no less pertinent to 1963. Resources must still be shifted from the private to the public sector. To deliberately encourage consumer purchases of automobiles, electrical appliances, and leisure articles at a time of serious public need involves a species of social insanity, and yet this is precisely what a tax cut does. Even if such a cut succeeded in stimulating aggregate demand, it would do very little to increase the production of the goods and the services which are most needed, those which add to the social investment of the public sector.

It is sometimes forgotten that there were always two Keyneses; and as a society we may be somewhat belatedly listening to the wrong one. There was the Keynes who saw nothing more grievously wrong with contemporary capitalism than inadequate aggregate demand and who contemplated no remedies more disrupting than alterations in interest rates, the supply of money, and the size of government deficits. But there was also the Keynes of "The Economic Consequences of the Peace" and chapter 24 of "The General Theory of Employment, Interest and Money." This Keynes toyed with the euthanasia of rentiers, speculated about the possibility of a long-run decline in the rates of profits to be expected in rich countries, questioned extreme disparities of income and wealth, and wondered whether a "somewhat comprehensive socialization of investment will prove the only means of securing an approximation to full employment." The administration's Keynes is the mild chap of the first version. But if we are to cope successfully with the problems of the 1960's, we shall have to begin paying much closer attention to what the second Keynes had to say.

CONGRESS MUST SAVE THE PANAMA CANAL

The SPEAKER. Under previous order of the House, the gentleman from Pennsylvania [Mr. FLOOD] is recognized for 2 hours.

Mr. FLOOD. Mr. Speaker, over the past few years I have addressed this body at great length to present to the Congress and the Nation a clear picture of the situation in the Caribbean with special reference to the key target of the world revolutionary movement in that area—the Panama Canal. All significant aspects have been explored, a plan of action to meet the crisis offered, and a series of predictions made of what would happen in the event of the failure of our Government, the Congress and the Executive, to take the necessary steps in the way of forthright declarations of our national policy.

So far, our country has not taken the measures required. Instead, it has floundered from crisis to crisis making concession after concession and, by this inaction or implied acquiescence, has invited larger and larger demands. The most serious fears that inspired my repeated warnings have come to pass virtually as predicted with no end yet in sight, and I hardly know what to say.

The situation which a few years ago was simple and easy to remedy has now become so grave that I feel impelled to speak out again on this crucial matter so that the people of the United States and their Congress will know what is happening in their backyard with respect to the sovereign powers, rights, and authority of the United States over the Canal Zone and Panama Canal. To this task, I now address myself.

WARNINGS THAT WERE IGNORED

What were some of the incidents that were forecast and timely warnings given? The list of them, in the light of what has subsequently transpired, is an impressive array. They were:

In 1958, the attempt of Panamanian students to hoist the Panama flag at the Canal Zone Administration Building, which most people then laughed off as a playful students' prank; and

On November 3, 1959, during the annual commemoration of the independence of Panama from Colombia, the attempted invasion of the Canal Zone by a Panamanian mob, which overpowered the civil police of the Canal Zone and required the use of the U.S. Army to protect the zone.

On September 17, 1960, soon after the adjournment of the Congress, the ill-advised action of the President of the United States, contrary to will of the Congress as expressed in legislative enactments concerning the canal, in directing the formal display of the Panama flag over the Canal Zone territory as evidence of Panama's so-called "titular sovereignty."

The ensuing misinterpretation by Panamanian and international propagandists of this action as recognition of Panamanian fundamental sovereignty over the zone.

And on October 29, 1962, on orders of the executive department of our Government, the formal raising of the Panamanian flag at the Canal Zone Administration Building, on a separate flagmast alongside the U.S. flag as part of a program for similar displays at other points in the zone as increased recognition of Panama's claim of titular sovereignty over the Canal Zone and Panama Canal.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. FLOOD. I yield to the gentleman from Iowa; yes. I am very glad to yield to my friend, the gentleman from Iowa [Mr. GROSS], because I recall that when I was a member of the Appropriations Subcommittee which at that time considered the request for the Department of Commerce, during the period of years I was discussing this, there was an amendment introduced by the gentleman from Iowa to the appropriation bill for the Department of Commerce and passed unanimously by the House, to prevent the use of any funds in that bill for the erection of any flagpole or any other contrivance for the flying of a flag in an attempt to defeat that program. I am happy to yield to the gentleman from Iowa.

Mr. GROSS. And, it was by an Executive order of then President Eisenhower that the will of Congress was subornated—I believe that is the proper word—at least the flag of Panama was raised along with the U.S. flag in the Canal Zone?

Mr. FLOOD. That is correct; and it was done by subterfuge because the gentleman's amendment to the appropriation bill and as it applied to the Department of Commerce became law. It was clear and it expressed again the second intent of this Congress that that not take place, and that any money in the bill could not be used to build a flagpole or to fly the flag because under the provisions of that appropriation for the Department of Commerce and related agencies the Panama Canal and the Panama Canal Government was in that bill.

Hence that money could not be used. So, the subterfuge was perpetrated upon the American people and upon this Congress, and I do not think he should have directed the Army from those funds to do so because of the gentleman's amendment to that bill.

Mr. GROSS. That is exactly right, and I want to commend the gentleman for the unceasing fight he has made to preserve our right to be in the Canal Zone and to administer the Territory there as it ought to be administered in the interest of the United States.

Mr. FLOOD. With the help of such Members as the gentleman from Iowa, we will continue to do this.

The last action, Mr. Speaker, was taken by our Government despite the fact that on October 12, only 17 days previously, the ceremonies for the dedication of the Thatcher Ferry Bridge at Balboa, attended by Under Secretary of State George W. Ball and other notables, was marred by Panamanian demonstrators, who used communistic revolutionary tactics and claimed Panamanian sovereignty over the bridge.

To many Members of the Congress and our people, this series of predictions by me seemed extraordinary. They are, I can assure, not the result of any so-called inside information or of the powers of a clairvoyant, but only the considered conclusions from the study of trend-forming developments and their projection into the future. Nor is the fact that all of them materialized, essentially as foretold, any source of gratification to me. Rather, it is a cause for deep concern for the failure of the responsible agencies of our Government, the Congress, and the Executive, to take timely preventive measures instead of waiting until little hills become volcanoes and erupt in our faces.

Later in this address, I shall indulge in other predictions, affecting both the United States and Panama. In so doing, however, I wish to stress again that what I shall say is not as an enemy of Panama or its people, but as a friend of both, with their best interests ever before me. I shall speak realistically, for the problems involved are too grave to gloss over or ignore.

PANAMANIAN ASPIRATIONS AIDED BY DEPARTMENT OF STATE

What are the aspirations of Panama with respect to the Canal Zone and Panama Canal? Panamanian leaders and agitators have never disdained to publish their objectives. But no better summary of them has ever been made than that by Gilberto Arias, recently Secretary of Finance in the Cabinet of President Chiari, as quoted on March 19, 1963, in the isthmian newspaper, Critica. His words were:

> In the future, with God's help, we will achieve our objective: that the Panama Canal be the property of Panamanians, under full and absolute jurisdiction of the Republic of Panama, maintained by Panamanians, operated by Panamanians, sanitated by Panamanians, and protected by Panamanians.

This concise statement, Mr. Speaker, must be accepted at its face value. Moreover, it is the end toward which every move in the relations between Panama and the United States has been made ever since the Suez Canal crisis of 1956 in a program of piecemeal liquidation, aided and abetted by certain elements in our Department of State.

How responsible officials of our Government can knowingly collaborate with Panamanian radicals to surrender more of our authority to a country, which since 1955, when sanitation in the terminal cities of Colon and Panama was returned to it, has not even succeeded in collecting its garbage, is incomprehensible.

Let us not be so naive as to think that those primarily responsible for this erosive process do not know what they are doing. They know precisely and seem to be bent on following the same path at Panama as they did in Cuba, which was featured by covert collaboration—Earl E. T. Smith, "The Fourth Floor," New York, Random House, 1962. The only difference is that in Cuba it was the friendly anti-Communist Cuban Government being undermined whereas in Panama it is the sovereignty of the United States over the Canal Zone territory being assaulted.

Here again, Mr. Speaker, I would emphasize that the Republic of Panama grew out of the movement for the Panama Canal and not the reverse. The only advantage that Panama can claim as regards the canal is its geographical location, which advantage it never ceases to exploit in advancing its demands for increased benefits and sovereignty over the Canal Zone.

To make sure that there is no uncertainty as to what purpose the Panamanian Government is using all its energies to acquire, I shall quote its openly declared objectives, as stated in a report on September 20, 1960, to President Chiari by his Committee on International Politics. These demands included:

First. Raising the Panamanian flag in the Canal Zone.

Second. Equal salary treatment and job opportunities for Panamanians and North Americans.

Third. Raising the annuity to 20 percent of the gross income, with a guaranteed minimum of $5 million.

Fourth. Setting the length of time for the annuity and cessation of the perpetuity clause.

Fifth. Mixed courts in the Canal Zone.

Sixth. Complete supplying by Panama of the Zone market, including ships, and stopping of production activities in the Zone.

Seventh. Recognition in the Canal Zone of exequaturs granted by Panama to foreign consuls.

Eighth. Use of Panamanian postage in the Zone.

Ninth. Liquidation of the Panama Railroad.

Tenth. Establishment of Spanish as the official language of the Canal Zone along with English.

Eleventh. Panamanian jurisdiction in the Zone over passengers and cargo coming into Panama and over ships flying the Panama flag.

Twelfth. Granting to Panama of dock and port facilities, and at U.S. expense.

Thirteenth. Organization of Panama's civil defense at U.S. expense.

Fourteenth. Corridors, under Panamanian jurisdiction across the Canal Zone.

Fifteenth. Opportunities for Panamanian products in U.S. markets.

Sixteenth. Acceptance of compulsory jurisdiction of the World Court over controversies between Panama and the United States.

And, Mr. Speaker, I will give you one guess and only one as to what would happen in the decision of the World Court on the controversy between the great Republic of Panama and the United States of America.

Such demands, Mr. Speaker, are matters that would inevitably affect all interoceanic commerce that uses the Panama Canal and has to pay tolls. They more than justify the concise statement of former Finance Secretary Arias, previously quoted, and present grave questions to which the merchant marine of all nations simply cannot afford to be indifferent. Moreover, it is significant that the flag of Panama's new Independent Revolutionary Party carries 10 stars, the 10th star representing the Canal Zone.

No wonder that patriotic Americans in the Canal Zone and the United States have become alarmed for the security of this vital transportation artery and view with amazement what is now taking place.

BYPASSING OF CONGRESS BY INTERNATIONAL SOCIALISTS

As to the flag question previously mentioned, it will be recalled that the distinguished House Committee on Foreign Affairs, in early 1960 in anticipation of difficulties with respect to the flag question, conducted hearings on United States-Panama relations, when high executive officials and myself testified—hearings, January 12, 15, 19, 22, and February 2, 1960; also House Report No. 2218, 86th Congress.

The unanimous recommendation of the full committee was for a concurrent resolution expressing the sense of the Congress that any variation in the traditional interpretation of the treaties of 1903, 1936, and 1955 between the United States and Panama with reference to matters of territorial sovereignty shall be made only pursuant to treaty—House Concurrent Resolution 459, 86th Congress.

After an animated debate on February 2, 1960, the House adopted this resolution by the overwhelming vote of 381 to 12, which should have prevailed over the predilections of executive officials.

Transmitted to the Senate, this resolution was referred to the Committee on Foreign Relations, where, because of opposition from the Department of State, it was not reported to the Senate and died in the committee.

Notwithstanding the failure of the Senate to act, the magnitude of the

House vote is significant, clearly reflecting the concern of our people for the security of the Canal Zone territory. It also demonstrates to the international infiltrators in the Department of State and their collaborators that these influences can never succeed in perpetrating their schemes with respect to the Panama Canal through normal procedures. They realize that they must bypass the Congress by means of a new canal treaty. This, they no doubt feel, can be pushed through, as was the 1955 treaty, without adequate debate, to continue the process or erosions that started with the 1936–39 treaty.

What a contrast has been the action of the Department of State in respect to West Berlin. For that city, Khrushchev has spoken publicly about replacing the flags of the United States, Britain, and France, with that of the United Nations but the Department of State correctly opposes striking the American flag there. Why did it urge striking it in the Canal Zone?

U.S. VITAL INTERESTS DISREGARDED

Though the writings on the diplomatic history of U.S. Caribbean and Isthmian canal policies are voluminous, the truly vital interests of our country at Panama are seldom stated. Those who view the subject realistically emphasize the following major points:

First. Control of the maritime approaches to the Panama Canal, both Atlantic and Pacific.

Second. Maintenance of untrammeled sovereignty over the Canal Zone.

Third. Meeting our treaty obligations to maintain free and open transit for vessels of commerce and war of all nations on term of equality with tolls that are just and equitable.

Fourth. Civil protection of the Canal Zone from disorders and pestilence, originating in the terminal cities of Colon and Panama.

Fifth. Safeguarding the summit-level water supply as required for lockages and maintaining channel depths.

Sixth. Military and naval defense of the Panama Canal from aggression.

The foregoing points, Mr. Speaker, are not wanderings of someone's imagination, but conclusions developed from the study of history. Most of the present difficulties at Panama have stemmed from either ignorance of these fundamentals or a heedless disregard of them, coupled with connivance on the part of international socialist elements in our Government and those cooperating with them for the complete liquidation of U.S. control of the Panama Canal—a major object of Soviet policy.

The question arises who are these elements and why are they not eradicated? Supplying the answers are tasks that the Congress should undertake.

In this general connection, Mr. Speaker, it was Alger Hiss, when holding an important position in the Department of State in 1946, who, under article 73 of the U.N. Charter, filed an administrative report with the United Nations listing the Canal Zone as an "occupied area." By thus minimizing U.S. sovereignty and supporting the Communist revolutionary conspiracy, this was a monstrous aggression upon our valid and unblemished title to that part of our territorial domain—FLOOD, "Monroe Doctrine or Khrushchev Doctrine," CONGRESSIONAL RECORD, April 12, 1962. These facts in our history suggest the question as to whether there are yet Alger Hisses in the Department of State. If there are, let us clean them out.

In any event, the Congress and the Nation should know that since 1923 our Government has made no forthright public statement of policy with respect to the Panama Canal. The urgency for such a statement is more acute today than ever in our history.

LIQUIDATION OF PANAMA RAILROAD NARROWLY AVERTED

Among the most audacious attempts at liquidation in the Canal Zone was the example of the Panama Railroad as was evidently contemplated under the 1955 treaty. This effort, officially made on June 17, 1955, before the Committee on Merchant Marine and Fisheries by the then Governor of the Canal Zone, an active military officer, inspired that committee and other Members of the Congress to take the necessary measures to prevent it.

Notwithstanding the committee's objective, the first step in the railroad's liquidation was actually taken by awarding to Panama, without any compensating concession, over $25 million worth of valuable property of the Panama Railroad, including its terminal freight yards and passenger stations in the cities of Colon and Panama. It was evidently in the minds of the schemers that, after surrendering the terminal facilities, the removal of the main line tracks would follow in due course and thus permit the construction of a truck highway on the roadbed, the effort for which was being sponsored by certain Panamanian interests and advanced by the then Governor of the Canal Zone. This was discussed and prevented by me as the result of hearings before my subcommittee of the Appropriations Committee for the Department of Commerce and related agencies, which included the Panama Canal Government, and by the merest accident of a question I asked the then former Governor of the Canal Zone on the matter of trucks and the highway.

While the treaty power of our Government, consisting of the Executive and the Senate, was engaged in giving away the railroad terminals, the House, by conducting an independent investigation headed by an able railroad executive in the United States, a retired vice president of the Pennsylvania Railroad, prevented taking up the main line tracks and the complete liquidation of the railroad itself.

Now, Mr. Speaker, we have a situation difficult for even the most credulous to comprehend—a railroad without its needed terminal facilities and without any substitution therefor. No wonder, Mr. Speaker, our diplomacy was fast becoming a laughing stock in the Western Hemisphere. No wonder our citizens kept demanding the elimination from the Department of State of the elements responsible for such diplomatic stupidity or downright disloyalty to the paramount interest of our country.

Mr. Speaker, it was the indicated congressional inquiry that saved the Panama Railroad. It was also this inquiry that caused some Members of the Congress present, including myself, to question the correctness of the "traditional" practice of appointing as governors of this great civil agency, known as the Panama Canal enterprise, only active officers trained for a military career. Moreover, the evidence indicates that had there been a capable business administrator heading this civil agency, the move to liquidate the railroad would never have been attempted. See Committee on Merchant Marine and Fisheries, hearings on proposed abandonment of Panama Railroad, June 17, December 7 and 8, 1955, pages 33–36.

PENALTIES FOR SURRENDERING AUTHORITY

The undertaking by the United States following the 1901 Hay-Pauncefote Treaty with Great Britain to construct and operate a trans-Isthmian canal was the culmination of an evolutionary process, involving most major historical occurrences in the Americas during the 18th and 19th centuries. Such an edifice cannot be demolished and swept into the ashcan of history with impunity.

Provisions in the 1903 treaty gave the United States the necessary authority to enforce sanitary ordinances and to maintain public order in the cities of Colon and Panama. Unfortunately, the right to intervene in the terminal cities, in event of domestic violence, was abrogated at the specific insistence of Panama in the 1936 treaty and the authority of the United States to enforce sanitation was surrendered to Panama in 1955.

What have been the results? The most violent border incidents in Isthmian history, which as previously shown, were accompanied by attempted mob invasions of the Canal Zone; and a deplorable breakdown in sanitation procedures, as evidenced by the failure of Panama to collect garbage, which is frequently piled high in the streets, causing Panamanian citizens to make vigorous protests to their government.

Again, Mr. Speaker, I would stress that these are facts and not mere carping criticisms. These facts are rooted in conditions that are inherent and serve to emphasize that where there is responsibility there must be adequate authority, such as provided by the 1903 treaty, or there will be chaos. Nor should it ever be overlooked that our country, notwithstanding its concessions to Panama, is still responsible. This responsibility must be faced; it cannot be evaded, for our obligations are to the entire world. We now have a total investment in the canal enterprise of more than $1,500 million, the funds for which have been supplied by the American taxpayer. Panama, in its radical demands does not offer a penny for reimbursement for these vast expenditures, but claims the right to take over the canal—lock, stock, and barrel—free from any obligation whatsoever. How can any Panamanian with a sense of justice favor such a demand and how can the free world approve it? Of course, the Communist powers would approve, because without delay they would fill the vacuum thus created and take over the canal itself.

Nor should our Government be deluded with the idea that its actions at Panama are not being observed by interested nations. In Great Britain, one of the signatories to the 1901 Hay-Pauncefote Treaty, it is well understood, as shown by a recent story in the Times of London, which emphasized that aid to Panama is "no substitute for a firm policy and this apparently the United States lacks in its dealings with Panama." Quoted from Miami, Fla., Herald, March 14, 1963.

CANAL ZONE CITIZENS APPEAL TO THE COURTS

By the fall of 1962, the process of erosion of our rights, power, and authority, symbolized by the formal display of the Panama flag in the Canal Zone wherever the U.S. flag is flown by civilian authorities as increased evidence of Panamanian sovereignty, had gone so far that our citizens there decided to act, for they understand the significance of such display far better than temporary custodians of the governorship.

In a desperate effort to protect our Nation's interests, they organized at their own expense to bring court action to test the legality of the formal display of the Panama flag over the Canal Zone Territory of the United States. One of them, Gerald A. Doyle, Jr., Chief Architect of the Panama Canal, brought suit in the U.S. District Court of the Canal Zone against Gov. Robert J. Flemming, Jr., of the zone and Secretary of the Army, Cyrus R. Vance, in an effort to end this symbol of surrender by the United States to the mob-ruled Panama Government.

PANAMANIAN REACTION TO FLAG SUIT

Mr. Speaker, I would invite the attention of the Congress to another angle of the sovereignty question that is most significant and illuminating.

Reacting to the suit in the Canal Zone court, a Panamanian citizen, on January 9, 1963, filed a suit in the Supreme Court of Panama that aims to establish that the ratification of the 1903 treaty by executive decree of the Panamanian revolutionary junta, was illegal and hence null and void. If sustained by the Panama Supreme Court, it would logically follow by the same token that the 1903 revolution, by which Panama gained its independence from Colombia, was likewise null and void, that Panama is still a department of the Republic of Colombia, and that Colombia and not Panama, is the sovereign of the isthmus.

Such eventuations, Mr. Speaker, would not be improbable, because the original guaranty by the United States of Panamanian independence that was provided in article I of the 1903 treaty, at the specific request of Panama, was abrogated in the 1936 treaty for the reason that Panama felt that it no longer needed such guarantee. This leaves the way open for Colombia to regain its territory lost throughout the political events of 1903 out of which came the Republic of Panama and the Panama Canal. Realistically, and I speak without intended offense, how long could Panama continue as a free and independent nation after liquidation of U.S. control and operation of the Panama Canal?

CANAL USERS HAVE MOST AT STAKE

The Panama Canal enterprise, under treaty and law, operates on a self-sustaining basis, with tolls prescribed at rates calculated to cover costs.

In this connection, Mr. Speaker, I would invite attention to the fact that the users of the canal, which have to bear increases in costs of operation through increased tolls have the most to lose by what could happen at Panama. Unless the users of the canal are to suffer unpredictable consequences, the crisis on the isthmus must be met, and met forthrightly and adequately, and without further temporization or delay; else the entire course of history will be changed, and changed disastrously.

The situation in the Canal Zone is just that grave and nothing less; and our policies of diplomatic placation and lack of judgment and vision have largely contributed to the crisis which has thus arisen.

All claims by Panama of any type of sovereignty on the Canal Zone, except that of reversionary character, must be repudiated. In so doing, our Government must make clear that the sovereign rights, power, and authority of the United States are not negotiable and that there will be no treaty with Panama liquidating or changing the basic sovereignty provisions.

In this general connection, I would invite attention that on March 20, 1963, at San Jose, Costa Rica, the President of Panama and the United States spent 41 minutes in conference. As far as is known, no report of this meeting was published in the United States, but the press of Panama in describing its results quoted President Chiari as having expressed his satisfaction. This, and other information, indicates that President Chiari, now being opposed by six of Panama's political parties, is pressing desperately to secure more benefits from the United States so that his parties will not be defeated in the coming Panamanian election and that he will be able to dictate his own successor.

GOVERNOR OF CANAL ZONE ATTACKS JUDICIAL FOUNDATION OF PANAMA CANAL

In December of 1962, Mr. Speaker, I visited the Canal Zone. Making it a point to seek enlightenment from all possible sources—official and unofficial, civlian and military, high and low—I found general alarm on the part of our citizens at the conduct of the Governor of the Canal Zone. This alarm, Mr. Speaker, was not surprising but the natural result of what has been transpiring. I share the deep concern of our residents in the Canal Zone for the same historic reasons.

There was more than a scintilla of Clive of India. I could see the East India Co. all over the place, with thousands of Americans being considered and rapidly considering themselves as colonials from the home office. This apprehension is not good for the canal, not good for Panama, and not good for the United States.

At a press conference held at the Tivoli Hotel, I learned about an address given on December 10, 1962, shortly before my arrival, by the Governor before the Panama section of the American Society of Civil Engineers, which includes Panamanian engineers among its membership.

Imagine my surprise on reading this address, which began with an apology for what has made our country great and an expression of his low regard for engineers. Not only was this address the most disconcerting ever publicly uttered by a Governor, but he seems to have reveled in its flavor.

Though it has many points that could be challenged, it is important to note that his address first, reflected the philosophy of international Socialist elements in and on the fringes of our public affairs; second, advocated what amounts to a permanent state of social revolution, which advocacy is not a valid function of a Governor of the Canal Zone; third, belittled the constitutional foundations of our country and urged unconditional exercise by Federal agencies of power without regard to constitutional limitations; fourth, condemned the past in our history without discriminating between that which is great and that which is ephemeral; fifth, failed to present the Constitution in its true light as the great contractual document under which the Thirteen Original States created three separate and independent agencies of government with limited powers; and sixth, concluded with an illiberal assault upon those who differ with his views as having small minds bent on preserving the status quo, and thus, in effect, as being domestic enemies as dangerous to the United States as foreign enemies.

Mr. Speaker, I wish to emphasize that this address by the Governor of the Canal Zone, who was at that time, and still is, a member of task forces engaged in important diplomatic discussions with Panamanian officials, was interpreted by many who heard it as first, a deliberate administrative attack against the present diplomatic and juridical foundation of the Panama Canal enterprise; and second, as an attempted public intimidation of those standing up for the sovereign rights, power, and authority of the United States over it. Thus, this shocking address served to invite further aggressions against the sovereignty of the United States over the Canal Zone territory.

GOVERNOR MUST BE REPLACED

It will be recalled that President Chiari of Panama visited Washington June 12–13, 1962, to present points of dissatisfaction over the basic 1903 Panama Canal Treaty, and then agreed to appoint representatives to discuss them. The Governor of the Canal Zone and the U.S. Ambassador to Panama were designated to form the previously mentioned task force to represent the United States in the ensuing consultations.

In the months following, there were many rumors of extreme demands by Panama, often denied at the time and later proved true by events. On January 10, 1963, the Department of State, in a joint communique, announced agreement by the United States-Panama representatives on the following:

First. That the flag of Panama would be flown with the U.S. flag on land wherever it is displayed by civil authorities.

Second. That foreign consuls may function in the Canal Zone on the bases of exequaturs issued by the Government of Panama.

Third. That Panamanians will have equal opportunities with the U.S. citizens at all levels, with social security benefits from the United States.

Fourth. That the U.S. representatives proposed the use of Panamanian postage stamps in the Canal Zone.

Fifth. That the representatives of the two countries discussed the need of pier facilities for Panama.

The latest news from the zone is that Panama has demanded jurisdiction of a corridor across the zone from Arraijan to Panama City, including the Thatcher Highway and the Thatcher Ferry Bridge, both entirely within the zone. Though this report may be denied, I can assert on the floor of the House that there have been discussions of this demand and that a survey has even been made. What is the meaning of this secrecy?

This vulnerable structure across the Pacific entrance to the canal would be an obvious point for attack in event of hostilities as a means of blocking the channel. Even to consider the idea of its transfer to Panama is shocking.

In addition, I can state without fear of successful contradiction that the Committee on Merchant Marine and Fisheries is now engaged in an effort to prevent the leasing of certain piers, repair yards, and the small drydock at Balboa to the Republic of Panama—H.R. 3999, 88th Congress. What further evidence is required to show the sustained program of cannibalization of the Panama Canal that has been, and still is going on in the Canal Zone? Why is it, Mr. Speaker, that these facts, which are well known on the isthmus, are denied to the people of the United States?

The surrenders, already made and contemplated, all without the authority of the Congress are not meaningless gestures of diplomatic pacification, but acts of aggression by public officials of our Government against the treaty-based sovereign rights, power, and authority of the United States. As such, they are fully in line with the long-range Soviet program for conquest of the Caribbean.

The latest effusion from the Governor of the Canal Zone was his statement on March 16, 1963, to U.S. newsmen visiting the Canal Zone in which he denounced Americans "in Panama and the United States" defending our country's treaty rights and expressing himself as favoring the "slaughtering of some sacred cows." His remarks, Mr. Speaker, by implication, apply to Members of the Congress, both House and Senate, who, after studying the Canal problem, have justifiably condemned unilateral surrenders to Panama without compensatory accommodations as "appeasements."

As to those he had in mind, the Governor stated that Chief Architect Doyle is one and that in the military "you could bust a man like that" but he apparently regretted being unable to do so. Aside from the Governor's ignorance of Panama Canal history as revealed by his published statements, his obvious threat to bust Doyle and implied attack on Members of Congress who, under the Constitution cannot be questioned in any other place for any speech or debate in either House, reveals a contempt of the Congress, and our system of limited government under the Constitution, which he is bound under oath to support and defend.

At this point, Mr. Speaker, I wish to associate myself with those in the Congress who wish the President to relieve this Governor and, in line with the philosophy of the 1950 recommendations of the Bureau of the Budget, appoint an experienced and capable business administrator to head the Panama Canal—House Document 460, 81st Congress. Such business type organization was originally desired by President Woodrow Wilson, who was prevented from bringing it about by the opening of World War I. In any event, Mr. Speaker, the original reasons for designating only active officers of the Army as governors of this civilian agency no longer apply and the need in completing the reorganization for the Panama Canal enterprise started in 1950, with transfer of its supervision from the Secretary of the Army to the Secretary of Commerce.

Before concluding this matter of the Governor's actions, Mr. Speaker, I wish to express my admiration for the way our patriotic citizens on the isthmus have risen to the defense of our legal position in the zone.

Thank God for Theodore Roosevelt who made the Panama Canal possible. Thank God for Gerald A. Doyle, Jr., and his fearless leadership. Thank God for the Canal Zone civil employees who are supporting him. And thank God for the Constitution of the United States, under which the founders of our Nation made it possible for American citizens to defend, by lawful means, our country's just interests wherever they may be.

CONGRESS MUST SAVE THE PANAMA CANAL

The court fight now being waged by frustrated and beleaguered American citizens in the Canal Zone has heroic aspects, suggestive of the plight of those barricaded in the legation compound of Peiping, China, during the Boxer Insurrection in 1900, while awaiting rescue by expeditionary forces. The rescue in the Canal Zone must be affected by the Congress as the ultimate authority under the Constitution of the sovereign people of our country, while there is still time.

As a start in this direction, my distinguished colleague from Missouri [Mr. CANNON], on March 4, 1963, introduced House Concurrent Resolution 105, which aims to clarify and make definite the fundamental policy of the exclusive sovereign control by the United States over the Panama Canal enterprise and to lead to the repudiation of all actions by the executive counter to that policy, including the ill-advised measure of hoisting the Panama flag over the Canal Zone as an evidence of Panamanian sovereignty.

Mr. Speaker, the situation that I have developed at such length today is not the result of illusory impulses, but of considered conclusions derived from years of study and observation, which I am ready to uphold on every appropriate occasion. Furthermore, the issues are basic and must be met on their merits and not to obscure weak, mistaken actions on the part of elements in our Government.

Over a period of years, I have received many letters from our citizens from various parts of our Nation. Though the views held by them are seldom seen in the mass news media, I know that they understand what is taking place at Panama and realize the significance of the control of the Panama Canal for the future of the United States and the entire world.

Although I could quote hundreds of letters from individuals and organizations in these regards, I shall not do so. But I do wish to state that among the strongest supporters for maintaining the untrammeled sovereignty of the United States in the Canal Zone are members of our great labor and patriotic organizations, such as the AFL-CIO and the American Legion. They view the Panama Canal as the highest achievement of American statesmanship, genius, and labor. They realize the mounting danger and are determined that control of the canal will not be wrested from our country.

Mr. Speaker, some of these organizations have taken their positions as regards continued U.S. sovereignty over the Canal Zone by means of letters and resolutions, which are quoted in the documentation for my remarks. Because of the importance of their stands in the evolving lineup in the United States on the Panama Canal sovereignty issue, I can think of no better way to support their stands than to make known to the Congress and the Nation the views of such eminent legal authority as former Secretary of State Charles Evans Hughes when faced with a similar crisis at Panama.

On December 15, 1923, Secretary Hughes, in response to demands by Panama for increased sovereignty and increased sovereignty attributes over the Canal Zone, spoke with a refreshing degree of candor. His words, which should ring throughout the world, were:

> Our country would never recede from the position which it had taken * * * in 1904. This Government could not, and would not, enter into any discussion affecting its full right to deal with the Canal Zone and to the entire exclusion of any sovereign rights of authority on the part of Panama (Foreign Relations, 1923, vol. III, p. 684). It was an absolute futility for the Panamanian Government to expect any American administration, any President or any Secretary of State, ever to surrender any part of these rights which the United States had acquired under the treaty of 1903.

Mr. Speaker, I would state that from time to time, since the birth of freedom, parliamentary bodies have preserved the just rights of a nation against the misguided exercise of executive power. In the present juncture, it seems that the legislative branch of our Government must similarly act to uphold and maintain the unalienable rights of our Nation in regards to the great Isthmian waterway.

The text of House Concurrent Resolution 105 and other documentation follow:

Mr. Speaker, I ask unanimous consent to revise and extend my remarks, to include a resolution and certain other material in connection with these remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

(The matter referred to follows:)

House Concurrent Resolution 105

Whereas the United States, under the Hay-Bunau-Varilla Treaty of 1903 with Panama, acquired complete and exclusive sovereignty over the Canal Zone in perpetuity for construction of the Panama Canal and its perpetual maintenance, operation, sanitation, and protection; and

Whereas all jurisdiction of the Republic of Panama over the Canal Zone ceased on exchange or ratifications of the 1903 treaty on February 26, 1904; and

Whereas since that time the United States has continuously exercised exclusive sovereignty and control over the Canal Zone and the Panama Canal; and

Whereas where responsibility is imposed there must be given for its effectuation adequate authority; and with respect to the Panama Canal the treaty of 1903 so provided; and

Whereas the United States has fully and effectively discharged all its treaty obligations with respect to the Panama Canal and the only legitimate interest that Panama can have in the sovereignty of the Canal Zone is one of reversionary character that can never become operative unless the United States should abandon the canal enterprise; and

Whereas the policy of the United States since President Hayes' message to the Congress on March 8, 1880, has been for an interoceanic canal "under American control," that is to say, under the control of the United States; and

Whereas the grant by Panama to the United States of exclusive sovereignty over the Canal Zone for the aforesaid purposes was an absolute, indispensable condition precedent to the great task undertaken by the United States in the construction and perpetual maintenance, operation, sanitation, and protection of the Panama Canal, for the benefit of the entire world; and for which rights the United States has paid the Republic of Panama the full indemnity and annuities agreed upon by the two nations; and

Whereas, on February 2, 1960, the House of Representatives in the Eighty-sixth Congress, by an overwhelming vote, approved House Concurrent Resolution 459, favorably reported by the Committee on Foreign Affairs, as follows:

"*Resolved by the House of Representatives* (*the Senate concurring*), That it is the sense of the Congress that any variation in the traditional interpretation of the treaties of 1903, 1936, and 1955 between the United States and the Republic of Panama, with special reference to matters concerning territorial sovereignty shall be made only pursuant to treaty."

Whereas, because of continuing claims of sovereignty over the Canal Zone by Panama which, if granted, would liquidate United States control of the Panama Canal and Canal Zone, a further declaration by the Eighty-eighth Congress is deemed necessary and timely: Now, therefore, be it

Resolved by the House of Representatives (*the Senate concurring*), That (1) the United States, under treaty provisions, constitutionally acquired and holds, in perpetuity exclusive sovereignty and control over the Canal Zone for the construction of the Panama Canal and its perpetual maintenance, operation, sanitation, and protection; and

(2) That there can be no just claim by the Republic of Panama for the exercise of any sovereignty of whatever character over the Canal Zone so long as the United States discharges its duties and obligations with respect to the canal; and

(3) That the formal display of any official flag over the Canal Zone other than that of the United States is violative of law, treaty, international usage, and the historic canal policy of the United States as fully upheld by its highest courts and administrative officials; and will lead to confusion and chaos in the administration of the Panama Canal enterprise.

(4) That the provisions of H. Con. Res. 459, Eighty-sixth Congress, are reiterated and reemphasized.

[From the Republic of Panama Sunday American, Mar. 17, 1963]

Fleming Would Slay "Sacred Cows"—Has Strong Feelings About Doyle

Canal Zone Gov. Robert J. Fleming Jr. was quoted yesterday by the Scripps Howard wire service as saying "I'm in favor of slaughtering some sacred cows."

The statement was quoted in dispatch from Jim Lucas, one of a group of 21 U.S. newsmen visiting the Isthmus on a tour of U.S. Army installations, who also heard Fleming denounce those Americans in Panama and in the United States who believe "any accommodation to give Panamanians a better share (of Panama Canal benefits) is a sellout of vital American interests."

Fleming was also quoted in the dispatch as saying that he has "very strong feelings" about the suit filed against him by Panama Canal Chief Architect Gerald A. Doyle, and as declaring that in the military "you could bust a man like that."

Lucas' dispatch reads as follows:

"The governor of the Panama Canal Zone today denounced those, in Panama and the United States, he said believe "any accommodation to give the Panamanians a better share is a sellout of vital American interests."

"I'm in favor of slaughtering some sacred cows," Maj. Gen. Robert J. Fleming, Jr., president of the Canal Company as well as Governor, said in an angry statement to 21 visiting American newsmen.

"Among them:

"1. The 'shibboleth' that any agreement between the United States and the Republic of Panama to settle differences is a form of appeasement.

"2. A discriminatory wage scale which has given 16 percent of the Canal employees, 98 percent of them Americans, the bulk of the payroll.

"3. 'Blind adherence to a treaty signed 60 years ago' and 'strictly legalistic interpretation' of its provisions.

"Fleming said he had 'always believed these things and it is high time somebody said them.'

"Here is where we, the United States, became a world power," he said. "The Panama Canal is a technical achievement of which every American can be proud. But socially, there is sand in our gears. We have lagged behind the rest of the United States, and we've got to catch up."

Fleming said any progress in betterment of relations between Americans and Panamanians "has been and will be resisted by small groups having a vested interest in the status quo." He said these people gain an audience they do not deserve. He said they undo the good done by thousands of others, and thus serve our enemies. He said there are some Members of Congress who "obviously" share their sentiments and work with them.

"He refused to name any particular congressman, but Representative Clarence Cannon, Democrat, of Missouri, is author of a resolution which would require Fleming to haul down the Panamanian flag now flying over portions of the zone.

"Fleming said he has 'very strong feelings' about a suit filed against him in Federal court here by his Chief Architect, Gerald Doyle of Cleveland, Ohio. Doyle seeks a writ of mandamus to force the Governor to haul down the Panamanian flag, forbid the use of Panamanian stamps in the Canal Zone (something Fleming said he 'hopes' to do soon) and block an agreement now being negotiated whereby Panama's Foreign Ministry would accredit foreign consulates in the zone subject to our veto.

"Fleming conceded Doyle was the kind of American he had in mind. In the military, he said, 'you could bust a man like that' but he is powerless to do anything about zone employees who have special status.

"In a separate interview, Doyle said a 'Gerald Doyle Defense Committee' in the zone has raised $8,000 to finance his litigation to the Supreme Court, if necessary. He said, however, he merely seeks to prevent Fleming's doing those things without congressional approval which he said is required 'if our constitution means anything.'

"Fleming and Doyle wants to 'block (U.S. Ambassador) Joe Farland and I from carrying out any agreements by the executive branch to improve relations with Panama.' He said it is important that public opinion in the United States be marshalled in favor of 'treating Panamanians like people.' "

Small groups of old time Canal employees, he said, are "insulated from the facts of life which are familiar to other Americans through daily exposure."

"We are not going to solve our problems by listening to these people," he said.

Congress of the United States,
House of Representatives,
Washington, D.C., October 26, 1962.

Hon. Dean Rusk,
Secretary of State, Department of State,
Washington, D.C.

Dear Mr. Secretary: A news dispatch from Balboa, C.Z., in the New York Times of October 7, 1962, states that starting with the dedication of the Thatcher Ferry Bridge across the Panama Canal on October 12, the flags of both Panama and the United States will fly side by side over the bridge and at several other spots in the Canal Zone.

Information is respectfully requested of the authority for this action.

Sincerely yours,

Daniel J. Flood,
Member of Congress.

Department of State,
Washington, D.C., November 8, 1962.

Dear Congressman Flood: Thank you for your letter of October 26, 1962, addressed to Secretary of State Rusk concerning the display of the flags of Panama and the United States on the Thatcher Ferry Bridge in the Canal Zone.

As you know, on September 14, 1960, President Eisenhower directed that the flag of the Republic of Panama be displayed, along with the flag of the United States, at a particular location in the Canal Zone. This decision was made voluntarily and unilaterally by the United States as a gesture of good will toward Panama. The concept of "titular sovereignty," expressed by Secretary of War Taft in 1906, was affirmed in 1960 by President Eisenhower. Since the 1960 action the Panamanian authorities have expressed a desire to have their flag fly in a similar manner at other sites in the Canal Zone.

In June of this year the subject of flags was discussed by President Kennedy and

President Chiari during their talks in Washington, D.C. As stated in the joint communique of June 13, the two Presidents agreed that their representatives would arrange for the flying of Panamanian flags in an appropriate way in the Canal Zone. It is on the basis of President Kennedy's publicly announced decision that arrangements were made to fly additional Panamanian flags alongside the U.S. flag at certain sites on land in the Canal Zone.

I hope the above information will be useful to you. If I may be of any further assistance, please do not hesitate to call on me.

Sincerely yours,
FREDERICK G. DUTTON,
Assistant Secretary.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 7, 1963.

Hon. DEAN RUSK,
Secretary of State,
Department of State,
Washington, D.C.

DEAR MR. SECRETARY: The Department of State, in its letter of November 8, 1962, advised me that the concept of Panamanian "titular sovereignty" over the Canal Zone, as expressed in 1906 by Secretary of War Taft and as affirmed in 1960 by President Eisenhower, is the basis for President Kennedy's June 13, 1962, agreement to fly additional Panamanian flags in the Canal Zone alongside those of the United States. This statement, unless amplified by historical facts, is not only incomplete but also misleading as to the real intent of Secretary Taft concerning sovereignty over the Canal Zone.

To supply the essential additional facts, attention is respectfully invited to the following:

October 24, 1904: In a comprehensive reply to a note of the Panamanian Government, Secretary of State Hay mentioned the "titular sovereignty of the Canal Zone" but asserted that such sovereignty is "mediatised by its own acts, solemnly declared and publicly proclaimed by treaty stipulations, induced by a desire to make possible the completion of a great work which will confer inestimable benefit on the people of the isthmus and the nations of the world." (Foreign Relations, 1904, pp. 613–630.)

January 12, 1905: When discussing the question of jurisdiction over the Canal Zone in a report to President Theodore Roosevelt, Secretary of War Taft explained that "while we have all the attributes of sovereignty necessary in the construction, maintenance, and protection of the canal, the very form in which these attributes are conferred in the treaty seems to preserve the titular sovereignty over the Canal Zone in the Republic of Panama, and * * * we have [had] conceded to us complete judicial and police power over the zone and the two ports at the ends of the canal. (Hearings before Senate Committee on Interoceanic Canals, 1907, vol. III, p. 2399.)

April 18, 1906: When testifying before the Senate Committee on Interoceanic Canals, Secretary Taft commented that article III of the 1903 Canal Treaty is "peculiar in not conferring sovereignty directly upon the United States the powers which it would have if it were sovereign. This gives rise to the obvious implication that a mere titular sovereignty is reserved in the Panamanian Government." (Ibid., page 2527.)

February 9, 1909: In an address at New Orleans, President-elect Taft stated that, under the 1903 treaty, "we are entitled to exercise all the sovereignty and all the rights of sovereignty that we would exercise if we were sovereign, and Panama is excluded from exercising any rights to the contrary of those conceded to us. Now that may be a ticklish argument, but I do not care whether it is or not. We are there. We have the right to govern that strip, and we are going to govern it. And without the right to govern that strip, without the power to police it, and without the power to make the laws in that strip bend, all of them, to the construction of the Canal, we would not have been within 2 or 3 years, hardly, of where we are in the construction."

November 16, 1910: When attending a banquet given by the President of Panama in the capital of that country, President Taft made this significant statement: "We are here to construct, maintain, operate, and defend a world canal, which runs through the heart of your country, and you have given us the necessary sovereignty and jurisdiction over the part of your country occupied by that canal to enable us to do this effectively." (Canal Record, vol. IV, [Nov. 23, 1910], p. 100.)

December 5, 1912: President Taft in an Executive order, pursuant to the Panama Canal Act of 1912 and in conformity with the 1903 treaty, decreed that: "All land and land underwater within the limits of the Canal Zone are necessary for the construction, maintenance, operation, protection, and sanitation of the Panama Canal."

October 15, 1923: When the Minister of Panama brought up the subject of sovereignty over the Canal Zone with Secretary of State Charles Evans Hughes, the latter stated: "The grant to the United States of all the rights, power, and authority which it would possess if it were sovereign of the territory described, and to the entire exclusion of the exercise by Panama of any such sovereignty, is conclusive upon the question you raise. The position of the Government upon this point was clearly and definitely set forth in the note of Mr. Hay * * * of October 24, 1904." (Foreign Relations, 1923, vol. II.)

December 15, 1923: In a conversation with the Minister of Panama, Secretary Hughes reiterated this stand, declaring with refreshing candor that the U.S. Government "would never recede from the position which it had taken in the note of Secretary Hay of 1904. This Government could not and would not enter into any discussion affecting its full right to deal with the Canal Zone under article III of the Treaty of 1903 as if it were sovereign of the Canal Zone and to the entire exclusion of any sovereign rights or authority on the part of Panama." (Ibid., p. 684.) Moreover, Secretary Hughes added: "It was an absolute futility for the Panamanian Government to expect any American administration, no matter what it was, any President or any Secretary of State, ever to surrender any part of these rights which the United States had acquired under the Treaty of 1903."

In addition to the foregoing, the fact that U.S. sovereignty over the Canal Zone was meant to be absolute was also stressed in 1913 by Bunau-Varilla, who, as Minister of Panama in 1903–4, had been the principal draftsman of the 1903 treaty. He stated: "After mature thought, I recognized that if I enumerated the various attributes of sovereignty granted, I ran the risk of seeing in the (U.S.) Senate, some other attributes asked for. To cut short any possible debate, I decided to grant a concession of sovereignty en bloc." (Bunau-Varilla, as quoted by Earl Harding, "The Untold Story of Panama," New York: The Bookmaker, 1959, p. 39.)

Accordingly, the formula adopted by the duly accredited representatives of the United States and Panama was that of exclusive sovereignty as conferred in article III. The validity of this formula has been confirmed in a series of U.S. court decisions. It would thus appear that, if the term "titular sovereignty," has any meaning at all, it is in the nature of a reversionary interest in the sole event the United States should fail to meet its treaty obligations to maintain and operate the Panama Canal. It can mean nothing more than this for the United States cannot operate and defend the canal enterprise with less than exclusive sovereignty. There must be authority where there is responsibility.

In these connections, I would also invite attention to the following:

Hearings before the House Subcommittee on Inter-American Affairs on U.S. Relations with Panama, January 12, 15, 19, 22, and February 2, 1960.

Debate on Panama-U.S. Relations, CONGRESSIONAL RECORD, volume 106, part 2, pages 1798–1808.

House Concurrent Resolution 459, 86th Congress. (See H. Rept. 2218, 86th Congress, Aug. 31, 1960.)

This resolution (H. Con. Res. 459, 86th Cong.), which aimed at preventing the formal display of the Panama flag in the Canal Zone except as may be authorized by treaty, was adopted on February 2, 1960, by the House, with an overwhelming vote of 381 to 12. The measure was transmitted to the Senate where it was referred to the Committee on Foreign Relations but, for reasons never publicly stated, was not acted upon by the Senate.

In adition to adopting the flag resolution, the House of Representatives, on February 9, approved the Gross amendment to the 1961 Department of Commerce Appropriation bill, which provision prohibited use of funds thus appropriated for display of the Panama flag in the Canal Zone. This measure became law.

These actions in the legislative branch in 1960, House Concurrent Resolution 459 and the Gross amendment, made clear the position of the Congress that acceding to demands for display of the Panama flag in the zone would constitute a "major departure from established policy and 'should not be accomplished through Executive fiat.'" President Eisenhower's voluntary and unilateral action on September 17, 1960, directing the display of the Panama flag over the Canal Zone territory, went beyond the authority conferred on the Executive branch by the Congress. This striking of the U.S. flag in the zone led me to issue a special press release on September 21, 1960. (CONGRESSIONAL RECORD, vol. 107, pt. 1, pp. 114–115.)

All of the sources and citations mentioned in the foregoing must be well known in the Department of State. If the actual records of the issue were not presented to successive Chief Executives by the responsible officials of the Department, they were gravely derelict in the performance of their duties to protect the interests of our country. It is upon the Congress that the Constitution conferred the power to declare war, the supreme act in defense of the national interest; and if the Congress has this power, it has the last word of authority in defining what the national interest is, was, or will be. No one of the creatures set up by the Congress, and by it with the means to operate, namely, the executive departments or agencies, may go beyond, above, below, or behind the precise definition of the national interest whenever the Congress chooses to define it with precision. And rarely, Mr. Secretary, has the Congress defined the national interest with more force and with greater precision than in regard to the untrammeled exercise by the United States of its sovereign rights in the Canal Zone. No refinement by Executive rhetoric can change the explicit definition of the national interest exercised by the Congress in this regard.

Moreover, the Canal Zone is not an "occupied area" subject to Executive disposal, but a portion of the territorial domain of the United States acquired in 1904 pursuant to law and treaty. (See "Panama Canal Zone: Constitutional Domain of the United States," World Affairs, Fall 1958.) As such, it is virtually a part of the "coastline of the United States."

I assert that the Department of State's interpretation of the statement of Secretary

Taft in 1906 so as to justify the action of the Executive in 1962 to authorize the flying of additional Panamanian flags in the Canal Zone is wholly mistaken. In any event, the ordering of such display was an arbitrary assumption of authority, subject to judicial review as to its validity.

The flag of a nation, when permanently flown, has only one meaning and that is sovereignty; and this is the way in which the display of the Panamanian flag over the Canal Zone is interpreted at Panama and elsewhere by Marxist-Socialistic elements hostile to the United States. Nor should it ever be overlooked that Soviet strategy for conquest of the sea aims at gaining control of key water routes; namely, the Skagerrack, Straits of Gibraltar, Dardanelles, Suez Canal, Straits of Malacca, and the Panama Canal. Thus, the Cuban crisis has been only an incidental element in the program to take over the entire Caribbean, in which movement the Panama Canal has long been, and still is, the key target.

Sincerely yours,

DANIEL J. FLOOD,
Member of Congress.

DEPARTMENT OF STATE,
Washington, D.C., February 5, 1963.

DANIEL J. FLOOD,
House of Representatives.

DEAR CONGRESSMAN FLOOD: Thank you for your letter of January 7, 1963 concerning the historical background of sovereignty over the Canal Zone and your views on the flying of the Panamanian flag alongside the U.S. flag at certain sites in the Canal Zone.

The references cited by you have in the past served as bases and guides for decisions and they will be kept available for continued use. The Department of State in carrying out its responsibilities will continue to be governed by duly constituted authority and the expressed policy designed to safeguard U.S. national interests; these conditions were set forth in two of my previous letters both dated November 8, 1962, in response to your inquiries of October 9 and 26, 1962.

Your continued interest in United States-Panamanian relations and operation of the Panama Canal is greatly appreciated. If I may be of additional assistance in this matter, please do not hesitate to call on me.

Sincerely yours,

FREDERICK G. DUTTON,
Assistant Secretary,
(For the Secretary of State).

JOINT COMMUNIQUE AND AIDE MEMOIRE RESULTING FROM DISCUSSIONS IN PANAMA BETWEEN UNITED STATES AND PANAMANIAN REPRESENTATIVES

President John F. Kennedy and President Roberto F. Chiari of the Republic of Panama agreed, during President Chiari's visit to Washington on June 12–13, to appoint high level representatives to discuss points of dissatisfaction with provisions of the United States-Panama Treaty governing the Panama Canal. The results of the discussions in Panama, which are continuing, are summarized in the following joint communique and aide memoire:

"JOINT COMMUNIQUE

"The representatives of the Governments of the Republic of Panama and of the United States of America, appointed to discuss points of dissatisfaction in United States-Panamanian relations with regard to the Canal Zone have periodically met during the last 5 months. Various aspects of pending questions have been discussed up to the present, with the following results:

"First. It has been agreed that the flag of the Republic of Panama will be flown together with the flag of the United States of America on land in the Canal Zone where the flag of the United States of America is flown by civilian authorities. Private organizations and persons in the zone are free to display flags at will over their places of residence or business. Other aspects of the flag question will be discussed later.

"Second. Foreign consuls, on the basis of exequaturs issued by the Government of Panama and, in accordance with procedures and understandings which have been agreed upon by the Government of Panama and the Government of the United States, may function in the Canal Zone. Subject to these procedures and understandings the U.S. Government will cease issuing documents of exequatur.

"Third. The representatives of both Governments have discussed labor problems relating to Panamanian citizens who work in the Canal Zone. Special attention has been devoted to the subject of wage scales, equal opportunities for Panamanian and U.S. citizens at all levels, and social security benefits. All these problems continue to be under discussion.

"Fourth. The representatives of Panama submitted for discussion the question of using Panamanian postage stamps in the Canal Zone postal system. The U.S. Government has proposed the use of Panamanian stamps in the zone in accordance with technical arrangements now under consideration and in conformance with international postal standards.

"Fifth. In accordance with instructions, the representatives have discussed Panama's need for pier facilities and have visited the present pier facilities in Cristobal. This subject continues to be under discussion.

"The representatives of the Governments of the United States of America and of the Republic of Panama will continue their present discussions aimed at finding solutions to other problems which remain unresolved.

"The discussions are continuing in the spirit of the joint communique issued by the President of Panama and the President of the United States of America at the end of the visit which the President of Panama made to Washington in June of last year.

"From time to time additional joint communiques outlining the progress of the discussions will be issued.

"AIDE MEMOIRE

"JANUARY 8, 1963.

"With reference to the conversations between His Excellency the Minister of Foreign Affairs and the American Ambassador concerning the meeting on September 11, 1962, of the United States and Panamanian representatives to discuss improvement of United States-Panamanian relations with regard to the Canal Zone, His Excellency will recall that the following decision was reached.

"It was agreed that the practice heretofore followed on the part of the United States with respect to the issuance of exequaturs for use in the Canal Zone would be changed as follows:

"The U.S. Government would not be agreeable to the exercise of consular functions by a consular officer from a government not recognized by the United States. Also, the Government of the United States will notify the Government of Panama and will prohibit a consular officer from acting in the Canal Zone if, for example, in the opinion of the U.S. Government, a situation arises in the future in which a consular officer accredited by Panama is a security risk, or his functioning would interfere with the operation, maintenance, or defense of the canal.

"Hereafter, when the Government of Panama has on request issued an exequatur to a consular officer to function in Panama, and has notified the Department of State to that effect, the Department of State, providing it has no objection in accordance with the preceding paragraph, will inform the Government of Panama by note that said consular officer may function in the Canal Zone, and the Government of Panama will so inform said consular officer; in the event the Department of State objects in accordance with the preceding paragraph, information to that effect will be supplied the Government of Panama and the consular officer may not undertake to perform consular functions in the Canal Zone."

RESOLUTION 230 OF THE 44TH ANNUAL CONVENTION OF THE AMERICAN LEGION, LAS VEGAS, NEV., OCTOBER 9–11, 1962

Resolution opposing surrender of U.S. jurisdiction over the Canal Zone and the Panama Canal

Whereas more than 50 years' experience in the construction, maintenance, operation, sanitation, and protection of the Panama Canal, in a region of political instability, has completely established the wisdom of the 1903 treaty provisions for its exclusive control by the United States in perpetuity as indispensable for safeguarding the vital interests of our country and all free nations; and

Whereas a series of surrenders to successive demands by the Republic of Panama, through treaties and executive agreements, and finally, by Executive order on September 17, 1960, to authorize display of the Panamanian flag over the zone (issued contrary to the overwhelming vote of the House of Representatives) has seriously weakened our legal position on the isthmus; and

Whereas, notwithstanding solemn treaty obligations to maintain and operate the Panama Canal, the President has acceded to recent Panamanian demands for general treaty revisions that aim not only further to weaken the rights, power, and authority of the United States on the isthmus, but also to set a time for turning over control of the Panama Canal and the Canal Zone to Panama: Now, therefore, be it

Resolved, by the 44th Annual National Convention of the American Legion, assembled in Las Vegas, Nev., October 9–11, 1962, That the American Legion reaffirms the position expressed in resolution 251, adopted by the American Legion at its 43d national convention, in Denver, Colo., September 11–14, 1961, which is:

1. That the United States should not, in any way, surrender to any other government or authority its jurisdiction over, and control of, the Canal Zone, and its ownership, control, management, maintenance, operation, and protection of the Panama Canal in accordance with existing treaty provisions.

2. That it is to the best interests—not only of the United States, but as well of all nations and peoples—that all powers, duties, authority, and obligations of the United States in the premises be continued in accordance with existing treaty provisions.

3. That there can be no just claim by the Republic of Panama for the exercise of any immediate control of whatever character over the Panama Canal Zone so long as the United States discharges the duties and obligations with respect to the canal.

4. That formal display of any official flag over the Canal Zone other than that of the United States, is violative of law, treaty, international usage, and the historic canal policy of the United States; and be it further

Resolved, That the American Legion is deeply concerned over the published aspirations of the Republic of Panama to negotiate with the United States of America for certain concessions, which, if granted, would be contrary to the established policy of the American Legion; and be it further

Resolved, That the American Legion urges the loyal news mediums of the Nation to publicize the grave perils involved so as to alert and inform our people, with demands for prompt and forthright declarations and actions by the legislative and executive departments of the Government.

RESOLUTION 22 OF THE AMERICAN COALITION OF PATRIOTIC SOCIETIES, 34TH ANNUAL CONVENTION, WASHINGTON, D.C.

CARIBBEAN CRISIS FOCUSES ON PANAMA CANAL

Whereas the outbreak of the Cuban crisis in early October 1962, followed by the raising on October 29 of the Panamanian flag at the Canal Zone administration building under the authority of the President, emphasized the Marxist-Socialist plan for conquest of the strategic Caribbean area in which the Panama Canal is the key objective; and

Whereas over a period of years the conduct of our Panama policies by the Department of State, made with the approval of Presidents, has been featured by a series of harmful and timid surrenders to Panamanian radical demands which have seriously undermined our juridical position on the isthmus; and

Whereas more than half a century's experience in connection with the acquisition of the Canal Zone, the construction of the Panama Canal, and its subsequent maintenance, operation, sanitation and protection in a region of endemic revolution has completely established the wisdom of the 1903 treaty provisions for its exclusive sovereign control by the United States in perpetuity, as indispensable for the vital interests of our country and other free nations; and

Whereas, regardless of the pathetic twists and turns of the controlling International-Socialist element in the Department of State with respect to our Caribbean and isthmian policies, the United States cannot forswear its inherent right of self-defense;

Resolved, That the American Coalition of Patriotic Societies:

1. Urges the following plan of action for our Government:

(a) Clarify and openly restate the Monroe Doctrine as applying to intervention through infiltration and subversion in any part of the Americas.

(b) Clarify and openly restate our historic, indispensable, and time-tested policies for U.S. control in perpetuity over the Canal Zone and the Panama Canal.

(c) Announce to the world the determination of the United States to liberate the people of Cuba from alien masters and the restoration of constitutional government.

(d) Reactivate a special service naval squadron in the Caribbean to serve as a symbol of liberty and as an assurance for security.

2. Condemns the tragic failures on the part of Congress, the Department of State, and the President to safeguard U.S. vital interests in the Caribbean;

3. Considers that the responsibility for such derelictions rests primarily with the jurisdictional committees of the Congress, the Department of State, and the President; and

4. Urges the loyal news media of our country to inform our people about the dangers in the Caribbean, with demands for prompt and forthright actions and declarations by the legislative and executive branches of our Government.

CONTROL OF PANAMA CANAL

Resolution adopted by the 69th Continental Congress, National Society, Daughters of the American Revolution, April 18-22, 1960

Whereas the United States in 1903 acquired full sovereignity by grant in perpetuity of the Canal Zone from Panama; and

Whereas the Thomson-Urritia Treaty between the United States and Colombia aimed, through a generous compensation to Colombia, to restore the friendship between that country and the United States which had been threatened by the loss of territory and revenue occasioned by the secession of Panama from Colombia, and defined the rights of the United States and Colombia respecting the Panama Canal; and

Whereas forcing the abandonment of the Panamal Canal, and accomplishing its internationalization is a Communist tactical objective; and

Whereas retention of sovereignty and control of the Panama Canal Zone is a vital necessity to the defense of the United States;

Resolved, That the National Society, Daughters of the American Revolution, urge that the United States refuse to permit the flag of Panama to be flown in the Panama Canal Zone; and

Resolved, That the National Society, Daughters of the American Revolution, urge the President and the Senate of the United States to refuse to enter into any treaty or make any Executive agreement with Panama whereby this country would lose its sovereignty and control over the Canal Zone, and the Panama Canal.

CANAL ZONE CENTRAL LABOR
UNION, AND METAL TRADES
COUNCIL, AFL–CIO,
Balboa Heights, Canal Zone, March 31, 1963.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: We know that upon your shoulders will fall the major burden of marshaling the arguments for the passage of House Concurrent Resolution 105 and the companion Resolution 113 which was introduced by yourself.

We believe that these resolutions are a reaffirmation of the basic principles upon which any civilized form of government may exist or continue to exist. No government, even ours, can hope to maintain its prestige for any length of time when it does not operate within the framework of constitutional law.

In other parts of the world, as well as here locally, commitments have been made by various individuals dictated by expediency, which have resulted in long-term detriment to the inherent rights of all of our citizens. Unfortunately, when Congress perceived the need for remedial action, these commitments have become irrevocable actions tying the hands of Congress.

We pray that you will have the inspiration that may show all your colleagues that it is not only the few citizens of the zone that are effected, but that every one of their constituents in one way or another, is, and will be, adversely affected.

It is very possible that these resolutions may be the one single piece of legislation that does the most to establish in the Americas a respect for government under constitutional law. The forces that are working in this hemisphere against democracy want government by fiat.

Sincerely,

J. H. ELLIOTT,
President.

METAL TRADES DEPARTMENT,
Washington, D.C., April 3, 1963.

Hon. CLARENCE CANNON,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. CANNON: We have read with interest House Concurrent Resolution 105, which you introduced on March 4, 1963, dealing with the Panama Canal. I am writing you to let you know that the Metal Trades Department, AFL–CIO, is very much interested in the continued welfare and well being of the many U.S. citizens employed in the Canal Zone, the vast majority of which are members of our affiliated international unions of this department.

The deep interest of the Metal Trades Department in matters concerning the welfare of the citizens of the United States employed as civilians in the Canal Zone, was evidenced by the unanimous action taken at our last convention in December 1961. The convention adopted three resolutions dealing with the Canal Zone merit system, the promotion of a sound apprenticeship program in the zone, and the unanimous expression that any person appointed to position as Governor of the zone, stockholder, or, Member of the Board of the Panama Canal Company should be required by oath to express their intent in the continuing of the Panama Canal as a U.S. enterprise.

We indeed desire to commend you for the introduction of House Concurrent Resolution 105, which obviously reflects the considered view of thoughtful and well-informed Members of the Congress with regard to the Panama Canal.

The recent Cuban situation and the Suez Canal crisis in 1956 have both served to focus world attention on the Panama Canal. We are indeed greatly concerned with the continued erosion of U.S. authority over the Canal Zone. We recognize that the Republic of Panama is subject to economic ills due largely to its overdependence on the Panama Canal and its failure to develop its own agricultural potential.

We trust that with the administration-proposed increase in technical and economic aid will come a decreasing need for Panama to rely on the Panama Canal as a solution to its economic ills.

The position of the metal trades department is to endorse and support a policy of the fullest measure of justice and generosity for the Republic of Panama consistent with public interest and our national security.

The principal purposes of the Panama Canal since its first transit almost 50 years ago has not changed. The dual purpose of its construction was to serve without profit world commerce, and as a measure of national defense. It was with wise understanding and responsible statesmanship that the House Committee on Panama Canal reported: "the canal should not be permitted to become a pawn in our normal diplomatic relations with Panama."

The Panama Canal still has great strategic importance to the security of both the United States and the free world. The phenomenal (record breaking) demand for Panama Canal services established in 1962, reveals to all its economic importance. Until, and unless another canal is built, the Canal Zone and the Panama Canal must in the interest of the entire free world continue to remain under exclusive U.S. authority and control.

We strongly support the provisions and urge, the adoption of House Concurrent Resolution 105.

We are taking the liberty of sending a copy of this communication to Congressmen DANIEL J. FLOOD and FRANK T. BOW, who introduced similar resolutions, House Concurrent Resolutions 113 and 120, on March 12 and 28, 1963. A copy of this letter is also being sent to THOMAS E. MORGAN, chairman, Foreign Affairs Committee of the House, and to all members of that committee.

Sincerely yours,

B. A. GRITTA,
President.

[From the Panama (Republic of Panama) American, Mar. 23, 1963]

THE TREATIES—WERE THEY ALL "TAKE"?

SIR: This is the fifth article we have written to your column dealing with the subject of present and past treaties between the United States and Panama as regards the Canal Zone and the Panama Canal. Our past papers have dealt with the subject of sovereignty and international law as both apply to the "big ditch," the Panama Canal.

It has been loudly, eagerly, and zealously argued that the treaties of 1903, 1936, and 1955 were completely one sided in favor of the United States with the Republic of Panama getting the very short end of the stick. It has been forthrightly urged that it was all take and no give on the part of the U.S. Government as regards the Panama Canal.

We found the book, "The Untold Story of Panama," by Earl Harding, extremely interesting on this subject and at the same time quite revealing and quite shocking. This 171-page book was published by Athene Press, Inc., of New York City in 1959. Harding is a famed journalist and was formerly the assistant to the president and public relations counsel of Remington Rand, Inc.

As early as 1913 Harding advocated that to properly protect the Panama Canal the Canal Zone should take in much more territory than the treaty of 1903 gave to the United States. On page 103 of his book, Harding states: "I suggested that acquisition of territory for future defense could not be regarded as aggression—unless delayed until a new generation of Panamanians came to believe their sovereignty an inalienable right."

They believe it now. For Panama history books have not told Panamanian youth that only a handful of conspirators knew that a revolution was planned. Radical ideologies infiltrated all around the Canal Zone and exaggerated ideas of supernationalism took hold of a generation of Panamanians schooled to believe in the fiction that their "founding fathers" actually won their independence. So uninformed and misinformed Panamanians and North Americans took for granted the righteousness of Franklin Delano Roosevelt's abrogation of practically everything in the 1903 treaty to which the Panamanian politicians objected and the new treaty of 1936 was signed in Washington on March 2.

What did the treaty of 1936–39 give to the Republic of Panama? Harding states quite bluntly the following:

1. The priceless treaty rights of the United States to build defense bases outside the 10-mile-wide Canal Zone. "That giveaway cost American taxpayers much more than the million dollars in rental paid to the Panama Government during World War II for permission to plant guns, build roads, landing fields, bomber bases and nearly 400 buildings on Panama's pasture lands and in her swamps and jungles adjacent to the Canal Zone." "It took endless negotiation to obtain permission—where the United States formerly had the right under the 1903 treaty—to use Panamanian territory for defense purposes."

2. All U.S. authority outside the Canal Zone was abrogated "thus abandoning its (United States) rights to defense bases outside the Canal Zone." The U.S. Government's right of eminent domain in acquiring property within the cities of Panama and Colon which might be needed for canal operation was renounced."

3. Also eliminated (by the 1936 treaty) was "the right of the United States to maintain public order in Panama if the Panamanian Government could not do so. The annuity of $250,000 paid by the United States for use of the canal strip was increased to $430,000—"on account of the Roosevelt devaluation of the dollar."

4. The treaty of 1936 restricted residence in the Canal Zone to American civilian and military personnel, established corridors within the zone for Panamanian convenience and prohibited new private enterprises in the Canal Zone.

The treaty of 1936 was the legal basis that brought about the "United States, in January 1948, abandoning the 13 defense sites within the Republic of Panama" and "retreated within its Canal Zone." "It was then understood that future defense would be entirely from within the zone limits."

The little-mentioned treaty of 1955 gave to Panama the following:

1. Increased the U.S. annuity to Panama from $430,000 to $1,930,000.

2. Gave Panama, without required compensation ($), waterfront and other properties, including Panama Railroad's yards and terminals in the cities of Colón and Panamá, of an "estimated fair market value," as stated by our Government of $24,300,000. These gifts included the Hotel Washington in Colón ($1,450,000) and many other parcels.

3. Agreed to ask Congress to appropriate and authorize building a bridge across the Panama Canal to replace the Thatcher Ferry, estimated to cost (at that time) up to $27 million. This bridge is now constructed.

4. Concessions to Panama designed to restrict American (United States) and extend Panamanian rights in respect to commissary privileges, trade advantages, wage classifications, taxation, etc.

"Panama's principal token return for all the treaty concessions was 'the right to use, for a period of 15 years without cost" as a military training and maneuver base the old Rio Hato base west of the Canal Zone. Extension after 15 years is subject to "agreement between the two governments."

The treaty of 1955 was ratified by the U.S. Senate on July 29, 1955, by a vote of 72 "for" and 14 "against." Senator RUSSELL, of Georgia, repeatedly questioned the wisdom of ratification and stated in his argument against ratification: "I reiterate that the Department of Defense never thinks of challenging the Department of State or interfering in any way in any international negotiations. That has been true of all negotiations we have had in the past 2 years. If I had the privilege of appointing someone in the Department of Defense I would have cautioned him, when he came to consider a treaty having to do with the Panama Canal, to get some agreement that would not bleed us white, if we had to get some land outside the zone, in the event of another war * * * while we were committing ourselves to these increased payments, we should have some room to stand and fight, in the event of another war, rather than having to pay a large rental for additional ground."

Have the series of treaties between the United States and the Republic of Panama since the treaty of 1903 been "all take" on the part of the United States and "no give"? In all intellectual honesty and sincerity, we think not.

CENTRAL COMMITTEE,
CANAL ZONE DEMOCRATIC PARTY.

GENERAL LEAVE TO EXTEND

Mr. FLOOD. Mr. Speaker, I ask unanimous consent that all Members may have 3 legislative days in which to extend their remarks on this subject.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

MRS. JEANNE B. CLARK

The **SPEAKER** pro tempore. Under previous order of the House, the gentleman from Louisiana [Mr. WILLIS] is recognized for 20 minutes.

Mr. WILLIS. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include related matter.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. WILLIS. Mr. Speaker, it is natural for all of us to be interested in the success of people from our hometown and particularly reassuring when they occupy positions in the Government service that deal with matters concerning the security of our country.

I am happy in this instance to salute Mrs. Jeanne B. Clark, the former Jeanne Bertrand of my hometown of St. Martinsville, La., on the 45th anniversary of her coming to Washington during all of which time she has been in Government service or connected with Government work in one way or another. Mrs. Clark is the widow of Reed Paige Clark, whose career as a Foreign Service officer was distinguished by many years of outstanding service to our Nation in various parts of the world.

As Assistant Chief of the Arms Traffic Division of the Department of State, in which position she is second ranking officer of the Division and Acting Chief during the latter's absence, Mrs. Clark's work has drawn much commendation. She is highly regarded for her competency, integrity, and cooperativeness in the performance of her highly important duties.

These duties are carried out under the munitions control provisions of the Mutual Security Act. This act grants authority to the President to control, in furtherance of world peace and the security and foreign policy of the United States, the export and import of arms, ammunition, and implements of war, including technical data. Under the law no one, other than a Government agency of this country, can export or import arms, ammunition and implements of war, including firearms, explosives, chemicals, tanks, bombs, missiles, rockets and war vessels, etc., without a license.

The functions of her position require Mrs. Clark to analyze specific applications to export or import such material and to issue or reject the licenses or make recommendations consistent with the applicable laws, regulations and policy-security factors currently in effect. These activities must be coordinated with appropriate bureaus of the State Department and with other government agencies such as the Department of the Treasury, Department of Commerce, Department of Defense, and the Atomic Energy Commission. In making decisions and in matters of public relations, Mrs. Clark's previous experience abroad as the wife of a Foreign Service officer, and her interest in both foreign and domestic political, economic and cultural fields, has contributed immeasurably to the valuable service she is rendering to the national interest and security.

Prior to assuming her present post, Mrs. Clark already had wide experience in Government service, first as an adjudicator with the Veterans' Administration, beginning in 1918, then as auditor with the Bureau of Internal Revenue, with the Foreign Service in Mexico City, and as divisional assistant in the Passport Office of the State Department.

It was during her tour of duty with the Foreign Service in Mexico that she became acquainted with and married Mr. Clark, in 1928. Even at that time Reed Paige Clark already had a splendid record of service behind him.

He had been secretary to Senator Burnham of his home State of New Hampshire and clerk of a number of Senate committees. He had been general receiver of customs in Liberia for 10 years and developed the first system of customs service in that country. He had been agent of a New York commercial house in the Gold Coast of Africa.

Mr. Clark joined the consular service in 1919, and prior to his marriage he had served as consul in Angola, in the Union of South Africa, and in Mexico. But many more years of valuable and distinguished service were yet to come.

After their marriage her husband's assignments took Mrs. Clark from Mexico City to Guadalajara, Mexico; to Santo Domingo, Dominican Republic; to Belgrade, Yugoslavia; to Vienna, Austria, and to Victoria, British Columbia.

Those were busy, crowded, and useful years.

With a French maiden name, background, and education, speaking that language comes both naturally and fluently to Mrs. Clark. And since most of the people of the European countries where they lived are bilingual and preferred to converse in French, Mrs. Clark's knowledge of the diplomatic language of the time as well as her gracious manners made living abroad and participating in official and social life that much more lively and happy for her and her devoted husband.

Dining with Mrs. Clark and her sister, Gertrude Bertrand, in their apartment at 411 Chastleton Hotel in Washington has been a Saturday evening ritual for Mrs. Willis and myself during the past 15 years and Mrs. Clark's witticisms and reminiscences always add zest to these occasions.

She tells about her experiences with a new breed of human beings who appeared on the social scene in Europe in the mid-1930's, when she was a delegate to the convention in Vienna of the American Women's Club in Europe. As a break from the serious discussions and debates a lavish entertainment had been arranged for the delegates in Vienna's swankiest nightclub. Mrs. Clark was impressed with the well-mannered and immaculately dressed young men in attendance and she and some of the younger set in the group danced away all night. Well, after the ball was over the young gentlemen demanded their pay. They were gigolos.

> Of course, we could not afford, shall I say, to hurt their feelings, and we had to pay up. Besides, they were so nice and handsome and it really was fun—

Mrs. Clark concludes.
